Christian (W. F. Corb), p. 16.

LIFE AND DEATH (Biological).—The characteristic quality, common to plants, animals, and man, which distinguishes them from all other things, is what we call 'life.' It cannot be defined in terms of anything else, but what the concept implies may be illustrated; and that is the aim of this article. The word 'life' is often used to denote the living creature's complete sequence of activities and experiences throughout the period during which it is alive; as when we say that an eagle has a very long, busy, and free life. It is also used as a short word for what is almost always going on in connexion with living creatures—their acting upon their environment and reacting to it; and it is, of course, quite clear and useful to say that life consists of action and reaction between organism and environment. We must, indeed, be careful never to lose sight of the fact that life is a relation. But what we wish to discern is the characteristic quality of organisms, one term in the relation. It may also be noted that 'life' is a distinctively biological concept, and that there is always a risk in transferring it to other fields. No harm is done, perhaps, in speaking of mental, moral, social, and spiritual life; but one may beg important questions in speaking of the life of crystals. By death we mean here the cessation of an organism's individual life, a fatal disruption of the unity of the organism. There is no confusion in using the same word for the end of the individual as such, and for the apparently irreversible process which leads to the end.

x. General characteristics of living organisms.
—Many biologists have sought to sum up the characteristics of living organisms, but no formulation has won general acceptance. This doubtless means that the insignia of life have not yet been discerned either wholly or in their proper perspective. One of the clearest statements is given by Roux (VII Internat. Zoological Congress Boston, Cambridge, U.S.A., 1912, 431), who recognizes five 'elementary functions': (1) self-dissimilation; (2) self-preservation, including assimilation, growth, movement, etc.; (3) self-multiplication; (4) self-development; and (5) self-regulation in the exercise of all functions, including self-differentiation, self-adjustment, self-adaptation, and, in many organisms, distinctly recognizable psychical functions. The persistent use of the prefix self, on the part of the founder of Entwicklungsmechanik, is very interesting.

Przibram (Experimentelle Zoologie, iv.) arranges the criteria of life in three groups—morphological, chemical, and physiological. The morphological characteristic is some measure of differentiation or heterogeneity of structure, which distinguishes even the simplest organism from a crystal. The chemical characteristic is the invariable presence of albuminoid substances in a colloidal state. The physiologcal characteristic is to be found in growth and in the movement of parts. Another way of stating the general characteristics of organisms will now be expounded—under three heads.

(1) Persistence of complex specific metabolism and of specific organization.—We place in the forefront the fact that the organism is typically in continual flux and yet retains its integrity. Chemical change is the rule of the world, but the
peculiarities in the case of organisms are (a) that many of the changes are very complex, having in many cases a number of processes in which they are specifically correlated for each kind of creature; and (e) that they are correlated in such a way that they continue and the associated structure persists. Each of these peculiarities requires some exposition. (e) Many chemical changes occur in the living organism, and some of them are relatively simple, but the essential changes appear to be concerned with protein or alaminoid substances, which are always present. These compounds are peculiarly intricate, with a large number of atoms or atom-groups in their molecules; they diffuse very slowly and do not readily pass through membranes; they occur in a colloidal state, and, although some are crystallizable, *e.g.* haemoglobin, they are not known in a crystalline state in the living organism; they are relatively stable bodies, yet they are continually breaking down and being built up again in the living body, partly under the direct influence of ferments or enzymes. The constructive, synthetic, up-building, within which processes are summed up in the term 'anabolism'; the disruptive, analytic, down-breaking, running-down processes are summed up in the term 'katabolism,' both sets of processes being included in the term 'metabolism,' for which we use the English word, although no English equivalent, like the fine German word *Stoffwechsel,* 'change of stuff.'

(6) It is a noteworthy fact that each kind of organism, so far as we know, has its specific metabolism, and when chemists, working upon chemical products of related species, there is chemical specificity in the milk of nearly related animals and in the grapes of nearly related vines. It is certain that this specificity is absolutely sure, within given limits, of the kind of animal to which a blood-stain is due—*e.g.*, whether horse or ass. The familiar fact that there are people who cannot eat certain kinds of food—*e.g.*, eggs, milk, oysters, crabs—without more or less serious symptoms is an illustration of specificity which is actually individual. It looks as if a man is individual not only to his finger-prints, but to his chemical molecules. We come back to what we said before: 'All flesh is equal, but there is one kind of flesh of men, another flesh of beasts, another of fishes, and another of birds.' (1 Co 15th).

(7) Ordinarily, chemical changes in the organic world, as in the weathering of rocks into soil, one substance changes into another. The same sort of thing goes on in the living body, but the characteristic feature is a balancing of accounts so that the specific activity continues. We lay emphasis on this characteristic since it seems fundamental—the capacity of continuing in spite of change, of continuing, indeed, through change. An organism was not worthy of the name until it showed, for a short time at least, not merely activity, but persistent activity. The vegetable is like a clock, inasmuch as it is always running down and always being wound up; but, unlike a clock, it can wind itself up, if it gets food and rest. The organism is profoundly different: up-building makes further down-breaking possible; the pluses balance the minuses; and the creature lives on. We are familiar with the self-preservative activities of higher animals, but not less important is the continual maintenance of the specific chemical activity of each cell and the whole organism. The whole may be protected and the correlated invisible structure or organization. It is an extraordinary fact that a particular functional activity in a nervous system may be restored after the destruction of the nerve-cells and fibres on which the activity previously depended—a fact all the more remarkable since in higher animals there is no regeneration of nerve-cells. But not less important is the manner in which a unicellular organism can store its substance and yet, as it were, have it, because of the fundamental capacity for self-renewal.
obvious advantage, therefore, in storing energy in potential form, and this accumulation of reserves is fundamentally characteristic of organisms—especially of plants. As regards income and output of energy, an organism is inefficient in a way that engines cannot do without enormous waste. More than this, however, there is a power of laying by what can be used later on. J. Joly ('The Abundance of Life.' Scienc. Proc. Roy. Soc., Dublin, vii. [1891] & xv. [1898] gives an account of the way in which he said that, whereas the transfer of energy into an inactive material system was attended with effects conducive to dissipation and retardative to further transfer, the transfer of energy into an animal system was attended with effects retardative of dissipation and conducive to further transfer. This seems to lead on to the criterion of growth. A surplus of income over expenditure is the primal condition of organic growth just as it is for mineral plants, since they accumulate such rich reserves (potential energy of chemical substances) and are so very economical in the getting of them. It must not be forgotten that it is the existence of the plant world that has made it possible to dispense with the accumulation of material. In the art. Growth it has been pointed out that the growth of living creatures, as contrasted with that of crystals, is at the expense of materials different from those which constitute them, that it implies active assimilation, not passive accretion; and that it is, in quite a new sense, a regulated process. An organism does not grow like a snowball rolling down a hill. To sum up, the power of sustained metabolism—of balancing accounts with some margin to go on with—makes growth possible.

But growth naturally leads on to multiplication or reproduction. As Haeckel clearly pointed out in his Generelle Morphologie (Berlin, 1866), reproduction is discontinuous growth. It seems impossible to draw any hard-and-fast line between a fragmentation which separates off overgrowths and the division into two plants. But it seems to be looking back to the beginning of organic life when we see the breakage of a protoplasmic mass which has grown too large to be a unity. It was long ago pointed out by Herbert Spencer that a leaf divides when the increase of volume outruns—as it soon must if it continues—the increase of surface. In a sphere, for instance, the volume must increase as the cube, and the surface only as the square, of the radius. Thus, if it grows beyond a certain size, a spherical organism would get into serious functional difficulties, the volume of material to be kept alive having increased out of proportion to the surface by which it is kept alive. By division into two plants the disproportion is counteracted. It has also been suggested that there is a certain normal proportion between the nucleus and the cell-substance or cytoplasm, which is disturbed if the cytoplasm increases beyond a certain limit. A non-nucleated piece of cytoplasm cut off from a large protozoan can move about for a time, but it cannot feed nor grow. There are facts which indicate that the nucleus is a trophic and respiratory centre of the cell. It may be that the division of a cell is a means of restoring the balance between volume and surface and between cytoplasm and nucleoplasm. The balance may also be restored by the emission of processes from the surface of the cell, as in rhizopod protozoon (Ameobae, Foraminifera, Radiolaria, etc.) or by a multiplication of nuclei, as often happens. But what has been suggested is a theory of the advantage of cell-division, not of the immediate, but of the far-off advantage, of its occurrence. As to this, it has been noted that a period of growth is followed automatically by a process of autokatalysis, but precise data are wanting. It cannot be gainsaid that the division of a cell remains one of the deep problems of biology.

W. Bateson writes:

'1 know nothing which to a man well trained in scientific knowledge and method brings so vivid a realization of our ignorance of the nature of life as the mystery of cell-division. The greatest advance I can conceive in biology would be the discovery of the mystery of cell-division.'

In most cases a cell divides into two precisely similar daughter-cells. This may be a simple division, as in the cell of the phytoplankton, or it may be a considerably complicated division, with growth at the same time of the daughter-cells. This is illustrated in the case of the Radiolaria, in which the division may be divided into two distinct steps, cell cleavage and nuclear division. The former is the well-known mitosis, in which the daughter-cells are formed from the mother-cell, the latter is the process of 'automictic' division, in which the daughter-cells are formed from the daughter-cells of the mother-cell. In the former case the two daughter-cells are similar, in the latter case they are different. In the former case the division is complete, in the latter it is incomplete. In the former case the division is regular, in the latter it is irregular. The former is the well-known mitosis, in which the daughter-cells are formed from the mother-cell, the latter is the process of 'automictic' division, in which the daughter-cells are formed from the daughter-cells of the mother-cell. In the former case the two daughter-cells are similar, in the latter case they are different. In the former case the division is complete, in the latter it is incomplete. In the former case the division is regular, in the latter it is irregular.
LIFE AND DEATH (Biological)

'veortex' is the seat of complex and specific chemical changes which are correlated in such a way that the creature exhibits, line, instinct, to be added still.

(3) Effective behaviour, registration of experience, and variability.—The common idea in this grouping is self-expression. (a) Life is a kind of activity, reaching a climax in behaviour, i.e. in an organism's variability and finality, which make towards a definite result. Behaviour concerns the organism as a whole, as in locomotion, or a considerable part of an organism, and differs from a reflex action in being a concatenation. It is a mode (as we call it) of instinctive behaviour, intelligent behaviour), but there is the common feature of correlation, of purposiveness (not necessarily purposefulness), and, usually, of individuality. When an amoeba appears to go elsewhere another, catches it, loses it, re-captures it, we must say either 'behaviour' or 'magic.' We need not suppose that the amoeba knows what it is about, but it is very difficult not to say that its awareness is accompanied by some analogue of our own. Of course, in amoeba there is an extraordinary adherence to routine, and this may defeat itself, but in ninety-nine cases out of a hundred what is done is effective, and the individuality probably finds expression in the cases that are not. The effectiveness which characterizes the behaviour of organisms (i.e. of those that show behaviour enough to be studied) seems to depend on profiting by experience in the individual lifetime, or on the results of successive generations. Exception occurs, and that both. It appears to us to be one of the insignia of life that the organism registers its experiments or the results of its experiences. We must here include under the term 'organism' the germ-cell, which is an organism's variability, and may be said to be made up in internal organization just as much as, in reality far more than, a protozoa which makes experiments in its skeleton architecturally or in its behaviour. As W. K. Clifford said,

"It is the peculiarity of living things not merely that they change under the influence of surrounding circumstances, but that any change which takes place in them is not lost, but retained, and, as it were, built into the organism to serve as the frame for a possible act, or future action (Lectures and Essays, London, 1879, p. 83)."

As Bergson puts it,

"Its part, in its entirety, is prolonged into its present, and besides there, actual and acting (Creative Evolution, p. 10)."

As Jennings says, from the physiological point of view, in discussing the behaviour of the starfish,

"The precise way such a part shall act under the influence of the stimulus must be determined by the past history of that part; by the stimulus that have acted upon it, by the reactions which it has given, by the results which these reactions have produced (as well as by the present relations of this part with other parts, and by the immediate effects of its present action). . . . We know as solidly as we know anything in physiology that the history of an organism does modify it and its actions—in ways yet not thoroughly understood, doubtless, yet none the more real (Behavior of the Starfish, University of California Publications in Zoology, iv. (1907) 177)."

(c) The organism's variability or power of producing some distinctively new character must, in the present state of science, be taken as 'given.' The only capacity it that we know of is our own power of mental experiment—the secret of the artist, the musician, the thinker, or the inventor. It may be noted that 'modifications' wrought on the body by some peculiarity of nurture, environment, or habit are to be distinguished from germinal variations. They are important individually, but they are not to be said to affect the progeny in any representative fashion. We may also distinguish those negative variations which are due to the loss of an ancestral character, like horns or a tail, for there are various opportunities in the history of the germ-cells for the dropping out of an hereditary item. Similarly, in regard to those variations which are plainly interpretable as new arrangements of previously expressed ancestral characters, there is no theoretical difficulty. What is baffling, however, is the origin of something definitely novel, especially when there is reason to believe that it originates brusquely. We can hardly do more at present than assume that the organism is essentially creative. Is the infant organism, from amoeba to elephant, tries experiments, so the germ-cell, which is no ordinary cell but an implicit organism, a condensed individuality, may perhaps make experiments in self-expression, which normal variations or mutations. This completes our statement of the general characteristics of organisms.

2. Death.—It is convenient to distinguish, from a biological point of view, three different kinds of death. (1) There is violent death when the external influence shatters, or dissolves, or burns the organization. A wound, a sudden change of temperature, or being swallowed by another organism may involve the irrecoverable cessation of life. For many an open nature the end seems to be always violent. (2) There is microbic death, when some intruding micro-organism, establishing itself in the body, multiplies exceedingly and produces fatal effects. The intruders of the effective of other important particles, or produce fatal toxins, and so on. In wild nature there is little microbic death except when man effects disarrangements in distribution, so that organisms are exposed to the attacks of new microbes. (3) The natural death, which results from some breakdown in the correlation of vital processes. Hard-working organisms, such as the heart, may suffer from the imperfect recuperation of their wear and tear. The higher species of the cells of the potential, and may be said to be made experiments in internal organization just as much as, in reality far more than, a protozoa which makes experiments in its skeleton architecturally or in its behaviour. As W. K. Clifford said,

"It is the peculiarity of living things not merely that they change under the influence of surrounding circumstances, but that any change which takes place in them is not lost, but retained, and, as it were, built into the organism to serve as the frame for a possible action (Lectures and Essays, London, 1879, p. 83)."

As Bergson puts it,

"Its part, in its entirety, is prolonged into its present, and besides there, actual and acting (Creative Evolution, p. 10)."

As Jennings says, from the physiological point of view, in discussing the behaviour of the starfish,

"The precise way such a part shall act under the influence of the stimulus must be determined by the past history of that part; by the stimulus that have acted upon it, by the reactions which it has given, by the results which these reactions have produced (as well as by the present relations of this part with other parts, and by the immediate effects of its present action). . . . We know as solidly as we know anything in physiology that the history of an organism does modify it and its actions—in ways yet not thoroughly understood, doubtless, yet none the more real (Behavior of the Starfish, University of California Publications in Zoology, iv. (1907) 177)."

(c) The organism's variability or power of producing some distinctively new character must, in the present state of science, be taken as 'given.' The only capacity it that we know of is our own power of mental experiment—the secret of the artist, the musician, the thinker, or the inventor. It may be noted that 'modifications' wrought on the body by some peculiarity of nurture, environment, or habit are to be distinguished from germinal variations. They are important individually, but they are not to be said to affect the progeny in any representative fashion. We may also distinguish those negative variations which are due to the loss of an ancestral character, like horns or a tail, for there are various opportunities in the history of the germ-cells for the dropping out of an hereditary item. Similarly, in regard to
organisms that they are continually at work in securing the persistence of their specific organization, it is equally characteristic that they spend time securing the continuance of the same kind. Instead of seeking to avoid death, to speak metaphorically, they often rather invite it, sacrificing themselves in producing and providing for the next generation. Their reproductive activities put an end to their self-preservation. Natural death is not to be thought of as like the running down of a clock. It is more than an individual physiological problem; it is adjusted in reference to the welfare of the species. As has been noted in art, age, there is good reason for regarding the occurrence of death at a particular time as adaptive. Constitutions which lose their correlation at the end of a year have been selected in certain conditions; constitutions which lose their correlation at the end of ten years have been selected in others. It is certain, as Weismann says, that ‘worm-out individuals are not only useless to the species, but they are even harmful.’ (Essays upon Heredity, etc. i. 24). As Goethe put it, ‘Death is Nature's expert contrivance to get plenty of life.’ (Aphorisms on Nature, tr. Huxley, in Nature, i. [1869] 1).

3. Organism and mechanism.—The task of mechanics, as G. Kirchhoffer said, is to describe completely and in the simplest manner the motions with which we are faced in nature. It involves the application (mathematische Physik, Leipzig, 1876, i. 1) of a mechanical description is satisfactory as such when it enables us to formulate a process as a continuous series of necessarily concatenated mechanical operations, like the one of an observer at the foot of a volcano. We shall use the term ‘mechanical’ throughout as meaning a matter-and-motion description, and as equivalent to physico-chemical, for chemical and physical descriptions are (ideally at least) reducible to mechanical terms. The question before us is how far mechanical description can be usefully employed in the study of organisms. The question is twofold: (1) how far we can describe characteristically vital events in terms of these concepts and formulae which certainly serve us well when we study the tides or eclipses, the fashioning of a deadwood, or the making of a star; and (2) how far a mechanical description answers the distinctly biological question relative to those correlations of physical and chemical processes that are characteristic of the living organism. Some vital processes illustrate J. H. van't Hoff’s rule of chemical reactions, for they increase in rapidity as the temperature increases. This may serve as an instance of the solidarity of the organism’s chemical processes with those that are characteristic of inorganic systems. In his posthumously published book ‘Mechanik der Organismen’ (Hamburg, 1894) H. Hertz emphasized the need of caution.

4. Life and Death (Biological).—It is plain that many physical processes occur in the body which are comparable to those observable in the inorganic domain—processes of diffusion, capillarity, surface-tension, and so on. And just as the living body illustrates conservation of matter, so is it in the continuance of energy. One mode may change into another, the energy is not lost but energy ceases or is lost in the transformation. Careful experiments with a calorimeter show that it is possible to square the accounts of the energy-income and energy-expenditure of an organism. The slight discrepancy that is sometimes observed is, being reasonably explained as due to the inevitable imperfections of instruments and observations. It should be noticed, however, that, according to some physicists and physiologists, the energy-dynamics does not apply to living creatures. While no fact so well established in regard to organisms has been shown to be inconsistent with the generalizations of chemistry and physics, and while many results of importance, both theoretically and practically, have rewarded the application of chemico-physical methods to living creatures, we believe it to be quite inaccurate to say that mechanical concepts and formulae suffice for more than a partial and abstract description of the life of organisms. We shall proceed to test this.

(a) Everyday functions.—As things stand at present, there is no forthcoming any physico-chemical description of any total vital operation, even of everyday phenomena such as the interchanges of gases in the lungs, the passage of digested food from the alimentary canal into the blood-vessels, or the filtering processes that go on in the kidneys. The co-ordination involved in the discharge of a function and the interrelations of the organs that perform it are in themselves characteristic physiological facts which are not made clearer when the chemistry or physics of an artificially isolated corner is worked out. Even in such familiar occurrence as a dog’s stimulus ‘there is in reality no experimental evidence whatsoever that the cause can be understood as one of physical and chemical change. . . . In the case of physiological stimulus and response no real quantitative relation can be traced between the apparent physical or chemical cause, and its effect. When we attempt to trace a connection we are lost in an indefinite maze of complex conditions, out of which the response emerges’ (J. S. Haldane, Mechanism, Life, and Personality, p. 24).

A very familiar fact is that the same stimulus applied to two apparently similar animals, or to the same animal at different times, evokes different answers. We can indeed give reasons for this, but the reasons are not inherent in the animal’s activities, its behaviour, its growth and reproduction, its development and evolution. There is no doubt that chemical and physical laws apply to living creatures—to what has been called ‘forms of life’—but when considered from the mechanical point of view, such as living involves a complex of reactions in or associated with the material which we call ‘protoplasm,’ and some of these can be reproduced apart from the organism altogether. Some vital processes illustrate J. H. van’t Hoff’s rule of chemical reactions, for they increase in rapidity as the temperature increases. This may serve as an instance of the solidarity of the organism’s chemical processes with those that are characteristic of inorganic systems. In his posthumously published book ‘Mechanik der Organismen’ (Hamburg, 1894) H. Hertz emphasized the need of caution.

It is certainly a justified caution with which we confine the realm of mechanics expressly to inanimate nature and leave the question open how far its laws can be extended. In truth, the matter stands thus, that we can neither maintain that the internal phenomena of animate beings obey the same laws as those that are valid for the inorganic world; nor that the laws of inorganic nature are applicable to the living organism; and so on. The behaviour of an individual in instances where we know nothing of the associated facts. It goes without saying that the behaviour implies chemical and physical events, but it is not necessary to say that such events are of a mechanical and physiologist. There are elements of spontaneity, plasticity, adaptiveness, and purposiveness that are foreign to mechanical reasoning. We can make nothing of behaviour without new concepts, notably that of the organism as an historical being that trades with time.

(b) Behaviour.—When we think of a collie dog controlling a flock of sheep according to instructions, or of a swallow returning from its winter in the South to the place of its birth, or of the spider spinning a typical web, or of the behaviour of the hypocausti model, or of the larval freshwater mussels fastening themselves to minnows, or of the larval river-fluke responding to the contact of the water-fowl by which alone it can successfully continue its life, or of the amoeba capturing its prey, losing it, following it, recapturing it, and so on, we are face to face with animal behaviour which transcends mechanical description. The behaviour is made up of a succession of acts and actions that are correlated in a particular sequence. This sequence is true in instances where we know nothing of the associated facts. It goes without saying that the behaviour implies chemical and physical events, but it is not necessary to say that such events are mechanical and physiologist. There are elements of spontaneity, plasticity, adaptiveness, and purposiveness that are foreign to mechanical reasoning. We can make nothing of behaviour without new concepts, notably that of the organism as an historical being that trades with time.

(c) Development.—The condensation of the inheritance into microsopic germ-cells, the combination of two inheritances in fertilization, the subsequent division of the inheritance involved in the
LIFE AND DEATH (Biological)

segmentation of the ovum, the process of differentiation wherein from the apparently simple the obviously complex emerges, the embryo power of righting itself when the building materials of its edifice are artificially disarranged, the way in which different parts are correlated and, as it were, conspire together towards these and many other facts lead towards a convincing impression that development far transcends mechanism.

In his Science and Philosophy of the Organism (1896) he stated that he had deliberately and subtly tested the possibilities of mechanical description with particular reference to the facts of development, and reached a conclusion of the first importance.

"No kind of causality based upon the constellations of single physical and chemical events; on the other hand, development; this development is not to be explained by any hypothesis about configuration of physical and chemical agents. ... Life, at least morphogenesis, is not a specialised arrangement of inorganic events; biology, therefore, is not applied physics and chemistry; Life is something apart, and biology is an independent science." (p. 142)

But, if the description of development is beyond mechanics, what, it may be asked, is the rôle of the young and vigorous science of "developmental mechanics" (Entwicklungsmecbenach)? We may represent it by the work of Roux. It may be answered that the developing embryo, as a material system, does of course exhibit chemical and physical processes which may be analyzed apart and treated singly; that development shows a continuous action and reaction between the various processes and the environmental conditions; and that developmental mechanics so-called is in great part concerned with discovering the correlation between steps in development and their appropriate external situations. But a further answer is, that the term 'mechanical' or 'mechanistic' is often, unfortunately, applied to a systematic or connected description which displays a series of events in causal sequence without any intervention of mentality. Given certain properties of organisms in general and of nerve-cells in particular, we may give a more or less connected and complete account of a reflex action without implying any mental agency. Whether this should not be called a mechanical or mechanistic description; it is simply what it pretends to be, a physiological or biological description, and it implies various non-mechanical concepts. Similarly, given the organism, in general, its regi-tration, and producing its specific organization, given the cell's mysterious power of dividing—of dividing now into similar and again into dissimilar halves—given the power of utilizing natural stimuli to elude the inherent manifoldness, and so on, we can begin to discover the connectedness of the successive stages in development. But this should not be called mechanical description.

(d) Evolution.—The adequacy of mechanical description may also be tested in reference to evolution. There is apt to be fallacy in speaking of organic evolution as a continuation of evolution in the inorganic domain. For it is more accurate, probably, to speak of the development than of the evolution of the solar system, since it is the differentiation of one mass into explicit manifoldness. The originative nebula, if such it was, is comparable to a great world-egg which developed into several embryos, as eggs sometimes do, but there was no struggle between the various planets, or between them and their environmental limitations, no sifting process which eliminated some and left others surviving. There were no alternatives, no trial and error methods. There was nothing comparable to that staking of individual lives and losing of them which is so characteristic of that sublime adventure which we call organic evolution. The theory of organic evolution starts with the mystery of variability, which is more like experimenting in self-expression than anything in the inorganic world, though it is not without its analogies even there. In natural selection the organism is a pawn; it does not simply submit to the apparently inevitable. It often evades its fate by a change of habit or of environment; it compromises, it experiments, it is full of device and endeavour. It not only acts with ruggedness and strength, but it also adapts itself to its environment, it adapts its environment. The evolving organism is an historical being, a genuine agent which trades with its talents. Such mechanical description as is possible leaves the essential features undescribed.

4. The uniqueness of life.—The negative conclusion has been arrived at that mechanical or physico-chemical concepts do not suffice for answering biological questions. This is because organisms show a certain apartness or uniqueness, the various theories of which may be roughly designated vitalistic. Before considering these, however, we must refer, practically rather than philosophically, to three preliminary points. (a) It is maintained by some that mechanical formulation, legitimate and useful for certain purposes, may be applied to things as they are in certain cases, such as the tides, is not the ideal formulation even within the domain of the not-living. But, if it is not adequate there, it will be still less adequate within the realm of organisms. Practically, however, it may be answered that this is not a biologist's business. All will admit that mechanical formulation work very usefully within the inorganic domain, but the biologist finds that they do not help him to answer certain particular questions. (b) It is often pointed out that, although we cannot at present translate vital happenings, such as growth and division, into terms of any known mechanics, we may be able to do so in the course of time. It may be, for instance, that the concepts of chemistry and physics will undergo profound modification in centuries to come, and no one can say that they have not changed in the past. The practical answer to this question is that this should not be called a mechanical or mechanistic description. (c) It is held by some that it is consciousness, or mind, that gives organisms their apartness or uniqueness. But, without entering into a discussion of this, we may again call attention to the fact that "vitalism" or "mechanism" is the same for plants as for animals, and that we do not know anything about the mind or consciousness of plants.

There are three well-known positions in regard to the apartness of living creatures, which may be roughly described as the three grades of vitalism. (1) The first finds the difference of organisms in the greater complexity in the configurations of elementary particles; photosynthetic metabolism is extremely intricate. New concepts are not required, but the activities of organisms cannot be predicted from a formulation of what occurs in the inorganic domain. Biology may be allowed a laboratory of its own, but it should be called bio-chemical. The main objection to this view is simply a matter of fact—that no headway has been made in giving mechanical answers to characteristic biological questions. (2) The second view is that there is a peculiar kind of physical energy operative in living things and not in the inorganic world. Organisms have a monopoly of some power in the same series as, say, electricity. This theory is a logical descendant of one form of the old theory of 'vital force,' but it has been brought up to date. It has been suggested that there may be a specific intra-organismal form of energy evolved by and
peculiar to the complex nature of the molecule of protoplasm or of protoplasm, which exhibits an unwritten and unfathomable quality which we shall term the "entelechy."
The attraction and repulsion observed between cell and cell and membrane and membrane, and the repulsions of different modifications of this supposed form of energy—but probably not by any means all; just as attraction and repulsion are manifestations of electrical energy under certain conditions—are neither the two main causes nor the only manifestations. In nerve impulses we may, for instance, really be exercising local movements in another way of the same form of energy which under other conditions produces the attractions and repulsions and the figures of strain in the dividing cells, and the actual cell-division. By this supposed form of energy, I do not mean a mysterious metaphysical influence, but a form of energy comparable to gravity, electricity, or magnetic influences, similar to these but in other respects differing from each, and a form which could be investigated by the ordinary methods of measurement and computation available to the mathematician" (AsheHton, *Archives for Entelec- hy*mechanics, xxiv, 681).
(3) The third view is thoroughly going vitalism, best represented by the work of Driesch. Its postulate is a non-perceptual vital agency or entele- chy, which does not occur in not-living things, but is associated with organisms, where it operates in certain cases influencing the chemico-physical pro- cesses so that their results are different from what they would have been apart from its intervention. The postulated entelechy is not the outcome of more complex physical conditions, not a new entity, but a difference in principle—between the flight of a bird and the movement of a comet, and biology is by hypothesis autonomous. We cannot enter into a discussion of Driesch's ingenious and consistently-worked-out theory of entelechy, or of the three proofs which he gives of the autonomy of life. The first is based on a study of morphogenesis, i.e. of the way in which an organ- ism realizes in development its specific form and structure; the second is based on a study of in- heritance; the third is based on a study of the movements of organisms. That they show the impossibly of 'a machine-theory of life' will be admitted by many who are not disposed to postu- late an organism as an entity. According to Driesch, entelechy is 'an autonomous agent,' of a non- spatial nature, without a seat or localization. It is immaterial and it is not energy; it is not in- consistent in its agency with the laws of energy; in its function it is expendable and to set free, in a regulatory manner, pre-existing faculties of inorganic interaction.
'There is something in the organism's behaviour—in the widest sense of the word—which is opposed to an inorganic resolution of the same, and which shows that the living organism is more than a sum or an aggregate of its parts. . . This something we call entelechy' (op. cit. ii. 333).
In illustration of the criticisms of Driesch's position, reference may be made to three points, (a) It is argued that, if entelechy is effective, it implies a breach in the fundamental law of the conservation of energy. But it is like begging the question to press this difficulty, and Poynting has suggested, in discussing the analogous case of the operation of our will, that a merely deflecting force does no work, though it changes configuration. The will may introduce a constraint which guides molecules to glide past one another instead of clashing—a slight change of spin which may be compensated for by a slight opposite spin put on the cell with such guiding power that a very serious admission of experimental indeter- minism, which for some minds is enough to con- demn the theory. It should be stated that Driesch has replied vigorously to the criticisms brought against his position, and that he never for a moment pretended that we could understand Driesch's taken to state his doctrine so that it does not violate the principle of the conservation of energy. He supposes entelechy to suspend re- actions which are possible with such compound- as are present, and which would happen without entelechy. And entelechy may regulate this suspending of reactions now in one direction and now in another, without the energy of the latter becoming whenever required for its purposes (op. cit. ii. 180). Entelechy stops a movement, and the energy of the latter becomes potential. Later on the movement may continue, the potential energy being recovered into kinetic. Thus no violence is done to the principle.
(b) A recurrent argument in Driesch's exposition of his doctrine of vitalism is that no machine-like arrangement can possibly account for the facts of development, inheritance, or behaviour. A machine is defined as 'a given specific combina- tion of specific chemical and physical agents,' and Driesch seeks to reduce to absurdity the theory that any machine could do what is required. His argument is very convincing, and of course we can argue only about machines that we know and imaginative combinations or improvements of these, but it seems open to the critic to reply that no one knows all possible machines, and to urge that proving the unfeasibility of one class of machines does not prove the necessity of postulating an entelechy. Concerning the ingenious machines invented by man, it may not be needless to remind ourselves that their introduction into the present argument is apt to be fallacious. For they, like the wonderful achievements of the synthetic chemists, are the fruits of intelligence, not fair samples of the inorganic world. An ingenious machine, like a type-writing machine, or a calculating machine, is an elaborated tool and an extension of what we have and has inside of it, to speak a human thought. It is because of these qualities that it is a little like an organism. Practically, however, most of those who have a notion of chemistry or of living creatures will agree with Driesch that their be- haviour is not very like the working of machines. For certain purposes it is useful to think of the organism as an engine, but we must recognize that it is a self-storing, self-repairing, self-pro- ducing, self-adapting, self-increasing, self-repro- ducing engine.
(c) Another objection is stated by J. S. Haldane: 'In order to "guide" effectually the excessively complex physical and chemical phenomena occurring in a living organism, and at many different parts of a complex organism, the vital principle would apparently require to possess a superhuman knowledge of these processes. Yet the vital principle is assumed to act unconsciously. The very nature of the vital- istic assumption is thus totally unattainable' (op. cit. p 25).
Similarly Jennings urge the difficulty of under- standing how entelechy gets its power of co- ordinating and individualizing:
'To accept the Entelechy unanalysed and unexplained is merely to give up the problem as insoluble'; and, if we try to work out a development of entelechy, 'then surely we are merely transferring our problem from the complex that we actually find in time and space to a sort of manufactured copy of this problem, presenting the same difficulties, with the additional one that it is impossibly and cruelly dealt with at all.' The entelechy simply adds to our difficulties' (J. E. Jennings, loc. cit. p 25).
Jennings also points out that, according to Driesch, two living systems absolutely identical in every physico-chemical respect may behave differently under absolutely identical conditions, this depending upon whether, and how, the entelechy takes part in the process. It is a very serious admission of experimental indeter- minism, which for some minds is enough to con- demn the theory. It should be stated that Driesch has replied vigorously to the criticisms brought against his position, and that he never for a moment pretended that we could understand
LIFE AND DEATH (Biological)

'even in the slightest degree' how entelechy is able to discharge its function as regulator and guide.

Differing from Driesch's position, according to which entelechy is not identical with the psychical, it is the animism so ably expounded by McDougall in his Body and Mind (1911). The panpsychism or mentalism in which the animistic position of Bergson should also be considered.

According to McDougall, 'not only conscious thinking, but also all other centers of activity, and even the energy of life which constitutes the organism are a psychical or spiritual process. All alike are conditioned and governed by psychical dispositions that have been built up in the course of the experience of the race.'

5. Provisional conclusion.—Looking backwards, we cannot admit that the study of animal behaviour, for instance, is no more than the study of some subtle problems in chemistry and physics; we do not find evidence to justify the view that organisms exhibit a new kind of physical energy in a line with electricity and the like; and we do not share the opinion of many recognized authorities that the facts cannot be met except by a theory of entelechy. What then is our position? It is that of 'descriptive' or 'methodological' vitalism.

Making no pronouncement whatsoever in regard to the essence of the difference between organisms and things in general, we believe it a fact, that mechanical formula do not begin to answer the distinctively biological questions. Biochemistry and bio-physics added together do not give us one biological answer. We need new concepts, such as the idea of the organism as an historic being, a genuine agent, a concrete individuality, which has traded with time and has enregistered within itself past experiences and experiments, and which has a capacity to endless development towards the future. We need new concepts because there are new facts to describe, which we cannot analyze away into simpler processes. In the present state of knowledge we cannot tell in what the newness of the organism essentially consists, and this appears to us to be a quite legitimate, though provisional, stopping-place, without pressing on to any positive vitalistic theory, which must be, from the nature of the case, metaphysical.

If we go, as so often in the endeavour to form some connected reconstruction, we should say that those constellations of 'matter' and 'energy' called organisms afford opportunity for the expression of aspects of reality which are not patent in the inorganic domain. We must not think of the stones and mortars of the everlasting life of the cosmos; they are abstract concepts, defined by certain methods, which serve well in the description of the physical universe. They certainly represent reality, for we safely make prophecies and risk our lives on the strength of this. But it is quite another thing to say that they are exhaustive. An aspect of reality which may safely be neglected in astronomy and navigation, in chemistry and engineering, becomes the central problem of organisms, and we call it 'life.' It is neither a product of 'matter' and 'energy' nor an outcome of the increasing complexity of constellations; it is an expression of the reality of which atoms and their movements are also but conceptual aspects. It may be regarded as that aspect of reality which is clearly manifested only in protoplasmic systems—and in normal conditions in all of them. May it not be that the qualities which render the protoplasmic cell or vital impetus necessary to some minds have been in kind present throughout the history of the Nature that we know? We say 'in kind,' since it is plain that we share in a movement which is not the unrolling of something originally given, but a creative evolution in which time counts. Instead of supposing the intervention of a non-material agency which controls chemical and physical processes, we suggest that a new aspect of reality is revealed in organisms—that capacity for correlation, persistence, and individuality, for growing, multiplying, and developing, for behaviour, experience, and experiment, which we call life, cannot be explained in terms of anything simpler than itself.

To the biologist the actualities are organisms and their doings, and life is a generalized concept denoting their peculiar quality. What life in essence or principle is he does not know. Taking life in the abstract, therefore, as 'given,' we have had to be content in this article with stating the general characteristics of living creatures. It is plain, however, that analytical and formal discussion falls far short of giving any adequate idea of life in its concrete fullness. For that requires a synthesis, and that, again, is impossible without sympathy. We must use our everyday experience of liveness in ourselves and in other organisms, not for knowledge alone, but as a source of sympathy wherewith to enliven the larger data of biology; and we need not be afraid of exaggerating the wonder of life. Sympathetically and imaginatively, we must seek to envisage the variety of life—hundreds of thousands of distinct individualities or species; the abundance of life—like a river always tending to overflow its banks; the diffusion of life—exploring and exploiting every corner of land and sea; the insulation of life—self-assertive, persistent, defiant, continually achieving the apparently impossible; the cyclical development of life—ever passing from birth, through love, to death; the intrinsic value of life—within the cosmos; the subtlety of life—every drop of blood an index of idiosyncrasies; the inter-relatedness of life—with myriad threads woven into a patterned web; the drama of life—plot within plot, age after age, with every conceivable illustration of the twin motives of hunger and love; the flux of life—even under our short-lived eyes; the progress of life—slowly creeping upwards through unthinkable time, expressing itself in ever nobler forms; the beauty of life—making out of the human organism an artistic harmony; the morality of life—spending itself to the death for other than individual ends; the mentality of life—sometimes quietly dreaming, sometimes sleep-walking, sometimes wide awake, capable of valuing or destroying material things to its will and in its highest reaches controlling itself towards an increasing purpose.

See, further, ABIOGENESIS, AGE, BIOLOGY, DEVELOPMENT, GROWTH, HEREDITY.

LIFE AND DEATH (Primitive).—In primitive thought, so far as we can analyze it, life and death are not the balanced opposites which civilized contemplation has made them. To early man life is the normal condition, death an abnormal and almost unendurable state, and, as a rule, the life of the individual is very brief. Exception is to be made when a man kills his quarry or his foe; here the satisfaction of an end achieved inhibits the feelings aroused by the non-violent death of a tribesman. According to the philosophy, a man would live an insignificant life, except for the result of actual physical violence or of sorcery, a refined form of it. This is the usual view of the savage, though it is hardly a reasonable opinion. The savage, like the majority of civilized men, lives in the present; this fact involves a certain inertia of thought as to the contrast between life and death, and it is true of both stages of culture that 'the fear of death is as nothing.' But this 'principle' is a replica of the individual, and a mimic of the life of the living man, with the acquisition of physical strength and moral influence, rather than with the problem of the nature of vital activity; but the constant rage and terror which characterized its attitude towards death involved a permanent concern with the supposed causes of an event which, though inevitable, remained a mystery and a violation of natural law.

1. The nature of life.—The distinction between living and dead is in some cases confusing, and in others not drawn. Again, the latter concept includes several ideas. We have, however, to deal with a 'life-principle' wherever there is a clear connexion between a concept and facts of life. For the earliest stage of thought the chief datum is the difference observed between the dead body and the living body. It is inferred that something has departed from the body when dead; the something is a concrete object or substance, identified vaguely at first by touch with some precision, as a special entity, or identified with one or other part of the living organism.

Certain Australians speak of 'something,' a youpe, not described, which never leaves the body of the living man; it grows as he grows, and decays as he decays. This illustrates well the primary stage. Put in another form, the inference is that the 'soul' does not finally leave the body until decomposition is well advanced. 

Such instances of the notion of life from observation of movement is not in itself primary. Many peoples regard inanimate objects as 'alive,' but the meaning of this is clearly shown by the Tongan and West African notion that these objects 'die' when they are broken or destroyed. The view that so vaguely indicated a content is concrete is supported by the fact that any haphazard identification serves as 'life.' 

...
necessitated by the idea that the life must take its departure by some one of the orifices of the body, and it is possible also that certain characteristics of the memory-image may have exercised an influence.1

In the early stages the life-principle is, though 'refined,' always material; the conception of insubstantiality is quite a late achievement of thought.2 But certain natural confusions occur. Thus, the *śāmāṃput* of the wild Malays differs from the body held by the latter in the same regions, for that which gives life is the *jīva.* The Patani Malays also believe in a 'life breath,' *nāyana;* the *śāmāṃput,* in their view, is not the vital principle, but is possessed by every object in the universe.3

In his study of the animism of the Moluccas and neighbouring districts, A. C. Kruijt finds a permanent distinction between the soul of a living man and the soul of a dead man. The former he considers to be impersonal, though in many cases it is certainly itself a person, and always in a miniature replica of the owner; it gives him life. Its material is fine, ethereal substance; it has various seats in the body where its action is most conspicuous, such as the pulpes. It dies when the man dies. The other soul is a continuation of the individual after life and does not appear till death. In the latter conception we seem to have a combined result of the memory-image and the hallucinational ghost.

A later detail, which involves the idea that all things in nature either are animate or possess 'soul,' is attached to the theory of the *śāmāṃput,* though it is chiefly things concerning or interesting man that possess the miniature replica.4

The *śāmāṃput* of the Eastern Senam is red like blood, or is in the blood.5 Life is usually regarded as the concrete or abstract life—the natural inference from observation of wounds or of death by loss of blood. Life and blood are identical.6 A vaguer identification is frequently found with various parts or states of the living organism, to some extent, as the heart, life is the flesh—a conception which probably originated from experience of nutrition. The heart is a seat of life; in some cases it, like blood, has a 'soul' of its own.8 The Australians regard the kidney-fat as an important seat of life, and the cam-fat and omentum are so regarded.10

The absence of breath in the case of the dead is a fact naturally assuring a belief that the breath is the life, or that the life is in the breath. In the Malays it was connected with the blood—a natural inference from observation of wounds or of death by loss of blood, in order to prevent death.11 In primitive thought there is no explicit inconsistency in the identification of life with various things; the early books of the OT hold, now the breath, now the heart, now the flesh. In the primitive psychology, in its secondary stages, has a larger list.12

In this is to be included the shadow of a man, which is (like everything connected with personality) a vital part,13 and a man's reflexion is also closely akin to it, if not identified with, his life. In Melanesia is a pool 'from which if any one dies he dies; the malignant spirit takes hold upon his life by means of his reflection on the water.'14 The lore of shadow, mirror-image, and portrait becomes prominent, however, only in the third stage of culture—that of the higher barbarism.

The Chinese place the dying man's picture upon his door, in the hope of saving his life.15 In Siam, when a copy of the face of a person is made and taken away from him, a portion of his life goes with the picture.16 The comparison of the life-essence with fire is the best known of many metaphorical analogies, and occupies a prominent place in myth—e.g., the fire of life infused by Prometheus into the clay figures which became men—and in metaphysical theology.

Until modern times, speculation has concerned itself with the source of life rather than with its origin. In excuse in the same regions, that of the Hervey Islanders, who regard a 'point' as the beginning of existence, are rare. Rare also are such pseudo-biological ideas as the Māori concept that the life of a man is contained in the fatamorin,6 but the usual conclusion is that the 'soul' is the source of life or is itself life.

2. The life of nature. — Life in the vegetable kingdom has probably always been recognized, and primitive thought doubtless distinguished it as being different in character from that of animals. The same may have been the case with its attitude to inanimate things, unless it merely 'personalized' them.

The view of Tylor, that in primitive animism there is 'a belief in the animating of all nature, and that a man recognizes in every detail of his world the operation of personal life and will,17 can be applied only to certain developments of the higher barbaric stage.

'It is not likely that at one stage man regarded everything as alive, and at a later stage gradually discriminated between animate and inanimate. The fact is, that he began by regarding everything as neutral, merely as given. Yet, though he never thought about the matter at all, in his acts . . . he distinguished as well as we do between animate and inanimate.18 Whatever power and importance he may afterward have ascribed to inanimate objects, he drew the strongest of lines between such objects and what was endowed with life.19

An excellent observer remarks of the Kafirs of S. Africa, in regard to the question whether they 'imagine everything in nature to be alive, that they very rarely think of the matter at all. When questioned on the subject of the animation of stones, they laughed, and said, 'It would never enter a Kafir's head to think stones felt in that sort of way.'20

Throughout the fluid and ill-defined psychology of primitive man we may distinguish a tendency to mark off the concept of things as living from the concept of them as ideas, whether in life or after death. The latter aspect is ideational, the former perceptual. An excellent illustration of the distinction is the Indonesian view, expounded by Kruijt, that the life of a thing is a physical constitution, but never confused or compounded with the after-death soul. In later psychologies, on the other hand, Tylor's hypothesis, that eventually the 'life' of a thing and its 'phantom' are combined, holds good. Language has probably had much to do with the combination. The view of Kruijt, however, that the Indonesian 'life-soul' is but a part of the world-soul, applies only to the higher developments of animism.21 Here we have a parallel with the pantheistic theories of the world.

3. Regard for life.—Another parallel with these is the regard for life generally, a regard which develops with culture but is more pronounced in Oriental than in Western morality. At first this feeling is a vague notion, but later it is fixed as will.22

with metaphysical estimates of the intrinsic value of life, as such.

As to China, Bushman, and Tanaim the respect for animal life is extreme. 1 A disciple of Buddhism may not knowingly deprive any creature of life, not even a worm or an ant. He may kill in which animal life of any kind whatever is contained, and must not even pier it out on grass or clay. 2 The Jain is stricter still in his regard for animal life. He supplies the life of him as he goes, lest animate things be destroyed; he walks veiled, lest he inhale living organism; he is careful that the evening and the morning are not times for eating, since one might then swallow a life thing by mistake; and he rejects not only meat but even honey, together with various fresh fruit to which he is usually bound, not because of his distance for worms, but because of his regard for life. 3

Throughout Japan no life of animals has always been held more or it is regarded as 'meritorious' to save animals from death—even insects if the number mounts to fifty or a hundred—to set, liberty广场s intended to be slaughtered. 4 To kill ten insects without reason to kill animals food—'to be foremost to encourage the slaughter of animals' are regarded as errors of the same magnitude as the crime of devising a person's death or of dressing or murdering a child. 5 The Burnese 'lunch at the suggestion made by Europeans, that Buddhists abstain from taking life because they believe in the transmigration of souls, having never heard of it before. 6 The same position may be assumed with regard to the Brahman doctrine of ahimsa, which includes the sanctity of all life. On the other hand, 'no creed in Christendom teaches kindness to animals as a dogma of religion.' The Manicheans prohibited all killing of animals, but, 'did not exact the shedding of a blood — but did it by a method similar to that of the(seed) life-interest. 7 When the conception of life as a moral essence is established, the formula is applied round all the social and religious spheres. The elementary conception of the life element is a basis of an elaborate vitalistic philosophy. In its more primitive forms this appears as a practical science of life insurance. Food . . . during thousands of years occupied the largest space in man's mental area of vision, 8 This conception helps to explain the existence of so large a body of superstitions concerning food. And into these enter the magical and, later, the vitalistic theory. Particular creatures are eaten because of their particular vital force. 9 The slyer eats part of his foe in order to assimilate his life and strength (see, further, art. CANNIBALISM, §§ 3-7). In order to procure longevity the Zulus ate the flesh of long-lived animals. 10 Media injected in the veins of 'Ezon an infusion of the long-lived deer. The lower culture special virtue is assigned to human flesh. 11 Besides the eating of flesh and the drinking of blood, there are various methods of acquiring the 'life essence.' The Ibis transfers the life of the animal to the boy by rubbing up a stone, into his body. 12 Anointing with emu oil and with gold-grease are methods of procuring life found in Indian and Chinese folklore respectively. 13 The Tibetan Buddhist acquires 'life' by drinking the 'ambrosia' from the 'Vase of Life' 14 (see, further, art. Food and Eating the God).

Long life is often the subject of charms. The Chinese war a longevity garment on birthdays.

The Hindu are long the 'life-trees.' 15 Most religions include prayers for long life. After

a death, magic is employed to prolong the life of the survivors.\footnote{Ejendalslåta, Ivar, 
Isto-Arigna, Calcutta, 1911, ii. 145.}

Magical persons, and later the gods, are regarded as both possessing a richer store of life and being able to impart it to others; the savage medicine-man is able to breathe life into an object. Breathing upon the object gives it the breath of life (as in Ezekiel's apologue of the dead bones; smearing with blood gives it the life of the blood.\footnote{I. G. Ettler, 
Die Todesbraterei, London, 1857, p. 104.} According to the Tantras, a king may slay his enemy by infusing life into his foe's belly and thus destroying it.\footnote{J. G. Miller, Gesch. der sogen. Urguinea, Basel, 1856, p. 607; W. B. Smith, p. 329, 344.} Divine persons naturally tend to become long-lived or immortal. But, though divine persons throughout bear a more or less 'charmed life,' absolute immortality is a late conception. The gods of the Homeric pantheon maintained their life by eating ambrosia, the 'food of deathlessness,' and by drinking nectar;\footnote{R. Mitra, ii. 110.} and similar ideas were connected with the Persian Horoma and the Hindu soma. In Scandinavia the myth of the apples of Immortality is eaten by the gods in order to perpetuate their life.\footnote{N. J. G. Milne, Teutonic Mythology, Eng. tr., London, 1883—88, p. 314.} The Egyptian gods were mortal.\footnote{A. F. Wiedemann, Religions of the Ancient Egyptians, Eng. tr., London, 1857, p. 179.} The (tendency to immortality, however, is carried out in the higher religions, probably in connexion with the natural attribution to the deities of a general possession of life, and a control of creation. In the end the gods assume in themselves the ultimate hopes and fears of men, and they become 'lords and givers of life.'\footnote{C. F. B. Husemann, 
Die Götter, ed. II, p. 96.}

6. Renewal of life.—A crude form of the idea connected with a renewed life after death or resurrection, may be seen among the Australian aborigines, who speak of the ghost returning at times to the grave and contemplating its mortal remains.\footnote{J. G. Miller, Gesch. der sogen. Urguinea, Basel, 1856, p. 607; W. B. Smith, p. 329, 344.} Similarly, on the W. Coast of Africa it is thought of himself in a shadowy or ghostly form that continues his existence after death.\footnote{J. L. Mitra, 
Traditions in North and South America, London, 1887, p. 173.} The belief in the revivification of a dead person does not appear until the thranamurtic stages of barbarous religion, when it becomes a favourite miracle, performed by a word of power or by the life-giving touch or contact with the body of the divine person. But the belief in a second life, or, rather, a series of lives, is a remarkable and regular feature of primitive thought. It takes the form of reincarnation; the dead are born again in another of their descendants, the idea being a natural inference from the resemblance of children to their parents and grandparents.\footnote{A. F. Wiedemann, Religions of the Ancient Egyptians, Eng. tr., London, 1857.} The Central Australians have developed it into an elaborate theory of heredity, in which the soul itself is in a shadowy or ghostly form that continues his existence after death.\footnote{C. F. B. Husemann, 
Die Götter, ed. II, p. 96.} The belief in the revivification of a dead person does not appear until the thranamurtic stages of barbarous religion, when it becomes a favourite miracle, performed by a word of power or by the life-giving touch or contact with the body of the divine person. But the belief in a second life, or, rather, a series of lives, is a remarkable and regular feature of primitive thought. It takes the form of reincarnation; the dead are born again in another of their descendants, the idea being a natural inference from the resemblance of children to their parents and grandparents.\footnote{A. F. Wiedemann, Religions of the Ancient Egyptians, Eng. tr., London, 1857.}

The idea of reincarnation refers also to living parents. Thus an old blackfellow of Australia cries to his son, 'There you stand with my body!' The son is recognized as 'the body of the father.'\footnote{C. F. B. Husemann, 
Die Götter, ed. II, p. 96.} This frequent belief has been sug-}

gested as an explanation of certain customs of which killing the first-born is a culmination—the child is supposed to have robbed the father of a portion of his life (cf. \textit{E. E. E. vi. 339}).

7. The nature of death.—Primitive thought has no definition of the nature of death, but the usual attitude towards it, as may be inferred from mourning customs, is a mystic terror. The catastrophic nature of the event is perhaps the fundamental reason for this attitude, but various emotions and ideas are superimposed and sympathy occurs among the lowest races, and they develop with culture. Another emotion is fear of the corpse as a mysterious personality; a parallel fact is that of the departed 'something,' ghost or spirit. Like other taboos and social customs which has not only its \textit{rites de passage}, such as mourning, but a mysterious power of pollution. This is partly connected with a fear that the survivors may also become victims, a fear which develops into an avoidance of infection.\footnote{N. J. G. Milne, 
Teutonic Mythology, Eng. tr., London, 1883—88, p. 314.} These ideas reach their climax in the Zoroastrian conception of the absolute impurity of death, a type of all uncleanness.\footnote{C. F. B. Husemann, 
Die Götter, ed. II, p. 96.} In others of the higher religions, particularly Christianity, the material notions of the state of death have given way to spiritual ideas and the dead soul has less and less connexion with the body, although even here a physiological fact has kept up the idea of 'the odour of sanctity.'

Fear of dying has no connexion with the primitive fear of death, and the survival of such survival reasons is very common among the lower races.

Many savages meet death with much indifference, or regard it as no great evil, but merely as a change to a life very similar to this. But it is a fact often noticed among ourselves, that a person on the verge of death may resign himself to his fate with the greatest calmness, and carry on his labours and occupation throughout his life. Moreover, the fear of death may be dispelled by thoughtlessness, checked by excitement, or mitigated by dying in company. There are peoples who are conscious for their braver, and yet have a great dread of death. Nobody is entirely free from this feeling, though strength among different races and in different individuals. In many savages it is so strongly developed that they cannot bear to hear death mentioned.\footnote{C. F. B. Husemann, 
Die Götter, ed. II, p. 96.} The last objection, however, may often be due to mythical notions.

Christianity esteems death as the passage to a better life, and the higher religions, generally, mitigate the inevitable lot of mankind.

Speculation on the origin of death is considerable in early thought, and myths innumerable have been invented to explain it (cf. art. \textit{Death and Disposal of the Dead, Introductory}, vol. i. p. 411 f.). A return to a former life was perhaps the result of these is a misterror or a trick. At a higher stage death is attributed to the malice of demons, often supposed to eat the life of men and so produce death.\footnote{N. J. G. Milne, 
Teutonic Mythology, Eng. tr., London, 1883—88, p. 314.} Otherwise, the separation of the life-giving soul from the body as a fact, not as a theory of origin, is usually explained as the result of sorcery, except in cases of obvious violence or accident.\footnote{N. J. G. Milne, 
Teutonic Mythology, Eng. tr., London, 1883—88, p. 314.} By various means the human sorcerer, like the supernatural demon, destroys or abstracts the life. In the higher religions, death appears as a punishment for breaking tabu or other supernatural injunctions. The greater religions connect its origin with sin, Christianity with the primordial sin of disobedience.\footnote{C. F. B. Husemann, 
Die Götter, ed. II, p. 96.} Throughout, humanism is the fundamental idea, and the conception of a second life is a protest against it.

8. Mythological and ethical applications.—Apart from myths in explanation of the origin of death and the less frequent form of of mythical life-source, primitive thought makes little use of the concepts of life and death as motives of.

story. Their deification is rarer still. In some stories one or more remarkable personages are brought into close connexion with the facts of life and death, and the lands they inhabit have been deathless as Maui, the culture-hero, had succeeded in passing through the body of Night. In Scandinavian story Lif and Lifthrasir ('life' and 'desiring life') survive the destruction of the world. The usual result is that some great deity possesses control over life, as in Hebraism, Christanity, and Islam. There is a tendency also to connect vitality with the sun-god; the Rigveda speaks of the sun in the character of Savitar, the Vivifier. In Hindu theology a contrast is drawn between the old Adam, by whom death entered the world, and the new, who re-introduced 'life' on a higher plane. A less refined moral is drawn in the Babylonian epic; the conclusion is that Gilgamesh must die and cannot escape the universal lot.

1. Let him hope for and, if possible, provide for proper burial. He will then, at least, not suffer the pang of hunger in the world of spirits.

The Scandinavian figures, Lif and Lifthrasir, are among the rare cases where life is personified. Death is frequently personified. Old Slavic myth seems to have had a godess Samh, and the Baganda are said to have a god of death, Wabumbe. The Etruscan figure of Charun may be similar to the last, the concept being derived from human experiences and the god being a slayer rather than a god of death. The Thanatos of Greek poetry, the brother of Sleep, is hardly a religious personification. The Sheol of the OT and the Hel of the Eddas are originally places which received the dead. As a rule, the figure later described as Death is either a messenger of the gods or a god whose office is indirectly connected with the death of men. So Yama has his messengers, and the Tatra believes in an 'angel of death.' The latter is the type of Christian ideas. The Greeks had both Charon and Hermes Psychopompos, but in modern Greek folk-lore Charon has become a figure of terror, Death himself. Death with his scythe seems to be a transformation from a personification of Time.

A certain control over life is assumed in primitive ritual dramas, as in the pretended death and revivification of youths at initiation, and of candidates for the priesthood. Ideas of a magically vital life grew up out of sacred meals; at the same time there appears the connexion of sin and death, and the consequent aspiration towards a purging of sin accompanied by a renewal of life. Out of these went the eternal vision of the renewal, but still undivinced from a mystical idea of a spiritual prolongation of existence. 'Salvation in the life after death was promised by the Greek mysteries.' In its lowest terms the salvation resulting from belief in Christ was eternal life. Faith and morality meet when eternal life is the reward for a good life on earth. Life is identified with goodness.

The fear of retribution in a future existence has been impressed by several of the great religions.

notably by Christianity. But there is no justification for connecting the origins of religion with either this fear (long posterior to the inception of religious ideas, and a late and spectral ethical development) or the worship of death or the dead. The dead are more or less feared in early thought; the infection of death is carefully avoided; the ghosts of the dead are intensely feared, and there are more carefully propitiated. If it is true, there have been developed into gods, but there are many keys which fit the doors of religion.

LITERATURE.—This is cited in the article, but the whole of E. E. T.ye's exposition of animism in his PrimitiveCulture, London, 1891, applies to the subject.

A. E. CRAWLEY.

LIFE AND DEATH (American).—The beliefs of the aborigines of America agree in the main with those of other peoples at the same stages of development; but there are a few interesting features of an individual character.

With regard to ideas of the life which informs the organism, the Eskimos identify it or its action with the 'life-warmth.' So the Navahos regarded the warmth of the body as the living soul; the 'shade' or 'double,' a distinct concept, was supposed to wander away when a man was sick or dying. The Sink and Saamis were 'vitality,' and supposed it to exist after death. The Toltec explained that it was 'something within in them which made them live: . . . which caused death when it quitted them.' Identifying breath or air with the vital principle, the Mexica and Aztecs are represented as crediting the atmosphere with a mortiferous quality.

In many American languages the Great Spirit and the Great Wind are seen as the same both in word and significance.

The Aztec word checaltli, e.g., means 'wind, air, life, soul, shadow.' A phrase attributed to an Indian orator is: 'The fire in your huts and the life in your bodies are one and the same thing.' Spirits and human magicians, such as the shamans, devour men's souls; the result is death. Death is 'infectious'; a dead man's belongings decay quickly. Such is the ancient opinion among the Irish also, who hold that a dead man's clothes wear out more quickly than those of a living man. The belief in the reincarnation of the dead in children is widely spread and firmly held. The Haida refine upon it by saying that after five such reincarnations the individual 'soul' is annihilated.

A special feature of American religious theory, on which practically the whole religious world of the central nations was founded, was developed from the usual primitive idea that divine persons are subject to senility, death, and decay. Among the Mexican gods Tezcatlipoca is credited with perpetual juvenility. The principle was developed that the gods, in particular the sun, would die if deprived of food. Hence the perpetual round of human sacrifices offered on Maya and Nahuat altars. This daily 'feast of flowers,' as it was euphemistically termed, kept the gods alive. A serious result was the equally perpetual carrying on of warfare for the sole purpose of obtaining captives to serve as victims. The heart, as the symbol of life, was the choicest portion.
It is natural that an old chronicler should say:

'The Maya have an immediate, fear of death, and they seem to have given it a figure peculiarly repulsive.' 1 In the Breton chronicles the soul is represented as a figure with exposed vertebrae and skull-like countenance, with the marks of corruption on its body, and displaying every sign of mortality. The mind, however, is singularly lucid, the Aztec sign of birth, perhaps to signify the connection between birth and death. He also wept for his dead brothers. The hieroglyph which signifies this figure represents a corpse's head with closed eyes, a skull, and a sacrificial knife. His symbol is that for the calendar date 7, corresponds to the month in which death occurs. He is with his father and mother, and prepares himself for death. The hieroglyph is not connected with the figure and is therefore a word.' 2

Like Hel and Hades, Mictlan seems to have developed from a place into a person. He is a 'grimy monster with capacious mouth,' like the medieval English identification of the whole and hell. Medieval Europe evolved also, by poetical rather than religious imagination, a figure akin to that of the American god A. For similar reasons the Sindon are said to have devoted most of their worship to Coochumne, who is Death. 3

Another detail of the human sacrifice is this:

'The idea that the god thus slain in the person of his representative, even if not immediately, was graphically represented in the Mexican ritual by skinning the slain man and clothing in his skin a living man, who thus became the new representative of the godhead.' 4

This principle, probable enough, is, however, a secondary development; the revivification of the god was the primary meaning of the sacrifice.

In Mexican theology the supreme deity Toquoxanumte (of Mictlan) is the person whom depends the existence of all things. 5 As is the case elsewhere, the sun is connected with vitality, 'animating and keeping alive all creatures.' An interesting point is the connexion of Mexican food-goddesses with the idea of life and its bestowal. 6

The aboriginal creation of a Great Spirit has been discredited. Equally unreliable are such forms as the Master of Life (of Laftan), and Master of Breath, though such phrases may have been applied sporadically by the Northern Indians to some 'great medicine.'

A feature of the eschatology is the other-world paradise for the brave, comparable only with the belief of Islam, although European chivalry shares the aversion from dying in bed. The 'happy hunting-grounds,' which have become a proverb, are typified in the Cananche belief—here is 'the orthodox Abraham's Paradise.' In the direction of the setting sun lie the happy primitives, where the buffaloes lead the fowler in the glorious chase, and where the horse of the pale-goldades those who have excelled in scalping and horse-clubbing, to attain supreme felicity. 7

LIFE AND DEATH (Chinese).—1. Popular ideas.—Life and death are more intimately connected in the Chinese mind than in the Western. The curtain separating life and death is thinner. The future life to the average Chinese, taught as he is by popular Buddhism and Taoism, is largely a replica of this life on a different plane of existence, but death is no theme of beauty. After passing through the Judgment Halls of the Ten Judges of Hades (a hell with many furies), the victims are supposed to require food, clothing, and all the needs of traveling both on land and on water, and money. All these are sent to them by their friends and relatives by means of burning paper models and imitations.

2. Ancient beliefs.—The ancient Chinese were not able to distinguish between death, sleep, and a swoon. They therefore tried to resuscitate the dead by calling in the伙 to recite spells and provide food for the dead, by keeping their bodies in the dress that they wore, and, at first, by tightly covering the corpse. 8 Many customs now in vogue in China are due to this belief. Death was a prolonged sleep (or due to suspended animation) and, as the sleeper will wake, so the corpse may do the same, should the soul return to its habitation. 9 Articles which were believed to promote vitality, such as jade, gold, silver, pearls, and cowries, were stuffed into the mouths of the dead. 10 No methods of disposing of the dead were employed which would quickly destroy the body, and collars were made of such materials as pine and cypress, for they were intended to preserve human bodies from putrefaction and to facilitate their resurrection by enveloping them thus air-tight in a material which, being possessed of vital energy, was considered capable of transmitting life once more into the clay. 11

The ancient Chinese were most scrupulous in washing and dressing the dead, so that the body might be ready at any time for the soul to return to its fleshly dwelling-place. 12 The strong Chinese repugnance of the mutilation of the body had its origin in the ancient ideas, for mutilation prevents the body from being in a fit state for the soul to return to it, or to appear in the next world. Hence criminals were beheaded as a severe punishment, and strangling was considered a lesser one. 13 The mode since the revolution seems to be that of shooting.

In the belief of the Chinese life remains after the soul has left the body. 14 There is thus a belief in a life in death itself, or, as de Groot graphically describes it, a habitation of the soul and body after death. 15 In accordance with this idea, there is not a complete separation of soul and body. In the popular ideas of the people, one of the three souls is in the grave, thus death dominates life, and life lives in death and is not extinguished by it. One of the other souls is believed to inhabit the ancestral tablet, while the third passes to the other world. 16

3. Classical ideas.—If we turn now to the ancient classics, which throw light on the early life of the Chinese, we find, besides the views already expressed, higher conceptions as well, or, at all events, less gross ones. Amidst all the ceremonial and ritual, the belief in immortality is clearly seen. 17 Ancestor-worship alone is enough to prove this. Even before the days of Taoism and Buddhism, the souls of the ancestors were believed to be in heaven. 18 Confucianism teaches the existence of the soul after death, 19 but nothing regarding the other plane of that existence. 20 The knowledge of a future life was hazy and indefinite in the old religion of China. 21

Thus they looked up to heaven (whither the spirit was gone), and buried the body in the earth. 22 The body and animal soul go downward; the intelligent spirit is on high. 23

LIFE AND DEATH (Chinese)

The attitude of Confucius towards death was that of an agnostic. He virtually avoided a direct answer to the question asked by one of his disciples about death, his reply being, "While we do not know life, how can we know about death?" The old Chinese proverb may give "no answer, because spirits and death are obscure and unprofitable subjects to talk about." Some of the modern Confucian writers agree with him and insist on the necessity of saying that the answer was "profound, and showed the proper order in which such inquiries should be prosecuted; for death is only the natural termination of life." To the ordinary reader however, it would appear that this reply was only an exemplification of a passage in the Doctrine of the Mean (xii. 2), "There is that which even the Sage does not know." 1

The followers of Confucius have not risen above the agnostic position which he took, and here it must be said that Buddhism came to satisfy the longings of the ignorant to the future with its scheme of rewards and punishments, its firm beliefs and precise statements, its apparent knowledge of Intuity, and its assurance of lives to come and the infinite progress on the road.

The duration of life and its early or late ending were believed by most of the Confucian school to be dependent on man's proper use of life, and this is a very general belief among the Chinese.

"...he who does wrong does only bring them to an end in the midst themselves." 2 A man of great virtue is sure to have long life. 3 A concrete example of this is the Great Sage, Li-nu, whose filial piety was so great that he attained the age of 100. 4

Length of days, therefore, was regarded by the Chinese as the reward of virtue, and longevity is often considered the reward of a good and virtuous life. Over many a door is pasted a piece of red paper, renewed at the New Year, bearing the wish, "May the five blessings descend on this door."

Though what is stated above is the general opinion, all have not subscribed to it. The materialistic Wang Ch'ung (c. a.d. 97) says, "Worthies are taken ill and die early, and wicked people may be strong and robust and become very old." However, he believed that death and death sentences are not a retribution for evil doing. "When a man expires, his fate is finished; when his death he does not live again." Human life and death depend on the length of the span of life, not on good or bad actions. 5

The Chinese temperance is one which enjoys life to the full. The people are generally contented and happy, and the deep hidden meanings of life are largely wanting.

4. Taoism.—In the 3rd and 4th centuries B.C. Chinese philosophy was in its golden period. It created the religious life of the Chinese people, developed original conceptions of the nature, motives, and mysteries of existence. This "pursuit of truth and wisdom" claimed not a few noted men among its adherents. Later, Confucianism, with its love of doctrine and ceremonies and its emphasis on obedience, had the effect of turning men's minds from the inquiries which a philosophical spirit delights to make, and Taoism, under whose reign such inquiries had arisen, to a large extent changed to a system of rites and idolatry. 6

Primitive Taoism—that shown to us developed through the sages and mind of its founder, Lao-tzu (b. 604 B.C.), and its earlier writers—knew little more than Confucianism as to the great secrets of life and death. Licius (Lich-tzu, 4th cent. B.C.) says: "The living and the dead . . . know nothing of each other's state." 7 We have all an end, but whether the end leads us is unknown. 8 Chuang-chieh (Chuang-tzu, 3rd and 4th cent. B.C.) asks: "What should the dead know of the living or the living know of the dead?" Yet

and I may be in a dream from which we have not yet awaked. 9 To him who can penetrate the mystery of life, all things are revealed. 10

The prolongation of life and the cheating of death of its due, or, rather, the raising of mortal life above death's transforming influence to a higher existence, 11 has been one of the aims of Taoism, to be attained by 'quietism and dispassionativism, by regulating one's breath and using medicines.

Lao-tzu is stated to have said that, to a perfect man, "life and death . . . are but as night and day, and cannot destroy his peace." 12 In Licius we find (as the statement of one almost a sage) that life and death were looked upon in the same light. Licius says that "the source of life is death." "There is no such thing as absolute life or death." It is a "stand-point of the absolute, since there is no such principle as life in itself, it follows there can be no such thing as death." 13 On the other hand, we have the saying of Chuang-chieh: "It gives rest to the noble-hearted and causes the base to cover." 14 The sage looks upon life and death merely as waking and sleeping. 15

In the idealistic and mystical writings of Chuang-chieh (Chuang-tzu), one of the great Taoist philosophers, who lived about two centuries after the founder Lao-tzu, there are some striking statements.

He says that for the sage "life means death to all that men think life, the life of the individual, or personal, or is not, for being or individual selfhood." 16 He who clearly apprehends the scheme of existence does not rejoice over life, nor repine at great death. If he knows that terms are not final, "life and death are but links in an endless chain." Life is inevitable, for it comes and it cannot be stopped. The quick passage of life is thus expressed: 'Man passes through this sublunar life as a white rose passes a crack. Here, the moment of the possessor's life is but as a stoppage as an imm. 17 The living are men on a journey. 18 'Life is a loan." 19

Taoism borrowed largely from Buddhism, and developed its scheme of life and death, amplifying its descriptions of renewed lives, which are to succeed death itself. 20

In the Epicurean Yang Ch'u's philosophy (c. 200 B.C.) life is to be lived for the possessor's own self and to be an expression of his individuality. There is to be a disregard of life and death: life is of importance only in the present, and then solely during his brief existence. The Chinese have not followed this philosopher.

Wang Ch'ung, who holds a mid position between Confucianism and Taoism, was of the opinion that the dead do not become ghosts, and are unconscious, and that 'sleep, a trance, and death are essentially the same." 21

He also says that "human death is like the extinction of fire. . . To assert that a person after death is still conscious is like saying that an extinguished flame can still burn. . . The soul of a dead man cannot become a body again." 22

5. Buddhism.—For the general attitude of Buddhism as regards life and death see art. DEATH AND DISPOSAL OF THE DEAD (Buddhist) and KARMA. It is, however, more than questionable whether its esoteric Buddhism, with its metaphysical aspect towards the world of sense, has much or any hold on the mass of the people. 23

Accordingly, many of

its votaries in the Northern branch of that religion believe in the glorious Paro of the West, to which the souls of the believers in Amida (Amitābha) Buddha can ascend and escape the long exta of lives and deaths supposed to be the lot of the aspirant to Nirvāṇa on his weary road to the goal.

To vie with its sister religion, Taoism evolved in its turn a nine-storied heaven with the Dragon King as ruler to await the arrival of pious souls.

6. Conclusion. — Thus, with the multiplicity of views to which Buddhism lent itself, the Chinese mind, death looms largely in the purview of life, not only to the Buddhist, but also to the Taoist and even the Confucianist; for Buddhism has entered into the religious life of the whole people and tinted their ideas and thoughts.

The Chinese is practical in his outlook on life. He finds himself in the midst of it, he has to accept it, and his thoughts turn more naturally to what its outcome is to be than to its source and origin. More fantastic than his visions of his future are those of his past. With no inkling, for the most part, as to whence he came, he has given full play to his fancy to conjure up the origin of the human race. One of the fairy-like tales of his mythology is the story of the two giants, who brought order out of chaos, were the progenitors of mankind; while in another account the mountains produced the lowest of the lower creation, and these, in turn, developed higher forms, culminating in man, who was evolved from the ape.

We find higher ideas in the ancient classics; for, though covering but limited ground, the rudimentary knowledge of the Supreme Being possessed by the ancient Chinese embraced the idea that He gave life to the multitude, so that in the State worship by the Emperors He has been addressed as the maker of heaven, earth, man, and all animate beings.

LITERATURE.—Authorities are cited in the footnotes.

J. Dyer, Ball.

LIFE AND DEATH (Christian).—In passing from the OT view to that of the NT there is no abrupt or startling gap, although a delicate tact is conscious of a difference of atmosphere, and becomes aware that the elements common to both are not in the same proportion, and that the term has been subjected to some organic change in the later form. In the OT words denoting life occur in 106 passages, and in the Apocrypha in 24; words denoting death occur in 354 passages, and in the Apocrypha in 433, in the NT words denoting life occur in 135 passages, and words denoting death in 128. In this quantitative analysis the striking fact is that death occupied the OT mind more predominantly than life. Qualitatively taken, however, a striking difference at once appears. Life in the OT for the most part refers to existence here in the flesh, and comparatively rarely rises above it, being summed up in the LXX phrase of Sir 37:1, 'the life of man is in the number of his days.' Instances occur, of course, especially in the later Psalms and Wisdom literature, of life being regarded as independent of bodily conditions, but these are to be treated as indications of a transition in thought to a higher plane, as a preapocalyptic experience.

The significant feature of the NT allusions to life (and death) is their want of any real interest in mere earthly living, and this feature is plain even where the necessities of experience compel reference to the fact of physical death. Thus, out of a total of 135 passages more than seven can be referred to physical life. In one (Lk 12:19) the text varies, and the life referred to might be spiritual. In Lk 10:24 the life of Dives is sharply contrasted with the life of Lazarus. In Acts 8:39 is a quotation from a work inspired by Stoic thought. In Ro 8:5, 1 Co 3:3, and Ph 1:21, where life and death are conjoined as correlative powers, the reference may be to earthly life and death, but the probability is that in each case the meaning is spiritual and spiritual death face us. In the first passage it is invisible powers personified that are declared incapable of sundering the Christian from Christ; in the second passage the words are equally patient of either meaning; and in the third, if Thoephylact may be followed,1 the spiritual meaning prevails. Besides these seven passages, the word 'life' in the NT does not seem to be used anywhere in the lower sense.

The case is different with the term 'death' (θάνατος), for in something less than a score of passages in the Gospels, and in eight passages of Acts, the death of Jesus is referred to; in nine passages of Heb. physical death, especially that of the Son of God, is the same as death. For Christmas is personified in conjunction with Hades, or is described as being followed by a second death, or is regarded as the term of this life. On the other hand, St. Paul and St. John, with hardly an exception, when they refer to death all mean spiritual death, not physical. Our task is to examine the passages where the terms ζωή and θάνατος, or their cognates, occur in the NT, in order to ascertain their precise meaning.

1. Life.—(a) the plural mode of expression for the 'life' which Christ gives is to be found in the use of the definite article. Examples of this are Mt 7:4, 'straitened is the way that leadeth unto life'; 18:8, Mk 9:44, 'to enter into the life that I have'; Mt 19:10, 'thou wouldst enter into the life'; Jn 5:24 (cf. Jn 3:3), 'hath passed out of the death into the life'; 6:6, 'the bread of life'; 8:51, 'shall have the light of the life'; 11:14, 'I am the life'; 19:7, 'the prince of this world is condemned'; Rom 5:18, 'the law of the spirit of the life'; 2 Co 4:4, 'the life worketh in you'; 5:5, 'the mortal may be swallowed up by the life'; 1 Ti 6:19, 'lay hold of the aeonian life'; 1 Jn 1, 'the word of the life'; 5:17, 'he that hath this Son hath the life'; Rev 1:5, 'the crown, the book of the life'; 21:4, 'the water of the life.'

In all these cases the article is used in those grammarians who regard the neuter of the substantive as a substantive, and to be referring to an object already definitively known. Thus, in the instances given the implication is that the life mentioned is that with which the reader was already familiar as the subject of Evangelical preaching, and an object of their own religious experience. It is also implicitly contrasted with another and a lower kind of life—that of the natural man of this world (cf. F. W. Blass, Grammar of NT Greek, London, 1905, p. 146).

(b) Life which is unreal and fleeting is set aside in favour of the life which is real and abiding: 1 Ti 4:8, 'life that is now and life which is to come'; 6:9, 'the life that really is.'

(c) It is assigned a heavenly nature by a predicative clause: Ro 5:19, 'we shall be saved by his [the Son's] life'; 2 Co 4:4, 'the life of Jesus'; Eph 4:24, 'the life of God'; 2 Ti 1:11, 'life that is in Christ Jesus'; 1 Jn 5:25, 'the life in his Son.'

(d) The characteristic NT expression qualifying life, however, is 'immortal,' repeated in Ro 8:11 24 times, and 'eternal' 42 times, but both terms are misleading, as giving a quantitative in-

st. of a qualitative category. "Ionian" as an adjective occurs in all 71 times in the NT, and in 43 of these it qualifies "life." All these passages (to addition to 17 in the Fourth Gospel) are Mt 16:29; 25:1, Mk 13:8, Lk 1:10; 1:13, 2:15, Ac 13:48, Ro 2:5, 11, Gal 6:6, 1 Ti 1:9, 2, 6, 15; Tit 1:3, 6, 11; 1, 2 Pt 3:5, 10. In all these passages it is not the duration of the life itself, but the nature and source. Hence, though the rendering "eternal" may be permissible, that of "everlasting" is erroneous, and even "eternal" can be allowed only where eternity is understood as by Boethius:

Whatever, therefore, comprehends and possesseth the whole prelude of unlimited life at once, to which nothing of the future can be added and from which nothing of the past hath flowed away, this may rightly be deemed eternal (Philo. Cont., v. prov. 6 [PL, xxii. 593]; cf. Dacty, Perirol., xxii. 61-60).

It is in the prominence given to this view of life that we are to find the superiority of the NT teaching on it over that of the OT.

The transition from the sense of "aeonian" in the LXX (where it [or its cognates] is used about 200 times) to its sense in the NT is of the nature of an evolution. The NT sense of "spiritual," or "divine," is not wanting in the OT, but the more usual sense of the term is that of duration. Out of this lower by no means futile, first tentatively, but at length surely and far, the ground on which duration rests, viz. the possession of an essence which is superior to the category of time. What endures is that of which time is but the changing expression and the great gift of Christ is seen to consist in the power which He confers of escaping from the jurisdiction of "the prince of the power of the air" into the higher realm where the "aeon" or the "aeonian" king rules.

The term "for" in the NT is important for our present purpose: for, in addition to the passages in which the temporal meaning of the term is required, there are a number which are ambiguous, and also a number where "aeon" is certainly used in a personal sense. Different ages, or different regions of the universe, are placed by God under the control of rulers to whom the name of "aeon" is given. In Ac 10:19 the rendering should in all probability be "God maketh them" (for the word is found in this sense in Lk 11:49). The same word, together with the prophet's, are said to receive their inspiration "from aeon." The sense of Jn 10:23 is best reached by paraphrasing it: "From the realm of the aeon the news has not been heard of anybody opening the mouth," etc. (In Eph 4:90) no question can be raised, for the 'aeon of this world' there is clearly a personal being, since he is given as a sub-title 'the prince of the power of the air.' In 1 Ti 1:17 God is distinguished as the "King of the aeons." In Col 1:16 the revelation given to the saints is exalted above that given to the aeons. The latter knew nothing of the mystery of the indwelling Christ, the hope of glory. The knowledge of this was the prerogative of the saints. In 2 P 3:8 the "day of aeon" can be nothing but the "day of the Lord," and hence the aeon here is Jesus (cf. also He 1:2, 1 Co 10:4, 14, and the appendix to Mk in the Freer-logion).

When we remember that Christianity grew up in a Gnostic environment, that among the Gnostics the doctrine of personal aeon was universal, and that I Clem. 35, Origin (c. Celsus, vi. 24), Ignatius (Ep. 19), Clem. Alex. (Strom. iv. 13), Ireneus (Herm. i. 17), and Hippolytus (Ref. vi. 20) all refer to the doctrine explicitly as worthy of note and demanding correction, we can understand the present interpretation of the NT. The same fluidity of meaning which attaches to the word "aeon" outside the canon attaches to it also within the canon. Omitting temporary significance as to general to need exemplification, it is enough to say that the "word of aeon" may stand for a superhuman being who is good or evil, supreme or subordinate. Hippolytus (Ref. vi. 20) mentions "the aeons" among the instruments who speak of a situation of good powers to evil, and of a concord of good and wicked aeons, and St. Irenaeus (Out. 2.6. 3) relates that the Valentinians taught the existence of a certain perfect, pre-existent, and self-existent Aeon, Pneuma, Propator, and Bythos. So Eusebius (CSEL. vi. 2) says: "But the god (and man), and the aeons of things are seven, as is written in the Apocalypse." The Valentinians further taught, according to Tertullian, that the supreme aeon ennounced righteous aeons, the good, and these ten others, which twelve more were produced, making thirty in all; they also saw in the vision of Jesus to the Temple when He was twelve years old, and, again, when He was thirty, a cryptic reference to the system of aeons. Reitzenstein (Raisonn. Leipzig, 1901, p. 256) quotes a Hermetic hymn addressed to "aeon" as the "unconquerable," which is said:

It is said: Thou art the beginning and the end, and the last of all, for of there are all things and to (each nation) do they run as to their end. So in the Hermetic tractate Haud unae, 3, it is said: 'God makes aeon, the aeon makes the world, the world makes time, time makes nothing.' Here 'aeon' is the name of the ideal principle which ultimately takes form in the world of becoming. Similarly, Plato (Philo. 5.75) says: 'When the father and creator saw the creature which he had made moving and living, and the created image of the eternal gods (now alive), he rejoiced, and in his joy determined to make the copy still more like the original; and this was the "aeon" (Anaximenes), he was to be the eternal "aeon," so far as might be. In this passage, where Plato wants to express the idea of everlastingness, he has the word "aeon" ready to his hand. But, when he goes on to express the same idea in a different way he uses a different term ("aion"): 'Now the nature of the ideal being was aeonian (apodeiktyon), but to bestow this attribute in its fullness on a creature was the height of presumption. He would make a moving image of the "aion" (aeonian), and, setting in order the same thing for ever, he made the heaven. He then made the aeon abiding in unity (persona aeion) [an image that in itself was aeonian] to move in accordance with number; and this image we call time.' In the latter passage, as in this, the "aeon" is dealing with the quality of the archetypal order, and, therefore, he uses the word "aeon." In the former passage he was dealing with a category of quantity, and, accordingly, he employed the word "aeon," everlasting. J. Adam (Finity of Eternities, Cambridge, 1911, p. 141) translates aside to Pindar (fr. 131, ed. Bury) as the 'living man,' and says that it never means 'eternity' in Pindar. The passage is ιόνος σε' ἐν αἰόνιοι, ἐν αἰόνιοι, ἐν αἰόνιοι ἐν οἷς συνήπτεται ἔνας τοῖς ἄνθρωποι τοὺς τὸν θάνατον. The antithesis of aeon and time reappears in Pindar (ed. T. Maurice, London, 1774, i. 496), who makes the time 'aeonian,' and the "aeon of the aeon" is "aeonian". Similarly, he says (§ 619) that 'the life of the intelligible world is called aeon, as that of the sensible is called time.'

The question whether "aeon" and 'aeonian' are to be rendered qualitatively or quantitatively is not the question whether a Jewish or Greek conception is the determinant, for the Hellenization of Christianity was active, even if not in its acme form, from the earliest NT days. Greek thought had penetrated Jewish before NT times (W. Bouisset, De l'existence de la "monade" dans le neueste Zeitalter, Berlin, 1903, p. 493; cf. "aeonian torment," in 4 Mac 9.; "aeonian life," in Enoch 106.; "judgment of the aeon of aeons," 108.; "the King of the aeon," 272), and is embedded in the NT itself. Moreover, the Rabbinical antithesis of 'this world' and 'that world' lay on the borderline of Greek thought, and might pass easily into it. The witness of Philo must be added to that of the Syoptic gospels (with their many isolated sayings redolent of Greek thought and their record of the teaching of a mystery-religion), the Fourth Gospel as a whole, Eph. and Col., and the constant tendency of the Greek in St. Paul to burst its Jewish fetters. We conclude, therefore, that "aeon" in the NT is life that belongs to a higher order than animal or ordinary human life; it is above, and the recipient of it is lifted, by possessing it, to a higher state of consciousness. It is not this present life indefinitely existing within the limits of the human creature. It is life beyond the grave distinguished as such from life on this side of the grave. It is not possible here to do more than allude to the central place which the fact and truth of regeneration (q.v.) occupy in the world of the Christian. All that is required is a reminder of the close connection of regeneration with the aeonian...
life which forms the theme of the NT. To be born from above (John 3:3); to be turned and to become as little children (Mt 18:3); to come out into the resurrection of life (Jn 5:24); to put on Christ (Rom 6:4); to be spiritually alive together with Christ (Eph 2:5); to be in Christ (2 Cor 5:17); to put on the new man (Eph 4:22); to be a new creature (Gal 6:5)—these and many similar passages describe that dynamic process of which the result is eonian life, or salvation, or the Kingdom of God, or blisslessness.

2. Death.—Christian theology has been at once oppressed and confused by its failure to note that in the NT it is not physical life cleared of its effects by Christ's atonement which is referred to as physical death as such as that is connected with sin. (1) Reflexion would assure us that, when life is used in a super-physical sense, it is at least probable that the death referred to is always something more than the death which dissolves the connection between the self and its physical vehicle. If one be of the transcendental order, so must the other be. (2) It has never been easy to maintain a causal nexus between sin as a wrong act of will and physical death which in its own right will. Modern science has convinced itself that death has reigned not only since Adam's transgression, but from the first appearance of life. Death indeed, apart from sin, is a process of nature and not a super-natural phenomenon. (3) Christianity is a religion whose home is in the spiritual order, and its interest, therefore, in the physical, though real, is only indirect. From its superior standpoint it may have something to say as to the origin and permanence of physical death, but in the specie of death as intimately bound up with its own life that death will not be of the physical order. (4) The law of analogy points in the same direction. A principle which is operative on one level repeats itself analogously at other levels. Just as gravity may be described without strain being love embroiled in matter, or, conversely, as love in the spiritual world exercises an attraction which binds spiritual beings as surely as gravity binds aether atoms, so death as physical is a reflexion of a similar principle in the world where life is life indeed. (5) All philosophy assures us of the existence of an infinite principle or truth in the finite event or fact, of the existence of a universal in the particular, but a physical death is a fact in the world of space and time; hence it conceals what is more than a fact—a truth or idea, or a fragment of reality presented under the guise of the actual. If, therefore, a religion which proclaims itself as having the real for its object speaks of death, or attributes to death any place in its world, it cannot be supposed to limit its reference to the death which is merely physical. It will be found on examination that the conception thus reached a priori by careful scrutiny of the evidence. (6) We may conveniently begin with passages in which death is obviously treated as acting in the spiritual sphere. The following passages in the Fourth Gospel may be cited: 'He hath passed out of the death into the life' (5:25; cf. 1 Jn 3:3); 'If a man keep my word, he shall never see death' (8:51); in ch. 11 the difficulty caused by the apparent indifference of Jesus in the beginning, by the reference to sleep, and by the present tense in the future, the obvious implication of death is obtained in what is certainly a gloss. In 1 Jn we have similar references to spiritual death: 'He that loveth not abideth in the death' (3:8), where the death is clearly on the same plane of being as love; in 3:14 the sin unto death (or not unto death) is also clearly a sin which is followed by death of the same order, viz, in the world of free will, of which the sentence 'for them that sin not unto death—are a sentence which is meaningless if physical life is meant, since that is ex hypothesi there already. In Rev. the second death, which is spiritual, is distinguished from the first death, which is physical (20:14, 15). In the Epp. also many passages occur in which death must be interpreted as spiritual. In Ro 1:26 St. Paul, speaking not as a jurist but as a preacher (cf. W. S. Sarve, "Paulus," Edinburgh, 1903, ad loc.), sets up an ideal standard with ideal consequences for violation of it. Those who outrage the plainly expressed mind of God as to what righteousness is do so with the full knowledge that they deserve death ('and meint damit den ewigen Tod' [H. A. W. Meyer, "Der Brief an die Römer," ed. F. Weiss, Göttingen, 1899, ad loc.]). In the striking passage Ro 5:21, unless St. Paul is guilty of inexcusable logical confusion, the death is not a natural process which in the very act of the same kind in vv. 12, 14. The current exegesis which assumes such looseness of thought in St. Paul is itself responsible for the confusion. The meaning is simple, plain, and consistent throughout. It is St. Paul's conception of the death, conceived in its character, being a misuse of free will; therefore he brought on himself spiritual death, and this death has afflicted mankind ever since. But now at last the Christ of God, by Himself entering into a vital union with a race self-deprived of the higher life, that is, by sharing in some sense their loss, has restored what they had lost; He has, that is, obeyed the law that only through death we enter into Life. The death He has undone is that which consists in the absence of spiritual life; and the death He has borne is that which consists in the process of turning the lower nature, in the process of the mystic crucifixion. The one lost eonian life by self-will; the other gained it by obedience, and gave it through love. Similarly, the linking of baptism with Christ's death and life in Ro 6 is explicable only if it is eonian life and eonian death that are in question, and the best proof of this view is to be found in the difficulty is a fact in the world of space and time; hence it conceals what is more than a fact—a truth or idea, or a fragment of reality presented under the guise of the actual. If, therefore, a religion which proclaims itself as having the real for its object speaks of death, or attributes to death any place in its world, it cannot be supposed to limit its reference to the death which is merely physical. It will be found on examination that the conception thus reached a priori by careful scrutiny of the evidence. (a) We may conveniently begin with passages in which death is obviously treated as acting in the spiritual sphere. The following passages in the Fourth Gospel may be cited: 'He hath passed out of the death into the life' (5:25; cf. 1 Jn 3:3); 'If a man keep my word, he shall never see death' (8:51); in ch. 11 the difficulty caused by the apparent indifference of Jesus in the beginning, by the reference to sleep, and by the present tense in the future, the obvious implication of death is obtained in what is certainly a gloss. In 1 Jn we have similar references to spiritual death: 'He that loveth not abideth in the death' (3:8), where
EVEN THE FAMOUS PASSAGE IN I Cor. 15 IS GIVEN A COHERENT MEANING ONLY WHEN THE THOUGHT OF SPIRITUAL LIFE AND SPIRITUAL DEATH IS_kept in the foreground. It is true that here the thought is less pure, and that the physical death of Christ and His Resurrection from the dead were made to prove the reality of the heavenly order. But, even so, it is not the physical resurrection that is the vital point, but the spiritual, of which the physical is but an expression. The argument is as follows: To be saved, a man must believe. Faith, however, when it comes, annuls this (spiritual) death, for it is essentially life. This living faith (the life of God in the soul) is what filled Christ, and constituted His title to the higher state of being, as is proved by the fact that He overcame (spiritual) death; the proof that He did so overcame spiritual death is to be seen in the fact that He could not be hidden by physical death. Hence death in both senses is abolished, or is in the process of being so. A coalescence of all things was necessary, and it is essentially spiritual, and, if physical death comes into question at all, it is incidental only or by way of illustration. That this is the true interpretation becomes clear when we observe that the remainder of this epistle is divided into two parts. The 5th and 6th chapters are occupied with confirming that higher spiritual, or risen, life will require a cognate spiritual body, and that as God gave the life so He will give the suitable body.

(6) There are, however, unquestionably many passages in the NT which seem, on the surface at all events, to refer exclusively to a physical death. They are those which in the Gospels (12 times) and the Acts (8 times) deal with the death of Jesus Christ. But this is not necessarily the only way of understanding these passages. They are, after all, only words, and their words, with their different conceptions of things, are capable of being made to mean many different things, if one is disposed to construe them. What is signified is that Jesus suffered a physical death at the hands of the civil and religious authorities of His day. What is signified is that His sufferings as such are a sign of divine wrath. The death of Jesus was a physical event, of which many passages in the NT give an account. It is a sign of divine wrath, and, as God gave the life so He will give the suitable body.

The Epistle to the Hebrews also refers explicitly to the physical death and sufferings, but where we must allow for the exiguities of the line of argument adopted. This compelled the author to place the physical death of the man Christ Jesus over against the physical death of the animals slain in OT sacrifices. Yet, even so, the form of the argument depends on the superior worth of the former. His sacrifice was all-compelling, partly because it was voluntary (7th and 10th), still more because of its transcendent worth, it being the offering of One whose life was divine, and made in accordance with the power of an indissoluble life (7th) and through an àonian spirit (6th). The life, we may say, that even here is dealt with is essentially spiritual, and is physical only in a secondary and subordinate sense.

(c) A third and small class of passages alone remains where death is of an ambiguous appearance. In Rev. 12:8 and 20:6, death is personified and joined with Hades, and both may attack man on his physical or on his spiritual side. In Mt. 24:29, and Lk. 17:28 the shadow of death falls across the heathen world, where spiritual death is, unmentioned. In Mt. 20:27, Mk. 9:44, and Lk. 16:29, the prophecies of Jesus, it should be observed, should not taste of death till they saw the Kingdom of God come with power. It is impossible to say what was the original context of this triplicated passage, but it is improbable that the passage itself is to be regarded as a falsified prophecy of a historical fact. The Kingdom of God and the 'Son of Man' are terms within which express inner realities, and it is at least likely, then, that 'death' is also eonian. In this case the meaning of the passage is that there were some ('remnant,' the few who were 'chosen') who would not taste the bitterness of spiritual death, because to them would be vouchsafed the mystic vision of the King in His beauty, of the land that to most men remains for ever.

It will be clear, from what has been said, that the NT and Christian anti-thesis is not that of the OT and Judaism, between this world and the next, but between two kinds of life both here and there. It is a qualitative and not a quantitative difference. On one side is life, and on the other, death. On the other side is the life which creates the very power by which sense and intellect discharge their limited functions, which is in itself doulous of forus, is only partially grasped by perceptions, and for the most part remains outside conceptions—life, in short, whose boundaries are set by the practical needs of the empirical Ego. On the other side is life which creates the very power by which sense and intellect discharge their limited functions, which is in itself doulous of forus, is only partially grasped by perceptions, and for the most part remains outside conceptions—life, in short, whose boundaries are set by the practical needs of the empirical Ego. Life is new creation, is entirely human life, divine, and is that ever-flowing stream from the life of God of which all expressions of life are at all levels fragmentary flashes. We pass from the fragment towards the complete and perfect in exact proportion to our surrender of our lower and separated self to the life of the whole, which is God. It is this enhanced life and expanded consciousness that the religion of Jesus Christ and His Church is primarily concerned with. It is a matter in theocritology, in theories about resurrection, in hypotheses such as that of universalism, of conditional immortality, of the nature of the ultimate union of soul and body, or of re-creation, thought of there is in the NT. It is concerned with a higher life experienced here and now, and to grow hereafter more and more towards the perfect day. It is interested in theories about that life, but its interest in them is not vital.

W. E. COBB.

LIFE AND DEATH (Egyptian).—The Egyptian conceptions of life and death seem at first sight to be full of inexplicable contradictions. No wonder is felt when we consider that life and death are alternately praised and execrated, for in such praise and execration personal preferences are involved, and these may vary. But it is more perplexing to find diametrically opposite views expressed or implied with regard to questions of fact or belief, as when the same being is described almost in one breath both as alive and as dead, or when men who fear the dead are seen to have used
magical means to kill their enemies, thinking thus to be rid of them. Such inconsistencies arise from the blending of the simple distinction between physical life and death with the extremely ancient and almost universal belief in immortality—a belief that is rooted partly in the passionate abhorrence which death inspires as an indignity inflicted upon the living,1 and partly in the fact that death is known to us only through observation of the external world, and not by conscious inner experience.

Life and death are facts, since they are ever being forced upon our notice; death is a falsehood, however, because we have never known it to be true of ourselves, and, furthermore, because we will not admit that it can be true of ourselves. But, if after the physical death we are not dead, then we must be alive. The words 'life' and 'death' thus both acquire a double meaning, and a wide field for speculation opens out; the achievements of the Egyptians within this field have here to be considered.

1. *Philological.*—Whereas the Egyptian word for 'to die,' mér, Coptic mér (indefinite), mér (qualitative), is shared with all the Semitic languages, the verb for 'to live,' nh, Coptic nh (indefinite), nh (qualitative), is of doubtful affinities. Several derivatives from the same stem, such as nh, 'sandal-string;' nh, 'goat,' nh, 'eat,' fail to suggest any earlier or more concrete meaning for it, while other words having the same radical letters, such as nh, 'oath' (Coptic anah), or nh, 'mirror,' clearly derive their meaning from nh, 'to live.' Closely related in sense are the verbs wren, 'to exist,' and hpr (Coptic

1 See art. ETHICS AND MORALITY (Egyptian), § 7.

belief in immortality; these are wnh-hrw, 'the justified,'1 and wen nh, 'who repeats life,' respectively. The deceased Pharaoh was called 'the great God,' like his great prototype Osiris, while the living king is 'the good god.'

2. *Writing and figured representation.*—(a) The symbol of life, which is also the hieroglyph used for writing the words 'life' and 'live,' is the so-called cruz ansata, [\(\text{\_<}_\text{\奥林}^\text{\_<}_\text{\奥林}\)], popularly known as the *ankh* (nh), or 'key of life.' Its origin has been much discussed, most scholars agreeing that the sign represents a tie or knot of some kind, though in V. Loret's opinion (Sphinx, v. [1902] 138) it depicts a mirror. The true explanation, hinted at but immediately rejected by G. Daressey (LTAP)

\[\text{\_<}_\text{\奥林}^\text{\_<}_\text{\奥林}\]
Life and Death (Egyptian)

xxvi. [1901] 130), was first enunciated by Battiscombe Gunn, who proves the symbol to depict the strings or straps of the sandal.

No demonstration of Gunn's discovery (acknowledged by A. Erman in his Ägyptische Grammatik, Berlin, 1911, p. vii) has yet found its way into print; the crucial evidence in the following argumentation has been supplied by Gunn himself. The Greek word ἄποστατον, roughly meaning 'symbol', is very exactly resembling the symbol and hieroglyph for 'life', which is often represented pair-wise at the foot-end of Middle Kingdom coffins. These coffins are surrounded with pictures deemed necessary for the happiness of the dead in the after-life, and care is taken in most cases to place each object in its appropriate position as regards the body of the dead man within the coffin: thus necklaces are shown on the level of his neck, sceptres within reach of his hands, and so forth. A priori, therefore, it is not to be concluded that the object was connected with the feet—a point clinched by the fact that a pair of these objects is usually shown next one or more pairs of sandals, while the other articles depicted (anklets, bowls for washing, etc.) are more or less clearly connected with the feet (see J. Garstang, British Museum Quarterly, 1903, vol. i. part 1. and H. Schäfer, Fruchterbeiträge, Leipzig, 1905, fig. 73 [pp. 54, 53 [p. 60], and pl. 11]. In several instances the accompanying inscriptions describe the pair of objects as 'the two *hmin on the ground under his feet' (cf. Garstang, loc. cit.).

There is an object which accompanies the sandals that is often shown in this way that seems to indicate that the objects served to land this loop to the sides of the sandal, and possibly a kind of ribbon bow or band was used to make the representations harmonious in detail, but, remembering that this sign is a very old one, that the modes of binding the sandal to the foot vary greatly, and that several objects depicted the signs not as actually worn but laid out in such a way as to exhibit them to the best advantage, we shall hardly doubt that the objects shown on the Middle Kingdom coffins and called *hmin are a pair of sandal-straps for use in the event of those attached to the sandales required to be replaced. The cut on the preceding page depicts various examples of the sandal-straps both as an article of use and as a hieroglyph, together with pictures of sandals for comparison; the hieroglyph is normally painted black.

There being no obvious connexion between the idea of life and that of sandal-straps, it must be supposed that the idea of life, not being itself susceptible of pictorial representation, was symbolized by an object the nature of which fortuitously coincided in sound with the word 'life'; this procedure is merely the procedure called 'phonetic transference,' extremely common in hieroglyphic writing.

It is, of course, possible that *hmin (Coffin Texts, § 1) of the Coffin Texts, and *hmin (Leb. II. 1913; 721, 1) of the Coffin Texts, who we find death compared with sleep (e.g., Pyramid Texts, ed. Sethe, Leipzig, 1905, 721). Life, on the other hand, is full of activity, and chief among its needs are bread and drink ("breath of life" is a common expression) and food and drink for sustenance. Here, again, the wishes for the dead are the best evidence of the things deemed needful for the living; "bread and beer, ozen and geese, cloth and linen, incense and myrrh, and things good and pure wherein a god lives"—so runs the common formula, which hardly less often mentions "the sweet breeze of the Northwind" as a necessity of life. The place of life was pre-eminent in the earth: "Of all the places on earth" begins a favourite invocation.

Various views were held as to the whereabouts of the dead, but their habitation was normally not the earth: "those who are yonder", is, in the view of a common designation of the deceased. That the land of death is a land wherein there is no returning was early said; already in the Pyramid Texts (2175) we find the warning, "Go not upon those western ways, for those who have gone yonder come not back again" (the same thought recurs later; cf. Harris 500, recto 7). Religions as to the duration of life and death are often encountered in the texts. The Egyptian prayed that, like Joseph, he might attain to "heaven", the "eternity" of the necropolis, the "lives of eternity" for the innurnery gods, the "span of things done upon earth but is but a dream" (IB 2175). In comparison with death, the endlessness of which was constantly alluded to (the city of eternity) for the necropolis, the lords of eternity for the innurnery gods, the span of things done upon earth but is but a dream) refers only to the dreamlike fuzziness of its events, not to any speculations concerning its reality. With regard to the extension of the idea of life, it seems to have included man and the animal upon his knees, and bleeding from a wound on the head; later this sign is merged into another of wider application and varying form—the commonest form is —which accompanies various words meaning 'prisoner' or 'enemy.' Very often, however, these hieroglyphs are mutilated or suppressed because of their ill-omened associations (Z.A. 111. 1917).

3. Literal views of life and death.—How life was envisaged may best be learned from the following wishes on behalf of a dead man:

May there be given to thee thy eyes to see, thy ears to hear, what is spoken; thy mouth to speak, and thy feet to walk. May thy hands and arms move, and thy flesh be firm. May thy members be pleasant, and mayest thou have joy of all thy limbs. Mayest thou see thy death (and find it) whole and sound, without any ailment upon thee; thy true heart being with thee, even the heart that thou didst have heretofore (R. Sethe, Urkunden des ägypt. Altertums, Leipzig, 1904-69, iv. 114).

Death is the negation of life; in slaying their foes, the Egyptians sought to make them 'as though they had never been' (Urkunden, iv. 7, and passim), and the custom of cutting off their heads and phalli indicates of what activities it was intended to deprive them. Further light is thrown on these materialistic conceptions of life and death in a passage of the 175th chapter of the Book of the Dead, where the state of death is described:

"Of a truth it is without water, it is without air—deep, dark, and void, a place where one lives in quietude. Pleasure of love is not there to be had, nor, but hatred shall be given in lieu of water and air and love, quietude in lieu of bread and beer."

Inertia is the chief characteristic of the dead, therefore they were called 'the weary,' 'the inert' (§ 1); elsewhere we find death compared with sleep (e.g., Pyramid Texts, ed. Sethe, Leipzig, 1905, 721).

Life, on the other hand, is full of activity, and chief among its needs are bread and drink ("breath of life" is a common expression) and food and drink for sustenance. Here, again, the wishes for the dead are the best evidence of the things deemed needful for the living; "bread and beer, ozen and geese, cloth and linen, incense and myrrh, and things good and pure wherein a god lives"—so runs the common formula, which hardly less often mentions "the sweet breeze of the Northwind" as a necessity of life. The place of life was pre-eminent in the earth: "Of all who live upon earth," begins a favourite invocation.

Excepwho the symbol life is used.\footnote{For this and other valuable references the writer is indebted to Professor Sethe and Godzicen.}
LIFE AND DEATH (Egyptian)

4. The hatred of death.—The opening words of the "grave-stone-formula," "O ye who love life and hate death," strike to the root of the most profound feelings of the Egyptians, whose intense love of life and detestation of death made them devote more time and thought to funerary things than has been done by any other people before or since. The best expression of these feelings is on a well-dated stone only from the year 46 B.C., but wholly Egyptian in feeling; a woman speaks from the tomb to the husband who has survived her:—

"O brother, husband, friend, highest—th' heart shall not grow weary of drinking and eating, drinklessness and love. Celebrate a happy day; follow thy heart by day and night; put no care in thy heart. Where are thy years upon the earth? The West (i.e. the place of burial) is a land of shadow, dark and heavy, the habitation of those who are yonder, who sleep in their nameless shapes, nor wake to see their brethren, nor regard their father's testament, and their hearts are rest of their wives and children. The living water of which all have a share, for it gives life to him who is upon earth. There have I, though water is beside me, and I know not the place where I am, since I came to this valley. . . . Turn my face to the North; I am on the bank of the water: perchance my heart shall be relieved of its affliction. Nay but Death, his name is Hor the Great, to whom all called comes to him straightway, their hearts straightened, through fear of him. There is none can see him either of gods or men; great and small alike have visions, nor can any say his finger. He loveth all, and rebuketh the son from his mother. The old man moves to meet him, and all men fear and make petition before him. Yet he turns not his face towards them, he comes not to him who implores him, he hearkens not when he is worshipped, he shews himself not, even though my prayer is given to him." (L. Lepsius, AnnahM der wichtigsten Urkunden der ägypt. Alterthümer, Leipzig, 1842, pl. 16).

This is perhaps the only passage in which death is thought as though the Egyptians were not averse to a sort of fictitious dedication of abstract ideas; Life, e.g., is found beside Health in the outward guise of a Nile-god (J. E. Gautier and G. Jequier, Mémoire sur les fouilles de Léhid, Paris, 1902, p. 25). The exhortation "celebrate a happy day" recurs again and again in the songs of the harpers at Egyptian banquet, together with the reminder that life is short, death inevitable and eternal. Herodotus tells us (li. 78) that at the entrance of the great wooden figure of the dead body in a coffin was borne around and shown to the guests, with the words: "When thou lookest upon this, drink and be merry, for thou shalt be such as this when thou art dead." No reference is made thereto in our texts, but they agree in their Egyptian spirit (see also Plut. de Is. et Osir. xvii.). The old songs collected by W. Max Müller, Die Liebesepik der alten Ägypter, Leipzig, 1889 (pp. 29-37), recall the wretched fate of the dead:

"The nobles and glorified ones . . . buried in their pyramids, who built themselves chapels, their place is no more; what is because of them? I have heard the words of Thoth and Horus, told and told again; where is their place? Their walls are destroyed, their place is no more, as though they had never been. None comfort them who can relate how they fare. . . . Then comes the inevitable moral: 'Be of good cheer, forget and enjoy thyself. Follow thy heart, so long as thou livest, place thy head, cover thyself with the linen, anoint thyself; forget sorrow and remember joy, until arriving that day of putting to shore in the land that loveth all.'"

5. The hope of immortality.—From the same Thèban tomb from which the last words are drawn (tomb of the priest Neferteshp [60], XIXth dyn.) comes a song expressing widely different sentiments:

"I have heard those songs that are in the ancient tombs, and what they tell extolling life on earth, and belittling the region of the dead. Yet where do they thus speak as concerns the land of Eternity, the just and fair, where terrors are not? Wrangling is its abhorrence, nor does any god2 harden against his fellow.

That land free of foes, all our kinsmen rest within it from the earliest day of time. The children of the Nile-god, who is thither, every one. For none may tarry in the land of Egypt; none there is that passes not yonder. The span of earthly life is but as a night to him who since he has reached the West (PSBA xxv. 169)."

This pretty poem voices the opinions of those who, holding a firm faith in immortality, rejected the cold comfortless views of death already illustrated. No doubt that faith was born of a revolution of feeling against the pitiless cruelty of death; and, being the offspring of the will rather than of the reason, it did not supersede or drive out the opposite belief. There is an argumentative, controversial expression of the discreditation of the old funerary texts: 'Thou hast departed living, thou hast not departed dead' (Pyramid Texts, 134; cf. 833); or we may quote the reiterated assurance: 'Thou diest not,' in the same texts (657, 715, 781, 792, 810, 875, 1464, 1477, 1810, 1819 [2901]). The multiformed funerary rites, the contracts made with ka-priests, and the petitions or threats to passers-by and visitors to the tombs all imply that the benefits of immortality were not to be obtained except by elaborate forethought and delicate effort. It is true that a discontinuance of the funerary cult might not entail complete annihilation; the Egyptians dreaded, for instance, lest the cessation of the offerings made to them might lead to the virtual destruction of their divinity (AA xlvi. [1910] 100—111). Nevertheless, there was ever lurking in the background the fear that a man might perish altogether, and that his corpse might decay and fall to pieces (Book of the Dead, titles of chs. 45, 160), this fear giving rise to the strong apprehension of "eternal life" of the second death in the necropoleis (ib. chs. 44, 175, 176).

Similar conclusions might perhaps be drawn from the variety of the theories concerning the fate of the departed, some of which (e.g. the simultaneity or similitude) believed to be stars in the sky, dwellers in the nether world, incarnations of Osiris, or spirits living in the tomb or revisiting their earthly homes (see art. STATE OF THE DEAD (Egyptian)). It is unthinkable that all these divergent views were accepted and believed with a fervent sincerity; rather they were conjectures sanctioned by ancient tradition, half-believed, half-doubted, and expressed with a naive and credulous thoughtlessness, as the rich and the strong of the same time failed to silence the haunting suspicion that absolute death, after all, might be a reality.

6. Secondary views of life and death.—Under the influence of the conception of immortality the terms 'life,' 'lives,' in its thoroughgoing sense, with each of the meaning of the other that they no longer contradictory and excluded one another as they had originally done; 'life' was not necessarily the short term of existence upon earth, and 'death' was perhaps but another mode of living. Sometimes, of course, by the abstraction which language permits, the words were used in their old strictly contrasted senses, but often there is left only a shadow of the original meaning; 'living' may become a term of existence vaguely analogous to physical, terrestrial existence, and, 'death,' 'die,' 'dead,' are terms that might be applied to various states from which some characteristic feature of living was absent. A few examples, mainly of philological interest, may serve to illustrate this translation of meaning. Not only was prolongation of life the reward of moral conduct (see ETHICS AND MORALITY (Egyptian), §6), but in a sense the moral life was the only true life; in the Teaching of Pahhatpe we read:—

'As for the fool who hearkens not, he achieves not anything, he looks upon him who knows as one who is ignorant, and upon things useful as things hateful. . . . he lives upon that
LIFE AND DEATH (Egyptian)

wherewith men die, ... his character is told(1) in the opinion of the nobles in that he dies 'living every day' (Le Papyrus funeraire de Thoutmosis III, 1913, p. 8).

Such was the fear felt by him who was admitted to the presence of Pharaoh that he knew not whether he was alive or dead (Sinuto, 253; Ketler ed. A. H. Gardiner, Literary Texts of the New Kingdom, Leipzig, 1911), 5. 1). The verb ‘to live’ was applied to other things besides beings; and animals; thus, whatever else in a man might die, his name, if properly tended, would continue to live (Pyramid Texts, 764, 899, 1024, and in later texts posthum). ‘Living soul’ (R, ‘nh) is a collation of words which frequently, if not from its association with the dead, the word ‘soul’ is often determined with the hieroglyph that implies death. Pictures, statues, and images of all kinds were imbued with a sort of life, by virtue of a principle of immortality even after its suspension; the sculptor was called ‘he who makes to live’ (R ‘nh); hieroglyphs representing animals and human beings were sometimes mutilated or suppressed, obviously because they were considered to have the same power to renew as dying things (Zd. ii, 1-64).

7. Death and the gods.—Could the gods be said to live? In a sense, no doubt, they were considered to live more fully, more truly, than human beings. The solar deity in particular was full of vitality; life of which is to be called ‘be granted life like Rê’; Rê ‘lives upon truth’; the solar hymns, especially these to the Aten (the solar god of the heretic king Akhenaten) represent all life as emanating from the god; and all gods and goddesses were, so to speak, semi-divine life. On a closer view, however, we find that kind of life that was predicated of the gods was more analogous to the life of the blessed dead than to the life of human beings; to the virtuous dead it is promised, ‘he who is venerable shall bear a name’ (Ermian, Gruppach eines Lebensauftrt mit seiner Seite, Berlin, 1896, p. 142; cf. Pap. Ptolemaeum, 1116, recto 56). That the gods dwell afar off together with the dead is shown by the Egyptian (hieroglyphic) term for the sepulchral State of the Middle Kingdom: ‘I have given down to the city of eternity, to the place where the gods are’ (Cairo, 1913). Various dead Pharaohs and celebrities were posthumously deified (see art. Honors and Heroes and the Egyptians), and complexes of their images suggest that they were not regarded as wholly alive. Osiris, as King of Eternity, chief of the Westerners, led but a shadowy existence, and similar conclusions are implied by their consideration as dead, not as living, deities, or restitutive representatives. The Pharaoh railed as Horus ‘on the throne-of-Horus of the living’; under another aspect he was the ‘living sphinx-image of Atum’ (asp ‘nk n ‘Hnt). Alternately regarded as ‘son of Rê’ and as identical with Rê, the King did not die, but ‘flew to heaven and joined the sun, the flesh of the god becoming merged in its creator’ (Sinuto, 1. 74). The Aps and Nunvis bulls were respectively living emanations of God and Atum; other animals whose cult was celebrated in late times doubtless stood in a similar relation to the gods whom they represented. Lastly, the historical aspect from which the gods were sometimes regarded regarded them as rulers of a far-distant age, and, in consequence, as beings long since dead.

8. The dead as a class of beings.—In the Book of the Dead and elsewhere, we find the following classification: men, gods, blessed dead (298), ‘bright’ (brightly) (298, 366). 1. In this classification there is a kind of chronological hierarchic arrangement: the dead of the most remote times are holier, and partake more of divinity, than those recently deceased. So, too, the Turin Canon of Kings conceived the earliest rulers of Egypt to have been the gods of the first cemetary; then came the lesser gods, and, lastly, the followers of Horus and earliest historical kings. Moreover, whole persons of the same name, and equal to the successor, were to the living Pharaoh what the sons of the lesser gods were to the gods. In the Book of the Dead and elsewhere the ‘dead’ are spoken of in a way that clearly assumes them to enjoy a kind of existence; they ‘are seen’, hear, feel pain or joy.

9. Relations of the living and the dead.—Some Egyptologists, influenced more by anthropological theorists than by the unambiguous evidence of the Egyptian texts, have asserted that the funerary rites and practices that one’s own funeral rites are dependent on others, liberal inducements in the form of legacies, previous contracts with the deceased, and also a certain modicum of fear and hope—all these things afforded a certain guarantee to the dying man that his relations might partake of the benefits of the deceased, and that if he died, if he died a natural death, and was not a heretic, a post mortem cult would be established. But there was no real ancestor-worship or objective cult of the dead in ancient Egypt. The feelings of the living towards the other-dead, if they may be so called, were not considered as living, except to restitutive representatives. The Pharaoh railed as Horus ‘on the throne-of-Horus of the living’; under another aspect he was the ‘living sphinx-image of Atum’ (asp ‘nk n ‘Hnt). Alternately regarded as ‘son of Rê’ and as identical with Rê, the King did not die, but ‘flew to heaven and joined the sun, the flesh of the god becoming merged in its creator’ (Sinuto, 1. 74). The Aps and Nunvis bulls were respectively living emanations of God and Atum; other animals whose cult was celebrated in late times doubtless stood in a similar relation to the gods whom they represented. Lastly, the historical aspect from which the gods were sometimes regarded regarded them as rulers of a far-distant age, and, in consequence, as beings long since dead.

1. It has often been stated, especially by G. Maspero, that objects found in the tombs have been deliberately broken in order to ‘kill’ them, and so send them into the realm of the dead for the use of the deceased. No authentic evidence in favour of this statement appears to be forthcoming.
bitter reproaches are addressed to a dead woman by her widow, who has fallen ill, blaming her for her neglect of him after all his kindness towards her while she was alive.

10. The dead as malignant beings.—In the magical and initiatory piy-nembitten are often directed against ‘every enemy male or female, every dead person male or female,’ who shall come to injure N, the son of M. The dead are conceived of as the cause of disease, though perhaps only those dead are meant who still wander homeless over the earth. The evidence seems fairly clear that actual ‘possession’ by the dead, conceived of as haunting spirits, is meant in such cases; for the demon is charged to ‘flow forth,’ and honey is said to be a useful medicament ‘which is sweet to men, but bitter to the dead’ (Erman, Zauberspräcke für Mutter und Kind, Berlin, 1901, p. 121). At the same time, the daly-buried dead also had power to take vengeance on those who injured their property or violated their tombs (H. Sottas, La Pré-
servation de la propriété funéraire, Paris, 1913).

Evidently in Egypt, as in other lands, there was a danger inherent in death and in the dead, as also in blood, the symbol of death; in a Leyden papyrus it is said that ‘place of the land, blood is everywhere, death is not lacking’ (Gardiner, The Admonitions of an Egyptian Soye, Leipzig, 1909, p. 23); and, perhaps because of its association with blood, red colour is in many papyri associated with the terrors of the gods, except in the case of the evil god Seth.

11. Origin and nature of life and death.—The Pyramid Texts (1466) recall a time ‘when heaven was not, when earth was not, when mankind was not, when gods were not, before death had come into existence.’ Many cosmogenic legends were told by the Egyptians (see Erman, Ägyptische Religion, Berlin, 1909, pp. 32-36, for best summary); most of these referred the origin of life to some god, but there was a superstition which attributed self-generative powers to various small forms of animal life, such as mice, snakes, or flies.

The frog was particularly prominent in this connexion, doubtless owing to the numbers in which tadpoles appear, just as though they had come into existence by themselves out of the wet mud. Hence not only did the frog become a symbol of the resurrection (shen net, ‘living again’), but it was intimately associated with the beginning of things; in the Egyptian magical myth the eight primal self-generating creatures had the heads of frogs or snakes, and in the Abydene tale the frog-headed goddess Heket was associated with Khnum in the creation (see W. Spiegelberg and A. Jacoby, in Sphinx, vii. [1909] 215-228). Life, once being started, was continued by the physical methods of reproduction (see esp. Song of Harper, l. 1; Admonitions, 12, 2-4), but the gods, especially the sun-god, Re, were none the less the cause and mainspring of life (the birth-scenes in the temple of Luxor and Deir el Bahri are very instructive in this connexion).

A daringly speculative attempt to follow up this train of thought is found in an inscription from Memphis, a late copy of a text dated (A. H. Breasted, The Philosophy of a Memphite Priest, in Z. d. Aeg. Reisen (1903) 93), which seeks to explain how Pah, having previously divided himself into ‘Heart’ (the seat of the imaginative, judging faculty), as impersonated by Horus, and ‘Tongue’ (the organ of command, i.e. the executive, with wisdom given to it by Thoth), was translated into his new body, and he was permitted to lead all that lives, ‘all gods, all men, all cattle, and all reptiles.’ It is then shown how all actions and reactions to sense impulses of ‘heart’ and ‘tongue’ when the eyes see, or the ears hear, or the nose sniffs, they convey (this sensation to the heart), and it is the heart that causes every recognition (lookout) to go forth; it is the heart that gives the word for the voice to be heard in the body of all things done by living creatures; he is, in other words, the vital principle itself. This psychological anal-

Other medical views. —A certain pre-natal existence is asserted in many hyperbolic expressions, as ‘he ruled (already) in the egg’ (Sinuhe, R 193). The normal view, of course, was that life began with birth; a writer speaks of the ‘children who are broken in the egg, who have seen the face of the crocodile before they ever lived’ (Leben-
müchte, 70). The medical papyri contain proclamations for telling whether a child will live or not; ‘if it says mahu (a sound like the word for ‘yes’), it will live; if it says emab (a sound like the word for ‘no’), it will die’ (Pap. Ebers, ed. L. Stern, Leipzig, 1875, 97. 131.). Spells were used to prevent women from conceiving, and there are various other ways in which birth is touched upon by the magico-medical literature. Amuletss and charms are used for all sorts with throughout: the case, but contrary, magic was secretly employed to bring about an enemy’s death (e.g., by means of waxen images [Pop. Lee; see J. E. Newberry, The Am-
herat Papyri, London, 18890]). A Turin papyrus contains attempts to cover all cases of suicide by killing all the possible kinds of death that may happen to a man (W. Pfeyle and F. Rossi, Pap. de Turin, Leyden, 1869-76, p. 120f.). Some kinds of death were considered happier than others; death by drowning, e.g., was considered a kind of death less painful, probably because Osiris had perished in this way, and those who died thus were called hesper, ‘blessed’ (ZA xlvii. [1909] 132). Curses were considered efficient magical means of affecting life (for a good collection of curses see Sottas, op. cit.). Oaths are conditional curses; it was usual to swear by ‘the life of Re,’ and so common was this style of oath that the verb ūny, ‘to live,’ was used transitively in the sense of ‘to swear by,’ and the Coptic word for an oath is amāt. Most contracts and judicial depositions during the New Kingdom begin with the words, ‘As Amāt endures, and as the Sovereign endures.’ In the law-courts wit-

nesses often swore oaths affecting their own life and property (e.g., to forebear theft and perjury, as Spie-
elberg, Studien und Materialien zum Rechtswesen
der Pharaoenreiche, Hanover, 1892, pp. 71-81).

13. Life and the law.—On this subject consult the art. ETHICS AND MORALITY (Egyptian), § 13 (1-8), from which it will be seen that the sanctity of human life was strongly felt, as far at least as Egyptians were concerned. A few details may be added here. Abortion was considered a crime (Pop. Turin, 55. 1), unless the charge made in the passage here quoted was one of brutality leading to a miscarriage. Particularly abhorrent was bloodshed between close relatives, as father and son, or a man and his maternal brothers (see Gardiner, Admonitions, p. 9). Capital punish-

ment was less favourably considered than punishment by imprisonment and the bastinado (Pop.

Peterburg, 1116 A, recto 48 f.), and persons con-
demned to death were allowed to make away with themselves.

14. Life as a thing undesirable.—The Egyptians’ intense love of life and appreciation of its value are reflected in many of the passages that have been quoted. There is, however, a limited pessimistic literature (see art. ETHICS AND MORALITY (Egyptian), § 6) in which life is regarded as undesirable. This point of view may have been inspired originally by some such archaical cou-
LIFE AND DEATH (Greek and Roman)

The outlook on life of the average Greek of the fifth century B.C. may be illustrated by the language which Herodotus, in 30 B.C., puts into the mouth of Solon of Athens in his interview with Croesus, King of Lydia.

When Solon visited Sardis, after all the grandeur of the royal palace he had been exhibited for his admiration, he was asked by Croesus whom he considered the happiest man (σατηνος) he had ever seen. To the surprise of Croesus, Solon answered, "Tellus of Athens, because, on the one hand, Tellus lived in the midst of gods and godesses (εκελειας γεγοιτων), and saw children born to them all and all surviving; on the other hand, after a life affluent as we can doubt, he died a most glorious death. He fought for the Athenians and their neighbours at Eleusis, 272 B.C., when he gained the highest victory; and the Athenians gave him a public burial when he fell, and honoured him greatly."

When Croesus asked whom he considered second in happiness, Solon answered, "Cleobis and Biton." These were natives of Argos, possessed of sufficient fortune, and, moreover, endowed with such strength of body that both were prize-winners in the games. It is further related of them that, on one occasion, when the Argives were celebrating a festival in honour of Hera, it was necessary that their mother, as priestess of Hera, should be conveyed to the temple on an ox-waggon. The oxen not arriving from the field in time, the young men harnessed their oxen and solved to the waggon and drew it to the temple, a distance of forty stades. After they had performed this feat in view of the assembly, there came upon them a most excellent end of life, wherein God clearly revealed that death is better for a man than the strength of Argos standing round praised the strength of the young men, and the women of Argos called their mother blessed in that she had such sons. Then their mother rejoiced exceedingly in her sons' deeds and in the speed of the citizens, and, standing before the image of the goddess, besought her to immortalize the children, who had done her such honour the best thing that man can receive. After this prayer, when her sons had sacrificed and feasted, they fell asleep in the temple and were found there the next morning. The Argives, in commemoration of their piety, caused their statues to be made and dedicated a temple.

Croesus was ingenuous that Solon should not assign to him even the second place among happy men. Then Solon said: "The elements, human affairs—men know that the deity (ο θεόν) is always just and dexterous in confounding mankind. For in the length of days men are convicted of seeing many things they would not have suffered to suffer many things they would not willingly suffer. I put the term of a man's life at seventy years. . . Now in all these days of seventy years... no one day brings us at anything the like. Thus, Croesus, man is always at the chance (ως κακον ανδρος κακον). You appear to me to be master of immense treasures and king of many nations; but I cannot say that you adorn life. If you find your happiness, then your life is ended your life happily. For the richest of men is not more happy (θελονας) than he that has sufficient for the day, unless good fortune attend him to the grave and make him happy. Many men who abound in wealth are unhappy (θελονας); and many who have only one fifth of them are fortunate (σελερονας). He that abounds in riches, and is yet unhappy (ο θελονας), excels the other too in two things; but the other surpasses him in many things. The wealthy man, indeed, is better able to gratify his desires and to bear a great deal of adversity, a misfortune, than other respects: although he is not able to meet the blows of misfortune, or the claims of his desires, yet his good fortune (σελερονας) wards off these things from him, and he may be able to have full use of his limbs; he is free from diseases, unseized by evil, blessed with a fine form (ο θελονας), happy in his children (εγκυνας), and, if all these things come at last to be crowned by a decent end, such a one is the man you seek, and may justly be called happy (θελονας). For noth that time we ought to suspend our judgment, and not to pronounce him happy (θελονας), but only fortunate (σελερονας). Now because no man can possibly attain to this perfection of happiness; as no one region yields all good things, but produces some and wants others, that country being best which affords wealth in plenty; and, further, because no human body is in all respects self-sufficient, but possessing some advantages, is destitute of others; therefore who continues to enjoy the greatest number of these and then ends his life graciously, in my judgment, O King, deserves the name of happy. We ought to consider in every manner how the end shall be, and to know that God has given a glimpse of happiness (σελερονας θελονας), He has afterwards utterly overthrown.

In reviewing these passages we may begin with the last point: 'Consider the end of everything.' This is a favourite sentiment in Greek writers, and there seems to be a note of conscious pride in the words with which Herodotus concludes the epilogue:

When he made this reply, he found no favour with Croesus, who held him of no account and dismissed him, considering him a very foolish man (ο δισελεως) who, while professing present blessings, bids men look to the end of everything.'

Life is to be viewed as a whole. Already in Homer we find it a mark of the wise man that he 'looks before and after.'1 It is a favourite notion in Findr:

'Here hang around the minds of men unnumbered errors, and this is the hopeless thing to discover—what is best for a man both now and in the end?' (Od. viii. 24). Here.

Hence the distinction here drawn between the 'happy' man (θελονας) δε της θελονας μεν μακαροτας (Hépeúlois) and the merely fortunate (σελερονας). A man may be fortunate in life; but he may not have been to him in death, and the Asiatic straightforwardly calls him happy, but the 'foolish' Greek refuses that title till he has seen the end of all.

1 'Behold, this is Oedipus; this is he who solved the famous riddle and was a man most mighty... Into what a sea of dire calamity is he fallen! Therefore, while a mortal waits to see that final day, call no man happy (θελονας) till he have passed the final mourne of life, having suffered no evil' (Sophocles, Ed. Rec. 1624 B.; cf. Trach. 17 F.; Eurip. Androm. 150 F., etc.)

Aristotle discusses the saying of Solon in Eth. Nic. i. 10: 'vai θελονον οδοντων αναγχον ανθρωπον εξαιρετικον εν εν εν που κακον θελονας και κακον το γενοθηναι

He begins by asking what the saying means. Does it mean that a man is happy (θελονας) only when he is dead, but not before? If so, then it is absurd, especially if we consider that the term θελονας is an activity (अन्वेषण तिते). Does it mean that only when a man is dead is one safe to call him happy, as being at last beyond the reach of evil and misfortune? Even if this is the meaning intended, the saying is open to dispute. In estimating a man's life, as happy or unhappy, we cannot confine our view to the individual. Man is a social being ( vid. πολιτισμον ανθρωπον [Eth. Nic. i. 7; 18. 670] and Pol. i. 52). If happiness, then, as we have lived many years...
LIFE AND DEATH (Greek and Roman)

seen, is characterized by self-sufficiency (αὐθεντική), it is a self-sufficiency which includes children and other relatives and friends—within certain limits, of course; otherwise it would have to include the relatives of friends, and so on indefinitely (Eik. V. i. 7).

Of the happiness of a man's life, then, we must include in the estimate a consideration of the fortunes or misfortunes of relatives and friends; but, here again, within limits. A man may have lived happily until old age and have died happily. But after his death (1) all sorts of things may happen to his relatives, and (2) these relatives will be of all degrees of nearness and remoteness of relation to the dead man. Now it is equally absurd either (1) to suppose that we must include in our consideration all sorts of distant relations, which would mean an indefinite postpondement of our verdict, or (2) to refuse to take into account any posthumous happenings at all.

The ground of our refusal to bestow the title of 'happy' on a living man is that we consider happiness as something stable and abiding, whereas life is subject to continual change. Consequently, if we judge a man by his condition at any one given time, we shall have to say him sometimes happy and sometimes unhappy. Is not our true solution that we must neglect accidents in our estimate? Most accidents are not determinative of εὐδαιμονία. What determines happiness or the reverse is ηγερμόνατε καὶ ἄφεσθα or the reverse.

This view is supported by our present problem. So long as we judge by accidents, we are no better off when the individual is dead than when he was alive. We are driven, then, to judge by the stable things, i.e. by the ὑγείας καὶ ἄφεσθα, and that is the argument sustained by our present position.

Hence these are more stable and abiding even than our knowledge of special sciences, which we are not living in and are therefore liable to forget. Thus the stability and permanence which we desire will belong to the εὐδαιμονία, and he will be εὐδαιμός all his life. His happiness may be tarnished by untoward accidents, but it will not be extinguished. He will never become δεήμος, or true-less, until he should have been ἀπαίτης, i.e. long, and have not do any evil. It is the only thing that is possible that he should become δεήμος. Happiness can be affected only by himself, and we judge, and we may qualify it by saying that they are happy, but with a mortal happiness.

To continue our view to the individual's life, and take no account of what happens after his death to those near and dear to him, is to take too unqualified a view. On the other hand, we must make some limitation. There are two further considerations: (1) posthumous events must be regarded as modifying our judgment of a man's life much more than the things that had happened when he still lived; he, at any rate, was spared the knowledge of them; (2) we do not know whether the dead are διάθεται—whether they are aware of what goes on here. If they are, the news that penetrates to them must be supposed to be slight in itself or at any rate of little moment to them. It follows, then, that posthumous events have no determining effect on our estimate of the individual's life.

The doctrine of the two races and souls which appears often in Greek literature, and deserves special notice. It is a mistake to suppose that the Greek view is that the deity acts in an arbitrary and, so to say, sibyllic fashion. It is true that the conception is sometimes expressed as to lend colour to such an interpretation.

Thus in Herod. vii. 10 Aristartous, the uncle of Xerxes, tries to dissuade Xerxes from invading Greece: 'Do you see how God strikes with His lightning those which are near and others, and suffers them not to vaunt themselves, while the loud do not at all excite His hostility? Do you see how He deters His bolts against the most stately edifices and the most lofty trees? For God is wont to cut down whatsoever is too highly exalted. Thus a great army is often defeated by a small number of men; when God in His jealousy (διώγματα) strikes them with fear or with thunder, they often perish in a manner unbecoming of themselves, because God suffers none to proud save Himself.'

But, while this may have been a popular conception, the underlying idea is a much deeper one. It is, in fact, nothing more than the expression of the Greek idea of justice, or Dike. The definition of justice (δικαιοσύνη) which Plato gives in the Republic is nothing new, but is implied in the whole Greek attitude to life, and gives the reason why they would have the gods and mortal men (Hesiod, Works and Days, 107); but the lot of the gods is altogether different from that of mankind. Pindar emphasizes this distinction in a beautiful passage:

'One is the race of gods, the other of men, and from one mother do we both have breath. But separate altogether is the power (τεχνή, ingenium, Indole) that suckers us; for one is naught, but the other allots the habitations unshaken for ever. Yet do we resemble somewhat, in mighty mind or in bodily form, the deathless gods, although we know not unto what line sovereign Destiny hath appointed us to run either by day or by night' (Xen. vi. 17).

Here we have the two characteristic distinctions which the average Greek drew between the gods and mankind: the gods are deathless and ageless, and untouched of evil; the years of man are few and full of sorrow, and the certain end is death; the gods have knowledge of all things, for good or evil. The river of provision is set afar' (Pind. Xem. xi. 46). Now it is implied in the very nature of mortality that human life is a chequer-work of good and evil. A life of unbroken success, even if not attained by or attended with wickedness, is already a breach of nature, an injustice, an encroachment on the attributes of deity, and so excites the jealousy of God, who allows no man to save Himself to be proud.

A life of unbroken happiness is no portion for men:

1 Happiness (ὡς ἔστιν) is he to whom God hath given a portion of glory (καλός, especially success in the national cause), and to have all his life with in enviable fortune (πλουσίον) and in the prospect of immortality (εἰς ἀπολογίαν εἰς ἀποθανοντα) (Porphyry, v. 50 ff.).

Hence it is a condition of adding prosperity that a man's happiness should not be unqualified; only by being interrupted will it conform to the law of nature, the demands of justice:

'In thy new success I rejoice, but also I am grieved that jealousy (here, because God is with His people) is not excited; but only thus, they say, will a man's happiness (εὐδαιμονία) prosper abidingly, if it wins both these things and these (i.e. good fortune and glory) (Pind. Pyth. vi. 14 ff.).' No one is without lot in sorrow nor shall be; yet the ancient prosperity (ὡς ἔστιν) of Eatos attends them, giving them these and those' (Ov. v. 441).
This is the point of Clytemnestra’s words in Ἄρησ. Ἀγαμ. 9041: 

*Let there be no jealousy: for many were the evils that we endured aforetime. For that is certain, our present good fortune should not excite jealousy. It is but the offset to former adversity.*

So Nikias in Thucyd. vii. 73: 

*Our calamities are likely to abate: for the enemy have had enough. The time of our success and our experience provoked the jealousy of any of the gods, we have now been sufficiently punished.*

If a man is attended by an unbroken felicity, he must restore the balance by a voluntary sacrifice of some portion of his happiness.

This is the point of the famous story of Polycrates of Samos (Hered. ii. 40). His continued prosperity (ἐρεύνη) excited the covetousness of his friend, Anakles, who wrote to him in these terms: *It is pleasant to hear of the good fortune of a friend and to equalize the felicity of those. But the excess of the prosperity does not please me, because I know how jealous the deity is. As for me, I would choose that my affairs and those of my friends should sometimes be fortunate and sometimes stumble, rather than be fortunate in everything. For I cannot remember that I ever heard of a man who was fortunate in everything, who did not in the end suffer in utter ruin, and advised, therefore, by me, and in view of your good fortune do this: think what it is that you value most and the loss of which would most grieve you, and cast it away, so that it may never be seen again among men; and if after that your good fortune does not alternate with misfortune, and thereby which you have now, it is well known how Polycrates cast a valuable ring into the sea, but, unforeseen by the gods, (heavily, that which you have now.)*

It is well known how Polycrates cast a valuable ring into the sea, but, unforeseen by the gods, (heavily, that which you have now.)*

The jealousy of God in the OT is exactly parallel to the Greek doctrine. It is not a capricious spite, but merely the justice which punishes any invasion of the prerogatives of the Deity by man: *The Lord thy God will make thee a God, if thou keepest my commandments.* (Deu. xxvii. 19). One form of the breach of justice is that a man should desist the God to whom he belongs and follow after strange gods. Just as the civil law recognized the duty owing from a motive to his προστάτης, or patron, and provided for the punishment of the violation of this duty by a man: *Let us therefore be in fear of God.* (Hes. Theog. 646). The wise and good man is the man who recognizes the conditions of mortality and the extent of the limits which this recognition and kicks against the pricks.

*Not for happiness in everything did Atreus beget his Aegaeomnon: they destined for his son Phorbas, and the Dómoi.* (Hes. Iph. 46). *If thou, Hiero, understandest a pithy saying, thou hast heard from them who were old and wise; therefore, that for one good the deadless gods give to mortals two evils. These gods cannot endure with decrecy, but only the good, turning the fairest out.* (Pind. Pyth. i. 98). *With mortal minds shall seek from the gods the things that are meet for us, knowing that this is one of the dialects of the gods. *And death art mortal, says the old man to Aegaeomnon (Ευριπ. Ἰφ. in Ἁγ. 286). *If thou, Hiero, understandest a pithy saying, thou hast heard from them who were old and wise; therefore, that for one good the deadless gods give to mortals two evils. These gods cannot endure with decrecy, but only the good, turning the fairest out.* (Pind. Pyth. i. 98). *With mortal minds shall seek from the gods the things that are meet for us, knowing that this is one of the dialects of the gods. *And death art mortal, says the old man to Aegaeomnon (Ευριπ. Ἰφ. in Ἁγ. 286). *If thou, Hiero, understandest a pithy saying, thou hast heard from them who were old and wise; therefore, that for one good the deadless gods give to mortals two evils. These gods cannot endure with decrecy, but only the good, turning the fairest out.* (Pind. Pyth. i. 98).

Pindar illustrates the doctrine by the story of Ασκλέπιον, whom Zeus slew with the thunderbolt because he tried to bring a man (Hippolytus) back from the dead—an attempt to overstep the limits of mortality, and therefore demanding punishment. The same story is referred to by Ἀριστ. Ἀγαμ. 954 ff., in a passage which excellently illustrates the Greek doctrine: *Excessive prosperity demands voluntary jeitation, says Ἀριστοτέλης. Then he proceeded to a story of Ἀσκλέπιον, a favorite son of Zeus from the yearly field destroys the plague of famine. But the blood of death that has once fallen on the ground at a man’s feet—who shall call that back by any means? I answer that Zeus for safety’s sake (i.e. repelling an invasion of his divine prerogative of immortality) put him to death. They had not the art to bring back the dead: and were it not that one god was appointed by the gods to check another fate from going too far, my tongue would have outdone my heart.* (Eth. Εὐθ. 121). *Life is based on the principle of justice, compensation, balance, that each should have his own.*

Hence, too, it is τα ἄμεσα χάριτα, the gifts of good-luck, that excite jealousy, not the good things which are won by toil.

The doctrine of the jealousy of the gods is rephrased as a poetical falsehood? by Aristotle, *Met. 2. 983.*

The things which make human happiness are, according to Solon, adequate endowment of worldly goods, health, beauty of person, prosperous children, and a death in accord with the gods. The enumeration of the elements of happiness is consonant with general Greek feeling. Similar catalogues occur frequently. Thus the list rhymed in the temple of Leto at Delos (Aristotle, *Eth. Εὐθ. 121*), *τὰ ὅταν ἄλλα φυσαλία ζωῆς πᾶσσα, ἔσθε ἀληθεώς χαίραι.*

*Poorer (καλλίστη) in justice, best (λαύστως) is health, and sweetest (μελίσσως) of all to attain what one desires.*

The same order is given in Theogonie, 555 ff. (cf. 594).
Sophocles, frag. 328 f.). A popular *scolion*, or drinking-song, says:  

'Health is best for a mortal man; second, to be fair of body (φρίον καλόν); third, to have wealth without guilt; fourth, to be young with a wife's friends.'

Philenon, frag. 163, gives (1) health, (2) success (τερεσία), (3) joy (χαρά), and (4) to owe no man. Pindar (Pyth. 1. 99 f.) says:

'Success (τερεσία), prudence, prosperity or happiness) is the first of prizes: a fair fame (in acropolis) is the second lot; he who has won both on land and taken them to be his heritage to the dead is the third. (5) See L. 1. 46, Pyth. 1. 101; Aristoph. *Ach. *165; Soph. *Oed.* Col. 141; Thucyd. *Hist.* iii. 110; Herod. *Hist.* 27 f.  

According to Aristotle, happiness is an *ευγένεια* καρά σαρκί. But he admits, in Eth. *Nik.* 1. 8, that 'nevertheless it does appear that happiness has need also of the external goods as aforesaid. For it is impossible or not easy for a man unprovided with these to do noble things. For many things are performed by friends, wealth, political power, the instruments, as it were, of action. The lack of some things mars happiness—the loss of health, children, beauty. You could not well apply the term “happy” to a man who was utterly ugly, or low-born, or solitary and childless. Again, less still, if his children or his friends are altogether bad, or if he had good friends or children who are now dead. As we have said, happiness seems to need such external goods and happiness. Hence some identify good fortune (ευγένεια) with happiness, others identify happiness with virtue (αρετή). In the *Rhetoric* (l. 5), where happiness is defined more popularly, such 'external' goods as the above are termed *ευγένεια* of the man, and the list is *ευγένεια* καρά σαρκί, χρηστοροφια, πλούσιον, ευτεχεία, πολιτισμόν: the physical excellences, as *εύγενες*, κάλλος, εόρον, μεγάλο, δόμα τούρανος; and δέκα, τιμή, ευγένεια, αρετή.

He proceeds to explain what he means by the several terms here employed.  

(a) *ευγένεια*, good birth, may be predicated of a nation or a State, or of an individual. As applied to a nation or a State, it means that it is autochthonous or at any rate ancient, and had as its earliest leaders distinguished men, and has had many distinguished members in the course of its history. As applied to an individual, it refers to descent on either the male or the female side; it implies both lineage and wealth, and the list must be citizens (*αρετή*, *αρετή*) in lawful wedlock (Arist. *Pol.* iii. 1. 4 f.; *Dem.* *are*, *Nec.*; Aristoph. *Ach.* 1600 ff.); it implies, further, that the earliest ancestors of the family were famous for virtue or wisdom and distinction, and that many members of the family, both men and women, have in the course of its history distinguished themselves.

The high importance attached to heredity is evident on every page of Greek literature (see art. *Pindar*).

(b) *πολιστικία* καί *χρηστοροφιά*, the possession of many good friends, a friend being defined as 'one who, if he consider anything to be good for another, is ready to do it for the other's sake.' (Arist. *Rheth.*, *loc. cit.*). Friendship takes a prominent place in the Greek ideal of life.

'Of all kinds are the best of friends; above all in trouble, but joy also seeks to behold their own happiness.' (Pindar, *Nem.* viii. 12 f.). 'To cast away a good friend I count even as that a man should cast away the life in his own house, he loves most.' (Soph. *Oed.* *Rex*, 611 f.).

We hear of many celebrated friendship-ships—Achilles and Patroclus, Orestes and Pythases, Castor and Pollux. The last is the theme of one of the most beautiful episodes of *Pindar's* poetry.

When Castor, the mortal one of the Twins, is slain, Pollux asks to be allowed to die with him. 'Grant me, O Lord, to die with him! A man's honour is departed when he is rift of his friends, and few there be that are faithful in the day of trouble to share the travail!' (Pindar. *Isth.* *II.* 11; *Isth.* *Ath.* 708, et al.). We learn, of course, of a more extravagant display of friendship: one should always look upon a friend as a possible enemy (Soph. *Ach.* 677 f.; Eurip. *Hippol.* 253 f.).

(c) *αρετή*, wealth.

(d) *ευτεχεία* καί *πολιτισμόν* these may be predicated either of the community or of the individual. In the case of the community, they mean the possession of a numerous body of splendid youths, splendid physically—in stature, beauty, strength, and athletic prowess—splendid morally, the moral qualities desirable in the ideal man being self-restraint and courage. In the case of the individual, they imply that his children, male and female, are many and good. In a woman, the physical excellences are beauty and stature; the moral excellences are self-control, and industry without illiberality ('*ϕιλοκληρία* ατείνα πολυκληρία').

'The high standard of female excellence is very important for the state; for where the condition of the women is vicious, as at Lacedaemon, there is no happiness in the state.  

The importance of having children lies partly in keeping property within the family, since the bitterest thought of the childless man when dying is that his wealth will go to an outsider:

'Even as a child by his wife is longed for by his father who has reached the other side of youth, and greatly heeds his heart, since wealth that falls to an outside alien's keeping is most hateful for a dying man' (Pind. *Isth.* *II.* 41 f.)

particularly in that there will be no one to carry the memorial offerings to the dead (προϊσία). These motives find their consequence in the frequency of adoption (*ευτεχεία*).

(e) *εύγενεια*, a good old age. This is described as an old age which approaches gradually and without 'pain'; if it comes rapidly, or slowly but accompanied with pain, it is not a good old age. This requires both the physical excellences and good fortune. It is incompatible with weakness or disease, and a man must have good fortune to live long and remain *εύγενες*. 'It is indeed true that some attain long life without physical excellences.'

(f) The physical excellences: (1) *εύγενες*, health, i.e. freedom from disease, full possession of bodily faculties. Such valetudinarianism is not approved of by the *medicalians* (Plato, *Rep.* iii. 340). It is not desirable, as it means the denial of all, or nearly all, human pleasures. (2) *κάλλος*, beauty. A different kind of beauty is appropriate to different periods of life: the young man must be adapted to courage and strength, and pleasant and delightful to look upon. Hence pentathletes are most beautiful. The man in the prime of life must be fit for military exercises, combining grace with sternness in his appearance. The old man must be equal to such exercises as are inevitable, and his appearance must not be repulsive, i.e. must be free from the disfigurations of age. (3) *αρετή*, strength. (4) *μεγάλο*, stature—but not so as to be unwieldy. (5) *σωφρόνισι*, athlete's courage, steadiness, speed: good running, wrestling, and boxing.

1. Of *Isthm.* ii. 45 f., 'I have shown you that the laws give power to childless men to adopt sons. It is clear, moreover, that I paid attention to him while he lived and buried him when he died. My opponent, wishes to turn me out of my father's estate, he is great or small; wishes to make the dead man childless and nameless, so that there shall be none to honour in his behalf the ancestral holies, none to make annual offerings to him (especially *ευγένεια* and *πολιτισμόν*), but to rob him of his honours. Providing for this, Mnesicles, being master of his property, adopted a son, that he might get these things. But now he is persuaded by these men to rob me of the title of adoption, which is all that is left, and make my adoption by him invalid. But, since the matter has come to you and you have power to dispose of it, help us and not now in the house of Hades and do not, in the name of gods and deities, allow him to be insulted by them' (see, further art. *Atonement* [p. 48]).
LIFE AND DEATH

(Greek and Roman) 29

world, whether in their own persons or in the persons of their descendants:

But whereas some evil, insidious, and forward works, for them bring death of Zeus, for the son of Cronus, as a pleasure, as justice. Yet, sometimes a whole city reaps the recompense of the evil man, who smooths and brings death. On them doth the son of Cronus bring from heaven a grievous visitation, even famine and plague together, and men perish. Their women bear no issue, and the men decay by being of Olympian Zeus; or an he or destroyeth a great host of them, within a wall it may be, or the son of Cronus taketh revenge in the face of the city.

In Republic, 363 A.Ff., Plato discusses this view of justice and its rewards. Goods are classified as of three sorts: (1) those desirable for their own sakes, (2) those desirable for their being useful for their consequences, and (3) those desirable for their consequences alone. Whereas Socrates would place justice in the second of these classes, the many would place it in the third. Popular morality holds that justice is desirable because it leads to reward in this life—a position which is open to the objection that 'seeming to be just' is preferable to being just.' Parents exhort their children to be just for the sake of office and other advancement, and because, according to Hesiod (loc. cit.) and Homer (Od. xix. 109 ff.), the gods prosper the just in this life. Then follows a striking passage:

'Still grander are the gifts of heaven which Marsyas and his son (Eumelus) offer to the just; they take men to the world below, where they have the saints lying on couches at a feast, everlastingly drunk, crowned with garlands; their souls seem to be the highest of all, and to have the highest reward of virtue. Some extend their rewards yet further; the posterity, as they say, of that justice, which even in this life shall survive to the third and fourth generation. This is the style in which they praise justice. But about the wicked there is another strain; they bury them in a shape in Hades, and make them carry water in a sieve; also while they are yet living they bring them to towns, and inflict on them punishments which Glaucon described as the portion of the just who are reputed to be unjust; nothing else does their invention supply.'

According to Homeric eschatology, there remains for the dead only a shadowy existence in a dim under world, in dank places which even the gods abhor. This life after death, if it can be called life, holds nothing lovely or desirable: it leads to no reward in this life—a position which is open to the objection that 'seeming to be just' is preferable to being just.' Parents exhort their children to be just for the sake of office and other advancement, and because, according to Hesiod (loc. cit.) and Homer (Od. xix. 109 ff.), the gods prosper the just in this life. Then follows a striking passage:

'Still grander are the gifts of heaven which Marsyas and his son (Eumelus) offer to the just; they take men to the world below, where they have the saints lying on couches at a feast, everlastingl

How then, and where shall it be better for the just man? The typical answer of the Greek moralist is 'Here and in this life,' Hesiod expresses the prevailing view of the Greek as of the Hellenic world when he says:

1. "Now may neither the men of mine be just among men! For it is an ill thing to be just, if the unjust shall have the great goods, though they may bring to pass." Injustice may prevail for a time, but justice is better in the end.)

2. "Too swift are the minds of men to accept a guileful gain in preference to justice, albeit they travel to a bane reckoning (πρεπονητον διψωπ), Priam, J. 139)."

3. "On the other hand, and beginning are alike pleasant if God spares,"

4. "How then, and where shall it be better for the just man? The typical answer of the Greek moralist is 'Here and in this life,' Hesiod expresses the prevailing view of the Greek as of the Hellenic world when he says:

5. "Whatsoever is sweeter to the gods to avert, better to them, they bear out, and the good goods, and the goods perish together. And in their hands is peace, the most excellent and purest happiness for the way of life. Neither doth Famine ever consort with men who doest smooth, but, as they do, they tend the works that are their care. For them earth beareth much livelihood, and on the banks of the most high beareth acorns, the oaks might see, their bloody sheep are reared with wool; their wives bear children like unto their parents; they flourish with go goods, care with much, but they on the earth bear fruit for them." (Works and Days, 295.)

6. "So even the punishment of the wicked is in this way, when he that doeth evil, and the good shall he be."

7. "Pains express the prevailing view of the Greek as of the Hellenic world when he says:

8. "Whatsoever is sweeter to the gods to avert, better to them, they bear out, and the good goods, and the goods perish together. And in their hands is peace, the most excellent and purest happiness for the way of life. Neither doth Famine ever consort with men who doest smooth, but, as they do, they tend the works that are their care. For them earth beareth much livelihood, and on the banks of the most high beareth acorns, the oaks might see, their bloody sheep are reared with wool; their wives bear children like unto their parents; they flourish with go goods, care with much, but they on the earth bear fruit for them." (Works and Days, 295.)

9. "So even the punishment of the wicked is in this way, when he that doeth evil, and the good shall he be."
which are among the most striking in the range of Greek literature.

Wealth added to deeds of prowess... is a conspicuous star, a most true light for a man, if he hath that knowledge which makes him come to the: that the holiness minded of the dead-pay straitly here their penance, while the sins done in this kingdom of Zeus one judges under earth, pronouncing doom by ablution, but expiation by night and day: the good enjoy the sun, receiving a life free from toil, vexing not the earth with might of hand, neither the waters of the sea in their own glorious life, but with the behatted of the gods they that rejoiced in keeping their onitha live a tenacious life, while the others are tormented, also to be behold. But whose brains on either side have enduring to refrain their souls utterly from unrighteousness, travel by the Way of Zeus unto the tower of Cronus, and around them of the bliss the Ocean breasts, and flowers and crops are giving, some on the land from gold, others the sweet flocks, with wreaths and garlands whereof they entwine their hands by the true counsel of Rhadamantus, wherein the father Cronus hath as his ready assessor, Cronus, husband of Rea, thrown highest of all. Penteus and Cadmus are numbered among these, and thither his mother brought Achilles, when she had with her prayers persuaded the heart of Zeus (Oth. ii. 367).

Pindar's teaching here appears to be that the soul passes through three successive incarnations, alternating with a disembodied state, and that only after passing through all these blamelessly is it saved. Such souls, according to another passage of Pindar (frag. 138), receive a final embodiment as kings and wise men and athletes, and after death become, not indeed gods, but heroes:

"From whom Persephone in the ninth year accepts the atone-
ment of ancient woe, the souls of them she sends back to the upper world. From them spring glorious kings and wise men, swift and strong and mightiest in wisdom: and for the future they are called by men holy heroes."

Again, in frag. 137 Pindar says, in reference to the mysteries:

"Happy is he who beholds these things before he goes beneath the earth: he knows the end of life, he knows its god-given beginning."

According to this view, the soul lives on after death, it alone being of divine origin.

"Or for the poor, after the home of Hades (fr. 132) all travel to an end which sets free from woe. And the body, indeed, of all goes with mighty Death. But there remains alive a phantom of life: for that alone compass the gods. It sleeps when the limbs are active, but to men asleep in many a dream it reveals the coming judgment of pleasant things and hard.

For the souls of the good there awaits a paradise which is imagined in terms of human bliss:

"For there shines the strength of the sun below while here it is night. And in mandays of red roses it shas, with frankincense and ladan with golden fruits. And some in horses, some in games, some in draughts, some in the lyre they take their pleasure, by them thou nourishest all the fair flower of blessedness. And a fragrance spreads above the lovely place, while they give their mingled all manner of increase in in-farening fires of the altars of the gods (fr. 129)."

"By happy dispensation"! Strange, indeed, would this have sounded to the Homeric hero, and hardly less strange, it would seem, to the orthodox Greek of the 5th century. It is not easy to estimate how far the ideas to which Pindar here gives expression had affected the general body of his countrymen, but it would not appear that they had done so very deeply. The general attitude to death continues much the same in Homer. A state of bliss after death is not held out as an incentive to righteousness in this world. Nor is the hope of a blessed immortality offered to comfort the dying or mitigate the grief of the bereaved. When death is spoken of as desirable, it is merely as a καλή κασαράγα, a refuge from evil, a dreamless sleep:

"Would that some late might come, speedy, not over-painful, not with lingering bed, bringing to us the bright light and dark sleep" (Eurh. Agam. 113 ff.)

It does not seem probable that the conception of the life of the deceased in the after world played any determining influence on the average man's conduct of his life.

When one attempts to discuss Roman views of life and death, there occurs at the outset the comparative paucity of genuinely Roman evidence. The general influence of Greek ideas towards life and death pervades the same general frame-

work as we have outlined in the case of Greece; the same conception of the gods; the same recognition of the content of human happiness; the same conception of death as the end and not the beginning; the same belief in the duty of paying solemn offerings (perpetuam) to the dead. When we advance beyond orthodoxy, or look to fancy or philosophic speculations, we find that we are merely encountering Greek ideas in a Roman dress.

Greek and Roman alike believed that the dead in some sense survived, and there was a small relish in the living to make offerings to the dead. But for Roman as for Greek, the after-world was but a dim shadow of the present. There was no lively conviction that it would fare worse in the after-world with the bad than with the good; there was no lively conviction that there was any true after-life at all, certainly no such conviction of an immortal felicity as could prompt to martyrdom or self-sacrifice, or alleviate the horror of bereavement with the hope of a blessed reunion hereafter. When a Roman man died he was at death his beloved daughter Tullia, in the letter of condolence written to him by his friend Servius Sulpicius (ad Fam. iv. 5) the topics of consolation are drawn from practical and secular considerations: that all had duties to perform, the evil to come, and that she has been spared the common lot, not of individuals only, but of cities:

"Ex Asia reddem, cum ab Egesta Megara versus navigarem, copi regions circumcurrent prospere: post me est Egesta, ante me Megara, destra Parnassus, sinistra Thessalia: oppida quodam tempore forentissima fuerunt, nume provincia, eorumque divinis et oculis ensibus. Copi genere auctor vero Numa, qui, si quos nostrum intercit ita essent, quemvis vita brevis esse debet, cum uno hoc bove spectaculorum cavat authores uerba postrema, quas tu, Serri, colibere et inimmisimis hominem esse naturam?"

Nor in Cicero's most touching reply is there any hint of other consolation.

Nothing, perhaps, in the consideration of the conception of life and death is more significant than the universal horror and aversion to the notion of suicide. The general feeling both in Greece and Rome seems to have been one of pity for the suicide rather than condemnation. Thus, e.g., Pindar, who three times refers to the suicide of Ajax, in no case hints at any wickedness in the act, nor does Sophocles in the case of Eteocles. And the fact that Aristotle, in his Πίνακος (1533 = 31 f.), and other writers noted that suicide was condemned by the Thebans points clearly to a different attitude on the part of the Greeks in general. Naturally the Orphic-Pythagorean school, insisting on the reality of a true existence conditioned by the life of the present existence, condemned suicide. In the Phaedo of Plato, Plato says that the good man will desire to be dead in order to free his soul from the enervating influence of the body, which hinders him in the pursuit of truth: 'only, perhaps, he will not do violence to himself, for this, they say, is not lawful (κακός Ευπορια), and he proceeds to refer to a 'secret doctrine' (τα δωδέκα μηνυτας Λεγειας) that man is here 'in a sort of prison' (τοι τε φαραος) from which he has no right to free himself or run away' (cf. Cicero, De fin. 294, 293 C. Gracil. F. C. 226, 231 C. Garg. 493 A.). Macrobius (Comm. in Somn. Scip. i. 13) tells us that Plotinus objected to suicide on two grounds: (1) it implies a perturbed state of mind at the moment of dis-
solution; (2) it is a step which, once taken, is irretrievable. On the other hand, in the Laws, 854 C, Plato recognizes that in certain circum-

stances suicide is a duty. Sacrilege, he tells us, is an inherited malady. When a man is tempted to commit such an offence, he should 'go and perform expiatory, go as a suppliant to the temples of the gods who aver, go to the society of those who are called good men amongst you; hear them tell, and yourself try to be a man amongst them.' And, if you honour the nation and the state; fly from the company of the wicked—fly and turn not back; and if your disease is lighted by these recommendations, go not; but if God should, then acknowledge death to be nobler than life, and depart hence.'

Similarly Cicero, de Offic. i. 31, holds that in the same circumstances suicide is for one man a duty, for another an evil. And, not (Gnm), Cicero was one who considered suicide as an evil. And, in the same connection, Cicero, de Offic. i. 31, says, 'One man is best—to fight for one's country.' (II. xii. 243). So in Rome Cesar, while holding the office of Quintus Maximus, delivered himself in the Senate of the doctrine that after death there was no place either for trouble or for joy: 'In hast acque miseris mortem summanum requiem, non currus care, caret utam si visutum furem ulna necque carum gandio teneam casso' (Nal. Catull. II.

So widely divorced, indeed, was outward practice from inward belief that Cicero, 'wondered how, when one soothsayer met another, he could help laughing' (Cicero, de Div. ii. 52). But the better minds, persuaded as they were that death meant either extinction or a true after-life in which the good should fare better than the wicked, prepared themselves for the great change much in the spirit of the Platonic Socrates, by setting their house in order. Thus Cicero: 'Id spero vivis noster. Quamquam tempus est non domesticus, ut inper spem lactam, non de hac exspect vita cognitae' (ad Att. x. 8).

See, further, art. Happiness (Greek and Roman).

LIFE AND DEATH (Hebrew).—There are two words which in the English OT are very often translated 'life': nephesh and haggain. Nephesh is a concrete entity, resident in the body, which, if scarcely coming within the range of man's senses, is at any rate thinkable. It is a psychical something, endowed with many attributes, or some other is the chief, though it may also have others, physical and psychical. Haggain represents life abstractly, as a state or condition—vitality, mental and moral activity.

1. Nephesh.—Of psychology has always been a crucial and often desired (as Franz Delitzsch) to form a 'system' of Biblical psychology. They have too often expected to find everywhere the same grade of civilization and the same type of approach and methods and that are very often desired (as Franz Delitzsch) to form a 'system' of Biblical psychology. They have too often expected to find everywhere the same grade of civilization and the same type of approach and methods and have not (until recently) allowed for primitive, ethnic modes of conception. The word nephesh is found in all Semitic languages, in much the same senses as in Hebrew; and therefore we must not be surprised if some extremely primitive beliefs, not taught—perhaps even discouraged—as doctrines by the men who were organs of revelation, have survived in occasional metaphors or modes of speech.

There were three ways in which the phenomena of life were regarded by early man: (1) objectively, by external observation, noting the manifestations of life in other men and in animals; (2) subjectively, by self-consciousness, through which man became aware of many different emotions and appetites, thoughts, and activities which were taking place within him; and (3) by the consciousness that he was being acted upon by forces from beings extraneous to himself. We can scarcely point to a time when man did not fancy himself an object of interest, often of assault, to spirits good or evil, by whom he was surrounded. When the external influence of nephesh is often defined as the inner principle of life. The vague term 'principle,' however, is much too modern. Early man personalized all our abstractions. The cause of breathing to him—and thus the cause of life—was a living spirit or soul, the breath of the flesh, the breath-soul, which Semites called the nephesh, i.e. a semi-physical, semi-spiritual something, a potent reality, not to be identified with the breath, but the occult cause of the breathing; and, when it left the body for a considerable time, death was the result. To die, or 'yield up the ghost,' is to 'breath out the nephesh' (der 's 69). When Rachel was dying and gave a name to her infant son, 'her nephesh was departing' (Gen. 35). When Elijah prayed for the recovery of the Shunammite's son, he stretched himself on the child and the child's nephesh came into him again (1 K 17). When the Psalmist is sinking in a morass and in danger of drowning, he cries, 'Save me, for thy waters are come in even unto my soul' (Ps 69).

(b) The second startling phenomenon of life was the pulse, and the beat of the heart, which ceased when the blood was shed, in battle or in any other way. The occult cause of the heart-beat was conceived to be another nephesh—the breath-soul, resident in the blood; and, when the blood was shed, the nephesh was released. The shedding of blood received much scrutiny and thought in connexion with sacrifice, and the Hebrew priests assigned the efficacy of sacrifice to the breath-soul. This is most accurately expressed in Lx 17, 'The nephesh of the flesh is in the blood. . . . The blood
maketh atonement by reason of the nephesh,' more laxly in Dt 12:2, 'The blood is the nephesh.' This is the customary Hebrew word for the soul or its organs. The root of nephesh is used in the phrase (so Kn., Kalk), i.e., we may say that the blood is the nephesh of the flesh, if we bear in mind that there is a nephesh resident in the blood, which is the cause of the vitality of the blood, and therefore also of the flesh. Hence the repellent feature in eating the flesh of animals whose blood had not been shed before death was that, in eating such flesh, from which the nephesh had not been allowed to escape, one was eating the nephesh, and this is strongly forbidden in the words: 'But flesh with the nephesh... shall ye not eat' (Gen 9:3; cf. Dt 12:2).

Human nature was not at first considered as a unity, but attention was directed to the centres of activity, where a mysterious energy was at work; and, long before man used the word nephesh as we use the word 'soul,' the several organs were considered separately, as so many independent centres of vitality. The heart, the liver, the kidneys, and the eye were regarded as distinct potencies, endowed with life, not interrelated or unified one with another. The word nephesh is not used in the OT of the cause of the vitality resident in each of the parts, wherein it would be analogous to the ideas of other ancient peoples if they did ascribe to each a nephesh.

It was a very general belief in old times that a nephesh might go out from its abode without causing some considerable time. What is to us poetry and metaphor was in the hoary past often accepted as solid fact, as, e.g., when we read of Jacob in Gn 44:8, 'His life (nephesh) is bound up with the lad's nephesh'; and of Jonathan in 1 Sam 20:31, 'his nephesh with the nephesh of David.' In the statement that the soul of Shechem clave to Dinah (Gen 34) we have reference to the primitive belief that in love (or a nephesh) leaves the body and enters into union with the soul of its beloved; and a similar belief underlies the phrase which compares perii to 'putting one's soul in one's hand' (Job 13:14; Jg 12:2, 1 Sam 18:28, Ps 119:19).

The consequences of the temporary departure of a nephesh might be injurious death or dismemberment, sickness, or dotage (Tylor, Pr. 665). There seems to be an allusion to this in the words of Saul in 2 Sam 2, if, with Graetz, we may alter the difficult, if not impossible, words 79:52 into 79:53. Saul, however, is bleeding to death, and his words would then be: 'Giddiness hath taken hold of me, for my nephesh is no longer in me.' We have a similar underlying belief in the phrase which we use metaphorically: 'I have poured out my soul,' as Hannah said to Eli (1 Sam 1:13); as Job also says: 'My soul is poured out upon me' (36:30); and as is said of the righteous servant: 'He poured out his soul unto death' (Is 53:12). In the first two cases the result is extreme prostration of mind and body, and in the third case death. It is the voluntary surrender of life.

The blood-soul may be 'smitten' when a wound inflicted causes bloodshed (Gen 37:25; Dt 19:11); or this nephesh may be 'shun' in unintentional homicide (Num 31:32-35), or in murder (2 Sam 4); while in Dt 27:25 a curse is pronounced on one who should accept a bribe 'to slay a nephesh of innocent blood.' The Hebrews were forbidden to make 'an incision to thy nephesh' in order to lose the nephesh of blood (1 Kin 19:6).

(2) The subjective method.—It is quite certain that men practised observance long before they practised introspection. When man habituated himself to turn his thoughts within, he became conscious of himself as a unity; the various organs ceased to be centres of activity. Thus came an assemblage of vital organs, as observation led him to suppose, and these were his organs or the nephesh. He was a unity, an organism; and the mysterious cause of his internal activities was his nephesh, his soul, the cause of his energies and emotions. Thus the nephesh in this sense is the seat of appetites such as hunger (Lu 1:15) and thirst (Is 29:9), and also of the outgoings of life in desires, longings, and wishes (1 Sam 31:27, 2 Sam 3:3). It is also the centre of all sensibilities, as disgust (Num 11:1), weariness (Job 14:19), love (Gen 44:31), hatred (2 Sam 17), wrath (Jer 18:8), and sorrow (Jer 13:15); but in all these and similar cases nephesh approaches the meaning of our word 'soul' (g.v.), and is so rendered.

Most ancient peoples believed that the souls of the departed lingered some days near the corpse; and, while some peoples had no dread of the departing spirit, others, including the Hebrews, had a great terror as to the mischief it might effect; and their holiest funeral practices were designed to scare the spirit away. We have indications of this belief in the lingering of a soul in the fact that a Nazirite is forbidden during his vow to come near the nephesh of a dead man (Num 6): a man rendered unclean through uncleanness, by the Passover at the statutory time, but might eat it a month later (Deut 14:11). Indeed, any one, male or female, who was unclean by a nephesh must go and remain outside the camp until purified (5:3), and a high priest was forbidden at any time to enter a room where the nephesh of a dead person was at large (Lev 21:11).

Eventually, after or before the funeral, the soul was believed to pass into Sheol, and to be gathered into its father's arms (2 Sam 12:23). But the dead were not as a rule allowed to eat for a week the food intended for wraiths or ghosts, rephitim, but nephesh is also used of the soul as a disembodied psychical entity. 'Gather not my soul with the wicked,' the Psalmist prays (38:11); 'Thou wilt not abandon my soul to Sheol,' says another (16:10); 'He hath delivered my soul from Sheol,' says a third (80:7; so Job 33:25-26, Is 38:7). By this time the nephesh has become the man's self, his personality.

(3) The objective-subjective method.—Man believed himself to be the centre of all personal influences from other spirits, or from one great Spirit, God. When the influence was gentle, he conceived of it as 'breath' (neshamah); and when it was violent he spoke of it as a 'wind' (ruakh), partly, no doubt, in connection with excitement. The stronger emotions of man were traced to the ruakh, or spirit of man, while the gentler emotions and the inspirations from the Divine were due to the action of the Divine neshamah or the human ruakh. See Spirit.

2. Ḥayyim.—Ḥayyim is a plural form, for which no singular is extant (the root is נוחן, 'to live'). It is an intensive plural, denoting diversity in unity. As the plural form Elohim seems to express the conception of one God with many manifestations, so ḥayyim expresses life in its many manifestations and modes. G. H. A. Ewald truly says that the word 'life' is 'most expressive and crowded with meaning.' Its various meanings it is our purpose to deploy.

(1) Physical life.—Ḥayyim is used of physical existence (a) in relation to time only, representing the continuance of the existence of God or man, in possession of their various activities; thus we read of 'the days of one's life' (Deut 4:1; 1 Sam 18:1); 'the years of one's life' (Gen 23, Ex 6:2), and 'the days of the years of one's life' (Gen 25:47); (b) in relation to its antiquity, physical death (Job 29, Jer 22, Ps 89); and (c) in relation to the events

1 OT and NT Theology, Eng. tr., Edinburgh, 1888, p. 135.

which occur in one's lifetime, or are the outcome of one's energies or activities, as marriage (Lv 18:19), deeds of valour (Jg 16:20), singing God's praises (Ps 104:1), sensual enjoyment (Ec 2:11). They were hated and beautiful in Life (Ps 37:4). "My soul is weary of life!" (Job 10:21): "Preserve my life from the fear of the enemy!" (Ps 64:1).

The remarkable thing as to the Hebrew usage of hayyim is the clear conviction that 'life' is something more than a mere continuity of physical existence. There is a clear recognition of the dignity of man—that man was not meant to live the life of an animal or a life of sense gratification. Such a life is unworthy of so dignified a creature as man is. As the period developed, the word 'life' became filled with deeper connotation. Roughly speaking, man's view of 'life' passed through the same three stages as we have found in regard to the word 'work': (a) the acceptance of a man's word or order; (b) the abundance of the good things that he possesses—the objective regard; (c) man's life consists in what he is, his character—the subjective regard; and (d) man's life consists in his relation to the Divine, to communion with the Divine—the subjective regard. In passing through this development, Israel was subconsciously discussing the problem of man and his life. What is man's life? Wherein does man's true life consist? And his three answers were: (a) happiness, (b) goodness of character, and (c) fellowship with God.

(4) Religious life.—The passages hitherto considered refer to the moral life nurtured by the instruction of the wise and by obedience to the revealed will of God. Similarly, Ezekiel in the OT, Psalms, speaking of the promises of God, says: 'By these things men live, and wholly therein is the life of my spirit.' (Is 58:11); and in 55 the Lord calls men through His prophet, saying: 'Incline your ear, and come unto me: hear, and your soul shall live.'

1 AT Theology, p. 400.
and to enter on the new Kingdom, in which God's presence will be much more real and evident (48); to go forth on his errand in the crisis and to be excluded from the Kingdom.

LIFE AND DEATH (Indian).—The earliest Aryans to enter India worshipped a vast number of petty spirits, but they learned, rather later, to revere a number of the greater phenomena of nature, and also had much stress on the worship of their ancestors. This ritual formed the foundation on which all the institutions of the Aryan family were built, though it may well be that the religious belief had its own ultimate origin in the natural organization of the family. At all events, the belief in the pious ancestors profoundly modified that organization. The father was the family priest, and controlled the worship of the ancestors of the family in all details. Centuries after their entry into India, when the Aryans were divided into the two great divisions, the Vedas, described the importance of bringing the dead to a happy afterlife. In fact, the Veda deals with the idea of transmigration, and rebirth. Whether the transmigration idea came from this source or not, it is impossible to say, and, indeed, it is more probable that it was at first a deduction from the physical resemblances which were observed among kindred.

But, even if the idea that human souls might undergo animal births came from the aborigines, that is but one element in the complex doctrine. That which gave the belief its power is the intellect, and also its value for the moral life, was the conviction that man possesses a soul which cannot be destroyed. There are probably totemistic clans who believed that death a man became, like his totem, a tiger, an oak, a cloud, or a wolf.

Whether the transmigration idea came from this source or not is impossible to say, and, indeed, it is more probable that it was at first a deduction from the physical resemblances which were observed among kindred.

The Vedas and Brāhmanas.—In the Rigveda the conceptions of death are not entirely consistent, but the principal belief relating to the ajita bhāga, or "unborn part," was as follows. When the remains of the deceased had been placed on the funeral pile and the process of cremation had begun, Agni, the god of fire, was prayed not to search to consume the departed, not to tear asunder his skin or limbs, but, after the flames had done their work, to convey to the fathers or ancestors the mortal which had been consumed. His eye was hidden to go to the sun, his breath to the wind, and so on. As for his unborn part, Agni was supposed to kindle it with his heat and flame, and, assuming its most suspicious form, to convey it to the world of the righteous, from where it can complete its course from earth to the third heaven, however, it has to traverse a vast gulf of darkness. Leaving behind on earth all that is evil and impure, and present itself, by the grace of the father's tool, to the spirit, invested with a bālia like that of the gods, soars to the realms of eternal light in a car or on wings, on the undecaying pinions wherewith Agni slays the Raksasas, waiteth upwards by the Maruts, recovered to a perfect body in a complete and glorified form, meets with the ancestors who are living in festivity with Yama, obtains from him, when recognized as one of his own, a delectable abode, and enters upon a more perfect life.

In the Vedic era death was held 'to be the going-forth from the living of his breath, or of the thinking part, the mind, which was held to reside in the heart. Heaven, a happy hereafter, was all that was looked forward to by these Vedic Aryans. Throughout the hymns there is no weariness of life, no pesssimism.

From death there is no awakening; the shade, the breath, soul, or spirit has gone forth and returns not.

In the "Pārītrīvā Bṛhatmāna" the souls of the deceased are said to dwell in the heavens above stars, and again in the stars are the lights of those righteous men on the earth.

In the "Satyapatha Brāhmana" death is the sun whose rays attack to mortals their life breath, yet, as the "Katha Upaniṣad" declares: "No mortal lives but the sun goes up and the breath that goes down. We live by another in whom these two reside." There was something which went out of man in sleep and death; something underlying the ego, the I, the vital breath, more subtle than life. In the "Rig Veda," the sun, though it holds the life breath of mortals, is something more. It is the Self, or the Atman, of all that moves and moves not, of all that fills the heavens and the earth. So it was there is also the Atman, "the Self, smaller than small, greater than great, hidden in the heart of that creature." A man who is free from desires and free from grief sees the majesty of the Self by the grace of the Creator. It is this Atman, or Self, more abstract in its conception than soul, psyche, or "ātman," that becomes also the Universal Soul, the Self of the World, "bhūmiḥātman," of which the Veda speaks: "When that which had no bones bore him who has bones, when that which was formless took shape and form," the Indian says had first to sweep away all that had been produced, even the gods themselves, and to his gaze there remained but the nearer essence, Brahman, from which all things issued forth, and into which all things resolve themselves. There remained also the Self, the Soul, the Atman of man. There was but one step further to be reached by the Indian mind, and that was when all duality vanished, and the Brahman became the Great Soul, the eternal and immaterial Self, into which was merged the Atman, or Self, of man.

In other words, the Hindu conception of the soul approached that of the modern monists (see further, art. ĀTĀMAN).

1. Rigveda, x. xvi. 1-5.
4. Bṛhadāraṇyāk Upaniṣad, iv. 4. 5; also see III. vii. 14-22.
5. In the Upaniṣads the soul was supposed to exist inside each human body and to be the one sufficient explanation of life and motion. In the living body it dwells ordinarily in a cavity in the heart, and is of the size of a grain of rice or barley. In later speculation it grows to the size of a thumb and is, therefore, called the "dwar." In shape it is like a man. Beliefs varied as to its appearance and as to its composition. One passage says that it consists of consciousness, mind, breath; eye and ears; earth, water, fire, and ether; heat and no heat; desire and no desire; anger and no anger; love and no love. In other words, the soul was conceived as material, although it also possessed selected mental qualities. It could quit the body in dream sleep, and certain diseases were supposed to have this effect on it. In death the soul leaves the body and enters the kingdom of after-life.
to be due to its having escaped from the body, so
that charm and life is not to be done or living its body.
In a sense passes the soul is supposed to have
existed before birth in some other body, and
opinions varied as to how it got into its first body.
We also find a curious speculation, with three
variations, to the transmutation of the soul, from
the ether into the air, from that into the rain;
by the earth, from it into plants which become food to
mammals, whence they pass into females. At an ordinary man's death the top part
of the heart is lighted up, and the soul, guided by
that light, departs from the heart into the eye.
and through it into some other body, exalted or
not according to deeds done in the body which it
is leaving. The soul of the man whose cravings
have ceased goes to Brahma. The Eyonisals are
almost unanimous that the soul will not obtain release from re-birth either by sacrifice or by
penance.  

Jainism.—The philosophy of Jainism, probably
the oldest living Indian creed, defines the universe
as not created and not controlled by any individual
god. As substance it is without beginning and
without end, but it is not homogeneous, since it
consists of substance (dravya), which is either jiva,
'alive', or ajiva, which may be translated 'in-
occluded', i.e., that which is not living. Jiva are
divided into three main classes: (1) living, viz.
matter, space, the two others, and (figuratively) time;
but living beings are com-
Judged to be the highest form.

3. Jainism.—The philosophy of Jainism, probably
the oldest living Indian creed, defines the universe
as not created and not controlled by any individual
god. As substance it is without beginning and
without end, but it is not homogeneous, since it
consists of substance (dravya), which is either jiva,
'alive', or ajiva, which may be translated 'in-
occluded', i.e., that which is not living. Jiva are
divided into three main classes: (1) living, viz.
matter, space, the two others, and (figuratively) time;
but living beings are com-
Judged to be the highest form.

4. Buddhism.—Buddhism, as an organized creed,
had disappeared from India, but the ideas which it
adopted or promulgated are still living and form
one of the sources from which the Indian beliefs
as to the origin of life are drawn.

5. Medieval.—Three or four centuries before
the Christian era a religion with Vaisudeva as its
central figure and a school of its followers as
Bhagavata was founded in India. According
to the Mahabharata, the sun is the god of the
tree of life, out of which all their material impurities being burnt, remain as atoms
in him (it); then, released from him, they enter the Aniruddha (self-consciousness) form, and,
becoming mind, they enter the Brahman (form). Leaving this, earth, water, fire, and wind,
is possessed of life. In other words, the Jain
philosophy is pure animism. Jiva is sometimes
translated 'living being' and sometimes 'soul,' yet
it is not one individual universal world-soul, but
is mass of mutually exclusive, individual souls, and
every soul having attained its highest state (moksa)
is styled parama-jiva, or 'great soul,' a term only
very roughly translatable by the word 'god.'
Jainism thus fails to draw any definite distinction
between body and the soul. Dravya may be
defined from several points of view. From
the standpoint of its own unchanging nature it is
that which ever exists. For example, the soul now
embodied as a cat may in its next life be incarnated
as a dog, man, insect, or what not, yet remain, in
spite of all these changes, the same individual soul
all the time; and, thus, while the body is merely
a vast multitude of cells which come and go, the soul is a homogeneous substance which
maintains its identity, and which is always
2 ib. p. 555.
3 T. W. Rhys Davids, Lectures on the Origin and Growth of
Religion as illustrated by some Points in the History of Bud-
dhism, London, 1891, p. 81; cf. Appendix vi, for parallel beliefs
on souls going to the moon.
LIFE AND DEATH (Indian)

creation (Samudra) is compared to a pipal-tree, which is to be cut by the weapon of indifference or detachment. When a soul departs from a body it takes away the indriyas (senses), of which avanishh (herb) is the sixth, and brings them in when it assumes another body. The soul itself is a part of Bhagvat and is eternal. By becoming somi (hemp) Bhagvat raises all herbs. By becoming fire he aids digestion. There are two souls in the world, one changeable, the other constant, and besides these there is another, the highest or Paramatman, who, as the unchangeable lord, supports all three worlds after entering them. Hence it appears that it is the animal soul that goes out of the body along with the six senses and enters new ones in that condition.

6. Modern Aryan.—The multiplicity and, it must be confessed, inconsistencies of the older doctrines current in India regarding life and death are reflected in the countless beliefs now existing, but through all the bewildering variations which prevail a few dominant conceptions can generally be traced, and a remote and savage tribe will be found professing a creed which is based on the fundamental beliefs of orthodox Hinduism. Even the regular terminology will reappear in forms more or less mutilated. So numerous are these beliefs that only a few of them can be given.

The basic idea of life in all India is that it is indwelt by souls. This leads to a readiness to take life which to the European appears callous and brutal indifference to it. Thus in 1841 S. C. Macpherson was deputed to Ganjam in Madras to suppress female infanticide and human sacrifice; among the Khondi Hindus a tribe which believed that souls return to human form in the same family, but that they do not do so if the naming ceremony on the 7th day after birth has not been performed. As the Khonds already have four sons, they saw in this belief a perfect justification for female infanticide as a means of reducing the number of female souls to be re-born in the family.1 A very similar belief prevails in the Panjab, where a girl child is or was killed with rites and an incantation bidding her ‘send a brother instead.’ Exchange is not murder.

How far this and similar beliefs account for the reluctance to cremate young children does not appear. Both these of dying after infancy or early childhood are very widely believed to pass into another world, at least for a term. Thus in the Panjab the Kansuts of the Kulu valley sometimes after a cremation make a small foot-bridge over running water in the neighbourhood to help the passing of the soul of the deceased.2 Yet the same people practice a form of divination, which is very widely spread, to ascertain, immediately after death, what animal the soul will enter or has entered.

This belief is perfectly consistent with a belief in metempsychosis and yet compatible with the worship or propitiation of the dead, who may be benevolent or the reverse. Among the kindly dead may be numbered the spirits of ancestors, of pure ones (siddha), and saints, of dutiful widows who have committed sati, and soon. But the propitiation of the malevolent dead is much more necessary, and therefore prevalent. For example, in the Kumaun division of the United Provinces the lowest castes, the Doms, and even the lower classes of Brahmans, the Khals Brahmins and Rajputs—indeed, the bulk of the population—believe in the powers of the malevolent or vindictive dead. Thus, if a man has two wives and drives one to suicide, any disease afflicting the other wife’s children is ascribed to her ghost, which must be propitiated, and gradually comes to be treated as a god. If a man is killed in a quarrel, every one who takes part in killing his slayer or his children is ascribed to the ghost.

There is reason to believe that the emotion caused by the dread of the effects of karma is much stronger in the plains. In particular dying in debt is dreaded as theuo3 debtor will, it is believed, be reborn as the ox or pony of his creditor. If a man's son dies it is believed that he was his father’s creditor in a former life, and the debt being now extinguished there is no necessity of his further life. The latter belief is said to provide a great consolation since the death of an ordinary son is a much more serious matter.

The certainty of the operation of karma is not without considerable effect on practical morality.3 It is automatic, so that specific condemnation by Parinicaya (Godd) of any sin is hardly required. Similarly, the idea of forgiveness is absolutely wanting; evil done may be outweighed by meritorious deeds only so far as to ensure a better existence in the future, but it is not effaced, and must be atoned for. As to the objection raised to the theory of transmigration—that it does not follow from that the soul remembers previous existences—such a consciousness is recognized in the case of great ascetics; and even among the degraded position knows that the reason for this is his wrong-doing in a previous existence. The nature of the next incarnation can also be divined, when a man has died, by placing ashes from a potter's kiln in a shallow vessel over his heart. Next morning they will be found marked with human footprints, claws, exuviae lines, and so on, according as the soul is to be re-born as a man, a bird, a tree, etc. To ensure that they shall be married to each other in a future existence, a man and his wife bathe together in the Ganges with their clothes tied together. The important difference in the teachings of theoretical Hinduism and popular religion in regard to heaven and hell is that the former declares that there are transitory stages of existence in the chain of transmigration, while in the latter there is generally an idea that the soul, when sufficiently purified, goes to dwell for ever in heaven, which is regarded as a place where the soul will enjoy material comforts. In popular Hinduism there is no idea of absorption in the deity or of recurring cycles of existence and non-existence.

The conception of life as something impalpable, yet apparently material and certainly transmigratory, is extremely common in India, and may, indeed, be described as the most popular. Thus a woman who has lost a child will bathe above its grave, pouring water over herself through a sieve, in order to ensure a fresh conception. For the same reason very young children are sometimes buried under the threshold, so that the life may come back again. This idea leads to the popular belief that life may be stolen, and so on the night of the Divali, or feast of lamps, male children are occasionally stolen and killed so that a barren woman may bathe over the body and conceive a son of her own.3 As in other ritual murders, it is desirable to kill the child with as much pain as possible. And during the śraddha, the ancestral fortnight, when the sun is in Virgo (Kanya), occurs the Kanaganā bāyaa, or ‘fighting in Kanyakā,7 also termed śraśa pāvam (‘sharing with others’), in which women of great Hinduaste, even Khatris and Brahmas, of the Central Provinces. On the first day of the śraddha, the goddess Lakṣumāni’s image in the house or lane is painted with cow dung, and the women belonging to it go out early in the day to a bathing-place, reviling on the way

1 Census Rep. United Provinces, 1901, I. 77. 2 Ib. p. 75. 3 No one would think a female soul worth stealing, although a girl’s soul is expected to return in a boy.
women who are known to have sons. This leads to tussles in which garments are often rent to pieces, but men must not interfere. The belief is that by cursing the sons of others the female attracts the male souls to herself through the intermediary of the dead. 'Wicked' life is worshipped daily and thrown into the river at the end of the fortnight which is held sacred to the spouse of Siva the destroyer as well as to the dead. Married women are also cursed to become widows, in order to make one's own life wretched. Life is lived by day regular fights take place between large gangs of women on their way to the river, and the affair is treated as a festival.

LITERATURE.—This has been given in the footnotes.

LIFE AND DEATH (Iranian).—With their marked tendency towards optimism, the Iranians loved life (angiu, grava, jdtta, jti, iiitia) and abhorred death (ufikia, mojlevia); the one is the creation of Ahura Mazda (Ys. xxx. 4), who has been at variance since 'the beginning of life' (Ys. xlv. 2). Not only was life first created by Ahura Mazda (Ys. xlii. 5, xliii. 5), but it only did give life to the body (Ys. xxx. 11), so that Zarathustra asks him how the 'first [i.e. the earthly] life' is to be (Ys. xxviii. 11; cf. xxxii. 1), but he is 'the lord of the deeds of life' (Ys. xxx. 8), and from hence come the 'living' (Ys. xxxi. 19; cf. xxxiii. 14). The Amesha Spentas (q.v.) give aid to the life of man (Ys. xxx. 7), so that Zarathustra fittingly presents the 'life of his own body' as a 'holy offering' (stria) to Ahura Mazda and Asa (Ys. xxxiii. 19). On the other hand, the demon Wrath (Ashna) injures the life of man, and the wicked and unbelievers mar it (Ys. xxx. 6, xxxii. 9, 11).

Life in this world is not all; indeed, though Zoroastrianism teaches that all good things are to be enjoyed in full measure, life here below is but a preparation for the richer life beyond. For this reason Zarathustra asks from Voihn Manazd and Asa the 'words of life' (avti avangia), while the 'right ways of works' (rrtovac watucv) are to be learned from the religious teacher in the present life (Ys. xlv. 8, xxxiii. 13).

If life on earth is the 'first life,' the 'second life' is in heaven, and that life the 'dreamer' (the 'man of the dream', 'man of the life') who 'looks down' on the devil's side in human life (J. H. Monlont, Early Zoroastrianism, London, 1913, pp. 136, 137) seeks to destroy (Ys. xlv. 1, xxxi. 11, lii. 6). Heaven is the place of 'long life' (Ys. xlii. 2, 13). Most significant of all is the presence of the Amesha Spentas, of the godling Immortality, Amertat (Ys. xlv. 17, xlv. 5, 10, xlvii. 1, lii. 7), for in heaven life is to be for eternity (Ys. xlv. 7).

When we turn to the Younger Avesta, we find the outlook upon life much changed. Long life in this world is a blessing and an object of prayer (Ys. lixii. 11; Afrinokian, i. 18), while both Ahura Mazda and the Gathas are honoured with life and body (Ys. v. 3, li. 1; cf. liii. 3). Life is twofold: 'this' or the corporeal (lit. 'incorporeal', and 'the spiritual' (ahmndia ahyi manahyata). Ys. xl. 2, xli. 6; wcnigia ... wcnigia ... ahvca angui-vd ... auuca angivi-yd ... auuuca angivi-yd. Ys. lii. 25), so that prayer is made to Ahura Mazda to be 'life and corporeality for both lives,' (aoyeiz aoyeiz-tosca ... aoyeiz aoyeiz. Ys. xlii. 3). The 'best life' (eystiia ahyi, Ys. xix. 19, and often) is actually a synonym for 'heaven,' as the 'worst life' (acirviia ahyi, e.g. Vend. liii. 5) is for 'hell,' and this conception of life is in the main Persian term to 'heaven,' bhiSt.

The 'best of the best life' is the 'righteousness of Ahura' (Vend. xviii. 6) and in the time of the final Saohshyan, Avesta-era, men will live for ever, for there shall be no more death (Ys. xix. 59), even as was the case in the happy days of Yima's reign (Ys. ix. 5; Ys. xix. 35; Vend. ii. 5).

In the Gathas death is seldom mentioned. The whole stress of Zarathustra's life is on life devoted to overcoming the powers of evil and gaining the eternal joys of heaven. Even the wicked do not die; they are damned to the everlasting torments of hell (Ys. xlv. 7, xliii. 11). In the Younger Avesta, on the contrary, death is an important feature. We need not detail the corruption wrought by the 'corpse demon' (Nasa; cf. Gr. niea, 'corpse'), which forms the main theme of Vend. v-xii. (see also art. DEATH AND DISPOSAL OF THE DEAD [Tarsi]), and we need only mention that a standing epithet of Haoma (q.v.) is umon (from whom destruction especially death) remains afar,' Ys. ix. 5, 19, x. 21, xi. 3, 10, xxxii. 14 (on the latter passage see Monlont, 71 f., 338). Death is one of the sins (Ys. liii. 7-12; cf. xxx. 10), and the first to stay it was Thrita (Vend. xx. 2), while it is the Druj (the Lie, the negation of the truth of Ahura Mazda) who destroys life (Ys. liiv. 15). 'Life' here probably being meant in the eschatological sense, for we have learned that the blessed future there will be no death, but in this present world only the wicked forget death; the man of piety prepares for it (Awend, 32 f.), for it is inevitable (Ys. xxxii. 25 f.).

According to the Pahlavi tradition the 'Yima Mainia-ya Xrst' (viii. 20), which is not strictly orthodox, being markedly fatalistic in tone (cf. art. FATE [Iranian]), the seven planets 'pervert every creature and creation, and destroy the men and the devils up to death and every evil.' According to the Bundahiism (Ys. xix. 20 ff.), the creatures of Ahiran will perish at the Last Day, when the heavens and the earth shall be created anew and when the creation of Ahura Mazda shall reign supreme, after wicked men shall have been purified by the flood of molten metal which at that time will cover the world.

Of mythological concepts of life and death there is scant trace in Zoroastrianism, the sole allusion, evidently borrowed from a Sarmatic source, being to the tree Gokart (the Gokeraena of Ys. i. 30, Vend. xx. 4, etc.), or white Hon, which is the 'counteractor of decrepitude, the reviver of the dead, and the immortalizer of the living' (Sectio- nes of Zet-Sarmatic, and those who take the zodavorast, is obtained one of the components of the food which will give immortality to all Bundahiism, xxx. 25; cf. ix. 6, xvii. 1, and see F. Windischmann, zur Studien, Berlin, 1863, pp. 106, 235; F. S. Spence, Anewerterbuch, Leipzig, 1871-78, i. 464 f.).

LOUIS H. GRAY.

LIFE AND DEATH (Japanese).—As might be expected, the early Japanese conceived of life and death as being entirely dependent on breathing. The word for 'to live', 'breath'; and i-no-chi, the expression for life and vitality, is believed to mean ski-no-nuchi, 'during breathing,' or ski-no-guchi, 'the way of respiration.' Similarly, the word for 'to die,' shina, seems to mean ski-inu, 'the wind goes' (a derivation of the word from sugi-inu, 'to pass away,' is disputable). These very ancient words are still in common use, though the people think little of their etymology.

The mythology opens with the primal power of production. Three deities are said to have sprung out of the primeval chaos. One of these is the Eternal-Ruling (Ame-no-mikana-mushi), and the
Life is coeval with breathing, but vitality endures longer and acts beyond bound.
The source of vitality, is considered to be a thing precious and mysterious like a jewel or ball. It is called *tama* or *tama-shiki*, 'subtle aerial ball'. But it is not always a unity or a homogeneous whole, for double manifested that this is divided and are spoken of. They are either *nigi-tama* and *arata-tama* or *seki-nitama* and *kushi-nitama*. The *nigi*, 'nicky', 'quiet', 'refined', is contrasted with the *arata*, which is 'wild', 'raging', 'raw'. Similarly, *seki* means 'wonderful', 'hidden', or 'hideous'.

The latter set is believed to be the two aspects of the *arata-tama*, the active side of the soul, but in fact the relation between these two sets is not clearly defined. The existence of these double souls in every man is also obscure. We know only that in some cases one of them appears, even to the astonishment of the possessor. Whether or not the double souls were borrowed from the Chinese conception of soul, aerial and terrestrial, or of the two principles, positive and negative, is uncertain.

The soul is sometimes personified as, e.g., Uga-no-mitama, the spirit of vegetable production, or as *Iki-kuni-tama*, the living-hand-soul. In post-Chinese ages the souls of men, if not gods, are more in vogue. They appear in human form, but they are distinguished from human souls, being specially named the *sci*, or 'essence'. The double souls were almost forgotten, having been overshadowed by Buddhist ideas, and they were revived by the Shintoists of the 18th cent., but with little influence upon popular belief. Buddhism teaches that there is only one soul to one living being.

As to future conditions, there is a kind of heavenly world, Takama-no-hara ('Plain of High Heaven'), where celestial deities reign. Yomotsu-kuni, mentioned above, is the opposite pole. Besides these, there are two worlds beyond this, Hi-no-waka-miya ('Solar Young Palace') and Taku-vo ('Eternal World').

The former is mentioned only as the abode of the Male-Who-Invites, and it is sometimes explained as meaning the shrine marking the place of burial. The latter meant any place beyond the sea. Moreover of those who hides himself, or a human being, when he dies, is destined to be born in one of these worlds beyond. Nothing definite or detailed is told of these conditions. A definite systematization of the eschatology, after the models of Buddhist ideas, was made only by the later Shintoists.

The Japanese remained in rather primitive conditions as to the conceptions of life and death, until Buddhism introduced an elaborate system of ideas in the 6th cent. A.D. Contact with the civilization of the Asiatic continent and the importation of Confucianism with its writings may have influenced Japanese ideas in some respects, as pointed out above. But these influences did not materially change the ideas, because Confucianism was not particular in such matters. On the other hand, the Buddhist influence upon the people of the East consisted chiefly in its elaborate eschatological doctrines. It taught the composite nature of human life, made up of the five components (akshara), in order to convince the people of its impermanency. Life, thus made up, is only a knot in a long chain of causation, of deeds and their fruits (karma), which stretches out endlessly before and after.

Along this chain of knots have passed through all possible forms of existence, and will continue to transmigrate further on. There are five or six courses (gotu) of transmigration, ranging from the highest heaven of pleasurable life to the nethermost inferno; and these are again classified accord-
ing to the three conditions of existence (bhavas), which are subdivided into twenty-five. Beyond these courses and conditions there are the lands of eternal bliss, prepared by various Buddhas to receive believers. Every one may be born in one of these, and is compelled to live in that condition. The Túśitá heaven of Maitreya and the Sukháváti of Amítábha were the most popular Buddha-lands (káśyapas) in the Buddhism brought to the East. There the soul, no longer subject to causation and transmigration, will enjoy full communion with the saints, and may come back to the earthly worlds in order to save relatives and friends. We can imagine how wonderful and attractive these teachings must have appeared to the people, simple and credulous, as they were. Thus, an inscription dated A.D. 622 expresses a belief in kármaka and a devout wish to be taken to the Land of Purity by the grace of Buddha. It is questionable how much impression these ideas left upon the mind of the people at large, a tribute to their simplicity, but the change and widening of thought are undeniable.

Steadi ly progressive Buddhist influence, first among the higher classes and then among the lower, gradually superseded the old national ideas as well as the Confucianist conceptions of life and death. The romances, stories, and lyrical poems of the 10th cent. and later abound in ideas of kármaka, transmigration, and birth in Buddha-lands. These ideas, becomes an ideal and remain to-day the most important factors of popular beliefs, in spite of hostile endeavours made by the Confucianists to depose them, ever since the 17th century. They can be detected in many songs sung by street names, whom the words of these are used in daily affairs, consciously or unconsciously.

Nevertheless, the native ideas have never died out, and have remained rather as a kind of matrix into which the adopted conceptions have been laid. The national beliefs, so to speak, look upon the sun as the source of all vitality. But here the sun is not exactly the goddess of light (Ama-terasu), of the mythology. It is sexless and without any other attributes than that of the life-giver. It is involved as the Great Divinity (O-hi-mi-kami) or the August Heavenly Way (O-tentó-sama), and is worshipped every morning by some, or on New Year's morning and at sunset on the equinoxes by the majority. They breathe the facing sun, meaning to inhale thereby the vital essence (yóki) emanating from it. At the same time prayers, either Shintóist or Buddhist, are uttered. The power opposing life is darkness, which, however, may not merely absence of light, but an evil power or pollution (kármaka or yóki), the cause of ills and death.

This belief in the sun as the life-giver is certainly a survival of that in the Prospecting-Divinity, who follows the Heaven-Shining goddess as her nom enon. The ideas and practices have been influenced by the Buddhist cult of Vairochana (the Great Illuminator) and also by the Confucian dualism of the yin and yang, but we can see here a tendence to the primitive beliefs. These ideas have been systematized in recent times into a cult by some Shintó reformers. One section of Buddhists favours this cult, while the other disregards it, though without opposing it. To the former belong the Shingon sect, the most Hindúistic form of Buddhism, which has tried to amalgamate Shintó, and the Nichiren sect, the most Japaneseized Buddhism. To the latter category belong the Jodo and the Shin sects, the Buddhist Paulists and Puritans, and the Zen sect, the school of meditation and introspection.

On an average, the prevailing conceptions of the modern Japanese are based on the Buddhist

**Shintó.** Kármaka and fate are still believed in by many, but transmigration is not strictly adhered to in the details of its teaching. The majority, in fact, think little of life and of its origin; but evils and diseases are, in many cases and by many people, ascribed to merit or demerit, and some of the folds of the sects. Among the educated classes and educational circles agnostic-doctrine, so common to the Japanese mind and to Confucianists in this connexion, is a recognized principle. Young Buddhists, who are now eagerly engaged in reconquering their faith in Buddhism, are not strict in the doctrines of kármaka and transmigration.

M. ANESAKI.

**LIFE AND DEATH (Jewish).—Optimism is the keynote of post-Biblical Judaism. Everything that God does is for the best (Barakah, 69b), and this life is essentially good, to be contemplated with joy and gratitude. 'For every breath that a man draws, says the Rabbis, 'let him praise God' (Midr. Rab. to Gen. 2). Yet life is not an end in itself, for it must be lived under a sense of responsibility to the Giver, and all its higher aspect of it. At death a man loses the opportunity of obeying the Torah and the Commandments (Shabb. 59b). 'Morality,' says M. Lazarus, summing up the teaching of Judaism on this subject, 'is man's vocation (Ethics of Judaism, § 189), and the Rabbinical legend tells of God's saying at Sinai: 'If Israel accept not the Commandments, it is better that the earth revert to chaos' (Shab. 58a).

The work,' says the Rabbis elsewhere, 'stands upon three pillars: the Torah, the Life of Peace, and the Divine Power (Abot, i. 2); or, according to another maxim, 'upon Justice, Truth, and Peace' (ib. i. 18). 'The Torah is the medicine of life' (Yoma, 72b); in other words, life is made secure and efficient by religion. God, according to the Talmudic doctors, says to Israel: 'My light, the Torah, is in thy hands; thy light, the soul, is in Mine. Tend My light, and I will tend thine' (Midr. Rab. to Lv. 24). The supreme hope of the believers is the Kingdom of God established on earth, and thus, in a notable passage of the Liturgy for the New Year Festival, he prays:

> Put Thy fear, O Lord God, we beseech Thee, upon all Thy works, so that all mankind may know before Thee one hand united to do Thy will with a perfect heart; for we know, O Lord, that dominion is Thine, and that strength is in Thee right hand. And so give glory, O Lord, unto Thy dominion; and hope to those that fear Thee, and the opening of the mouth to those that trust in Thee. For then the righteous shall see and be glad, and iniquity shall shut its mouth, and all wickedness shall be wholly consumed like smoke, for the proud rule of sin shall pass away from the earth. Then every creature shall own Thee as its Creator, and everything that hath breath shall cry, The Lord, the God of Israel, reigneth, and his dominion ruleth over all (Cf. Sir 3:1-9).

But, though the true life is the life of service, it must be glad service, for 'the view of life taught by Judaism is serious, but cheerful' (Lazurus, § 256). The Shékoltó, the Divine Preserver, says the Talmud, does not come in response either to grief or to levity, but to glad performance of duty (Shab. 306). This is the essence of Jewish doctrine on the subject; neither asceticism nor hedonism, but joy springing from a religious idea, is the characteristic Jewish temper.

'There should be no unrestrained laughter in this world' (Ber. 56a). The history of Israel, with all its tragedy, is sufficient to forbid such mirth; and the devout Jew denies himself and his pleasures in memory of desolate Jerusalem. Moreover, unlimited enjoyment is incompatible with a religious outlook on life; the good man will conceive of himself as living under a Divine law, with which
his pleasures must be made conformable. On the other hand, the ascetic idea is alien to the true Jewish spirit. In Judaism, desire, and its indulgence, under right conditions, is commendable. Even the impulses that make for physical pleasure are the Divine handiwork, and to gratify them is a duty; without them life would be a burden. 'If it were not for desire, the world could not stand; a man would not take a wife, nor build a house, nor plant a vineyard (Midr. Thallim, ed. S. Buber, Wilna, 1891, to I's 87'). But indulgence of these lower instincts must not be allowed to carry its own weight, for as they yield, it but the desire to promote the Divine purpose for which they were created. That indulgence is a duty, but a religious duty.

Thus the Rabbinical law, following the general rule laid down in Gen. 3:15, prescribes a number of prayers to be recited by the Jew on indulging in various pleasures more or less sensuous in character—on partaking, e.g., of various kinds of food, on inhaling the fumes of incense, on inhaling a rainbow, on taking possession of a new house, and on wearing new clothes for the first time. By such means physical gratification, while sanctioned, is also cancelled. The tendency to self-indulgence is not rebuked, but restrained; natural desires are transformed into higher, and purified by dignity and self-restraint. At the same time the laws to prevent against various forms of excess in life are given as an integral part of the ethical code (e.g., Lev. 19:37). In Judaism the life of the individual is primarily an act of service to God, and the law was especially composed for that purpose. The length of a man's life is valued by Judaism, and death is not for Jews a penalty, but an act of man as a whole, a duty (Midr. Thallim to Ps 90); 'if thou desirest life, hope for affliction' (ib. to Ps 104). Such utterances betoken not a worship of sorrow, but a recognition of its disciplinary power, as well as its value for the character of the individual and the life of the people. Judaism sees no merit in suffering, but only in the right bearing of it; and between its teachings and the ideas of the self-mortifying Hindu there is an impassable gulf. Suicide is a crime, and its condemnation is in the words of the Talmud (Midr. Rab. to Gn 9); Maimonides, Hil. Repugach, xi. 4); but the slow suicide that comes of self-mortification or of the neglect of health is also reprehensible. Ye should keep my statutes, and my judgments: if a man do, he shall live by them (Lv 18)—'live by them,' says the Rabbinical gloss, 'not die by them' (Yoma, 85b).

Scattered among the moIy content of the Talmud are the materials for an curious protest against a materialistic view of life. The fact is itself a proof of the importance attached to the physical life by the Jews, but a protest against this is called into a religious duty. Hillel (1st cent. B.C.), on his way to the bath-house, tells his disciples that he is about to perform a sacred rite; it is not the days of the week, or the Sabbath, or the holy days, if it is the latter is the outcome of a devout heart (Kubb al-Kazzari, tr. H. Hirschfeld, London, 1919).

It is due partly to the difficulty of defining the rica medio of moderation, and partly to the sorrowful experiences of the Jewish race, that occasionally temperance has overstepped the safe line, and lost itself in austerity. The Talmud tells of a Rabbi (Ze'ira) who fasted a hundred days (Sanb. mojia, 85a), and of another (Mar ben Rabina) who fasted practically all the year round (Pos. 69b). There have been Jewish sects, like the Essenists and the Karaites, which have been marked more or less strongly by austere practices. In Judaism, as in other religions, mysticism has had contempt for the world and its joys as its corollary. The disciples of Hillel and Shammali even formally discussed the question whether life is worth living (Erubin, 13b). This uncertainty is often visible. The devout who gives himself to fasting is called, now a saint, and now a sinner (Talmith, 110, 22b); a man must die for the Torah, and not for worshiping idols (Ber. 62b), but these contradictions are either passing or incidental phases of Jewish thought; a main note is the rule, the ascetic and the

pessimist are only by-products of Judaism. It is a bad sign, says the Rabbi, to desire life (Tanna, 114); 'the Elyathin, etc.' and he who is not a hundred is no child of the sin-offering brought by the Nazirite (No 6th) by contending that his very abstinence from strong drink was a sin (Talmith, 11a).

According to our view, says Joseph Hamburger, a p. 135, 'a servant of God is not one who detaches himself from the world, or hates life, which is one of God's bounties. On the contrary, he loves the world and desires it: it affords him the opportunity of desiring the world to come.'

According to a striking Talmudic utterance, in the next world men will be called to account for the lawful pleasures they have indulged in on earth (Jer. Kiddushin, ch. 4). And the real Jew speaks in these maxims. Judaism fixes the thoughts of its adherents upon the future world, but not to the exclusion of this world. It has revealed heaven to men, but earth as well. (M. Gudemann, Das Judentum, Vienna, 1902, p. 56). It has no sympathy with self-mortification for its own sake, no commendation for the temper that voluntarilycourts pain and abandons life for the greater glory of God. Suffering has to be patiently endured when it comes; it has even to be welcomed as the seed of moral regeneration. 'With thy very wounds I will heal thee,' God, according to the Talmud, says to man (Midr. Rab. to Lv 15) (the reference is to Ex. 19. 21). 'The spirit is willing, but the flesh is weak' (Matt. 26. 41). 'If a man has a will, let him will his will' (Midr. Thallim to Ps 94); 'If thou desirest life, hope for affliction' (ib. to Ps 106). Such utterances betoken not a worship of sorrow, but a recognition of its disciplinary power, as well as its value for the character of the individual and the life of the people. Judaism sees no merit in suffering, but only in the right bearing of it; and between its teachings and the ideas of the self-mortifying Hindu there is an impassable gulf. Suicide is a crime, and its condemnation is in the words of the Talmud (Midr. Rab. to Gn 9); Maimonides, Hil. Repugach, xi. 4); but the slow suicide that comes of self-mortification or of the neglect of health is also reprehensible. 'Ye shall keep my statutes, and my judgments: if a man do, he shall live by them (Lv 18)’—'live by them,' says the Rabbinical gloss, 'not die by them' (Yoma, 85b).

Scattered among the moIy content of the Talmud are the materials for an curious protest against a materialistic view of life. The fact is itself a proof of the importance attached to the physical life by the Jews, but a protest against this is called into a religious duty. Hillel (1st cent. B.C.), on his way to the bath-house, tells his disciples that he is about to perform a sacred rite; it is not the days of the week, or the Sabbath, or the holy days, if it is the latter is the outcome of a devout heart (Kubb al-Kazzari, tr. H. Hirschfeld, London, 1919).

It is due partly to the difficulty of defining the rica medio of moderation, and partly to the sorrowful experiences of the Jewish race, that occasionally temperance has overstepped the safe line, and lost itself in austerity. The Talmud tells of a Rabbi (Ze'ira) who fasted a hundred days (Sanb. mojia, 85a), and of another (Mar ben Rabina) who fasted practically all the year round (Pos. 69b). There have been Jewish sects, like the Essenists and the Karaites, which have been marked more or less strongly by austere practices. In Judaism, as in other religions, mysticism has had contempt for the world and its joys as its corollary. The disciples of Hillel and Shammali even formally discussed the question whether life is worth living (Erubin, 13b). This uncertainty is often visible. The devout who gives himself to fasting is called, now a saint, and now a sinner (Talmith, 110, 22b); a man must die for the Torah, and not for worshiping idols (Ber. 62b), but these contradictions are either passing or incidental phases of Jewish thought; a main note is the rule, the ascetic and the
the duration of life even in the case of the dying (Sif. 151b).

The Talmud has the story of a sage who, suffering martyrdom at the stake, is adjudged by his disciples to end his agony by-giving himself his lamp. The lamp has two flames. He refuses, "God, says, 'alone can take my life; I may not' (Aboda Zara, 18a).

Regard for life is exalted into reverence. The gift of God, life must be treated with the utmost consideration. The Talmudic laws prescribing kindness to the lower animals are in part enacted by this motive. God has created the various types of animal life, and desires their perpetuation. It is man's duty to pay homage to the Divine will in all his actions for respect, and to make himself the instrument for its fulfillment (see Aaron of Barcelona, Sepher Hahinhinuht [13th cent.], §§ 254, 545).

Life, then, according to the Jewish idea, is not even then so very good but it is not a burden to be shuddled off with a sign of relief.

'This world is not a vale of tears. It is a beautiful world, and one dwells ever by the joy they weave into the lives of others. On the other hand, the true Israelite does not think of this world as his haven. He is not a halting place on the journey from one point in eternity to the other, "the ante-chamber to the palace" (Abot, iv. 16). "a wayside inn" (Mekil. Anton, 98), the post where we are to refresh our hearts and live, gloriously, on our fateful voyage in the great Beyond' (Joseph, p. 287).

Life is not to be clung to unduly, or to be yielded up grudgingly. When a man is called, he must go. Man has no choice fully; for, since he does everything well, the decree that removes us is as wise and good as is the ordinance that places us here. 'Fear not,' says Ben Sira, 'the sentence of death is in the hand of God, yet thou refuse, when it is the good pleasure of the Most High?' (Sir 41: 16). This acceptance of death as the dispensation of Divine justice is the keynote of the ancient Jewish burial service, which takes the form of a theodicy, and, in a measure, of an exhortation. Its sacred name is t'fillin, justification of the Divine sentence, and its essence is expressed in the following quotation:

'Righteous art Thou, O Lord, both when Thou killest and when Thou pourest forth life. It is not for me to murmure at Thy method of judging. Blessed, then, be the righteous Judge, all whose judgments are righteous and true. The Lord giveth, and the Lord hath taken away; blessed be the name of the Lord' (Authorized Prayer Book, p. 315). On hearing of the death of one dear to him, the devout Jew utters the benediction: 'Blessed be the righteous Judge' (ib., p. 252).

The Israelite, then, is taught not to desire death, but also not to fear it. If in life he sees the opportune time to die, he acts with a view to ceasing his labors. He is so live as to be ready for that signal whenever it is given; his garments are always to be white, 'for who knoweth when the King may come?' (Shab. 153b). And, so remains he, he await the unknown hour calmly.

G. H. Dalman is not warranted in charging the Jew, as does Max Muller also in his Gilded Lectures (Anthropological Reikiwu, London, 1852, p. 369), with undue dread of death. 'The celebration of the New Year and the Day of Atonement,' says Dalman, 'according to the notions attached to it by orthodox Judaism, instead of mitigating or banishing the fear of death, strengthens it' (Christianity and Judaism, p. 28, Oxford, 1910). He is doubtless right in pointing to the passionate prayers for life which fill so large a place in the liturgy for those solemn days. But those days are essentially days of penitence; and if the Jew appreciates the order that by repentance and amendment he may put to life noble uses henceforth. Death itself has no greater terror for him than it has for any other religious Jew. Judaism, at any rate, does not encourage such fears, but exhorts the Jew to contemplate death with a tranquil mind as the end and the climax of the well-spent life.

Such a death, coming in its due season, is likened to the gathering of fully-ripened fruit or the quenching of the flame of a burnt-out lamp. The death to be dreaded is the morally premature one, which is gathering of the impersonal fruit, the untimely extinction of the lamp (Midr. Reb. to Gn 25: 29). Death is a natural ordinance; his work finished, the worker must go and make room for his successor—Abraham for Isaac, Moses for Joshua, etc. (Midr. Talmilin to Ps 116: 2). 'And God saw all that He

made, and beheld it was very good'—it is death that is meant, says a Rabbi (Midr. Reb. to Gn 1: 28). The death of the righteous is like the act of one who gently draws a hair from the surface of milk (Ber. 58b); this is called 'death by a kiss' (Bab. booth, 17a). The death of the wicked, on the other hand, is like the painless disentangling of a thorn from wool (Ber. 58a). Death is the liberator (Shab. 30b): it is like the entering into port of a well-laden vessel (Midr. Reb. to Ec 7: 16); hence it is that the Wise Man declares that 'the day of death is better than the day of one's birth' (ib.). It is fulfilled as compared with mere promise. Far from being the primordial curse, death is a blessing. The day that Adam died was made a holiday (Tana 'boe Kilayah, ch. 16). 'The death of the righteous,' God says, 'is a grief to Me, and never should they die if they did not themselves ask for death; for did not Abraham say, "I would be dust and ashes," and Jacob, "Let me die now"?' (Midr. Talmilin to Ps 116: 2).

The idea, however, that life is desirable as the opportunity for obedience persistently recurs in the Rabbinical literature. The thought of its cessation, therefore, is not welcome.

Even Abraham, who is most instanced, prays for death, is represented (in the apocryphal Testament of Abraham) as being adverse to it. He refuses to surrender his soul even when the archangel Michael comes and bids him to go to heaven. 'I yield the soul of an angel, at the Divine bidding, puts off his fierce aspect, and appears to the patriarch, dressed in the robes of the Angel of Death, finding him absorbed in religious study and, therefore, invincible, has to divert his attention by a stratagem before he can perform his mission (Shab. 200).

The Angel of Death is a familiar figure in the Rabbinical literature, and, as in the later Biblical writings (e.g., 1 Ch 21: 27), he is armed with a sword. Its point is tipped with gall, and it is this bitter drop that slays (Aboda Zara, 96b). According to some ideas, Death is a fallen angel (Pirke R. Eleazar, ch. 13), and identical with the Serpent in Eden (Wis 2: 24). His name, which often occurs in Rabbinical literature, is Summed, i.e., 'the drug of God,' a reference to the gall on his sword. Liberal opinion, however, disavows the existence of an Angel of Death, just as it scouted the idea of a personal Devil. 'Satan, the Angel of Death, and Evil Desire are one and the same' (Bab. bath, 160b). In other words, it is ignoble impulse alone that tempts and seduces. The knowledge, however, is the friend of men, especially of the righteous. Benevolence disarms him (Deirch veze ze, 8); he will not proceed to harm any one (Rab. 51a). He respects the wishes of the just as to when and where he delivers his summons (Mekil. Anton, 28a).

A Talmudic legend tells how a famous sage, Joshua ben Levi, appointed to die, and permitted beforehand to see his place in paradise, seized the knife of the destroying angel, whereupon a heavy voice rings out the command, 'Give back the knife; the children of men have need of it' (Rab. 71a). The angelic fellow has made good use of the story in his Legend of Rabbi ben Levi.

The necessity of death, however, applies only to the existing worldly order. In the Golden Age there will be no death; Messiah Himself will slay it (Pszisa Rebbeithi [ed. M. Friedman, Vienna, 1850], 1616 (the Scripture proof cited is Is 25: 8)). As to the origin of death, various opinions are expressed. The familiar idea that it was brought into the world by Adam's sin has its place in Rabbinical literature (see Shab. 55b; Erubin, 18b; Tane 'boe Kilayah, ch. 5); but we find it much earlier in Sir 25: 25. Closely connected with this idea is the legend, possibly of Persian origin, that the Serpent, when tempting Eve, infected her and, through her, all mankind with his death-deal-
of life and death (Teutonic).

Our knowledge of the conceptions of life and death among primitive Teutonic peoples can be gleaned from three fields: (1) the fragmentary information on Teutonic beliefs and practices given by classical and early Christian writers; (2) the organized religious belief of the Norse peoples, particularly their chief god, Odin, which is common to the general Teutonic stock, and reveals traces of earlier ideas; and (3) the great mass of Teutonic tradition, folklore, superstition, and custom, both in early times and in modern survivals. From such a study of this material we would appear that the processes of thought on these subjects among the early Teutons were very similar to those now formulated for all primitive peoples. The early Teuton, in dividing all that affected him into animate and inanimate, probably for his criterion the power of motion: from the confusion of this power with the faculty of volition animistic ideas would arise in connexion with active natural phenomena, and, later, even with inanimate objects, while a still further development would appear in personification, with inevitable sex-distinction, and in symbolical beliefs. The criteria for the attribution of death would be the loss of the power of motion and the phenomena arising from it; from the observation of sleep, dreams, trances, etc., would spring animistic belief. A further stage would appear in the identification of the principle of life with those intangible or tangible manifestations, such as breath, warmth, colour, pulsation, or voice; this last would be animistic belief. The close connexion with trees of the principle of life is proved by the well-attested Teutonic worship of trees, and by the idea of the World-Tree, with its popular parallels in the identification of trees with the guardian-spirits of peoples, tribes, families, or individuals (see Hamadryads [Teutonic]). The use of plants and fruits to convey the powers or the properties of death and the power of its transmission; others had an intimate connexion with individual human beings, and from this arises the power of transference or of shape-

1. The principle of life in nature.—The four elements are constantly represented as imbued with life, and the principle of vitality is naturally personified: (cf. Gardner, "The Beautiful," ii. 29). The personification of the living element in water is generally feminine.

The belief in life inherent in fire is shown by the general Teutonic myth of Wieland, originally a doublet fire of Zora, and originally a doubletion by Frazzor, Zora, later confused with, and superseded by, Loki. The life-transmitting powers of fire appear in the customs still practised throughout Teutonic Europe, at the ceremonial bonfires, especially at Easter and Midsommer (ib. ch. iv.; note that Frazzor admits the existence and signification of these customs, although he deviates [cf. v.] from Mannhardt's explanation of fire festivals). Akin to fire-beliefs is the belief in the quickening power of the sun, shown in the connexion between the summer solstice and the Midsommer fires, and in the custom of rolling fiery wheels or other sun-symbols. A curious example of belief in the connection of the sun with the power of lightning occurs in the superstition that mistletoe is produced by a lightning-stroke. The connexion between fire and human life appears in the representation of souls as flames or will-o'-the-wisps. Air has always had an important connexion with the principle of life under two chief aspects: first, breath, the symbol of life (cf. Velaspo, 18); secondly, wind or whirlwind. Wind made known the presence of mysterious beings, and, as Odin, as god of the wind, the shan, the wind, is the culmination of the connexion of wind with the continuance of life in the soul.

The primitive conception of the earth as Mother of all appears widely in Teutonic belief (cf. art. Earth, Earth-gods, § 61). Early personifications of her nature (Nerthus, Erec), and her life-giving and restoring power appears in charms in which sods, turfs, or handfuls of earth figure; many of these, whether in Old English or in modern survivals, as well as the methods of preparing them, show that their origin is unmistakable. The earth's living power is transferred even to inanimate objects resting on or discovered within her, such as stones and metals; we find a life-stone that heals wounds mentioned in the Laxdala Saga (Laxdala Saga, 21). Plants, fire, and water, were credited with volition, as in the story of Balder, and the early idea of the conscious power of weapons (cf. "the sword that lights of itself" [Skjernismulf, 81]) was long retained in poetry and folk-tales.

changing. Another form of this sympathetic connexion appears in the 'external soul'; but totemistic ideas, the logical conclusion of depositing the external soul in animals, seem never to have been in vogue (Y. Lehn, Allteurn. Religion, 

1. 23 ff.). In heroic saga the infant hero is sometimes suckled by an animal, as were Woldfiderich and Sigurdr Sven. In the serpent, in other cults so important a symbol of life, because of the removal of its skin, has little connexion with life-conceptions in Teutonic mythology. The tenacity of the belief in individual life in the natural world appears in frequent personification, though it is sometimes difficult to distinguish between personification and those local deities which abound in Teutonic belief, but which may be a later development.

It is a moot point whether the primitive Teuton believed in a universal life-giving spirit; without going so far as to assume a monothetic origin for Teutonic mythology, we can yet believe that the principle of life was early personified, though whether as earth-spirit or as sky-spirit it is impossible to decide. Animistic thought generally tends to the Norse type, the Frisian having more distinctly the Saxon form of the Freyr combination, and the Swedish worship of Freyr as a fertility deity all point to the former. All the chief gods had some connexion with productivity, and traces of phallic worship are not wanting. As regards the individual soul this has already been treated (see COSMOGENY AND COSMOLOGY [Teutonic]); the revival of world-life and its different phases were celebrated at the Easter, Midsummer, and Yule festivals.

2. The individual soul in Teutonic conception was prevented from becoming metaphysical by that material view of the soul which is illustrated by the ceremonies followed at birth (see BIRTH [Teutonic]); and the lack of individualism in the life-conception is shown by the importance attached to blood-kinship, heredity, and rebirth. Blood-kinship was the closest of ties, and the mingling of blood was the symbolic ceremony for sworn brotherhood (cf. Art. BROTHERHOOD [Artificial], i. 7). The power of heredity consisted in the transmission of racial qualities, especially courage and hardihood, as in the case of Sinjöllr (Volksang Saga, 8). The idea of re-birth, which still persists, was deeply rooted in Norse belief, and accounts for the constant custom of naming children after dead ancestors; the name was of great efficacy in the attraction of ancestral qualities, and even implied the transmission of a personality. The impossibility of re-birth was considered a misfortune (cf. Ælfringmann, Yggdr. Mythol., p. 25 f.). Similarly, thehöumungja, or genius in female form, could transfer itself from the dead to a beloved kinsman (Vega Ælfgja Saga, 9). The different stages of human life were little regarded; we know of no initiatory ceremonies, although Karl Pearson (Chances of Death, London, 1897, vol. ii. ch. ix.) considers that the licentious character of medieval Walpurgisnacht revels proved their origin as sexual festivities; otherwise we hear only of military ceremonies (Finn. Geru, 15) or of heirship feasts (Vegingla Saga, 40).

The material representation of the soul was probably induced by the observation of dreams and similar phenomena, where the soul appears to have an independent existence, or by the location of the soul in various organs of the body, as the liver, heart, or head. An extension of this material representation appears in the doctrine, common to all Teutonic peoples, of the 'external soul': the chief evidence is the story told by Paulus Diaconus (de Gest. Langobardorum, iii. 32) of King Gunthram, whose soul was once observed to issue 'in modum reptilis' from his mouth during sleep. Survivals of this idea in fairy-tales show the control exercised by the individual over his external soul, generally by depositing the soul in a place of apparent safety, in an object or plant, and thereby prolonging indefinitely the body (ib. 116 f.; CF. ch. vii.). A case of control exercised by an external and malignant power is that of Nornagasti, whose life was identified with a burning candle (Signs of Nornagasti, 11). The soul's power to assume an animal form and to go on journeys (haustruar), leaving the body sleeping, accounts for hamnir, or shape-changers, and confusion of such ideas with the observation of states of super-normal activity appears in accounts of berserkgange and shape-changings in THE TRANSMIGRATION [Teutonic] and LYCANTHROPHY, § 1.

An extensive power over the principle of life was acquired by magic, chiefly sympathetic, prophylactic, or coercive, and it was possible to induce annual and vegetable fertility, as by the sympathetic magic of the Midsummer fires. Instances of the sacrifice of human life to ensure vegetable fertility occur in the immolation of the kings Donaldi and Óláfr (Vegingla Saga, 18, 47); a similar fate of Anu (ib. 74), and an added ten years of life for each son sacrificed (ib. 29). Magic use of plants, etc., and of charms could induce prolific human life, and facilitate the soul's coming (Singfsfriandl, 9). Life could be protected or protected world-life could be extended (i.e. as passing the individual through a leafless or hollow stone (cf. Giam, p. 116); Fræzer, ii. 166 f.); the story of Balder exemplifies prophylactic magic to secure invulnerability. By spells then poison could be removed immediately (ib. 44, 75, 79); and sickness prevented or cured, while the perpetual battle of the Þjóðninga exemplifies the power to renew life indefinitely (Skaldsko- trunk, 47). Charms also had power to suspend life (cf. the sleep-thorn), and to harm or destroy it; metamorphoses were often compulsory, the result of external magic.

3. The conception of death in nature.—The elements have all a death-dealing as well as a life-giving power, especially life and water; water acquires a malevolent power on Midsummer Day, and demands a human victim; similarly, many vegetable and animal objects had death-dealing powers, inherent or temporarily acquired.

4. The conception of death in men.—This arises from the phenomena attending sleep, which foreshadowed the soul's departure; the soul is still materially represented as issuing from the mouth in the form of a bird or mouse, and its exit is facilitated in every way by Norse mythology—the dead made an actual journey, and needed shoes to travel the Hel road. The idea of cessation of activity after death, if it ever existed, was soon superseded, as is proved by the universal custom of providing the dead with material implements; the earliest tombs contain cups and vessels, not armour and weapons—a sign that at first feasting, not fighting, was to be the chief occupation. Activity after death could be exercised still on earth, but it was then frequently malignant, and could be prevented only by burning the corpse (Laxdala Saga, 17, 24). Spirits could return in animal or in human form (Erbyggja Saga, 31, 53), and hauntings show the power of ghosts to affect the living; fear was probably great as an incentive to ancestor-worship as reverence. Activity in another world was materially conceived as a close parallel to mortal life, as is proved by the nature of the implements provided, and such activity was often localized in sepulchral howes (ib. 11). The Valhalla belief is the final poetic development of the conception of Óinn as god of the slain; in a less warlike age a more peaceful preaugurment
arises, the Rosengarten of the later German poets; Saxo Grammaticus' account (Gesta Danorum, i. 31) of Hading's voyage to the under-world represents an interpolation in the Teutonic. The power of death was inexcusable and inevitable, even the gods being doomed to perish at the world-death. Death was personified in many forms: as a messenger, or as an enemy. The Norse Hel was certainly at first a Teutonic Proserpine, however shadowy: subsequently, her personality was not distinguished from her abode. Popular and grotesque personifications of death prevailed later, and gave rise to the idea of weakening death's power by insinulation or beating a tangible representation (Grinn, p. 767).

In spite of the undoubted fatality of Teutonic people (see art. Doom, Doom Myths [Teutonic]), the belief, born of instinct and desire, prevailed that magic enabled man to exercise a twofold power over death: first, in reassuring or hastening death; secondly, in controlling and summoning spirits (Veroff. Saga, 53). Preventive magic against death might include the wide range of charms to preserve health, prevent barrenness, heal sickness, or stanch blood. Coercive magic to compel death was apparently as frequent as preventive though naturally more secret. It was possible to possess the sword of death upon others, and also to have the premonition of it in oneself—to be fey. The summoning of spirits (heltrun), performed by means of the valpilore, became in Norse mythology an important branch of magic art (see MAGIC [Teutonic]).

5. The ethical aspect of life and death.—It is difficult to deduce the ethical outlook of the average Teuton on life and death because of the extremely subjective character of the literature, but the non-moral aspect of world-life and world-death is proved by the fact that the end of the world comes 'automatically', involving the gods also. Respect for the principle of life is presupposed by the importance attached to fertility and all that promotes it; but this was instinctive, and originally entirely non-moral. Respect for individual life rarely appears, except in kinship; the slaughter of kin was abhorred as violating the blood-tie (see also akin, Gesta Danorum, ii. 1; Beowulf,2435Ec.); but even this was probably due more to tribal than to moral instinct. Custom rather than morality governed the sacrifice or the retention of life, as in the case of the Gothic widows (Hildecar. i. 234.ii. 9.); childhood, and the suffering of life was little known, for Saxo Grammaticus' assertion to the contrary can hardly be substantiated from earlier literature (Gesta Danorum, v. 169). The fatality so deeply ingrained in the Teutons coloured their whole outlook, but it was not tinged by remorse for an ill-spent life or by fear of coming punishment; and the lack of a moral division after death is so general that it is tempting to explain apparent inconsistencies by the theory of Christian influence. Suicide was allowable when due to grief for a friend or kinsman, and was more honourable than an ignoble death (cf. Saxo Grammaticus, tr. O. Elton, London, 1894, p. xxxvi.). The practice of human sacrifice points to little respect for human life in the abstract (see art. HUMAN SACRIFICE [Teutonic]); the fact that such sacrifices were prophylactic or propitiatory was held sufficient justification, if indeed any were necessary. In the West certainly seems to have been a strong idea of sacrificing the life of the body for the welfare of the soul and to that of the many. It would add greatly to our knowledge and the interest of the subject if, in the account of prophylactic sacrifices, the least clue were given to the mood and temper of the victim—whether he were merely passive under compulsion or a willing and exalted sufferer.

LIFE-TOKEN

LIFE, FUTURE.—See STATE OF THE DEAD.

LIFE-TOKEN.—"Life-token" or 'life-index' is the technical name given to an object the condition of which is in popular belief bound up with that of some person, and indicates his state of health or safety. The object may be an artifact, such as a tool, a weapon, or an ornament; or it may be a tree or plant, an animal, or even a well, or a vessel of water or some other liquid. The most familiar examples are found in the Arabian Nights. In the story of 'The Two Sisters who carried their Cadette', with which Galland concluded his version (cf. R. F. Burton, Supplemental Nights, London, 1889-88, iv. 49r ff.), Prince Bahman, on departing in search of the golden water, and the singing tree, leaves with his sister a hunting-knife, the blade of which will remain clean and bright so long as he continues safe and sound, but will be stained with blood if he be slain. His brother, following Bahman, casts a string of pearls, which will run loose upon the string while he is alive, but after his death will be found fixed and adhering together.

The incident is, in fact, common in folk tales all over the world where the hero goes on a perilous adventure, and his friends require early information, that they may in case of need sail forth to rescue or avenge him. It is necessary here to draw attention only to one wide-spread cycle—that of the modern variants of the ancient Greek story of Persens. In these tales Persens is often represented by three sons, born in consequence of their mother having partaken of a magical fish. Some portion of the offal of the fish is buried in the garden; a tree grows on the spot, and becomes the abode of the children. Sometimes a portion of the fish's blood is preserved, by its direction, in phials, one for each of the children, to boil or become turbid in case of misfortune. In a story from Persia the fish-bone is fastened to a known tree, the kitchen and sweats blood when anything untoward happens to any of the boys.

There is thus an organic connexion between the life-token and the person whose condition it exhibits. This connexion supplies the interpretation. The life-token is derived from the doctrine of sympathetic magic, according to which any portion of a living being, though severed, remains in mystic union with the bulk, and is affected by whatever may affect the bulk. Sym pathetic magic, however, is not confined to folk tales: it has a practical bearing. It is applied in witchcraft and folk-medicine to the injury or to the benefit of human beings and every object that comes into relation with them. Accordingly, we find the life- token not only in folk-tales, but also in everyday custom and superstition.

A striking and pathetic example of a severed portion of a human being employed as his life-token is recorded in the United States. Early in the last century a boy in New Hampshire, was so badly wounded that a piece of his skin, fully an inch in diameter, sloughed off, and was carefully treasured by his mother. When he grew up, he left home and was not heard of after; but his mother used from time to time to examine the fragment of skin, presumed that, so long as it was spread, her son was alive and well, and that it would not begin to decay until his death. For thirty years, until her death about the
Turning now to artificial objects—an illustration may be given from a somewhat unexpected quarter.

Father George K. S., reporting in the Annales de la Propagation de la Foi (1896) a recent visit to Easter Island, relates that the native converts persuaded another Roman Catholic missionary, Father Albert Moniton, who had previously visited them. They said that he had caused the great stone cross being cast up as if in the tale the offal of the fish buried in the garden grows up into the tree and becomes the life-token of the children who owe their birth to, or perhaps are a transformation of, the fish, so trees are in actual life-token for the purpose.

The novel-string of a Maori child was buried in a sacred place, and a young sapling planted over it expressly as the babe's sign of life. (Taylor, Te Ika a Maui: New Zealand and its Inhabitants, London, 1870, p. 145.) Sometimes it was buried at the foot of a willow or bush. If the tree whose branches showed signs of decay or died, the results would be similar to the life-token (Journ. Ethn. Soc. i. 1872). In the latter case an already existing tree is appropriated as the life-token by uniting the child with it through the medium of the cord. In the same way, in Germany the birth of a child is thought of as the feet of a young tree, and the child is expected to grow with the tree and thrive as it thrives (K. Bartels, Sagen, Marken und Gleichnisse aus Mecklenburg, Vienna, 1880, ii. 43; Am Urquell, v. 1894) 253. Though it is not now common thus to unite the child with the tree, the practice of planting a tree at the birth of a child is still fairly common in Europe. In Aargau (Switzerland) an apple-tree is planted for a boy, a pear-tree for a girl, and it is believed that the child will thrive or die as the young tree (W. Mannhardt, Wald und Feldkunde, Berlin, 1875, i. 134) the same. Numerous remains of this practice and belief are found in tradition all over Europe.

The cani with which some children are born also becomes an index of their health and prosperity. For this purpose great care is taken of it. Among the Lottos of Russia to lose it betokens misfortune for the child (K. Robert, Hist. Studien aus dem jungen Russland, Inst. der Russ. Acad., v. Halle, 1894-95). In England and Scotland its condition, whether soft and fleshy or hard, dry, and uncurved, indicates wealth or poverty (B. O. Adam, Household Tales, London, 1805, p. 130; J. G. Dalyell, Darker Superstitions of Scotland, Glasgow, 1855, p. 390).

But, as in the stories, the life-token is not always devoted to birth, or the birth of a child.

The case on which the tree is planted is sometimes indicated by it. When a child has been passed through a young ash-tree split for the purpose, in order to cure infantile hernia, the tree is bound up and plastered, in the hope that it may grow together again; and according to the success of the treatment the child is expected to recover or not. More than this, so intimate has the connexion between the tree and the child become by the operation that, if the tree be afterwards felled, the child will die. But if the operations are already depicted, the tree is dependent upon the fate of the child; the child is also dependent of the fate of the tree. This mutual dependence is sometimes explicitly mentioned in the stories also. It results from the close connexion between the object being watched, life as the object constituted as the life-token. In the stories it is often forgotten; generally in practice it is at least implicit.

On the Eastern peninsulas of Maryland, opposite Baltimore, when a member of a family leaves home, a bit of fire-for-ever is stuck in the ground to indicate the fortune of the absent one. It will flourish if he prospers; otherwise it will wither and die (J.A.F.L. iv. 1894) 63). At Rome every Emperor solemnly planted a laurel bush, which was said to wither when he was about to die. A successful general to whom a triumph was awarded also planted on the occasion, in the shrubbery set by Livy, a laurel, similarly believed to wither when he was about to die. Two myrtle-trees grew before the temple of Quirinus, one called the Patriotic tree, the other the Pheidian. So long as the Senate maintained its power as the supreme authority of the State, the Patriotic tree flourished. But it begins to wane, and at last withers away, when the Pheidian successfully asserted its rights, and the Pheidian tree, hitherto sickly and shrewd, gained the superiority (Pliny, H. N. xx. 36). The same happens on certain occasions to plant a sort of palm, which is regarded, in the fullest sense of the word, as the palm of the deceased. If it grows prosperously, they reckon on good fortune; but, when it fades or dies, the person concerned has to expect the reverse (Wilken, Verzeichnis der Geschichten, 1870, p. 264). When the sun sets upon the mountains of the Sieben, and other places near Gothic, two young trees are planted at a wedding by the bridal pair, on the property of the commune. If either of the trees withers, one of the sisters of the sponsors will shortly die (Mannhardt, p. 48).
LIFE-TOKEN

are often vague, and, where they are so, to affix terms to them which connect to us something definite is to darken counsel.

In Nigeria a great tree frequently stands in a village, and is used with magic and votive offerings. It is described by the villagers as 'our life,' and it in some sense worshipped as a god. It is called the 'fountain of the land.' From the moment of birth the snake and the man share a life of common duration, and the measure of the one is the measure of the other. Hence every evil or failing is taken by the snake from the infant, and it is said that they are quite harmless to human beings (Journ. Afr. Soc. x. [1909] 29). So at Rom every man was deemed to be accompanied throughout life by a genius, to which he owed all his gifts and good fortune. The genius was represented by, or incorporated in, a snake, which was never killed, but encouraged in the house, and even in the sleeping-chamber. The result was, according to Plato, that snakes multiplied to such an extent that, if they had not been kept down by frequent fires, it would have been impossible to make headway against their infestation (L. Plut. De Byz. Bel. Berlin, 1828, ii. 196. Fl. Pliny, HN xiv. 223. Tiberius Gracchus once caught a pair of snakes upon his bed, and was advised by the soothsayers to kill them. The more he thought of it the more his life was bound up with that of the one, and his wife's with that of the other. Rather than put an end to his wife's life, he killed the male and himself died in a short time (Plutarch, Tiberius Gracchus). At the monastery of Saint Maurice, on the borders of Burgundy, near Lyons, there are a number of snakes, as many fish, and as many fish as there were monks. When any of the monks fell sick, one of the fish floated on the surface of the water, half-dead; and, if the monk was going to die, the fish would die the same day before him (J. W. Wolf, Ueber die Spuren, Leipzig, 1843, p. 239, citing Leonard Vain, Traite des chaunciens, Paris, 1553, p. 263). On the island of Born, one of the Moluccas, the same belief seems to be attached to the catamen. No Burmese, we are told, would kill a cat, for fear of unutterable death. The cause of one of his nearest kinsmen (Wilken, iii. 52). In fact, the belief of the lives of human beings are bound up with those of certain of the lower animals. As trees, and plants are very widespread; and the latter are not necessarily trees as the guardians or incarnations of the souls of the former. Lakes and streams even serve as life-tokens, independently of the animals that haunt or inhabit them.

On a mountain in Frasonia a fountain issues near the ancestral home of an ancient noble family. The clear stream gushes forth incessantly the whole year round; and it was believed that the family was saved from any evil. (I. Gneu, Beitrage zur Sprache, Berlin, 1856-18, i. 162). The waters of the crag-lake of Tritheis in Maniakas are of a deep green colour, and all the youth of the neighboring tribe, especially a member of the kinsmen of the Zanausara, is taken ill, if the water is trodden on, or if he is thrown into it. The death is promptly inflicted; if it remains, he will have a chance of life (K.P. vii. [1892] 709, quoting J. Bier.)

The present writer has elsewhere (LP II. [1895] 13) stated that the custom of siring by crystal-gazing (p. v.) is intimately related to those of looking into the depths of a well or a pool of water or ink, and into a magical mirror, for the purpose of gaining tidings of absent friends or distant events. It will suffice to say here that the hallucination on which it is founded is equally capable of being produced by gazing intently on any dark and polished surface like that of standing water, a mirror, or a piece of stone, and that the supernatural is universally world-wide. The march between the life-token and the belief in omens drawn from objects not specially connected with any individual is ill-defined. It is by means necessary to appoint one's own life-token; the imposition of it by another may be divined by the condition of a life-token arbitrarily appointed by anxious relatives or friends at home.

Here is but a step between this and the drawing of auguries from events and objects not appointed at all. The step is often taken both in tales and in real life.

In an Indian tale three drops of blood appearing on the face while sleeping are a totem to one brother of another pair (V. Gregory, Folklore of N. B. of Scotland, London, 1841, p. 511). An Indian folk-tale tells of a girl who, with a red lotus, saying: 'Take each of you one of these lotuses in your hand. And, if either of you shall be cut off by some separation, the lotus in the hand of the other shall fade, but not otherwise.' When they awoke, each beheld in the other's hand a red lotus; and it seemed to them a sign of their future (C. H. Towne's Journ. of Folk-lore, v. 80). In Indian folk-tales, half-bird, and romances the life-token is by no means a fanciful piece of machinery. It has found its way on to the stage. Among other dramas, the plot of P. Massinger's play of The Picture (1632) is founded on it. Nor is it a new idea. The Hero in Seneca's Thyestes is a leper. He is merely a member of the Stemon tribe in Bengal. Every leper has in the courtyard of his house a 'plant' (Euphorbia)

Further, if my life be united to any external object, whether physically (so to speak), as in the case of an alien child possessed by the demon, or by the holy appointment of myself or another, it is obvious that injuries intentionally inflicted on the object in question will react upon me. The felling of the sapling causes the death of the child. In any case the hero's life came to an end with the burning and extermination of the fateful brand. This belief is the foundation of that department of magic which is used for injuring others by damaging or destroying things which have been closely united to, or to which identity with them is imparted. Fragments of the hair, nails, food, or clothing, portions of the blood or saliva, and earth from the footprints of the victim are all impregnated with his life, are still further impregnated by that of another, and lie may be injured or even done to death by the appropriate treatment of any of these objects. So also to stick pins or daggers into, or to burn, the effigy of a man is to wound or kill the person represented. These are all well known. Parallel with them is the treatment of such objects for the purpose of benefiting the person to whom they belong.

The marvellous string of an infant, taken by a mother to church at her decease, and laid down beside her on her coffin, is, in other suitable place, is deemed in Meisenburg and Thuringia to be efficacious in surrounding the child with such holy influences that he will grow up God-fearing and pious (Witzelsch. I. 203.; Bartsch, ii. 40). For some such reason Athenian women who became pregnant for the first time hung up their girdles in the temple of Artemis. Probably for a similar purpose fragments of clothing and other things are hung by vetaries on a sacred tree, and pins are deposited in sacred wells. To the same order of thought belongs the sympathetic treatment of wounds by means of the instrument immediately employed, or the instrument used, formerly accepted by philosophers and physicians, is now left in Europe to the pessary. It originates in savagery. The Lacang or Sembang, when he is wounded, and the Bambangan, when he is shot, know how to keep concealed the arrow that has wounded a friend, and not to bring it near the fire; for he would become very ill if the weapon, while still covered with his blood, were thrown into the flame (F. Boas, Rep. Brit. Assoc., London, 1890, p. 557). Melanesians keep the arrow when they are wounded by arrows from cool leaves, believing that the inflammation will then be slight and will soon subside. But, if the enemy who has shot another can get back his arrow, he puts it into the fire, with intent to irritate the wound and cause fatal results (R. H. Codrington, The Melanesians, Oxford, 1891, p. 310). Similar practices are very widespread among the European peasantry, and not least in our own island.

By a very natural extension of the idea of the life-token the cognate idea of the ineluctable has been evolved. It is not enough for one of a pair of lovers to know that the other is living; there must be constant assurance of the absent one's life. The token of life is, therefore, a common incident both in tales and in actual life.

It is well known in India. In the Ceylon arhatara, or 'stream of the Streams of Story,' a famous collection of Indian tales, the god Siva appears in a dream to ininasena and his wife vihara, appearing to be a woman, and asking for a red lotus. When he woke, he found each beheld in his other's hand a red lotus; and it seemed to them a sign of their future (C. H. Towne's Journ. of Folk-lore, v. 80). In Indian folk-tales, half-bird, and romances the life-token is by no means a fanciful piece of machinery. It has found its way on to the stage. Among other dramas, the plot of P. Massinger's play of The Picture (1632) is founded on it. Nor is it a new idea. The Hero in Seneca's Thyestes is a leper. He is merely a member of the Stemon tribe in Bengal. Every leper has in the courtyard of his house a 'plant' (Euphorbia)
LIGHT AND DARKNESS (Primitive).—
Among the lower races the nature and origin of light and darkness gave rise to many questions, and the answers to these are found in a great variety of myths. Frequently light and darkness are assumed to be substances—e.g., 'a hard darkness,' as in an Australian myth or the sun, often regarded as the cause of light, is thought of as a fire or fiery substance, larger or smaller. Among the primitive peoples the dualism of light and darkness or of beings representing these—so frequently found at higher stages of civilization—can hardly be said to exist.

1. Primordial darkness.—A wide-spread idea seems to be that night precedes or gives rise to day, darkness precedes or gives rise to light. Light, the light of day, appears to come gradually out of the darkness of night, whereas darkness falls over the light of day and extinguishes it, but does not come from it. Man also, asleep and inert during darkness, rises to fresh activity with the light. A pre-existing state of darkness, out of which light and life have proceeded, is thus usually presupposed. Many Australian tribes believe that long ago a great darkness prevailed, until the sun was made or released. An emu's egg was thrown up to the sky, and either itself gave a great light or set fire to a wood-pile belonging to a sky-being. The latter sees how beautiful earth now is, and therefore he makes a fire every day. There is little warmth in the morning, because it is not fully kindled, and it is cold at night when the fire dies out. The jackass roves men to the light. If he did not, or if children imitated him, there would be nothing but darkness. Or the sun is created as the result of certain obscene rites performed by men who complained of having no heat or light; or there is darkness until the magpie props up the sky and so lets the sun rise.2 The last-mentioned myth, that heaven and earth are close together, and that, until they are separated, their offspring are in perpetual and universal night, prevails over Oceania. The children, or gods, or a serpent, or a fish, come apart and so let in light and darkness.

Hindo (A. Hillerbrand), p. 60.
Iranian (L. H. Gray), p. 61.
Semitic and Egyptian (W. Cruckshank), p. 62.

Maori mythology relates that the Atua o te po, gods of Hades or darkness, existed before heaven was lifted up, and were more ancient than the Atua o te ra, gods of light, because darkness precedes light. Their chief was Hine nui te po, a great mother night, or Hades and life are represented by Tana nui te ra, the great son of day. A creation epic describes the cosmogenic periods, the first of which is that of thought, the second that of night or darkness:

'The word became fruitful.
It dwelt with the foolish trembling;
It brought forth night.
The great night, the long night.
The lowest night, the blackest night.
The thick night, to be hid.
The night to be touched, the night unseen.
The night following on.
The night ending in death.'

Then follows the third period, that of light, and the fourth, in which sun, moon, and stars are created. 'thrown up as the eyes of Heaven, then the heaven became light.' This idea that chaos and darkness—the state of Po, Hades, or night—precede all gods and all things is widespread in Polynesia. Even the 'liberating' light of Tāne, the light of sun, moon, etc., springs from it; or he sprang out of an egg and so brought light to the world.

The Garo say that earth was at first a huge watery plain, and darkness lay over all. Tatarabunga created earth through a lesser spirit and at the latter's request, placed sun and moon in the sky to give light.

The myth of Heaven and Earth as a divine pair is common in W. Africa, but its most significant expression is found among the Yorubas, who say that Obatala and Oodua, their chief god and goddess, were shut up in darkness in a calabash in the beginning. She blamed him for this, whereupon he blinded her.

Among the Eskimos, a people dwelling for a great part of the year in darkness, many myths deal with this subject. According to one of these, men came out of the earth, lived in perpetual darkness, and knew no death. There came a flood which destroyed all but two old women, one of whom desired both light and death. Death came,

2 J. Frobenius, Die Weltanschauung der Naturvölker, p. 10.
and with it sun, moon, and stars. Another widespread myth is that of the brother who, in the two cases, when he returned from the earth, ravished his sister. In her anger at his brutal conduct, she pursued him to the sky with a brand. He became the moon and she the sun, ever pursuing the moon, except in winter, when she remains in her room and there is darkness. The stars are sparks from the brand.

A well-known Chinese myth relates that in the beginning all was darkness. From a great mundane egg, which divided in two, came Poon-Ko Wong, who made the sky and earth out of the lower half. He also made sun and moon. Chinese philosophy speaks of Tai-Khi, the 'Most Ultimate,' which produced the cosmic souls Yang and Yin, male and female, heaven and earth, warmth and cold, light and darkness.8 In Japan an old myth in the Kojiki speaks of a time when Heaven and Earth were not separated and the In and Yo (= Yin and Yang) not yet divided. All was chaos and presumably darkness.

A Finnish etiological myth in the Kalevala relates that from the upper and lower parts of an egg which fell into the primeval waters were formed heaven and earth, from the yolk the sun, from the white the moon, and from the darkness in the center the abyss.13 Scandinavian mythology contains an elaborate myth of beginnings. There was first a void world of mist, ginungaga. On its southern extremity was uuspeli, fire, on its northern, nifl, fog; from the fire proceeded light and warmth, from the water darkness and cold. According to Grimn, ginungaga is the equivalent of the Gr. χώρα, meaning both 'abyss' and 'darkness.' In the Edda, Day personified is the son of Night, each of them having a horse and car, in which they journey round the earth. The primitive method of counting time with Scandinvians, Tentons and Celts was on the principle that night preceded day, the moon, which 'governs the night,' being the measure of time. Tacitus says of the Celts that they define the divisions of seasons not by days but by nights, and observe times in such an order that day follows night. A Celtic myth embodying these ideas has not come down to us.

2. Origin of light.—In some of the myths just cited the origin of light from darkness, or from the creation of sun and moon, is already found. As in the Mayan myth, light is sometimes prior to the sun (cf. Ge. 1). Some other examples of such myths may be cited. In Bushman belief the sun was a mortar on earth from whose body light radiated for a short distance round his house. Some children were sent to throw him up to the sky as he slept, and now he lightens the earth.

The Baronga think that the reflection of light on the sea after the sun's rising is a kind of source of light whence the sun has come out from the provision of fire, and dies in the West nightly. Light is also called 'that which makes to appear.' An E. African myth tells how two men came to a cave, looked in, and saw the sun. One of them removed a stone, and was burned up. Then the sun ascended on high to light the world. According to the Ja-Luo, Apāthō, father of mankind, appeared from heaven on earth together with the sun, moon, and wind, which caused the sky when he was angry and have remained there ever since. The heavenland has people as bright as fire, and men will go there when they die.

3. Succession of light and darkness, day and night.—In some instances light, not darkness, is primordial; the creation, while day exists, night is still unknown. Numerous myths relate how darkness is produced and the regular alternation of day and night follows. The Wambato, an Australian tribe, say that at one time the sun never moved. Nurelli, tired of eternal day, bade it go down by the west. In Banks Island, Qat, after making all things, did not know how to make night, and it was always day. He heard that there was night at Vava, and therefore went to get it from I Qong, Night. Returning with it, he bade his brothers prepare for night. The sun now moved westwards; he let go the night, and it was dark. After a time he cut it with a knife, and daylight again shone out, and the moon is told of Fagaro. The Mithrais say that at first there were two suns which rose and set alternately. A slave, tired of getting no rest, shot one of them. There was now always darkness. There other sun refused to come forth; but at last he did so as a result of certain ceremonies. The savage Malays of Malacca have a myth of three suns, one of which was always left in the sky, The female sun was induced to swallow her husband and child, and now there was night. A native Brazilian myth tells that at first there was no night. Night, or a cobra who owned night, slept at the bottom of the waters. His daughter would not sleep with her husband till he procured darkness from her father. Slaves were sent to bring him the sun. In spite of all warnings, they opened it, and all grew dark. The daughter now separated from night by night. In Santa Cruz sun and moon are said to have travelled together, but by a trick the sun caused the moon to fall into the sea on before his own. Night is the result of a part of the moon becoming black through this trick. A Finnish myth says that in the beginning there was nothing but water and light—a running water version of the cosmogonic idea. In some instances night is formed as the result of a dualism. The Yezidis say that God made the world beautiful. Then Malik-Tanks appeared before Him and said that there could be no light without darkness, no day without night, and accordingly He caused night to follow day. In a Wallachian Mârchen God sends a bee to inquire of the devil, the master of night,
whether there should be one sun or more. The bee rests on the devil's head and bears his cogi-
tations to the effect that, if there are several suns, men will get so accustomed to heat that there will be no fear of hell; night will be as clear as day; and the works of darkness will be brought to an end.1 In Breton folk-belief God created the day, and the devil a dark night as an offshoot to it.2

The same dualism is found in a Melanesian story, in which all that Tagaro makes is good. Suqa, who makes evil things, wished to have six nights to one day, but Tagaro sent him underground to rule the souls of the dead.3 An extremely naive Macedonian Mirchos tells how all creation, grateful to the sun for his light and warmth, proposed to reward him with a wife. But the lion said that several sons would be born and all would be burned up. All agreed that it was better for the sun not to marry. In disgust he hid himself in the sea, and all became dark, to the consternation of the animals. But the hen, persuading him that marriage has a disgrace, caused him to rise from the sea every morning.4 This myth obviously originates from the apparent disappearance of the sun into the sea at night, and his apparent rising from it in the morning. An Eskimo myth relates that sun and moon were once removed, causing darkness which no shaman could dispel. A boy sent by his aunt to go south, where he will find the light. He arrives at a hut where light like a lot of fire is burning, but it is hidden by a man shown light which causes obscurity. He steals the light and is pursued. He breaks oil pieces, each of which produces day, which is then followed by night. They are of unequal lengths because sometimes he travels a longer time without throwing a light, sometimes a shorter time.5 This myth exactly reproduces the phenomena of the Arctic dark winter, and the phenomena of days and nights of varying lengths.

Lights of light and darkness; sun and moon.

Day and night or their relatives are symbolic of sun and moon, are often personified as male and female, or as husband and wife, as in the Eskimo myths already cited (§ 1). This is found in American Indian mythology; and in Australian belief, e.g., among the Arunta, the sun is female, the moon male.6 It is also found among the Andaman Islanders (the sun is the wife of the moon), the Indians of Guatemala, in Central Celebes, in Curnama, among the Yururo of Peru, in Tahiti, among the Pitos, among the Anima, and among the peasants of Obervolta.7 In another American myth day and night are two wives who produce light and darkness by sitting alternately at the door of their tent.8

In a Tongan myth Vatea and Tonga-iti quarrel about the parentage of the first-born of Papa, each claiming it as his own. The child is cut in two. Vatea throws one part up to the sky, where it begins to shine; Tonga-iti throws the other to the dark sky where the moon is. This is explained as Day and Night alternately embracing Earth, their joint offspring being sun and moon.9

In Norse mythology Night and Day are mother and son, set in the sky by All-Father, who gives each a horse and chariot to drive round the earth. The sun also has a chariot.10

In many of the myths just cited sun and moon are not always regarded as causing light and darkness, or rather day and night. These exist apart from them, though the two are associated together. A clear connexion between them, however, is seen in another group of myths—those of the sun-catcher. In some of these the sun is tied down, as in a Toda instance, by a demi-god. There is at once darkness on the earth, and in the under world, whether the sun goes at night. The purpose of both implore the demi-god for the sun's release.2 More usually the sun is captured because his course is far too rapid and darkness comes too soon—found in many Polynesian myths, as in a New Zealand myth.4 Sometimes, however, he is captured in order to lengthen the ordinary day, and this group is then connected with magical rites which have also this for their purpose.4 Again, he is captured by some persons who wish to amuse themselves, but it becomes so hot that the captors run away.6 The second group of myths is obviously suggested in answer to such a question as was raised by the Inca priest. Why cannot the sun wander freely about? Clearly because he obeys the will of a superior being. This is an idea found also in the mythologies of the higher culture.

Light and darkness, day and night, sun, moon, and stars are often personified or worshipped as gods, or the sun, moon, and stars, as sources of light, are the dwellings of gods. Thus the Lapps believe in a spirit of light who lives in the sun or animates it (EBEE i, 191.5). Many African tribes have a high god, often the sky personified, and many of them worship the heavenly bodies as sources of light. Loba, the high god of the Bateri, has a name signifying originally Heaven or Sun, and so in many other instances.3 Shango of the Yoruba is the sun, dwelling in a flaming house of brass; one of his trains is Biri, the darkness.4 The Kavorondo worship the moon and its twin, and the latter regarded as apathetic, occasionally beneficent, but usually malignant.5 Among the ancient Teutons and Celts sun and moon were also divinities to whom a cult was paid. Among the Polynesians Ka-ne is the sun, and Tangaloa is the lord of light, his brother being Rongo, god of dark and night.11 The Andaman Islanders connect Pulaga, their high god, with the sky, where he set the sun and moon, who give light by his command and have their meals near his house.12 Among the Hottentots Tsni-Goam, the red dawn, is opposed to the dark sky personified as Gaama.13 With the

LIGIIET AND DARKNESS (Primitive)

Fijians Nanauina is god of light and fire, whose love of light in his infancy was so great that his mother bound lighted reeds to his head.1

5. Regions of light and darkness.—As in the higher religions the beneficent or loiter gods are connected with light in Polynesia, so also is the sky in which no man can approach unto it, so it is also in savage belief. The Australian high gods, Bunjil, Mangk-njgur, and Balwe, dwell in the sky or in Keladi, 'eternal brightness,' and the Num religion, Murray River tribes is an embodiment of light.2 The higher Polynesian gods, Tangara, Tangada, Ti, etc., dwell in the light heavens, seven or ten in number.3 The Khonds reverence Bura Penna, god of light, or Bella Pooma, the dark god, whose dwellings are the sun and the place where it rises. Pulugia, the Andaman high god, lives in the sky. This is true also of many African gods; e. g., the Zuuls hold that the creator lives in heaven, and Nsamvi Mpana of the Fort Hatts behind the firmament. Similarly one of the names of the supreme being of the Indians of Guiana signifies 'the Ancient One in Skyland.'4 Many of the Teutonic gods, some of them of light, dwell in the sky, where Yathallia was situated.5

So also Elysium, the abode of the blest, whether it is in the sky or on or below the earth, is always a region of light and brightness. In contradistinction to this, the abode of unhappy spirits in all mythologies is dark and gloomy, in this resembling the abode of the shades in religions where no deliverance had yet been made between good and bad spirits—the Fab. Aralu, the Hb. Sh'völ, the Greek Hadès (see the series of art. on BLEST, ABODE OF THE)

The subterranean Pukivio or Tarutu of the Caroline Islanders is cold and dark.6 In Polynesia, as Po, or darkness, was the primal source of light and of the gods of light, so it is also conceived as the subterranean place of night whither departed spirits go.7 In Nanumea the wicked go to a place of land and darkness.8 The Japanese Yon, or Oades, means 'darkness,' and is preceded by Sasa-no-wo, a personification of the rain-storm, and a moon god, ruling also the darkness of this island.9 Similarly the Scandinavian Niflheim is a place of darkness surrounded by fog and gloom (see BLEST, ABODE OF THE (Teutonic)).

6. Evil powers and darkness.—Evil gods, gods of death, etc., are often associated with darkness, or divinities who are not evil have often acquired a sinister aspect in so far as they are associated with the night or even with the moon, the ruler of the night. The Sakai believe that the lord of hell, a cavern in the interior of the earth, is a friend of darkness and cannot bear the light.10 In Polynesia Rongo, brother of Tangarow, is god of darkness and night; Hine-me-te-po, the great mother night, into which all must fall, is a personification of night and death.11 Some Australian divinities to whom evil powers are ascribed are connected with darkness, and, what men's fears peopled with them.2

In S.E. Guinea evil spirits called morotonna inhabit dark places and wander about at night; and in New Britain Kais, a spirit causing disease, earthquake, and destruction of places.1 The Tasmanians thought that lower spirits concealed themselves in dark ravines by day and came forth at night to de-3

deform.2 The Australians also personified darkness in a variety of horrible beings ready to pounce upon men.3 Innumerable other examples could be cited. Similarly, among the Culla and Teutons a variety of demonic and supernatural beings were associated with the darkness, and in folk superstition generally faeries, witches, demons, werewolves, vampires, and ghosts are most powerful in the hours of darkness, especially at the moon midnight hour when spirits have force.4 ART. DEMONS AND SPIRITS, FAIRY, LIGITTIIHOOO, VARIES.

Among savages, as also among higher races, there is a wide-spread fear of the dark. Many savages will not travel or even leave their huts or camps at night; or, if they do so, they must be armed with firebrands and the like to keep evil spirits at a distance, since these fear the light. Thus we find magical rites to overcome the terror of darkness; e. g., in New Caledonia the priest, when cutting the umbilical cord of a boy, had a vessel of water before him, dyed black as ink, in order that when the child grew up he might not fear to go anywhere on a dark night.5 For similar reasons an eclipse of the sun or moon is universally feared. Generally a monster is supposed to be destroying these bodies, and, since they are so often regarded as the sources of light, it is feared that their destruction would mean a return to the primordial darkness. Hence the idea that the lower ceases at dawn, or that, if they are surprised by daylight, they are destroyed. This applies to all evil beings, demons, witches, fairies, etc. See art. FAIRY.

7. Dualism of light and darkness.—The contrary nature of light and darkness, the qualities instinctively associated with each—life with light,2 death and terror with darkness—might easily suggest to primitive minds a species of natural dualism. The day seems to be swallowed up by night, again to appear and drive it away; at an eclipse sun or moon is wholly or partially concealed by darkness, figured as a beast or demon, but again emerges victorious. Hence in some instances on the lower levels of culture light, or day, and death, or darkness, or night, may be personified and regarded as in conflict. That this was the case is obvious from such a dualistic system as the Parsee, which is fundamentally concerned with an older natural dualism of light and darkness, giving rise to a moral dualism of good and evil. The same dualism is found sporadically in other higher religions, and in faiths in which the influence of Persianism was felt,8 also perhaps in such a dualism as exists in the religion of the Buriats (i. e.). On the other hand, since light, day, sun, seem to rise out of night, they are perhaps more often regarded as produced by darkness, rather than hostile to it, as in Polynesian mythology and elsewhere (s. t). It is also probable that modern inquisitions into savage myths have too readily assumed that mythical personages represented, on the one hand, light, sun, or dawn, and, on the other, darkness and night, and that myths of a contest between a hero and the sky being necessarily meant a contest between light and dark-

ness. While it is possible that certain American myths adumbrate such a contest, it is likely that, on arbitrary philologized grounds, such an interpretation has been too easily applied to them. One aspect of such a mystified notion of the contest among the dark gods is often regarded as opposite in nature or opposed to divinities or spirits of light—e.g., gods residing in the heavens. In primitive religion decisive examples of such a conflict between light and darkness are few in number, but the mythic method is seen in the words of a Basuto who described nature as given up to perpetual strife—the wind chasing the clouds, darkness pursuing light, winter summer, etc. If, as has been assumed, the Polynesian Mau is the sun (though, as has been seen, Mau is the sun), then the story of how he intended to pass through the body of Hine-nui-te-po, but was unsuccessful and died, and so brought death into the world might be a myth of the sun or light being swallowed up by darkness. In Khond belief the supreme creator, Bura Pennu, the light- or sun-god, is opposed, not by darkness, but by Yari Pennu, the earth-goddess, the absence of which, in another evil, Japanese mythology preserves a story of the retirement of the sun-goddess to the rock cave of heaven, leaving the world to darkness, because of the misconduct of her brother Susa-no-wo, the storm-god and later maker of the gods. The gods dance in front of the cave, and she comes out to see them and is prevented from re-entering. Light is thus restored to the world. This suggests a myth of the strife between light and darkness that describes the goddess's retirement as emblematic of the darkness of sin, and the renewal of light as signifying repentance. Grimm has suggested that many phrases in Teutonic languages used of light and darkness, day and night, show the one as a hostile, evil power in contrast to the kindly character of the other, and that there is perennial strife between the two.

J. A. MacCulloch.

LIGHT AND DARKNESS (Chinese).—The Chinese outlook on life and attitude towards religion gives more prominence to light than to darkness. The two principles which pervade all nature and to which everything is assigned—the sin and yung principles, the dualistic elements of Chinese philosophy—are also the two headings into which light and darkness are differentiated. Yin, it may be said, is darkness, and yang light. The latter stands for the upper world of light; the former for the lower world of gloom and semi-darkness. It is difficult to classify as gods of darkness any of the gods of the Chinese, unless Yama (Yen-ma, Yen-lo), the ruler of Hades, with his entourage of officials and demons, be considered as such. The light of the sun is wanting in the Chinese neither world; it is a land of shades and of the shadow of death, for a twilight gloom prevails. The idea of hell in Taoism was derived from Buddhism; but the conception was developed on Chinese lines. Utter darkness may be seen in the beings associated with light and darkness rather than in these themselves personified. Thus the demoninc beings who have power in the darkness are generally powerless and are not feared by day.

In the primitive religion of the ancient Chinese nature-worship was prominently apparent. The sun was the primeval deity; other deities were either fired by lightning, and priests clanged cymbals and chanted prayers to the sun and moon. While all this was going on, the populace fired crackers and clashed pots and pans to frighten the monster away.

There is an altar to the sun in the east of the Tatar City of Peking. That to the moon is outside the west wall.

In that ancient Chinese classic, the Yi King, or Book of Changes, one of the trigrams is an emblem of light or bright (Yung) and darkness or the symbols of, or attributes applied to, goodness and virtue. The rising of the brightest object in the sky is suggestive of advancing, and Hsi Ying-wan of the Yuen dynasty (A.D. 1250-1367) thus applies it:

'Of bright things there is none so bright as the sun, and after its pattern he (the superior man) makes himself bright.'

These instances show that the Chinese early seized on the striking symbolism of light and darkness to represent a mental or moral condition as well as a physical one; and this expressive language has continued in use. It appears now and again in the Te Tih Chih:

'We should temper our brightness, and bring ourselves into agreement with the obscurity of others.'

'Use the light that is within you to the utmost, and let that darkness in the heart of men, which is the source of the spiritual malady of mankind, work on you to make you gentle, calm, and patient.'

There is the god of lightning, worshiped by both Buddhists and Taoists, who, according to the popular mythology, was appointed to accompany the god of thunder on his expedition to prevent his making a mistake, for on one occasion, finding the white rind of a melon flung away, in the darkness of a smoke-bejeweled Chinese kitchen, he mistook it for rice and killed with his chisel and hammer the supposed waster of good food. To prevent the recurrence of such an event the godess carries a mirror in each hand, or one in her two hands, and flashes light on objects before the god strikes. This is the explanation of the lightning's fiery wing.

The god of fire is another of the gods connected with light. His name, Hwa Kwang, may be rendered 'Beautiful Light.' Unlike the majority of the popular gods, he was not originally a human

11 For these myths see D. G. Berlese, Myths of the New World, Philadelphia, 1866, p. 198 ff.; Tyler, PC^, ii. 200 ff. For some arguments against these views see A. Lang, Natures Savoir, Central, xix. (1880) 54-65, and Custom and Myth, London, 1892, p. 107 ff. (against Hahn's theory of a contest of light and darkness, or Taoist mythology).

11 Grimm, p. 762.
being, but a lamp, of which the sunlings of the vick were turned into a man by the recital of a charm. He is the formal and soul of fire. Both Buddhists and Taoists claim him.

The Buddhists defly light by personification in the bodhisattva Marichiva. The Chinese god represents her with eight arms. In two of her hands she holds up emblems of the sun and moon. She is the goddess of light, and protects nations from war. Among her other titles is that of Queen of Heaven. The Taoists also claim her as one of their deities, and fix her residence in a star in the constellation of Sagittarius.

Buddha after Buddha, commencing with Sakyamuni Buddha, has light as one of his attributes, or some manifestation of light appears in the course of his life in connection with him. Five-coloured lights flashed at his birth, and flame burst from his dead body. Every Buddha has, among his characteristics, a circle of hairs between his eyebrows by which he can illuminate the universe.

The Bodhisattva, One whom the Law displays myriad Luminous Figures, 'The Buddha of Fixed Light,' 'Light and Bright,' 'The Bright Effulgence of Sun and Moon,' 'The Bright and Efficient Sun and Moon.' The 59th Buddha of the present era is Amitabha, 'The Buddha of Wonderful Light.' Some twenty billions of Buddhas have the title of 'Cloud Sovereign Illuminating King.' Five hundred arhats will reappear as Buddhas with the name of 'Wide-spread Brightness.' Some variations in this conception in which Buddhism believes shed a glint of light. A realm mentioned in Buddhism is 'The Realm of Great Light.' One of the sixteen (or eighteen in Northern Buddhism) celestial worlds is that of 'Light and Sound,' and another is that of 'Unlimited Light.' Buddha has five Luminous Treasures, and a fictitious degree of samadhi is also called 'Pure Light and Brightness,' and another 'Pure Light.'

In Northern Buddhism the 'Buddha of Boundless Light,' or the 'Great Cosmic Buddha of Light,' Amitabha (Amithaba), originated in the idea of boundless light, and was thought of at first as impersonal. He is the most popular of all the Buddhas among the Chinese people. In his heaven, the wonderful and glorious Paradise is a light of itself, and in the presence of the Buddha, and three thousand great worlds. Amita Buddha himself, in the words of the Chinese poem singing his praises, has a

'... halo of light that enshrines his head,
The sun at noonday is less glorious than he.'

As to those who enter that heaven,

'The material body of men on earth
Is changed for another ethereal and bright,
That is seen from afar to be glowing with light.'

This new mystical shades make use of the symbol of light in its description of religious states of its devotees.1 In some cases light plays an important part in the advent to earth of a god on his incarnation, and even one of the mythical emperors of China, the Yellow Emperor (2698 B.C.), owed his origin to this.

With the Taoist gods, a ray of light shoots down arrow-like from heaven to the future mother shortly to be delivered of a child, and thus the divine is blended with the human in the infant, who has sometimes to expiate some sin from which his godlike nature has not saved him, or to cure or to eradicate some infirmity still inherent in his mortal nature.

We find a brilliant light in connexion with the preparations for the birth of the Taoist Cummans Sovereign, the Supreme Ruler, and in his later incarnations a golden light or a glimmering light2 descends. Somewhat similar experiences occurred when the Taotist Aged Sire united with light, and became dust and was born on earth.3 A Taoist writer of the Yuan dynasty says that light broke forth spontaneously in the primordial void, springing from itself in the heart of the void, and his idea would appear to be that to attain illumination one must empty oneself as the primordial void of which he speaks was emptied.

The word 'light' is used as one of the Chinese clan-names or surnames, as it is in English, but it also appears sometimes as an individual name bestowed on an infant, and occasionally in union with some other character in a name selected later in life.

LITERATURE.—This is sufficiently cited in the footnotes.

J. DYER BALL.

LIGHT AND DARKNESS (Christian).—The symbolical use of the words 'light' and 'darkness' is very common in early Christian literature, and in the main was derived from the OT, as will be seen by the references given below. As time went on, the metaphor of light served as one method of expressing the theological conception of the Persons of the Holy Trinity.

1. The symbolism in the NT.—We may pass by the obvious metaphor by which to speak or act 'in the light' is to do so 'openly,' and to speak or act 'in the darkness' is to do so 'secretly,' as in Mt 10:26, Lk 12:2 (a few OT allusions). More to our purpose are the numerous passages where 'light' denotes knowledge, truth, and holiness, and 'darkness' denotes ignorance and sin—ignorance in all its phases being included in the latter; light and darkness are thus symbols of blindness, error, and wickedness; for blindness, if willful, becomes sin. The opposition between light and darkness is expressed in Jn 3:20: men had the opportunity for light, is come into the world, but they loved the darkness rather than the light, for their works were evil—every one that doth ill hateth the light.' 'Darkness' expresses the state of the world before the Incarnation (Jn 1:* 8, Lk 1:30); the idea is taken from Is 9:1, where it is said that the 'people that walked in darkness have seen a great light.' To be in a state of sin and ignorance is to walk, or sit, or be in darkness (1 Jn 1:* 5, 2 Jn 3:5, Is 8:17, 1 Th 5:5, Ro 2:19, Lk 19:4). In Jn 8:* the 'light of life' is the light which both springs from life and issues in life (B. F. Westcott, 'Propel according to St. John, London, 1908, in loc.).

The metaphor is very common in the Johannine writings, but it is frequently found elsewhere. In Mt 6:* the 'bodily full of light' (φωτισμός) denotes purity and holiness; darkness here means 'bodily full of darkness' (σκότος) denotes evil; so Lk 1:34 (cf. Lr 14),

1 See T. Richards, The New Test. of Higher Buddhism, Edinburgh, 1900, pp. 55, 149, 151, etc.
2 Dyer Ball, Scraps from Chinese Mythology, in China Review, xi. 17:1, 190, 295, 257.
In Ac 26:4 the preaching of the gospel is to turn the people from darkness to light and from the power of Satan unto God. St. Paul uses the metaphor, ‘The work of darkness’; the evil deeds of the present ‘night’, and the ‘amour de lumières’ to be put on view in the approach of the day (Ro 13:2; cf. Eph 5:7; ‘right’, ‘night’, and ‘day’ in this connexion see 1 Th 5:23). We are partakers of the inheritance of the saints in light, and have been delivered out of the power of darkness (Col 1:13). The fruit of the light is in all goodness, righteousness, and truth (Eph 5:9, RV). Light has no communion with darkness, and therefore Christians are not to be transferred wholly or partly to unbelievers (2 Co 6:14, quoted in Apost. Const. viii. 34, to forbid Christians to pray with heathen). So St. Paul uses the verb ‘to darken’ (παρασκευάζειν or οὐσιάζειν) in Ro 12:18 and Eph 4:18 metaphorically of the hardening of the heart or the blinding of the eyes by ignorance, just as he uses ‘to enlighten’ (φανερώσειν) in a metaphorical sense in Eph 1:18 (cf. Jn 1:1; see below, § 4). St. Peter speaks of our being called out of darkness into God’s marvellous light (1 P 2:9). The curious passage 2 P 1:11, where prophecy is as ‘a lamp shining in a squallid (άνώτατον) place’, may be compared with Mic 4, where ‘darkness’ is used of want of spiritual perception in a prophet.

The name ‘Light’ is given to God. Not only is light a gift of God, but God is by nature ‘Light’ (1 Jn 1:5 φως αιωνίων); therefore He can be known by His creatures, and is all-holy, for in Him is no darkness at all. This goes much further than St. John, where He is called the ‘Light of the world’. In Je 12:7, He is called ‘the Father of lights’ (τὸν φως τῶν ἐκκλησίων). This divine attribute is claimed by or ascribed to our Lord in Jn 8:12 (‘I am the light of the world’); Mt 5:14, 16; 16:13, 15; (from Is 8); St. John says that in the Word was life, and the life was the light of men, shining in the darkness; He was ‘the true Light which lighteth every man, coming into the world’, i.e. by His Incarnation (but see Westcott’s note), in contrast to the Baptist, who was but a witness of the light (Jn 1:4). Because He is the light, He will shine (τζωταμάτισα) on the awakened sleeper (Eph 5:14). He is to be a light to all men (Ac 13:47; quoting Is 40:5 (the reference is to St. John), and though the Apostles identifies his mission with that of his Master; cf. Is 42, where the Servant of Jehovah is to be a light to the Gentiles—a phrase repeated of the ‘Son of Man’ in Eph 4:18, xlvii. (41st cent. B.C.)). This use of light and darkness (1 Th 5:5) might be applied to the Son (so Chrysostom, Hom. xlvii. in 1 Tim., in loc.) or to the Father, but probably it refers to the Father (cf. Ps 104, Dn 25). See also § 3, below.

In an inferior sense the servants of the Incarnate are ‘lights.’ The Baptist (see above) is ‘a lamp that burneth and shineth’, in whose light the disciples were willing to rejoice for a season (Jn 5:35). All Christians are the light of the world (Mt 5:16, cf. Ph 2:15; 1 Th 5) and Eph 5 (‘once darkness… now light in the Lord’). The angels are angels of light (2 Co 11:14; we may compare the light which shone when the angel released St. Peter, Ac 12). In contrast to this, the devil and his angels are ‘world-rulers of this darkness’ (Eph 6:12), i.e., as the Peshîtha paraphrases, ‘rulers of the world of this darkness’ (meaning of this dark world), and their realm is the ‘outer darkness’ mentioned in Mt 8:27 (for Jewish parallels see W. C. Allen’s note in loc., ICC [1912] 225, 225); this is the place of punishment of unholy and unhallowed, where the fallen angels are said to be ‘kept in everlasting bonds under darkness’ (ἡμετέρας until the great day), and 2 P 2, where the ‘blackness of the darkness’ (τὰ σκοτάδια αὐτῶν) is said to have been kept for evil men. The same idea of punishment is found in Ezh. Enoch, lxvii. 6, where the wicked say: ‘Light has vanished from before us, and darkness is our dwelling-place for ever and ever’; on the other hand, God will for the elect ‘transform the heaven and make it an eternal blessing and light’ (Hev. 4).

2. The same symbolism in the Fathers.—The symbolism of light and darkness is not so common in Patristic writings as in the NT, but a few examples may be given in the 1st and 2nd centuries. At the close of the Apostolic period the Epistle of Barnabas (§§ 18-20) describes the two ways, of light and darkness, i.e. of good and evil (cf. De 30:19); over the former are stationed the light-giving (φωτεινοί) angels of God, and over the latter the angels of Satan. In the 3rd cent. Origen calls Celsus’s arguments darkness, the truth light (cf. Cels. vi. 67). Lecturing A.D. 348, Cyril of Jerusalem says (Cot. vi. 9) that the Father is eternal light, beaming inconstancy, a metaphor is found in the Ancient Church Orders — e.g., in the Egyptian (Coptic) Church Order (662), the Verona Fragments of the Didascalia, etc. (ed. E. Hauler, Leipzig 1890, p. 119), and the Testament of our Lord, ii. 24: ‘The Father is mn σύνορατον της Αλήθειας and Wisdom) to enlighten the saints.’ In the last-mentioned work (Eng. tr., J. Cooper and A. J. Maclean, Edinburgh, 1902) the symbolism is very common, both in the apocalyptic prolongue (where it probably comes from an original apocryphal, perhaps of the 2nd cent.; see JThSt xiv. [1913] 601-604) and in the Church Order proper. Christians are children of light (i.e., pref., 1. 3, 12, 37). In the liturgy of this world (v., vi.) it is called ‘the Father of lights’ (Ja 1:19), ‘King of the treasures of light,’ ‘Illuminator of the perfect,’ ‘Giver of light eternal.’ Elsewhere in the book He is called ‘Giver or Maker of light’ (i. 26, 43), ‘God of the lights of the ocean’ (cf. 1 Th 5:20; 1:4), ‘Light (φως)’ (i. 7). Our Lord is ‘Begetter of light… Guardian of light eternal,’ who has ‘shed light on the darkness within us’ (i. 28). Jesus is the name of light (i. 27). The illumination of the heart is frequently referred to (i. 21, 25, 28, 32, 38, ii. 5, 7, 9). Somewhat more sparingly the titles ‘the Light of the World’ and the Apostolic Constitutions, Christians are ‘children of light’ (i. 2, ii. 32, 46, 54), as in the parallel passages of the Older Didascalia (see these, arranged on opposite pages, in E. X. Funk, Didaskalia et Const. Apostolorum, Paderborn, 1905). The Father inhabits light inaccessible (Apost. Const. vi. 11, viii. 15, from 1 Th 5). Jesus is the true light (v. 16), and the bishop must be a student, and enlighten himself with the light of the world, the Lord (v. 7). These phrases (except v. 16) are not in the Older Didascalia. In Serojipon’s Sacramental body is called the ‘Font of light,’ and is prayed to give us the (or a) Spirit of light (§ 1: JThSt [1839] 105, in Funk [op. cit. ii. 172], numbered i. 13). Gregory of Nazianzus (Orat. xi. 5, [A.D. 351]) calls angels and men ‘light’ in an inferior sense, though in the highest sense God alone is light.

In the Clementine Recognitions, now thought to be of the 4th cent., Simon Magnus, denying that God has a Son, says that there is a power of infinite and ineffable light (i.e. God), of which power even the Demiurges, Moses, and Jesus are ignorant (i. 49).
3. Light as describing the relation of the Father and the Son.—We may now investigate the use of the phrase 'Light of Light' (φως εἰς φως) as opposed to 'Light of the Father and the Son.' We shall now find that the word Light is in Now Testament Greek, though of course not in the Eusebian phrase 'Light of the Father and the Son.' But the phrase above is not used, though in the Πσ. Ουρανος 1 Light is still the Father and the Son; but the phrase is not used, though in the Πσ. Ουρανος 1 Light is still the Father and the Son: but the phrase above is not used, though in the Πσ. Ουρανος 1 Light is still the Father and the Son: but Light of the Father and Light of the Son. It is therefore possible to use it of the Father and the Son. It is therefore possible to use it of the Father and the Son.

2. Justin. On the other hand, the phrase 'Light of Light' is not in the creed of Gregory Thaumaturgus (c. A.D. 263), which has only 'Sole of Sole (φῶς ἐκ φῶς) God of God' (it is given in Ante-Nicene Chr. Lib. xx. [1882] 5). In Cyril of Jerusalem (c. iv. 7) the Son is called 'begotten Life of Life, begotten Light of Light;' in vi. 4 Cyril repeats this phrase and adds 'Truth of Truth, and Wisdom of Wisdom, and the King of Life and Power of Power' (cf. xi. 18). The phrase 'Light of Light' occurs in R. H. Connolly's reconstruction of Aphraates' creed (4th cent.; J. T. M. 1908) 290, but not in the creeds of the various Church Fathers, though those of the Apostol. Const. (vi. 11) and of the Egyptian (Coptic) and Ethiopic Church Orders are of the Eastern type (those of the Tischendorf, or, as it were, of Hippolytus, and the Western or Roman creed). It is instructive to note the different creeds of the Council of Antioch in Iconium, A.D. 541. The second creed has 'God of God, Whole of Whole, Sole of Sole, Perfect of Perfect, King of King, Lord of the living, the living Wisdom, Life, the true Light,' etc. The third creed has 'merely' perfect God of perfect God. The fourth creed, drawn up by a continuation of the Son, has 'God of God, Light of Light, . . . the Word and Wisdom and Power and Life, and the true Light' (these creeds are given in Athanasius, de Synodis, 28, 24, 25, and the second and fourth in Socrates, H. E. i. 10, 18; see them also in Hefele, Concilia, Eng. tr., Edinburgh, 1876, vi. 77–80).

4. Baptism and light.—In the early Church the symbolism of light was closely connected with the sacrament of initiation. Baptism was, especially by the Greeks, called 'illumination,' φωτισμός or φωτισθεῖν, as in Justin (Apol. i. 61), in Gregory of Nazianzus (Orat. xi. 1; cf. ii. 30), once in the Apostol. Const. (i. 32, where it expressly includes the laying on of hands; in vi. 1 and viii. 12 the word is used literally, of the pillar of fire, and in xi. 5, v. i metaphorically, of knowledge: cf. 2 Co 5:1, and in the Older Dionysius (Copt. Latin Fragments, ed. Hauler, p. 87; 'post illuminationem quod dictum Chungton fotsimus, with reference to Ιερος [not in the corresponding passage of Apost. Const.]. Similarly the selected candidates for baptism were called φωτισθεῖν, 'those who are in the process of being illuminated,' and the baptized were called 'the illumined' (αὐθίναρχοι) as in Justin (Apol. i. 61, 65, Dial. 122). Clement of Alexandria (Protr. i. 6), who quotes Eph 5:8 of baptism, and wrongly derives φωτισθεῖν,
in times of persecution, and that, when churches were built above ground in times of peace, the usage was continued and was given a symbolic turn (W. E. Scundamore, in DC&A ii. 993 ff.).

This may be partly true, though it does not explain all the circumstances: the Arabische Dioscorida (§ 35), which describes its own church buildings from the Testament of our Lord, i. 19, transfigures this name into Arabic (Funk, Dial. et Const. Ap. ii. 124 f.).

The use of light is found also in the NT. In He 11:10 the ardent pupil perceived (‘illuminated’), denoting a definite act, clearly refers to the Christian act of initiation, and the Syriac versions, both the Peshitta and the Harqel, in translating these passages explicitly refer them to baptism.

The metaphor has been thought to have been derived from the Greek mysteries, though the NT αἰνήσαντες are quite unlike the heathen ones in that in the former the revelation of the unknown is imparted to initiates (cf. Mk 4:11; Co 14:13-14, and Co 12, where see Lightfoot’s note).

The custom of the candidates for baptism carrying torches probably came from the metaphor, not the metaphor from the custom, which is perhaps alluded to by Cyril of Jerusalem (Cat., i. 1) and certainly in pseudo-Ambrose (de Lapis. Virg. v. 19), A. D. 374 [2].

There is a 2nd cent. legend, mentioned by Justin (Dial. c. G. 88), that when Jesus was baptized, ‘a fire was kindled in Jordan.’ It is from an apocryphal Preaching of Peter, in the Ebionite Gospel, and in the Old Latin codices α ‘γ’ (in Mt 3:11 they read ‘hunc ingens’ or ‘magnum’; see H. E. Swete, Holy Script. IV. Lorn., 1904, p. 43 n.), and is a commonplace of Syriac literature. In the Diatessaron it was related that a light flashed on Jordan and the river was girt with a white cloud. This reading is attested by Eusébius (Hist. Eccl., iv. 20, and E. C. Harle, The Canonist, Cambridge, 1904, p. 115).

From the baptismal metaphor, Epiphany was called ‘The Holy Lights’ (cf. Greg. Naz. Oration xxxix. and xi. 1); our ‘Lord’s baptism is the event principally commemorated at that festival in the East (see, further, art. EPHESIUM).

5. Liturgical Use of Lights.—There are many traces of the symbolic use of lights in Christian services, from the 4th cent. onwards. Perhaps the earliest is in connection with funerals. At the Spanish Council of Elvira (c. A.D. 305, can. 34) the custom of burning candles in the day-time in a cemetery was forbidden, lest the spirits of the saints should be disturbed—a custom probably borrowed from the heathen (see Heide, op. cit. i. 120). But in some form the custom continued. Lights were carried, as in heathen, so in Christian, funeral processions; see Gregory of Nyssa, de Vita S. Marcius (near the end, ed. Paris, 1638, ii. 204 A; c. A.D. 389); and Funeral Oration in Meteora (near the end; A.D. 381). Eusébius says (Vit. Const. iv. 66) that Constantine’s body lay in state surrounded by candles burning in candlesticks of gold, presenting a marvellous spectacle; and Gregory the Great (Ep. iv. 3, to Januarius, A.D. 608) speaks of relatives at a funeral offering lights for churches.

About the 4th cent. we find the symbolic use of lights in other Christian services. In the Testament of our Lord (1. 19) it is directed that all parts of the church be lighted, both for a type, and also for reading. The derived Arabische Dioscorida expands this phrase thus: ‘Let them be lighted with many lights as a figure of heavenly things, especially in the reading of the pericope of the sacred books’ (§ 35; Funk, op. cit. ii. 125). It has been suggested that lights had necessarily been in use in the catacombs and in the assemblies before dawn.

The candle was carried before the compunctates to the font (ct. § 4, above), and denoted the rising of the Sun of righteousness. The Liber Pontificalis says that Pope Zosimus (A.D. 417) extended the custom of blessing the Paschal candle to the churches of Rome. (c) The office of Tenebrae is found from the 7th or 8th cent. onwards—an extremely symbolic service on the night which usherers in Good Friday. After each of the three noontides one-third of the lights were extinguished, except that seven remained, which were gradually put out during matins, the last when the Gospel was read (DC&A ii. 954).

We may ask what is the meaning of this symbolism of lights when transferred to Christianity, and used in its services. Putting aside the lights carried before a dignity, we gather that the general idea was that, on the one hand, Christ is the Light of the world, and that, on the other, Christianity is the religion of light and Christians are children of light. There is an open religion, not confined to the few, like the Greek mysteries, not hiding itself, as those cults which became so common in the heathen world, and loved darkness rather than light. Such seems to be the symbolism of the liturgical use of lights.
LIGHT AND DARKNESS (Greek and Roman)

In the fields of the Hellenic and the Italian civilizations we have in historic times a divinity recognized as supreme, Zeus or Jupiter, who is a personalization of the sky and the daylight that fills it. He has counterparts in the religious systems of kindred races. Among Greeks and Romans and peoples subjected to their influence there are two groups of contrasted deities, those of the upper world (Olympos, di superi) and those of the under world (Olympos, di inferi), the former the authors of life and increase and prosperity, the latter of death and waning and misery to mortal creatures.

1. Greek.—Certain varying waves of tendency, characteristic of the development of belief towards these two classes, may be discerned in the history of the Greeks. There was a time when the chief sacred centres had mysterious connexion with the realms of darkness, when the fear of obscurity had more power over the religious consciousness than the delight in heavenly radiance. The spots at which there were repeated entrances to the domain of Hades and darkness were numerous in early Greek days. In many instances, subterranean pheno-

Liturature.—(1) For the subject of light as expressing the religious idea of the Greeks, and all that was especially the work of Athanasmus, and the edition of A. Robertson, Select Writings and Letters of Athenasmus, 1st and notes, Oxford, 1832 (the Index of the ninth volume of the series of lights and letters). See also E. C. S. Gibson, The Three Creeds, London, 1898, ii. 1.

(3) The symbolism of the NT is treated in H. B. and J. Moffatt, in D.C., art. "Light." on the whole subject see also the works mentioned in the course of the article.

A. J. Maclean.

the mysteries celebrated at Eleusis. Hades, the consort of Persephone, underwent a like change, indicated by his later name Plouton (Pluto), i.e. god of wealth or the god of the dead. His divinity was sometimes aided by euphemism, causing the light deities to be propitiated by well-sounding titles. So the avenging spirits of gloom, the Furies, were venerated as 'Eumenides,' 'benevolent ones' (cf. art. EUMENIDES, EINNTES; EUPHEMISM).

A profound alteration was wrought in the religious conceptions of the Greeks by the rein given to their myth-making fancy and to their artistic genius, working on the old things divine. As human traits were inwrought into the texture of dimly apprehended superhuman existences, and the dreams of art, their original connexion with natural objects became veiled, and in some cases was forgotten. The process had already been carried far when the Homeric poetry arose in its glory. Some figures that did not very readily lend themselves to transformation received little notice in later worship, even the dawn-god, Hecate, is prominent in Homer, but, as she is also too obviously the dawn, she is present but little in later ritual. Ovid remarked that her temples were the rarest in the world (Metam. xii. 388). But the divine being who is wrenched in need of the sun, and so generally lose that particular contact with nature which gave him his origin. Zeus remained the actual source of events in the sky. the mysteries celebrated at Eleusis. Hades, the consort of Persephone, underwent a like change, indicated by his later name Plouton (Pluto), i.e. god of wealth or the god of the dead. His divinity was sometimes aided by euphemism, causing the light deities to be propitiated by well-sounding titles. So the avenging spirits of gloom, the Furies, were venerated as 'Eumenides,' 'benevolent ones' (cf. art. EUMENIDES, EINNTES; EUPHEMISM).

A profound alteration was wrought in the religious conceptions of the Greeks by the rein given to their myth-making fancy and to their artistic genius, working on the old things divine. As human traits were inwrought into the texture of dimly apprehended superhuman existences, and the dreams of art, their original connexion with natural objects became veiled, and in some cases was forgotten. The process had already been carried far when the Homeric poetry arose in its glory. Some figures that did not very readily lend themselves to transformation received little notice in later worship, even the dawn-god, Hecate, is prominent in Homer, but, as she is also too obviously the dawn, she is present but little in later ritual. Ovid remarked that her temples were the rarest in the world (Metam. xii. 388). LIFE AND DARKNESS (Greek and Roman) 57

from heaven, the lightning. The deities who rule the regular light also send lightning, especially Zeus, one of whose chief emblems is the thunderbolt, and also Athene and Apollo. It is sometimes a sign of divine anger, as when Semele died by its stroke, sometimes an indication that the god has signified his will and given warning of the impending calamity. To interpret the sign is, of course, a matter for an expert. Lightning was thus connected with divination and prophecy, and spots struck by the sacred bolt were revered.

The fire which is of use to men on earth could not but be regarded as in its origin divine, and as venerable, being a symbol of the eternal. The apparent everlastingness of the fire of which sun, moon, and stars are the manifestations doubtless led to the idea of a constant and unceasing fire in the earth, or, as it is called in Hellenic, the earthly fire. Hence, the great metal-worker, the goddess of the subterranean flames which find vent in the crests of Etna and the Lipari Isles. In Homer and the poets generally he is the maker of all the weapons, equipment, and equipment of the Olympians, of the scenes of Zeus, of the arrows of Apollo and Artemis. Hestia, goddess of the family hearth, has an especial connection with earthly fire. She is the only one of the greater deities whose name has a transparent significance in life, equivalent to the hearth of the house, always regarded as in some sense an altar. As every house had this altar, so the great State family had its central hearth-altar for all the banquets. When a city sent out some of its sons to found a colony afar, the central fire of the new community was lighted from the central fire of the old home. When a city was under a monarch or despot, its common hearth was in his dwelling in a republican community it was in the town-hall (παρευρεσ [see, further, art. HEALTH, HEALTH-GODS [Greek]). The conception of Hestia remained one of the clearest and simplest in the range of Greek religion. Where the name of a divinity retained an obligation to an altar, the cultus, and an altar itself, was clear; as, for instance, by Hestia, in other passages he assigns divine character to the sun, moon, and planets. He was followed, with variations, by later thinkers—Xenocrates, Heraclides of Pontos, and many others. Aristotle described the celestial bodies as containing a great divine element, and pointed out that this belief, now explicitly declared by philosophers, was implicit, in an obscure form, in the popular mythology. Like doctrine was taught by the Stoics and particularly by Cleanthes, who considered that in the sun lay the guiding principle (περασεως) of the universe. It was common to call the heavenly bodies ‘visible gods’ as opposed to the invisible deities. These notions were prevalent among the Neo-Platonists. Apollonius of Tyana (q.v.), the seer and wonder-worker of the late 1st cent. A.D., translated the sun at dawn, like many an Oriental of to-day. That the practice was popular in Greece is shown by the salute which Socrates offers to the rising luminary, at the end of his great drinking-bout, in the Symposium of Plato. The Neo-Platonists, who powerfully affected the thought and religion of the Hellenistic period, received and developed beliefs like those that have been cited. Philo, the great Alexandrian Jewish philosopher, was in this respect fully in accord with the Greeks. An idea that was wide-spread in the philosophic age was the legendary account of the sun, that the contemplation of the heavenly bodies in their purity and in the regularity of their operations had an ethical value for the regulation of human conduct.

2. Roman.—Among the Romans notions concerning the regions of light and darkness were clothed in some distinctive forms. The dread of evil that might befall if the inhabitants of the other world,

heavenly objects before the time when Greek and
Oriental influences became powerful. Even the
relation of Jupiter to the light of the sun does not
come out with distinctness. The word Lencesie'
addressed to him in the very primitive hymn that
survived in the ritual of the Arval Brothers' {rj.r.)
refers to him as god of light, and a con'esponding
epithet Lucetia' was applied to Juno, indicating
a connexion between her and the moon. The
antiquarian scholars of the late Republic declared
that Titus Tatius, the Sabine king of Rome, had
introduced the worship of the sun and moon into
Rome from his own country, and that a temple of
the sun on the Aventine was founded by him.
This was the opinion of Varro (</« Ling. Lett. v.
74), and Tacitus {Ann. xv. 41) attributed a temple
of the moon (Luna) on the Capitol to Servius
Tullius.
But the official Roman calendar of festivals, which is known to enshrine very ancient
usage, gives no sign of official reverence paid to
sun or moon, nor have we any sound evidence of
a public priesthood devoted to them either at
Rome or elsewhere among Italic peoples, though
Varro assigned such an office in old days to the
gens of the Aurelii. They were supposed to have
come from the countiy of the Sabines, in whose
tongue ausel denoted the sun. The Aventine, as
is well known, was a home of cults introduced
from Greece. The existence of a deity called
Noctiluca (the night-shining one ') on the Palatine
is hard to explain. The situation ini]rlies high antiquity, for no god realized as foreign was allowed to

one of those which longest survived the introduction of Christianity. The forms with which
;


another divinity, Vesta, was venerated were remarkably characteristic of the Roman people. Her affinity with fire and her kinship with the Greek Hestia are obvious; but the worship of Vesta among Romans is far more complex than that of the Greek. The structure of the Roman family resisted the assaults of time more stoutly than that of the Greek family. A great feature of Roman religion is the parallelism in many respects of the religious ceremonial of the family and that of the State. And the private and public worship of Vesta resembled each other not a little. Every house bad a cult of Vesta, and the name was restricted to the divinity; it had no connotation like the name Hestia, which meant 'hearth' as well as goddess. So thoroughly is Vesta a Latin deity that outside Latium hardly any signs of her existence have been found—a surprising fact when the similarity between Hestia and Vesta is remembered. In the home the cult of the goddess belonged to the matron and the virgin daughters, whose duty it was to see that the fire on the hearth was not extinguished. The centre of worship for the great State family was the ancient shrine of Vesta in the Forum, and the Vestal Virgin was the chief attendant in the service existed before the end of the Republican Period. The temple of Vesta was of the antique round shape derived from that of the earliest Roman house. Close by dwelt her priestesses, the Vestals, who, in their sacred possessions, the Vestals had not come to light in recent days. The temple never contained an image, for Vesta was the one ancient divinity in Rome who never succumbed to the anthropomorphic impulses of her worshippers. The Vestals dwelt by the side of the eternal fire, whose extinction imported calamity to the land. Lapse of duty or impurity of life on the part of a Vestal was an omen of disaster, only to be averted by the sacrifice of the sinner. The Vestals were the daughters of the community, regarded as one vast family. Augustus, who loved to present himself as the restorer and maintainer of the most ancient Roman rites, connected Vesta with the dwelling-place of the imperial family on the Palatine. The Pontifex Maximus had a public residence close to the house of the Vestals. Augustus made this office an appanage of the emperor, and made over the official house to the Vestals. He then set aside with proper ceremony a portion of the palace on the hill; this was the Palatine, and established there a second State temple of the goddess (see, further, art. HEARTH, HEARTH-GODS [Roman]).

We turn now to the later age of Rome. The conscious worship of the sun marked distinctively the dying days of Roman paganism. The oldest shrine dedicated to the sun was on the Quirinal, and seems to belong to the time of the Second Punic War, and to be a result of the mighty tide of religious influence which poured upon the world from Hellas. A desire to venerate the sun was manifested, however, earlier, when he appeared with his attributes on the Roman coinage. Augustus placed in Rome two Egyptian obelisks before the temple of Caesar, and they were supposed to be devoted to the sun. Vespasian transformed it into a representation of the sun a great colossal figure erected by Nero in his own honour. Several inscriptions attributed to increase Roman reverence for the hamiltar. But, when Calpurnius, the son of the emperor, was killed in the summer of the century, A.D., bear increasing evidence. Some of the most powerful divine invaders who came from the East to conquer the West were solar divinities. Also, as mentioned above, philosophers and mystics had preached the divine nature of the sun and other celestial bodies. Immigrants from the East, and Romans, especi-
the emperor as embodying the monothetic conception; and, in so far as that is concerned, he may be said to have borrowed from the East. An interesting inscription recently discovered in Mysia records that the elder Constantine had ordered the consecration of an image of the sun and the establishment of a ceremony in his honour just before the great crowning victory of Constantine, for Arianism in 323 A.D. Some years later, Constantine had ceased to put the sun on his coins, a practice common since Aurelian's time.

We come now to the most dominant of all the representatives of the sun in the Roman sphere—Mithra. It was during that Empire that the cult of the sun in many inscriptions. The Mithraic system was complex and many-sided, however, and this is only one aspect of the god. His cult embraced elements derived from many sources, not only from the Persian religion in which his origin is to be found, but from Babylon and elsewhere. Sun, moon, and stars were prominent in the ritual. The extraordinary spread of Mithraism in the Roman empire was mainly the result of tendencies which had been noted in the vague of Mithra was especially notable on the fringes of the empire and in the camps situated there. Many of his shrines have been found in the inner lands, especially on the sites of sea-ports and he the Roman college, where M. Gaecleker a few years ago discovered a remarkable shrine. Another lies under the church of San Clemente, and memorials have been found also where the Vatican now stands. The certainty of the Mithraic worship was especially due to the provision which it made for satisfying some yearnings which afterwards found a fuller gratification in Christianity. So many were the resemblances between the religion of Christ and that of Mithra that Christians attributed them to the subtle maladaption of evil demons. The religion spread rapidly among the freedmen and soldiers, but also attracted the educated and the officials, and found favour with princes. It's close-knit organization, with its official priests and its ascending grades of illumination, kept believers together in the manner of the Christian rites. It owed much of its hold over the West to the moral element which its mysteries embodied. It instilled into its followers a high sense of life and a hope in death than any other form of pagan creed.

The conversion of Constantine, however, gave it its deathblow. Like other heathen cults, it lingered on to the end of the 4th cent., revived a little in the intervening time through the redemption of the forbidden gods by Julian, who himself entertained a religious veneration for the sun. It may be observed that Mithraism never took any great hold on Greek lands where the Greek culture had been already established. It is found nowhere on the outskirts of Greek civilization in the East and on the Danube (see, further, art. MITHRAISM).

In conclusion, we may note that the evil associated with the darkness left its mark on some usages connected with the administration of the Roman State. The taking of an oath, which preceded the carrying out of many public affairs, originally took place at dawn. It was just as the sun was rising that the flight of eagles which gave him the kingship. No profitable business was valid unless conducted between sunrise and sunset—neither meetings of assemblies nor of the Senate, nor the administration of justice. Clerical and lay rights to Marzabul date through decrees of the Senate after the sun had sunk (Senats-consulta user-pertina, Phil. iii. 24).

Something of the same usage can be seen in Greece, but the rules there were never so rigid.

LITERATURE.—All information in matters connected with this article can be found in a few publications, in which the results of recent investigation are collated and discussed, such as: H. Knoke, Lexicon, now approaching completion, is invaluable. O. Gruppe, Griechische Mythologie. 3d ed., Munich, 1908, is important, on the Greek side, and G. Wissowa, Religion und Kultus der Römer, 4th ed., 1922, on the Roman. Roman religion has been interestingly treated by W. Warcke, Wissowa, Religion und Kultus der Römer, 4th ed., 1922, on the Roman. J. S. R. E.

LIGHT AND DARKNESS (Hindu).—The great contrast between light and darkness with their life-stirring compounds has been recognized naturally in all ages taken deep root in the human mind, which welcomed the reappearance of light as the release from the night or the long darkness of winter, and transformed the contrast of light and dark into one of life and death, freedom and bondage, good and evil, virtue and sin. The great representative of light, life, freedom, and goodness was to the mind of ancient India Usas, the goddess of dawn, and her rival Ratri, the night, or, in a sense more adverse to human life, ftames, the darkness. The imperishability of light found its expression in the personification of Aditi, which other scholars explain merely as eternity (cf. Hillebrandt, Vel. Myth. iii. 185 E.). Usas is not only on the Urihess of the dawn of every day; in many songs that glorify her reappearance the turn of the year is alluded to, and Usas means the first dawn of the New Year (cf. A. Ludwig, Der Rigiw, Prague, 1876-88, iv. p. xi. vi. 179; Hillebrandt, Vel. Myth. ii. 204). The Usas' are the Ostara of the Rigveda poems (F. Kluge, Zeit. für deutsche Wortforschung, ii. [1901] 42). She brings back the sun, the fire, the sacrifice which has been discontinued during the decaying period of the year; sometimes she is also called sirya or ekloka, and under the name 'saranima, she became the mother of the two heavenly dogs, the sarmanas.

The Indias divide the year into two periods, the Uttarayana, when the sun proceeds towards the north, and the Dakshinayana, when he goes towards the south, the light half of the year being sacred to the gods, the dark half to the dead. Sometimes (e.g., Sattrapatha Brāhmaṇa, ii. 3. 1) it is said that spring, summer, and a hot season, and a dry season, and a cold season are the pitruro-saha, sacred to the ancestors. We may begin the New Year with the winter solstice or with Easter time, according as we lay greater stress upon an astronomical or a practical point of view. Indian writers also oscillate between the two possibilities, and faced the problem in the same manner as their brothers did among Teutonic, Slavic, and Italian tribes (cf. e.g., F. M. Müller, Contributions to the Science of Mythology, London, 1807, ii. 715). The Vedic authors speak of the dark half of the year as toras, and originally meant thereby the winter, the personification of which was Vṛtra, not the retainer of the heavenly rain, as has generally been believed, but the demon of winter, who was slain by Indra, and who regains the light and sets free the streams bound by the fetters of frost and ice. This idea was inherited from pre-historic times, and formed under the influences of a that the flight of the Indian plains. The further the Aryans tribes advanced towards the south, and the longer they settled under a drier climate, the less that idea harmonized with the surroundings and the actual climate; the new hero represented that the really dark season of India—that the rains; and the residue of the past and the germ of a new time were thus equally precipitated in the ancient

VI.

LIGHT AND DARKNESS (Iranian). - The antithesis between light and darkness among the Iranians was closely connected with the antagonism between Ahura Mazda and Ahriman. This feature attracted the attention of Pintarch, who says (De Is., xxvii, 3), that when Ahura Mazda appears in human form he is always accompanied by a female, Anger Mainyu, of darkness, so that "תא תבשה" φώτος και θάνατος, for example, is a synonym for 'light,' but 'darkness' is the opposite of 'light.'

The view recurrs not only in the late "Ulamat al-Islam" (tr. E. Blochet, "Kitab al-bulut wa-l-amlah") (tr. T. Haarbrucker, Halle, 1890-91, i. 278), but also in the Armenian writers (tenom Artinian's "Hwirtu"), while Dio Chrysostom (Orat. xxxvi) goes so far as to make the assertion - not thus far substantiated elsewhere - that, in order to create, Ahura Mazda had to surrender much of his light.

In the Gāthic we find the striking statement that Ahura, 'well-working, created both light(s) and darkness(es)' (Ys. xliv. 5). This at once recalls the passage in Is. 43, 1 'Thou art my light,' and creates darkness.' It seems advisable to assume, with H. H. Crooke ("Zoroastrianism," 1913, p. 129), that the Iranian and the Hebrew developments are only parallel and not connected (cf., further, E. Stave, "Einfluss des Persischen auf das Judaisische," Haarlem, 1898, p. 98; and the fuller and more critical and exhaustive section below, p. 65, note 3).

The origin of the two what it may - and the true explanation of the Gāthic passage doubtless is, as Moultt maintains, that it is the protest of Zarathushtra against Magian dualism - light is, as is but natural, associated with Ahura Mazda and his supporters, while darkness is connected with Anger Mainyu and his rabble. It was Ahura Mazda who in the beginning filled the blessed realms (reatra) with light (Ys. xxxvii, 7), and in the realms of light (reatin) it is to be beheld by him whose thought is right (Ys. xxx, 1), while the light of the sun is one of the things that glorify Ahura Mazda (Ys. xxvii, 7). Apart from the passage already noticed, darkness (tonath) is mentioned only once in the Gāthas, in Ys. xxxii, 20, where it refers to the blackness of hell (on the blackness of hell see Moultt, p. 172); F. Spiegel, "Bewegung, Alterthumsforschung," 1871-78, ii. 120, gives a similar passage.

In the Younger Avesta the dualism between light and darkness appears in full vigour, so that Spiegel is amply justified (ibid. 219) in dividing his discussion of the Iranian theology and demonology into 'the light side' and 'the dark side' respectively. A phrase which constantly recurs in beginning the laudation of all good deities is "for his magnificence and his glory" ("he roya,

For an admirable discussion of the latter word see E. Wilmann, "Hymnen," in "Hymnen," Vol. of the Sir James and the A. J. Lehmann-Zoroasth., London, 1814). Light was created by Ahura Mazda (Ys. v. 1, xxxvii. 7), and is one of his prerogatives (Ys. xii. 1); hence prayer is made to Ahura Mazda: "light of the Creator!" (Ys. lvi. 6), and the light of the sun is praised him (Ys. lxxv. 6). Together with Asha, Ahura Mazda created 'the shining light and sunny abodes' (Ys. lii. 1), so that the abodes of Asha are light (Ys. xvi. 7), while the abodes of Ahriman are darkness. Righteous dead dwell (Ys. xvi. 7), and light: cf. lvi. 11; Arianian, i. 15; Vend. xii. 26, for paradise (eshtaka abo); see also, LIGHT AND DARKNESS: AIR (Iranian) and, as such, receives worship (Visparad, xxxii. 1; Sih roaya, i. 27). Indeed, 'light' (roaya) is a synonym for 'heaven' (Ys. xii. 26), another synonym being 'the shining house of praise' (roaya, gera-sana) (Yt. xii. 124, xiii. 44) to which worship is paid (Sih roaya, i. 27). Still another synonym is 'the light without beginning' (munaya roaya, Ys. lxxvi. 9, xvi. 15; Vend. xvi. 1 f., xiii. 10; Purušasr, xxxv., i., 10), which is likewise an object of veneration (thri, iv. 17; ydush, iii. 9; Sir, roaya, i. 30), and also in the Persian, in the "Paradise," i. 11; cf. A. H. Anw, "Zoroastrian Texts," Bombay, 1909, p. 145, tr. O. E. Donnert. "Vend-Avesta," Paris, 1893-92, iii. 178), the righteous men hopes to attain to 'the place of light' (yow-ca-xa) not to 'that of darkness' (Gahz-ta-xa).

The general creation is given the epithet of 'bright' - Asha (Ys. v. 4), the Amesha Spentas and their protectors (Yt. xiii. 22, 84, xiv. 15, 17), Ashi (Yt. xii. i, 6), Apam Napat (Yt. xii. 22; Sir, roaya, i. 30), the "Avesta," and especially Yama, whose conventional epithet wakta ("shining") is so completely blended with his name that in modern Persian he is known only as Jamshid.

The sun, moon, and stars are hidden to give light (Vend. xvi. 5, 9, 13), and the light of the moon is hauled (Yyamis, iii. 7), while so great are the blessings of the light of the sun that, if the sun no longer rose, the demons would destroy everything that is in the seven regions of the world, and the spiritual angels would hold no tarrying place and no abiding place in this corporal existence (Yt. vi. 3; Yyamis, i. 15; cf. in general Yyamis, i.-iii.; Yt. vi.-viii.) Indeed, the finest of the forms of the universal, earthly and the heavenly light, i.e., the fire and the sun (Ys. xxxvi. 6, liii. 8); and in the palace which Ahura Mazda built for Mithra there is neither night nor darkness (Yt. x. 32).

Darkness is a special attribute of hell (Vend. iii. 35; Aryanwadatha, xxvii.), for which 'darkness without beginning' is a synonym (Yt. xii. 33; cf. Spiegel, i. 18 f.). The demons are 'spawn of darkness' (or perhaps, 'possess the seed of darkness,' tundemithi) (Yt. vi. 4; Yyamis, i. 14; Vend. viii. 29), and seek refuge in darkness (Ys. lvi. 18), or hide in the earth (zoware-za) (Ys. ix. 15; Ys. xii. 8; Westernavard Frag. iv. 5) or in caverns (Vend. iv. 7, 19), - a phrase which may possibly point to survivals of an old chthonic cult (cf. Moultt, pp. 57, 128 f., 132, 390). Properly enough, therefore, divine aid is sought to resist 'darkness, woe, and suffering' (Ys. lxxii. 17; cf. Yyamis, i. 15).

Turning to the Pahlavi texts, we are told that "the region of light is the place of Ahuramazd, which they call 'endless light'" (Briedan, i. 2), and that the place of the Amesha Spentas is "in that best existence of light" (Visparad-Dag, lxxv. 2), while Artā-ī-Vārat, when in the presence of Ahura Mazda, perceived only brilliant light (Artā-ī-Vārat Nānum, i. 2), and the radiance of
Zarathustra within his mother, during the three
days'-before his birth, was so great as to illumine
his father's whole village (Dinkart, vi. ii. 2, vii. ii.
56-58).
According to the same texts, hell is full of darkness
(Dinkarta-Dinkar, xxvii. 2, 6, xxxii. 2, 4,
xxxvii. 20, 45), so intense that it 'is fit to grasp
with the hand' (Bandehshin, xxviii. 47; cf. Dinkar-
Mainyu-Yad, vii. 38). In the midst of Angra Mainyu
(Dinkarna, i. 3), and when, in his fruitless endeavour to destroy
the light of Ahura Mazda, he emerged from hell, he
made the world at mid-day as dark as midnight,
returning, after his defeat, to the darkness, where he
lived in darkness. In fact, the most steadfast quality of the demon
himself is darkness, the evil of which is so complete
that they shall call the demons also those of a gloomy race
(Dinkarta-Dinkar, xxxvii. 5). In contrast, although sun, moon, and stars will con-
tinue to exist after the renovation of the world, they will no longer be necessary, 'for the world is a
dispenser of all light, and all creatures, too, are
brilliant' (ib. xxxvii. 136). The power of the demon Mainyu was immense as darkness. Therefore,
'when in the dark it is not allowable to eat food; for the demons and fiends seize upon
one third of the wisdom and glory of him who eats food in the dark' (Singaat-la-Singarat, ix. 8; two
translator's glosses insert 'if one rushes them (the hands); and the eighteenth section of the vast
Satur Shok of the Avesta dealt, among other
topics, with 'the horses that spills anything after
sunrise, or whoscars a morsel of food to the
north.' Sassanian literature during the second
19-208. 4; the edition is not yet published, but the
writer has a set of the proofs through the
courtesy of the editor and J. J. Moli). According to this
'Rvayat on the Lighting of a Lamp,' the lamp-light
drives away all demons, and it adds:
'From that light of the Fire the world is bright, since it is
hostile to the demons of Ahurray; if there were notalways the
light of the Fire, there would not be a single man in the world.'
This little poem is immediately followed, it may be remarked,
by another of nine stanzas, recounting the miraculous cure of a
dying child by the lighting of a lamp at the root of the house.

The problem of the relation of light and darkness
was even more vital than the extant Iranian
texts would lead one to suppose; for it gave rise
to philosophical speculations which materially
helped to form the Zoroastrian sects.

The Sassanians see so far as to declare (G. 273) that 'all
problems of the Magians turn upon two main points: why the light
mingled with darkness; and why the light cleansed itself from
darkness; they posit the mingling as the beginning, and the
cleaning as the aim.'

The Gynaiorean sect maintained, according to
al-Shahristani, that light had no beginning, but
that darkness was created. Whence, was their
problem—whether from light, which, however,
could not produce anything even partially evil, or
from something else, though there was nothing
which shared with light the properties of creation
and eternity. Their rather lame solution was that
Ahura Mazda thought to himself: 'If I had an
opponent, how would he be formed?' From this
thought, which did not harmonize with the good-
ness of Angra Mainyu, Zarathustra was produced. The
mingling of light and darkness was due to the fact
that the light gave men, before they were
embodyed, the choice of degradation to the realms
of Angra Mainyu or battle with them. They chose
closely according to the quality of the idea that
they were lifted by the light to eventual victory and
the final resurrection at his defeat.

The Zartarist sect held that the light produced
a number of creatures of bright, divine nature, the
most important of whom was Zarvan (Time), who,
after murmuring prayers for a son during 9999
years, entertained the thought: 'Perchance this
world is nothing.' From this thought Mainyu was
born, and from Zarvan's wisdom sprang Ahura Mazda. There were a number of
minor speculations among this sect—e.g., that
Angra Mainyu was originally in heaven, but
meditated upon treachery with Ahura Mazda, and fell. The Mithraeans thought that a portion of light
had transformed itself into darkness.

The Zarathushtrians (Zoroastrians) entertained,
according to al-Shahristani, the views of light and
darkness which had conditioned thought from
the Avesta and Pahlavi texts. Both light and dark-
ness had existed from the beginning. Good and
evil, purity and impurity, etc., had arisen from the
mingling of light and darkness; and, had there
been no such mingling, the world would not have
existed. God was the source of both (cf. Ps. xlv.
5, cited above), and in His wisdom had mingled them;
but light alone is real, darkness being, in
fact, only its necessary antithesis; and, since they
are antithetic, they cannot be forever to last until the light shall be victorious over darkness.

Thus in Zoroastrianism the problem of the rela-
tion between light and darkness becomes part of
the greater question of the origin of good and evil;
and from this point of view the antithesis of light
and darkness is found again—whether independent
or derived—in several Gnostic systems (cf. ERE,
vol. vi. p. 238 ff.), as well as in Manichaeism
(A. J. H. W. Brunot, Manicheische Religion, Leipzig,
1889, p. 301 ff.) and Persian literature (KAH,
PREI. xii. [1903] 205 ff.). See art. MAZANDAR.

LITERATURE.—In addition to the references given in the art.,
other citations from the Avesta may be found in C.
Bahloloz, Altiran. Worterbuch, Strassburg, 1904, s.v. 'Rash.'
Rassanna,' 'Ravash,' and 'Tabas,' 'Temash,' etc. (coll. 1577-
1615, 648-550). No special treatise on the subject has as yet
been written.

LOUIS H. GRAY.

LIGHT AND DARKNESS (Semitic and Egyptian).—1. Peoples and period.—Babylonian
(Assyrian), Egyptian, and Hebrew beliefs on the
subject of light and darkness may all be taken
together. Although in course of time they became
widely divergent, at the outset of the
same period they showed many points of similarity
—a fact to be ascribed to the contact and the
common origin, in part if not in whole, of the
peoples inhabiting the countries of the Near East.

For the Babylonians and the Hebrews it is
generally admitted, both being of the Semitic
stock. Further, in the words of Cheyne, 'a primitive
contact between the early Egyptian race and the
Babylarians has been made extremely
probable by Hommel. Winekler, too, remarks with
justice that the cultus of the Horns-child belongs
to the same religion as the Babylonian, and is in
this sense Semitic.' Sayce, while tracing many
analogies of the same kind between Babylonian and
Egyptian beliefs, takes no further step, and
sees in 'the triumph of the gods of light and order
over the monsters of chaos not only the birth of
the present creation, but also the theological
victory of the Semite over the Sumerian.' Without
going so far as this, other writers, influenced by the
mythological compositions of the Babylonians were
derived from Sumerian sources. The upper
limit of the period to be considered may therefore
be placed in Sumerian times, about the middle of the

linguistic affinities are worked out by G. J. Hall in
the Hespelheth Anniversary Volume, Leipzig, 1905. For 'darkness'
pp. 34, and for 'light,' pp. 35-36. A condition that
they were warded by the light to eventual victory and
the final resurrection at his defeat.

The Avestan sect held that the light produced

LIGHT AND DARKNESS (Semitic and Egyptian)

fourth millennium B.C., and the lower limit may with propriety be fixed about the time of the Hebrew Exile, before the influence of Persia, followed by Greece, could have been felt. Throughout this period of three millennia the predominant feature of religion in Babylonia and Egypt is the dualism of light and darkness; we should therefore expect to find in the records that have survived much that is cognate to at least the first member of our subject. Owing to syncretistic tendencies always present, and the case with which those ancient peoples tolerated antinomies in belief, no uniform presentation of their views about light and darkness can be given.

2. Various relationships of light and darkness.

While the words 'light' and 'darkness' appear to stand in a co-ordinate relationship, in reality they are contrasted terms, to be compared with 'day' and 'night,' 'life' and 'death,' 'good' and 'evil.' In all these cases the co-ordinate relationship holds good in the sense that light and darkness, etc., can be regarded as complementary terms, conveying the idea of the whole,—e.g., the daily round, the sum-total of existence, and the ethical contents of life. The exceptional view whereby both light and darkness are traced to the same creative source (Jehwism) may also be brought into this connexion. In general, however, the relation between light and darkness continues to be regarded in Semitic thought as adversative, slightly veiling a dualism which perhaps has been inherited from pre-Abrahamic beliefs, and which is not resolved (Jehwism excluded), even theoretically, to a monism until the limit of our period has been passed. We have throughout to reckon with that 'Oriental resignation to the contrast in life, the theory that prevailed might at best be termed 'optimistic dualism.' With special reference to light and darkness there was a contest present in the beginning (cosmology), with yearly renewal, with every day and night, every spring and autumn (or summer and winter), and it may even extend through the course of the world cycle. While light and darkness have, therefore, each a separate being, the one being for day and the other for night and for death, there is evidence in the development of religious thought in Egypt of an invasion of each upon the other's domain, resulting in a measure of fusion. This is often summed up by saying that one star was oseanized and the other system was celestialized. A subtle theory of a similar kind has been formulated for Babylonia, as an instance of which we may quote the representation of the sun as under-world divinity: 'because in his light the stars disappear and perish.' There is much less warrant for such crossing over of the ideas of light and darkness in Babylonian thought. Regarding the 'Astral Theory' as a whole, it may be remarked that, were it accepted, it would greatly extend the possibilities of our subject. It requires, however, more agreement than at present exists as to the date of the origin of scientific astronomy among the Babylonians before its findings can be accepted with any degree of confidence.

3. No science of light.

Judging from present data, the likeliest hypothesis is that the peoples of antiquity were not conscious of the fact that the universe is under the dominion of natural law. Theirs was the cosmography of appearances—a view of the world resting at the empirical stage. They had no scientific theory of light; the universe was not merely the absence of light. Both were 'material entities.'

'The matter of light issues forth from its place and spreads over the earth; at night it withdraws itself; it transmutes forth from its place, each in a hidden, mysterious way.'

The 'substantiality of darkness' may be specially remarked in Ex 10:12. A higher conception of the quality of light was reached in Egypt.

According to Heliog, in the later parts of the OT light is used as a symbol of deity because it is the finest and most immaterial substance known, and there is no danger of corporeal form being attached to it.

'The deity as light gives the transition to the deity as spirit.'

Bearing in mind that the peoples of the Ancient East were accustomed to concrete views of what are accepted by us as abstract qualities, we shall understand how they received the phenomena of light and darkness mainly according to their physical effects and their bearing upon life. Light was of service to them: darkness was a barrier. This was transferred to the realm of feeling: light they rejoiced in; darkness they dreaded. Love of the light and hatred of the darkness lie at the root of many of the myths of antiquity, and are evident in the metaphorical usage of the two terms. By an inevitable transition light is associated with warmth, and darkness is linked with cold. This applies to the cycle of the year, which is of more importance in ancient belief and practice, as appears in the Tanuwetz calendar, than the cycle of the day. From warmth again there is an easy passage to life and growth, and from cold to decay and death.

4. Light and darkness as associated with deities.

Like great natural forces, such as thunder and tempest, light and darkness were seen to be beyond human control, and thus they came to be associated with deity or deities, and with beings more than human. Light is the creation of good gods, although it has also a hurtful side, when found in conjunction with darkness, as in the plague of summer, and when bound up with lightning and fire. Darkness is viewed less as a creation of the gods than as an environment for monsters and evil spirits, who could not exercise their baneful power apart from darkness. Still more directly associated with darkness, both in Babylonia and in Egypt. Many deities bear names and attributes compounded with words signifying 'light,' and their temples are similarly termed (e.g., Echrara, 'the shining house' [sun-temple at Sippar]). In addition to Shamash, the sun-god (and other deities who in their original function are merely aspects of the sun), Nannar or Sin, the moon-god, and Ishtar, 'the light of the heavens,' the foremost place must here be given to Marduk or Merodach (Amar-Und, or Amar-Udunk), 'son of the sun,' or 'child of the day,' as being the god of light by pre-eminence. He, too, is generally regarded as a solar deity, although he has also an attribute to prove that he is independent of the sun, being simply the god of light. Although appearing at the summit of the Babylonian pantheon, he

6 Breasted, p. 190 f.
certainly did not hold undisputed sway, either at the beginning or afterwards, and the light between light and darkness, typified by Marduk (or Bel) and the Dragon, was continued down the ages. From HDB, Maspero, lb., the Aton (Gn 18:1), how the Babylonians readily associated with Hezekiah (Is 30:21) the god of darkness, the 'natural antithesis' of light, also enters into the imagery of the OT (Ex 20:12, Dt 41:6, 1 K 8:2, Ps 29:2, 97: Am 5:15, Zeph 1:5). It is surprising that, though the Hebrews were surrounded by races more or less allied to them, who shared the Babylonian and Egyptian belief in demons and evil spirits, hardly a trace of such powers of darkness is evident in the religious literature of ancient Israel.

5. Light and darkness in cosmology.——According to the main version of the Babylonian Story of Creation, Marduk, the god of light, prevails over the darkness, which is distinguished by two conceptions one of which Marduk presumably forms part. Sayce finds in Mummu (tablet I. 4) the 'flood,' or chaos, the equivalent of the 'darkness' which in Gn 1 is said to have been 'upon the face of the deep.' In both the Hebrew and the Babylonian accounts of what was in the beginning, darkness is reckoned as primeval, i.e. before the cosmos. It is an element not to be reckoned as good. While this may be asserted of darkness as diffused through space, it does not hold true of darkness as a division of time, when darkness means no more than night. (16-9.) According to Hebrew cosmology, one function of the heavenly orbs was to divide the light from the darkness; and God saw that it was good (Gn 1:4; cf. Ps 104:2). In the account there is no mention of the creation of light, perhaps to be explained by the fact that Marduk is himself the god of light and consequently its creator—an which might well have been entertained in spite of the Hebrew account as we see it, that the 'son of the sun' is also made the creator of the sun and all the other orbs of light. In the Hebrew account light is given as the first act in the creation of the world, wrought by the word of God. This, Chayyeh thinks, formed no part of the traditional Hebrew cosmogony, but is due to the priestly writer's reflective turn of mind. Be that as it may, this light, which is diffused through space, wherever darkness is not present, is evidently to be distinguished from the 'lights'—sun, moon, and stars—in which light is, as we localized (Gn 1:6). In Egypt there is no detailed account of creation. Sayce and

LIGHT AND DARKNESS (Semitic and Egyptian)  65

Jeremias's remark on sectional parallels to the Babylonian main version. Different conceptions of the origin of light appear. According to one, primeval chaos is an ocean from which the sun-god (Atum) arises, bringing his own light with him; according to another, light is laid up in the world-egg, waiting to be revealed. The second creation would seem to be found in the narrative of Berossus, according to whom the animals apparently were not able to bear the light of the first creation, and a second was rendered necessary of such a kind that they could bear the light.  3

Deuter-Isaiah's exalted conception (457), whereby the creation of light and darkness is referred to the same divine source, is the logical outcome of monotheism. 3 It has an anthropomorphic parallel in the words ascribed to Ra: 'When I open my eyes, there is light; when I close them, there is darkness.' 4 This, of course, applies to the daily renewal of light and its withdrawal every night.

A reduction of earth to primeval conditions would involve among other things the extinction of light and by inference the return of the darkness of chaos (Jer 4). An Egyptian myth, found in the Book of the Dead, represents Atum (see also the previous paragraph) bringing about the return of water, as it was at the beginning. Over this Osiris (lord of darkness) is to rule. 5

6. Light and darkness in human experience—

The cosmology, although relating to what is first in the creation, is itself the product of reflection upon the phenomena of the present. The processes of thought which give origin to the myths connected with the world's beginning, and to mythology in general, may be placed in times subsequent to the Semitic period. The myths, having been invented and reduced to writing, were now exercising a certain counter-influence on current ideas. They were never absent from the background of thought, and in a way they hindered development. We may suppose that light and darkness, especially light, would in time have been accepted as in the course of nature, and have ceased to attract attention. But there came interruptions of the usual order—e.g., in the eclipse of moon or of the sun. It is possible that the general process of the secundum ridiculy. The cults also were of such a kind that they kept the mythology alive. The great hymns to Shannu, Sin, Ishtar, etc.; the transcription and frequent recitation of funerary hymns; particularly the Book I. 5. 6, this had been handed down from very early times; the festivals attending new moon, full moon, and the new year, and every occasion of national or local assembly—all must have exercised much influence towards the preservation of traditional beliefs. There was thus but slight opportunity of escaping from the legacy of the past. When the Egyptians looked upon the fiery clouds that attended the rising sun, their minds reverted to the pits of fire that were supposed to mark the eleventh division of the Tuat. 6 The multiform representations on cylinder seals of the orbs of night and day, especially of the figure of the sun-god rising between the mountains of the East, depicted with streams of light flowing from both sides, or with rays of light protruding from his shoulders, give a vivid conception of the ideas constantly at work in the minds of the Semites and their neighbours. In addition to anthropomorphic representations of the deities of light, their symbols, especially the sun's disk, winged or unwinged, abounded both in Egypt and Babylonia. More telling all, were the gods of the sun and pyramids of Egypt, which were symbols of the sun in addition to their other uses. Temples to these deities of light were also present to bear their witness. Very impressive was the thought current so long that the sun was in the east at morning, evening, and every morning was resurrected. In the interval he moved with difficulty through the realm of darkness, and, as a passive body, had to be lighted through the under world by other creatures of light. 7 In Babylonia the phases of the moon seem to have attracted attention even more than the daily course of the sun. As king of the night, Sin (Nanmar), the bright one, may have had an even older sovereignty than Shamash, who was reckoned to be his son. This sequence has been explained in various ways, but it would seem that the rejoicing which attended the moon's appearance every month, and the lamentation which accompanied its disappearance, point to the belief that the sun was in the presence of the moon, or that it was no less than by day, the ancient Babylonians found safety and happiness, whereas in darkness there lurked danger and woe. In this connexion it is curious to note that Saturn was regarded as a second sun, to whom (apart from the moon) the illumination of the night was due. 8

In spite of these efforts to extend the sovereignty of light, there remained a sufficiently terrifying residuum of darkness. To overcome this, resort was had to other Believers, or the gods were invoked as a due fulfilment of the duties owing to the dead. Darkness both of earth and of the underground being the miseries of demons and the spirits of the deceased, contrariwise they could not have their dwelling in the light. Anu and as natural light was not always available, artificial means had to be adopted to overcome the disabilities attaching to darkness. The energy of fire was here of great significance. It is noteworthy that a certain part of the temple where holiness was enjoined was termed 'the house of light' (Assyr. bit nari). The light is associated with Girru or Nusku, the fire-god, which may be taken to mean that the purification was by fire. 9 The subject of artificial lights is closely related to that which has just been dealt with. The peoples of antiquity being obsessed by the terror of darkness, it was natural that they should have safeguarded themselves, so far as they could, by having lights in their dwellings and out-of-doors. From the number of lamps found during excavation, notably in Palestine, many of them belonging to the Semitic period, it has been inferred that these were in general use. 10 Out-of-doors torches served the purpose. The torches of the Anunnaki (gods of the lower order) are mentioned in the Babylonian Flood Story (col. ii. 44). A graphic description of the festival 'illumination' of New Year's Eve and days following, given by Bred_gate, affords an excellent idea of the use of artificial lights in the ritual of Egypt. One of the duties of the priests and ministrants in the temples was to attend to the fires and lamps (cf. 1 S 3, 1 K 7).

Thoughts of light and darkness were further kept in the minds of these ancient peoples by the terms assigned to the

day (Assy., ururu, Heb. or, 'light'); to the morning, or East (Assyr. or Sami, Heb. midrath, 'the rising of the sun'); to the evening or West (Assyr. or Sami, Heb. h13b-arkh, 'the setting of the sun'); and by certain Babylonian month names (Assr. Ajarun, the second or 'bright' month; Addaru, the third or 'dark' month; Addaru, the second or 'dark' month). One series of directions in Hebrew gives north (םלעפ) as the 'obscure' or 'dark' place, and south ( REPL) as the 'bright' or 'illuminated' place.

7. Light and darkness in relation to the state after death.—The contrast between light and darkness, the idea of the ancients is most strikingly revealed in their views about the state of the living and of the dead. 'Darkness without light' is one of the curses invoked by Hammurabi on any one who should venture to deface his stele. This is the same as darkness without light, and that to which the dead are consigned is 'the dark-dwelling' (Sumerian U.NUN), which in its extended meaning is applied to the under world, the abode of the shades (cf. 1's sqq. 12, 2). The departed soul itself is a 'creation of darkness' (Sumerian, g13l-la, Semitic, gidmuunu). The darkness attending death was to some extent relieved in the practice of the living by the use of artificial lights in the preliminaries to burial and by occasional illuminations in proximity to the tombs destined to be used. It has been ascertained that lamps are exceedingly common in graves, where their intention is evidently symbolic. Their purpose has been variously explained, and one and the same interpretation will have to be given for the era. But the exact explanation of the lamps would place them—at least in the earlier period—on a level with food and drink vessels deposited with the dead. Whatever was of service to the living might also serve the dead.

Among the Babylonians the general idea was that it was a misfortune for the dead again to be brought to the light of day. Unless decent burial was given, their spirits would return to earth, but only to plague the living. In the under world (or preferably the other world) was the home, and there their spirits found rest. The classic description of this abode of the dead is found in the myth of Ishtar's Descent to Hades, to the land of no-return (cf. Gilgamesch Epic, II. 400):

'To the house of darkness, brakha's dwelling-place,
To the house from which he who enters never returns,
To the road whose path turns not back,
To the house where he who enters is deprived of light,
Where dust is its sustenance, its food, chay,
Light they see not, in darkness do they play.

Over a realm of a Babylonian dead
the god Nergal presides, with his consort Ereshkil, the 'dark' goddess. In Egypt Osiris was lord of the under world, and there held his court. This also was a world lying in darkness, which was relieved one hour in twenty-four, during the passage of the sun-god and his train through each division of the Tant. The entrance to this realm of the dead lay, for both Babylonians and Egyptians, in the west, where the sun goes down. On the other hand, the east, as the point of sunrise, is the abode of life; but this has an interest only for the sun-god and the privileged few who shared his daily recurring glory. Although the point of departure to the under world and the point of return thereto are clear, there is doubt as to the location, relatively to earth, of the region of the dead. The Egyptians placed it beyond the circle of mountains girding the earth, perhaps on the same plane with earth, perhaps at a lower level. In the Babylonian world, it seems to have lain beneath earth, even lower than the

waters of the abyss (aplay), themselves associated with darkness. This was a region which the sun, living or dead, could not pierce.

8. A better fate for departed spirits, some if not all, was also contrived. In Egypt, e.g., in the recovery of Tammuz from the under world and in the sun-bark with its occupants who returned to the region of day. Light here plays the principal part, although the obstacle of darkness has to be surmounted before the goal of light can be reached. One of the charms in the Book of the Dead is for making the transformation into the god that gives light (in) the darkness, or light for darkness.

The 'Island of the blessed,' in the Gilgamesh Epic, is cut off from mortals by many barriers, including twelve double-hours of travelling through thick darkness.

The Babylonian heaven was the reserve of the gods, save in exceptional cases. In Egypt, at an early date, the king shared in the delights of heaven, and was exalted to life with the gods in the sky. Later this was qualified by the Osirian doctrine, whereby the realm of the blessed could be attained only by redemption from the under world. In his next life, if he had his other world is a realm of light for the most part. The crested ibis, whose name is equivalent to 'light,' is used as a symbol of the soul, including that of the sun-god. The khuf, or beatiated spirits, feed upon the date palm, and there is an explanation of the date palm as growing in the land of the Light-god. Later, the followers of the Sun-god, who travelled with him in the Boat of Millions of Years, eventually became beings consisting of nothing but light (cf. Is 605).

Hebrew thought about the state of the dead in the under world shows close kinship to the Babylonian, and is less developed than that of Egypt. The utmost allowed, even in the later books of the OT, falling within our period, is that the shades may emerge from Sh'ol back to the light of the upper world (Is 269).

LITERATURE.—This is sufficiently given in the footnotes.

LIGHTNING.—See PRODIGIES AND PORTENTS.

LIGUORI.—Saint Alfonso Maria di Liguori was born 27 Sept. 1696 at Marianella, near Naples. He was the eldest son of a noble family, and, according to his biographers, was from earliest youth remarkable for his piety, his charm of manner, and his precocious ability. A strain of Spanish blood seems to have lent him a greater seriousness of mind and tenacity of purpose than are common among natives of Southern Italy. He devoted himself to the law, and took the degree of Doctor of Laws at the age of sixteen, being then so small of stature that, to the amusement of the spectators, his doctor's gown had him almost completely from view. He afterwards practised in the courts of Naples for nearly eight years with extraordinary success; but it would seem that in 1723, in a case in which large pecuniary interests were at stake, Liguori, in the interpretation of an important document, was guilty of an oversight which, when brought home to him, covered him with confusion, and disgraced him with his career and with all worldly ambition. He had always led a most innocent life, and now, giving himself up to solitude and prayer, he had what he believed to be a

supernatural intimation to consecrate the rest of his days to God in the ecclesiastical state. He wished to become an Oratorian, but his father, who had already been much distressed on two little points by his unwillingness to fall in with an advantageous project of marriage that had been suggested, obstinately opposed his design. Yielding eventually to his father's entreaties, and acting on the advice of his confessor, himself an Oratorian, the young lawyer gave up his idea of leaving home, but began to study for an ecclesiastical career, and in December 1726 was ordained priest. In the first six years of his ministry Alfonso worked under the direction of an associate of the Oratorian order, a priest of Castelnuovo, who, he was led to the conviction that Alfonso was an instrument divinely sent him to carry out a project which he had long secretly cherished of founding a preaching Order to evangelize the godless classes of the Italian people. This scheme eventually took shape in the little town of Scala, near Amalfi, twenty miles from Naples. There the 'Congregation of the Most Holy Redeemer,' from which name the members are most commonly known, was formed in 1732. Bishop Falcona was at this first nominally superior, but he lived at a distance, while Alfonso resided with the community. Hence, on the bishop's death in 1745, Alfonso was formally elected to preside over his brethren. In 1749 the rule was authoritatively approved by Pope Benedict XIV., and the rule of an Order of nuns, which had been closely associated with the Redemptorist congregation from the beginning, was approved in the following year. But this measure of success was not achieved without numerous disappointments, and several of Liguori's first companions broke away from the Institute. A document signed in the early years by the head of Alfonso himself in the vain hope of obtaining the approbation of the king of Naples, Don Carlos (afterwards Charles III. of Spain), supplies a concise account of the special character of the Order's aims:

"The principal aim of the priests so associated is to imitate as closely as possible ... the life and virtues of Our Lord Jesus Christ. In this they set before themselves their own spiritual advantage and that of the people of this kingdom—especially the most forsaken of these, to whom they render spiritual aid.

In their houses they lead a perfect community life, under obedience to their superior, and perform the functions of the sacred ministry, such as instructions, confessions, the superintendence of schools, confraternities, and other devout gatherings.

They go about the dioceses in which they are established, giving missions, and, as a means of preserving the good results which they have been enabled by the grace of God to effect, they return from time to time to the districts which have been evangelized, to hear confessions and confirm the people in their good resolutions by another series of instructions and admonitions as well as by spiritual advice and so forth.

In their conventual life they endeavour, with the help of divine grace, to follow closely in the footsteps of the Most Holy Redeemer, Jesus Crucified, in order to instruct the people by example as well as by precept. As a means of attaining this end, there are twelve points of rule and instructions. The headings of these are: Faith, Hope, Love of God, Concord and Charity among themselves, Purity, Purity of Heart, Obedience, Meekness and Humiliation, Mortification, Recollection, Prayers, Abolition of Self, and Love of the Cross.

Each of the associate passes a full year every week (now one day every month in retreat), thus treating alone with God in the interests of his soul, in order to be able to employ himself afterwards with more ardour in securing the spiritual welfare of his neighbour.

In their houses they consecrate a large part of each day to silence, recollection, the choir, mortification, and meditation, which is practised three times a day. Their houses are to contain but a small number of subjects. As for their subsistence, they endeavour not to be a burden on anybody; they live on their family resources, which they hand over to their superiors, and on such offerings as may be made spontaneously for the love of Jesus Christ, by the piety of the faithful" (Berthe, 'Saint Alphonse de Liguori,' Eng. tr., i. 106).

Despite domestic anxieties and contradictions in the government of the new Institute, Liguori, down to about the year 1752, devoted himself indefatigably to the actual work of preaching, while leading at the same time a life of abstinence and austerity. At that period his health began somewhat to fail, and henceforward he devoted more time to literary activities, composing a number of books of piety and instruction, as well as the more severe mental suffering which he himself practised, to take a special vow to accept no ecclesiastical dignities, but in 1762 influence was used with the Holy See to dispense the saint from this vow, and, sorely against his will, he was compelled by the pope to accept the title of Abbot of the Redemptorist Community. As a reward, his name was added to the calendar under the name of the Holy Redemptorist. Thus, in 1766, a tiny see to the north of Naples, among a peasant population unpleasantly notorious for its barbarism and irreligion. Here he worked wonders for the reform of morals, but after an episcopate of more than thirteen years, the Pope, with the advice of his council, on the advice of Pope Pius VI. in 1775 to allow him to resign in order that he might end his days among a community of his own Order. Broken with years, with apostolic labours, and with the incredible austeritys which he practised, he retired to Nocera dei Pagani, but twelve years were still to pass before he was called to his reward. In the meantime he was destined to endure trials which probably cost him more severe mental suffering than any of the difficulties which he had previously encountered. For forty years and more, mainly owing to the influence of the anti-clerical but all-powerful minister Bernard Tarnucci, who was the virtual ruler of Naples, the formal recognition of the Redemptorists as a religious Order had been withheld by the Government. This had always been an obstacle in the way of its expansion, reducing it, as it did, to the position of an illegal association. At the time of the death of Pius VI. in 1775, the Order numbered only nine houses—four in Naples, one in Sicily, and four in the States of the Church. In 1779, under a different administration, everything seemed to point to the adoption of a more generous policy. Promises of favour were made on behalf of the Government, and in response the Redemptorist rule was formally submitted for State approval. From the point of view of the aged founder, the result was disastrous. The rule was approved, indeed, but in a point of fact modified form (known in the controversies which followed as the 'Regolamento'), which set at naught many of the most essential features of the constitutions as hitherto observed, and which practically reduced it from the status of a religious Order to that of a mere pious association. Liguori, who was now 55, decrepit, deaf, and almost blind, was induced to sign the Regolamento, and it was for the time adopted in the Neapolitan dominions, but the Redemptorists belonging to the houses founded within the States of the Church energetically protested against the acceptance of any such caricature of their rule. The Holy See pronounced in their favour, and the unfortunate zealism...
caused in the Order had not been healed when, on 1 Aug. 1787, the saint died at Nocera del Pagano. It is to this only has Alfonso di Liguori's popular enthusiasm which it evoked and the marvellous events that followed, brought about a happier state of feeling. The Government of Charles iii. in Oct. 1790 approved the original Redemptorist rule, and in Aug. 1791, under papal sanction, the different houses of the Order were once more reconciled with each other. From this time forward, and especially after the subsidence of the disturbances caused by the French Revolution and the Napoleonic wars, the development of the Order was rapid. In 1780 the first Redemptorist house north of the Alps was founded at Warsaw by Clement Hofbauer, afterwards beatified. From there the Congregation gradually spread to Austria and through Europe, while a beginning was made in the United States in 1832 and in England in 1845. The Redemptorists have since made foundations in Ireland (1831), Kintzoull, near Perth, in Scotland (1869), in Brazil, Dutch Guiana, the Congo, Australia, New Zealand, and many other distant countries. At present the Order numbers rather over 4000 members, half of whom are priests, the rest lay-brothers and students preparing for ordination. The strict ultramontane views distinctive of the followers of St. Alfonso di Liguori have been shared by those in contact with State officials, and, like the Jesuits, they have several times been banished from different European countries. Still no serious attempt has been made to connect them with any kind of political power. The Redemptorists have remained steadfastly faithful to their primary work of giving missions and retreats, especially among the poor and un instructed, and the severe rule of the Order has suffered no relaxation.

Liguori was beatified in 1816, canonized in 1839, and declared 'Doctor of the Universal Church' by Pius ix. in 1871. The terms of this last pronouncement, though somewhat vague, may be held to constitute a guarantee of orthodoxy for the saint's writings, at least when taken as a whole. Moreover, it may fairly be inferred from the language used that he is commended for holding a golden mean in his moral teaching between a Jansenistic rigorism on the one hand and dangerous extremism on the other. Liguori's writings may be found in Berthe, Eng. tr., ii. 766 ff. Two works especially in this long catalogue have been subjected to much adverse criticism. Against the Le Glorie di Maria, first published at Naples in 1750, and since translated into every European language, many objections have been raised on the ground of its alleged extravagant 'Mariolatry' (see, e.g., G. B. Pusey, Eirenicon, Oxford, 1866, passim). But it is to be remembered, as Newman points out, that 'St. Alfonso wrote for Neapolitans, whom he knew, and whom we do not know' (see the whole context in J. H. Newman, Letter to Pusey on the Eirenicon, 1867, p. 105 ff.). The character and traditions of these people are so different from ours, and he was writing to protest against what he considered to be a veiled attack on that simple and childlike devotion to the Blessed Virgin which has often been a very important factor in the religion of his countrymen. It is, however, the Theologia Moralia that more than anything else has been made the object of fierce invective. Liguori originally (i.e. in 1748) published his views on moral questions in the form of a commentary on a well-known text-book for students, the Medulla of the Jesuit Hermann Busenbaum. But the second edition in two volumes (Naples, 1753 and 1755) appeared as an original work, and the author continued to revise and enlarge it as the successive issues were exhausted. The eighth edition, which was printed in 1779, was the last to receive his personal attention. Seeing that not only the Church, but that earlier authoritative decrees in 1803 and 1831 pronounced that there was 'nothing worthy of censure' in his writings (on this cf. Newman, History of my Religious Opinions, note G, p. 338), and that all his opinions might safely be followed by confessors, it is fair to conclude that by the theology of Liguori the moral teaching of the Roman Church must stand or fall. But, while we admit this, it must be said that few of his views concerning society and the Church, but against his teaching have taken the trouble to understand it. It is easy to denomine the 'shocking laxity' of this or that isolated proposition set out, often inaccurately, and always apart from the context, as, e.g., in the notorious pamphlet of Robert Grassmann (Ausenzage aus der Moraltheologie, etc.), but the man who does this is most commonly a publicist who knows nothing of ethical systems and who has never considered the difficulties which follow from the acceptance of a contrary position. Nothing can produce a better impression than to lay down the rule that under no possible circumstances must the truth be departed from, but those who most positively commit themselves to this are also those who are most likely to fall short of them. The extremely difficult problems which arise in practical life, and who have never attempted to square their own conduct by any consistent principle.

They believe, as Newman well says, 'that on a great or great occasion a man cannot help telling a lie, and that he would not be a man did he not tell it, but still it is wrong and he ought not to do it, and he must trust that the sin will be forgiven him, though he goes about to commit it. It is a frailty, and had better be anticipated, and not thought of again after it is once over.'

Now Liguori, like all his fellow-bishops, believed that for those whose duty it was to hear confessions and instruct their flock it was necessary that these and other moral questions should be thought about. Moreover, it must be said, in answer to such criticisms as those of R. Grassmann and those contained in art. Casuistry (vol. iii. p. 249), that priests administer a code of law in the tribunal penance and, like lawyers, doctors, and magistrates, they have to acquaint themselves with technicalities which, in the case of certain offences, involve unsavoury details quite unfit for public discussion.

One of the special grounds of reproach against Liguori's moral system is his adoption or defence of probabilism (q.v.). This charge is only partially justified and would be repudiated by all his own disciples. The principle which he enunciated, at least in his later years, was that of 'presumptuous probabilism' (q.v.). The difference between this and probabilism, rightly explained, is not very momentous, and many modern writers on the subject, especially the theologians of the Jesuit school, have maintained that St. Alfonso's views diverged but slightly from those of approved probabilists. According to the probabilist system, starting with the admitted axiom that a doubtful law does not bind (Lex dubia non obligat), a man is not held in conscience to obey as long as there is sound probability against the law—as long as, e.g., in a matter of extrinsic testimony, where doctors disagree, one unexceptionable authority teaches that a particular precept has no binding force. The adherents of probabilism, on the other hand, held that, unless the authorities who maintained the binding force of the law or precept were notably less weighty than those who exonerated from it, such a precept could not be set aside without sin. Between these rival views comes that of Liguori, who held that, when the reasons or authorities were
LIGURIAN RELIGION—LINGAYATS

69

equally balanced for and against the law, then a man without peril to his soul was free to use his liberty.

A doubtful law does not bind. But when two opposite opinions are equally or nearly equally probable, you have a strong reason to regard the absence of the law, therefore the law being only doubtfully pronounced, has no binding force. Therefore it is true that you can follow an equally probable opinion without risk of evil in any such ambiguous cases as in the figures of the ‘Clouds’ and ‘Daws’ of the Tabula Aquinensis (see Italy [Ancient]); or the Angitique of the Marsians—not to speak of the Parce of Greco-Roman fable or the Sareus at Athens.

A critical and definitive edition of the Theologia Moralis, equipped with adequate notes, has only recently been brought to completion: Theologia Moralis S. Alphonsi Maria de Ligorio, ed. Lodron, Venice, 4 vols. The editor in his preface gives a satisfactory explanation of the inaccuracy of so many of the saint’s quotations as printed in the earlier editions.

LITERATURE.—The fullest life of St. Alfonso di Liguori is that by A. Berthe, 2 vols., Paris, 1860, Eng. tr., H. Gaste, 2 vols., Dublin, 1865 (the translation has been subjected to careful revision and is in many respects superior to the original). Other noteworthy biographies are those of A. Tamanini, ed. Istituto del Ilenrerabile Alfonso Maria Liguori, 3 vols., Naples, 1790-1802 (a valuable source written by a devoted disciple of the saint). See also C. Villecourt, L’I. et Institut de S. Alphonse Marie de Liguori, 4 vols., Tournai, 1833; K. D’Hunant, Heil. Bischofs und Kirchenlehrs Alphonse Marie de Liguori, Regensburg, 1857; A. Caprecciatoto, La Vida di S. Alfonso Maria de Liguori, Rome, 1870. A great amount of the Order with the bibliography founded by M. Hennicke, Die Orden und Kongregationen der kath. Kirche, 2 vols., Paderborn, 1908, ill. 315-323.

H. THURSTON.

LIGURIAN RELIGION.—Solitie is certainly known of the early history and geographical distribution of the Ligurians that any attempt to give a general account of the religious life of these ancient people would appear but a fable of the deities that were worshipped in Roman times in the Ligurian area strictly so called may be mentioned. The most noteworthy are those closely attached to a particular spot, such as Mars Cenemenis (CIL v. 7871), sometimes worshipped without the first name, and clearly connected with the town of Cenemenum; and Bormanus, who was probably, like his namesake in the north of Gallia Transpadana, from whom the modern town of Boromea takes its name, a god of hot springs, and who gave the name to the Lacus Bormani on the coast to the east of (Albuna) Intimelium, the modern Ventimiglia. Not less local was the worship of Mars Lencinaulus at Pulsano, a possibly an adjective derivation, of the dedication to whom was made on some festival of waggoners or nulletes (plostrallites). Local, too, was the cult of the Matrone Vedianitie, where the plural is interesting, also honoured at Cenemenum and known as Desuettioni. The worship of Matrone with some local epithet or epithets was fairly common in N. Italy, sometimes combined with Genii, as in an inscription from Tremonza on Lake Como (ib. 227), generally with a local epithet, as Desuettioni (ib. 2571, found at Milan) or Veelassae Concanaeae (ib. 5584, found at Corbeta, north of Milan). They are often joined with Jupiter Optimus Maximus, and sometimes themselves called Iunones—a plural form which never appears in pure Latin inscriptions. It would be exceedingly unsafe, without other evidence, to see in this a trace of any polygenous strain in the Ligurian cognition of Olympus; a nearer parallel is the (presumably) generalizing cultual in such anarchy (cf. ii. 145).

On the important question of the ethnic character in the population of the Ligures, reference must be made to EB3, art. 'Ligurians,' and the authorities there cited. If, and in so far as, the view of W. Ridgeway ('Who were the Romans? Brit. Acad. Tran. iii. [1907] 42), with the comments of the present writer, id.) may be accepted as sound, the early history of Ligurian religious worship was the same thing as that of the pre-Tuscan population of Western Italy, in particular of the Aurnici and other early dwellers in the Ligurian lands, which was Latium (see Italy [Ancient], especially the paragraph on the archaic cult of Aricia).

R. S. CONWAY.

LINGAYATS.—The Ligayats are a religious community in India numbering three to four millions at the census of 1911, of whom more than half are found in the southern districts of the Bombay Presidency. In the Bombay districts of Belgaum and Bijapur one-third of the population is Lingayat, and in the Deccan districts of Dharwar they constitute nearly 50 per cent of the total. Beyond the limits of the Bombay Presidency, Lingayats are numerous in the Mysore and Hyderabad States. They also form an important element in the population of the north-west corner of the Madras Presidency.

1. Description.—The Lingayats, who are also known as Lingawants, Lingangie, Sivalkhatkas, and Viraśāivas, derive their name from the word līgga, the phallic emblem, with the suffix yata, and are the people who bear the līgga habitually. Their name literally describes them; for the true Lingayat wears on his body a small silver box containing either a piece of the sacred thread which is the symbol of his faith, and the loss of which is equivalent to spiritual death. The emblem is worn by both sexes. The men carry the box on a red silk scarf or a thread tied round the neck, while the women wear it inside their costume, on a neck-string. When working, the male wearer sometimes shifts it to his left arm.

The Lingayats are Dravidian, that is to say, they belong to a stock that was established in India before the arrival of the so-called Aryans. They are dark in complexion, in common with the races of Southern India, and speak Kanarese, a Dravidian language. They have been not inaptly described as a peaceable race of Hindū puritans, though it may be questioned whether their rejection of many of the chief dogmas of Brāhmanic Hindūism leaves them the right to be styled Hindus at all. Of the Brāhmanic triad—Brahma, Viṣṇu, and Siva— they acknowledge only the god Siva, whose name, the līgga, they reverence. They are called the Vedas, but disregard the later commentaries on which the Brāhmanas rely. Originally they seem to have been the product of one of the numerous reformations in India that have been

1The census of 1911 gives the following figures for Lingayats: Bombay Presidency, 729,431; Mysore, 1,239,483; Madras Presidency, 124,592; total India, 2,976,233.
aimed against the supremacy and doctrines of the Brahman, whose selfish exploitation of the lower castes has frequently led to the rise of new sects essentially anti-Brahmanic in origin. It seems clear that, in its inception, Lingayatism not only rested largely on a denial of the Brahman claim to supremacy over all other castes, but attempted to abolish all caste distinctions. All wearers of the linga were proclaimed equal in the eyes of God. The traditional Lingayat teacher, Basava, proclaimed all men holy in proportion as they are temples of the great Spirit, and thus, in his view, all men are born equal. The denial of the supremacy of the Brahman, coupled with the assertion of the essential equality of all men, constituted a vital departure from the doctrines of orthodox Hinduism. Other important innovations were: the prohibition of child-marriage; the removal of all restriction on widows remarrying; the burial, instead of burning, of the dead; and the abolition of the chief Hindu rites for the removal of ceremonial impurity. The founders of the religion could scarcely have forged more potent weapons for severing the bonds between their proselytes and the followers of the doctrines preached by contemporary Brahmanic Hinduism.

Lingayatism must not assume that this brief description of the fundamental doctrines of a religious movement which dates from the 12th cent. conveys an accurate picture of the prevalent Lingayatism of the present day. In connexion with the original Linga movement and its dissection, there has been a very noticeable departure from Basava's teaching. The origin of caste in India is as yet a subject requiring much elucidation. In its development no mean influence must be allotted to function, religion, and political boundaries. Nor can differences of race have failed materially to assist the formation of Indian society on its present basis. One of the most interesting phenomena connected with the evolution of modern caste is the working of a religious reformation in which caste finds no place on the prevailing existing social structure of caste units. If caste is largely a manifestation of deep-rooted prejudices tending to raise and preserve barriers between classes, it is evident that the evolution of today is in the same way. In the section of the human race, it would seem not unnatural to expect that it would tend to reassert itself within the fold of an essentially casteless religion soon as the enthusiasm of the founders had spent itself; and it is highly likely that many converts having joined the movement at an early stage in its history would generate a claim to social precedence over the later converts, and thus in time reconstitute the old caste barrier that the reformers spent themselves in endeavouring to destroy. One of the most interesting pages in the history of caste evolution, therefore, must be that which deals with the evolution of caste inside the fold of a religious community originally formed on a non-caste basis. A resemblance between the evolution will be found in the history of Lingayatism. The Lingays of the present day are divided into three well-defined groups, including numerous sects, of which a description will be found in the section dealing with their social organization (see p. 72). With the rise of caste distinctions, numerous other changes occurred in the nature of the Lingayat religion. The aghyas or junagams, the priests of the community, devised in time a ritual and ceremony in which the influence of the rival Brahman aristocracy can freely be traced. The more important of these ceremonies are described in § 4 below. But it is essential to a thorough understanding of the nature of Lingayatism that the most important ceremony of all, known as the astavarga, or the eightfold

**The astavarga consists of eight rites known as**

2. Linga.
3. Vihinti.
4. Rudraksa.
5. Mantra.
7. Tirth.
8. Prasad.

On the birth of a Lingayat the parents send for the guru, or spiritual adviser, of the family, who is the representative of one of the five aghyas, or holy men, from whom the father claims descent. The guru binds the linga on the child, besmears it with vibhiti (ashes), places a garland of rudraksh (seeds of the bastard cedar) round its neck, and teaches it the mystic mantra, or prayer, known as Narasimha Siva-ya;—i.e., 'Obedience to the god Siva.' The child being incapable of acquiring a knowledge of the sacred text at this early stage of its existence, the prayer is merely recited in its ear by the guru. The child has then to be presented to the god Siva in the person of a jinggam, or Lingayat priest, who is summoned for this purpose. On his arrival the parents wash his feet, and the water in which the feet are washed is described as the tirbho or charniyathiring. The water is next poured over the linga attached to the infant. The jinggam is fed, and a portion of the food from the dish is placed in the child's mouth. This final ceremony is known as presad. Occasionally the doctrine of twopersona, or jinggam and linga are combined in one person. When the child attains the age of eight or ten, the ceremony is repeated with slight modifications.

It will be seen that this eightfold ceremony forms a very concise test of a Lingayat's religious status, and may be not unfitly compared to the rites of baptism and confirmation which are outward and visible signs of admission to the Catholic Church. But not all Christians are confirmed, and many of them, in the same way, the members of other religious communities undergo the full ceremony of initiation. It would probably be safer to apply the term 'Lingayat' to all wearers of the linga, whether they are entitled to the full astavarga on birth or conversion, or not of that of or components. In so doing, the lower orders, from a social standpoint, of the Lingayat community will not be excluded, as they would otherwise be, from the fold.

Lingayats are not permitted to touch meat or to drink any kind of liquor. The greater number of them are either occupied in agriculture or are traders. They are generally reputed to be peaceful and law-abiding; but at times they are capable of dividing into factions of savagery and hostility that the dispute culminates in riots, and occasionally in murder. Among the educated members of the community there is a strong spirit of rivalry with the Brahman, whose intellect and capacity have secured them a preponderating share of Government appointments. Except for these defects, the community may be described as steady and industrious, devoted to honest toil, whether in professional employment or occupied in trading or the cultivation of the land. The Lingayat religion, the movement in favour of this special form of Siva-worship was commonly supposed to
have been set on foot by the great Lingayat saint, Basava, in the latter half of the 12th century. The acts and doctrines of Basava and his nephew Channabasava are set forth in two purânas, or sacred books, named, after them, the Basavepurâṇa (ed. Poona, 1865) and the Channabasavepurâṇa (ed. Mangalore, 1851). But these works were not written contemporaneously. The Basavepurâṇa describes Basava as the son of Brahman parents, Madiraja and Madalambika, residents of Bagevadi, usually held to be the town of that name in the Bijapur district of the Bombay Presidency. Basava is the Kannarese equivalent of 'bull,' an animal sacred to Siva, and thus a connexion is traced between Basava and the god Siva. At the age of eight, Basava refused to be invested with the sacred thread of the twice-born caste, to which he belonged by birth, declaring himself a worshipper of Siva, and stating that he had come to destroy the distinctions of caste. By his knowledge of the Saiva scriptures he attracted the attention of his uncle Baladeva, then prime minister of the kingdom of Kalyana in the middle of the 12th cent., installed Basava as his prime minister, and gave him a wife, Nila lochanâ. The purânas recount the birth of Channabasava from Basava's unmarried sister Nagalambika, by the working of the spirit of the god Siva. The myth in connexion with this conception is strangely at variance with the other accounts, inasmuch as, while engaged in prayer, saw an ant emerge from the ground with a small seed in its mouth. He took the seed to his home, where his sister swallowed it and became pregnant. The issue of this unusual conception was Channabasava. Uncle and nephew both preached the new doctrines, and in so doing encountered the hostility of the Jains, whom they relentlessly persecuted. A revolution, the outcome of these religious factions, led to the final downfall of King Baladeva and to the flight of Basava and his nephew. Basava is said to have been finally absorbed into the linga at Kudal Sangameswar, and Channabasava to have lost his life at Ulvi in North Kanara, a district in the Bombay Presidency. An annual pilgrimage of Lingayats to the shrine of the latter at Ulvi takes place to this day.

Two important inscriptions bearing on these traditions of the origin of the Lingayat sect are preserved. The first is an inscribed tablet recovered at the village of Managoli, a few miles from Bagevadi, the traditional birthplace of Basava. This record (as also many others) shows that king Bijjala gained the kingdom of Kalyana in a.D. 1136. It also states that a certain Basava was the builder of the temple in which the inscription was first put, and that Madiraja was mahâprabhu, or head of the village, when the grants in aid of the temple, which included a small endowment, were granted by the grandson of Revadasa and son of Chandrajira, and as a man of great sanctity and virtue. The second inscription was found at Ablur in the Dhawar district of the Bombay Presidency, and belongs to about a.D. 1290. It relates the fortunes of a certain Ekantada-Ramayya, an ardent worshipper of the god Siva. Ramayya came into conflict with the Jains, and defeated them, both in dispute and, the inscription says, by performing a miracle—we may venture to say, by arrangement, matters so that he seemed to perform it—which consisted in cutting off his own head and having it restored to him, safe and sound, by the grace of Siva, seven days later. All this came to the notice of King Bijjala, who summoned Ramayya into his presence. And Ramayya, making his cause good before the king, won his support, and he was presented with gifts of lands for the temple founded by him at Ablur in the Bijapur district. The incidents related of Ramayya are placed shortly before a.D. 1162, so that he would have been a contemporary of Basava. No mention, however, of the latter or of his nephew is found in this record.

If we accept the little history of Basava and his contemporaries, it seems more entitled to credit than the tradition overlaid with myth recorded at a later date, it seems clear that both Basava and Ekanatada-Ramayya were reformers who had much to do with the rise of the Lingayat doctrine, and that the evidence once placed in the 12th century. Lingayat scholars of the present day, indeed, claim a far earlier date for the origin of their faith. But their contention that its origin is contemporaneous with that of the Brahmanic is as well as religious. The best opinion seems to be that of Fleet, who considers that there is no doubt that the present Lingayat sect is more or less a development of the gild (mentioned in the inscriptions of 1000) set up by 500 Swamis of Aihole, joining seems certainly to have originated with Ekanatada-Ramayya at Ablur. And probably the prevalent tradition of the present day, that Basava was the originator of the sect and the founder of the Lingayat faith, must only be attributed to his having quickly become acquainted with the new development of Saivism started by Ramayya, and to his having taken a leading part in encouraging and propagating it in the southern half of the Peninsula, which rendered him more conspicuous than the real founder. Basava happened to be a member of the body of village elders at Managoli, and so to occupy a recognized position in local matters. The Aihole Lingayats, however, in the document of that account was unable to tell us anything particular about Ramayya, beyond duly recording the miracle performed by him, and attributed the movement entirely to Basava, assigning to him an assistant, his nephew Channabasava, who he perhaps only a mythical person. But it must be also admitted that the early history of the movement may be capable of further elucidation, and that the present-day claims of the leading Lingayats for a very early origin for their religion, though lacking the support of historical evidence, have this much to rely on, that it is essentially probable that the Dravidian races of Southern India, whose primitive deities were absorbed by the Aryan invaders described by the personality of their god Siva, always looked towards the special worship of Siva to the exclusion of the other members of the Brahmanic triad, and combined with this preference a dislike of Brahmanic caste ascendency which is the real substratum of the movement ending in the recognition of Lingayatism.

In dismissing the question of the origin of the Lingayat religion, it seems desirable to give an instance of the claims advanced by learned members of the community for a greater antiquity for their religion than historical evidence would afford.
at. Mr. Karlekasavasastri, Professor of Sanskrit and Kannarese in the State College of Mysore, contends that the Saiva sect of Hindus has always been divided into two groups, the Lingayats and the other who do not wear it. The former he designates Virasaiva, and declares that the Virasais consist of Brahman, Kshatriya, Vaisy, and Sudra, the fourfold caste division of Manu. Quoting from the 27th chapter of the Paramesvar agama, he declares that the Virasais Brahmanas are also known as Suddha Vira, Vira kings as Marga Vira, Vira Vaisy as Mira Vira, and the Sudra as the Ante Vira. In his opinion, the duties and penances imposed on the first of these classes are (1) the astavarna (see p. 70), (2) penances and bodily emaciation, (3) the worship of Siva without sacrifice, (4) the recital of the Vedas. He further asserts that the Hindu dravas, or conditions of life of brahmachari, ghyastha, and sannyasi, i.e., student, householder, and ascetic, are binding on Virasais, and quotes, from various Sanskrit works, texts in support of this view. He publishes a mythical account of the origin of Lingayats at the time of the creation of the world. The importance of this summary of his views lies in the fact that it is completely typical of the claims that many members of the Lingayat community have recently commenced to advance, and in a sense, within the fold of orthodox Hinduism, with the mistaken notion of thereby improving their social standing. They endeavour to divide themselves into a fold of Brahmanas, Kshatriya, Vaisy, and Sudra, regardless of the fact that their is in origin a non-caste religion, and that Manu’s scheme, which can only with great inaccuracy be applied to the more orthodox Hinduism, are wholly unsuited to the Lingayats. A sign of this movement towards Brahmanic Hinduism among Lingayats is to be found in the organized attempt made by certain Lingayats at recent censuses to enter themselves as Virasaiva Brahmanas; and it seems probable that these claims to a great antiquity for their religion and for a caste scheme based on Manu’s model are chiefly significant as signs of the social ambitions of the educated members, who are jealous of the prestige of the Brahmans.

3. Social organization.—The results of investigations undertaken in the Bombay Presidency in 1900 by committees of Lingayat gentlemen entrusted with the duty of preparing a classification of the numerous social subdivisions of the Lingayat community tend to show that the relation of these various groups to each other is one of some complexity. Broadly speaking, Lingayats appear to consist of three groups of subdivisions.

(1) The first, which for convenience may be named ‘Panchamalsis with full astavarna rites’ (see p. 70 above), contains the priests of the community, known as nagya or jayyana, and the leading trader castes, or bavjays. It is probable that this group is the nearest approximation to the original converts, who, it will be remembered, could interdine and intermarry without restriction. The seven subdivisions of this group may still dine together, but for purposes of marriage the subdivisions rank one above the other, and it is permissible for a bridegroom of one subdivision to take a bride only from the divisions below his. The reverse process, namely, of a bride marrying a youth of a lower division, is strictly forbidden. Members of the lower subdivisions may only intermarry by performing certain rites and ceremonies. The marrying of a boy to a girl beneath him in social rank and of a girl to a boy above her is part of a system of isogamy and hypergamy, and is not at all uncommon in many Indian castes. It is a probable speculation that the early converts in course of time came to rank themselves as superior to the more recent members of the community, and the growth of this feeling would lead, in harmony with the ideas that prevail in all societies, to the early converts declining to wed their daughters to the newcomers, though they would accept brides from the latter and if only slightly so. The Panchamalsis, as they may be called for lack of a better name, are all entitled to the astavarna rites, and rank socially above the remaining groups. In BG xxvii. 218 they are described as ‘Pure Lingayats’.

(2) The next group is that of the ‘non-Panchamalsis with astavarna rites.’ This group contains over 70 subdivisions, which are functional groups, such as weavers, oil-pressers, bricklayers, dyers, cultivators, shepherds, and the like. It seems probable that they represent converts of a much later date than those whom we have styled Panchamalsis, and were never permitted to interdine or intermarry with the latter. In this group each subdivision is self-contained in regard to its ancestors, and to that is to say, a jadar, or weaver, may marry only a jadar girl, a badiy, or carpenter, may marry only a badiy girl, and so on, remembering in this respect the ordinary Hindu castes, which are usually ended by a fourfold separations. Many have recently begun to pass to another. The names of the subdivisions are generally indicative of the calling of the members, and it is of special interest to note here how the barriers erected by specialization of function have produced among the Lingayats the ordinary communal theories of equality which the Lingayats of early days adopted.

It is interesting to observe that considerable diversity of practice exists in connexion with the relations of the subdivisions to the parent Hindu castes from which they separated to become Lingayats. In most cases it is found that, when a portion of an original Hindu caste has been converted to Lingayatism, both intermarriage and interdining with the unconverted members are finally abandoned, and the caste is broken into two divisions, of which one is to be recognized by the members wearing the linga, and the other by their wearing the sacred thread of the twice-born. But in some instances—e.g., the Jeera of the Belgaum district—Lingayat members continue to take brides from the non-Lingayat section, though they will not marry their daughters to them; it is usual to invest the bride with the linga at the marriage ceremony, thus formally receiving her into the Lingayat community. In cases the Lingayat and non-Lingayat sections live side by side and dine together at caste functions, intermarriage being forbidden. In this form, however, the former must perform their religious ceremonies, and the latter employ a Brahman. The more typical case seems to be the subdivision given in the Indian Census Report (Bombay Census Report, 1901, ch. viii. p. 182). In the last century a Lingayat present of Ujjaini conversions of the Lingayat community; the distinction is the lesser one, and the members also have the astavarna rites. It is described in BG under the name of ‘Affiliated Lingayats.’

(3) The third group of subdivisions is the ‘non-Panchamalsis without astavarna rites.’ It contains washermen, tailors, shoemakers, blacksmiths, etc., which were as unclean castes among Brahmamic Hindus. It is the practice among Lingayats of the present day to deny that the members of this third group are entitled to be classed as Lingayats at all, and to say that the possession of the full astavarna rites is the mark of a Lingayat, these lower divisions, who at most can claim three or four of the eight sacraments, are only the followers or servants of Lingayats. The contention is the highest possible by performing certain rites and ceremonies. The marrying of a boy to a girl beneath him in social rank and of a girl to a boy above her is part of a system of isogamy and hypergamy, and is not at
LINGAYATS

The specially Lingayat ceremonies described by Carr are:

1. Birth.—It is customary for the female relatives attending a confinement to bathe both mother and child. On the second or third day boiled turmeric and water is applied to the mother, and a ceremony known as purúv, or the worship of the afterbirth, is performed. The propitiation of the afterbirth by the offering of food, nim leaves, turmeric, and a coco-nut, is considered necessary for safe nursing. The titi, or the first bath received by the child, is considered of great importance, and the child must be washed in the river. When the afternoon of the third day has passed, the child is washed and dressed in new clothes. The ceremony is regarded as a piece of good luck. The offering of food, leaves, etc., is usually accompanied by singing and playing of musical instruments.

2. Betrothal.—For a betrothal the bridegroom’s family come to the bride’s house on an auspicious day in company with a javanam. They bring a woman’s dress, a jacket, two coco-nuts, five pieces of turmeric, five limes, and betel leaf and areca-nuts. They also bring flowers for the aavanka (a cap of flowers made of pungent things). Rice and sugar are distributed to guests. The bride puts on the new clothes with the ornaments and flowers, and sits on a folded blanket on which fantastic devices have been made with rice. Women also wear coco-nuts and other things brought by the bridegroom’s party. Music is played, and the women sing. Five of them pick up the rice on the blanket and gently drop it on to the bride’s knees, shoulders, and head. The bridegroom’s mother then offers the bride and brother’s hands; sugar and betel are then distributed, and one of the bride’s family proclaims the fact that the bride has been given to the bridegroom. One of the bridegroom’s family then states that the bride is accepted and the bridegroom and his companions feed the visitors on sweet things; dishes made of hot or pungent things are strictly prohibited.

3. Marriage.—The marriage ceremony occupies from one to four days, according to circumstances. In the case of a four-day marriage, the first day is spent in worshipping ancestors. On the second day rice and oil are sent to the local math, or religious house, and oil alone to the relatives. New pots are brought in with much shouting, and are placed in the god’s room. A marriage booth is erected, and the bridegroom sits under it side by side with a married female relative, and goes through a performance which is called surige. An enclosure is made round them with the ceremony in vogue at birth, betrothal, marriage, and death have been accurately described by R. C. Carr in his monograph on the Lingayat community (Madras Government Press, 1906), and are given below.

The Lingayat ceremony known as the astavarma, or eightfold sacrament, has been already referred to in some detail (p. 70 above). The essentially Lingayat beliefs and ceremonies, such as the wearing of the linga, the worship of the jangam, and the administration of astavarma rites, are, however, as usual in India, constantly mingled with many commonplace Hindu beliefs and customs. It is a common practice for Hindus to worship at the shrine of Musalman pirs, or saints, and in this same way Lingayats will combine the worship of the special objects prescribed by Basava with the worship of purely Hindu deities such as Hanuman, Ganapati, Yellamma, Marutti, and many others. The investigations ligherto conducted in the Lingayat and Hindu ritual are liable to be combined; but it can be confidently predicted that the lower orders of the community, who still keep in touch with the unconverted section of the caste to which, professionally speaking, they belong, will be found to adhere in many instances to the beliefs and customs of their unconverted fellow castemen, despite the teaching and influence of the jangam.
made of kate grass on the big toe of his right foot. The bride sits on the left-hand side of the bridegroom, and the garm ties their right and left hands respectively with katu grass. The joined hands of the bride and bridegroom are washed, and betel (Areca arecurans) leaves and flowers are offered. The officiating priest then converses the neck ornament and the thread, ties the latter on the wrists of the joined hands, and gives the former to the bridegroom, who ties it round the bride's neck, repelling some words after the priest.

The tying of the bihi is the binding portion of the ceremony. Before the bridegroom is given to the bridegroom it is put at the round the arm is to be touched by all and blessed. As soon as the bridegroom ties it on the bride, all those present throw over the couple a shower of rice. The bridegroom places some conmin seed and jighri, or marigold flower, on the hand to which the bride does the same to the bridegroom. Small quantities of these articles are tied in a corner of the cloth each, and the clothes and are knotted together. The bride stands up, and the bridegroom, feet, and he throws rice into her hands. The newly married couple offer fruits to live jingrams, and present them with five piece. The relatives worship the bride and bridegroom, wash their feet, and offer presents of the day terminal day. On the third day, friends, and relatives are fed. On the fourth day, bride and bridegroom ride in procession through the village on the same bullock, the bride in front. On returning to the house they throw sweetened powder at each other, and the guests join in the fun. Then follows the wedding breakfast, to which only the near relatives are admitted. The newly married couple worship jingrams and his wife, and take off the consecration thread from their wrists and tie it at the groom. The live matrons who have assisted are given presents and dismissed, and the marriage is now complete.

In a one-day marriage the above ceremonies are crowded into the short time allotted.

The remarriage of widows was one of the points on which Basava insisted, and was probably one of the biggest bones of contention with the Brahmans. Widow remarriage is allowed at the present day, but the authorities at Ujjini see fit to disregard it. The remarriage of jingrams is prohibited, and that among the other classes of Lingayats it is the growth of custom.

4. Death.—The dead are buried in a sitting posture facing to the north; but an exception is made of the old married people, who are buried in a reclining position.

Before the sick man dies, the ceremony called vibhuti-celai is performed. He is given a bath, and is made to drink holy water in which the jingram's feet have been washed. He is made to give the jingram a handkerchief with vibhuti (ashes), radhokaj (seeds of the bastard cedar), dajgaya (coin), and tamarala (betal-leaf). This is followed by a meal, of which all the jingram's friends and the relatives and friends of the patient partake. It appears to be immaterial whether the patient is still alive or not. It is stated that, if the invalid survives this ceremony, he must take to the jungles and disappear; but in practice this is not observed. The death party resembles in some respects an Irish 'wake,' though the latter does not commence until the deceased is well on his way to the next world.

After death the corpse is placed in a sitting posture, who has received the offering before death, places his left hand on the right thigh of the body. The people present worship the corpse, and the usual distribution of coins and betel to jingrams follows. The body is then carried in a ruma, or bamboo chair, to the harr-

The grave should be a cube of 9 feet dimension, with a niche on one side in which the corpse is to sit. The linga is placed on the ground, and ined in the left hand. betel leaves are placed at the side, the body is wrapped in an orange-coloured cloth, and the grave is filled in. A jingram stands on the grave, and, after receiving the usual dower, şouts out the name of the deceased, and says that he has gone to Kailasa, or heaven.

Memorial ceremonies are contrary to Lingayat tenets; but in this, as in other matters, the influence of the Brahmans appears, and among some communities an annual ceremony is performed. The performance of śrīdāru, or the funeral ceremonies common to other Hindus, is unknown. Dubois tells us that a Lingayat is no sooner buried than he is forgotten.

'The point in the creed of the Sivaites which appears to me to be remarkable is their entire rejection of that funereal principle of the Hindu religion, marrigung, or the post-mortem accusation of the dead, p. 116.'

From this it would follow that they do not believe in ghosts. But there is a generally accepted idea that evil spirits and ghosts take the form of females. This may be a rude way of expressing the fact that the gentle sex is 'uncertain, coy, and hard to please.' Although the ceremony of śrīdāru is unknown, once in a year or every new moon, the third day of the month, Bladurpada or in Asvina they throw other clothes and food to (a) ancestors in general, (b) childless ancestors, and (c) men who have died a violent death.

Among Lingayats widow remarriage is common, and divorce is permissible. The ordinary law of Hindus is followed in regard to inheritance. Lingayats regard their jingrams, or priests, as incarnations of Siva, and will bathe their lingas in the water in which the jingram has washed his feet, and thus rendered holy. They have numerous superstitions regarding good and bad omens. Thus, it is lucky to meet a deer or a dog going from right to left, whereas the same animals passing from left to right will bring ill luck (monograph on Lingayats by E. C. Carr). They do not observe the prohibition periods of the Hindus, and their indifference to the ordinary Hindu purification ceremonies is notorious (Dubois, pt. 1. ch. ix.).

Members of other religions communities who wish to become Lingayats are called on to undergo a three days' ceremony of purification. On the first day they allow their face and head to be shaved, and bathe in the products of the cow, which alone they may feed on. The second day they bathe in water in which the feet of a jingram have been washed, and which is therefore holy water. They eat sugar and drink milk. On the third day they take a bath described as pākôshna, that is, they apply to the head and body a paste made up of phutnats, cow's milk, clarified butter, curd, and honey, and wash it off with water; they again drink the tirth, or water in which the feet of a jingram have been washed, and which are then invested with the linga, after which they are allowed to dine with Lingayats, and are considered members of the community. Women undergo the same ceremony, except the head-shaving.

5. General remarks.—It will be gathered from the foregoing sketch of the origin and present-day social organization and customs of the Lingayats that the community is virtually an original casteless section in process of reversion to a congress of castes holding a common religion. It has been stated, and the 12th cent., a movement was set on foot and spread abroad by two Brāhmans, Ekanada-Ramappa and Basava, devotees of Siva, to abolish the ceremonies and restrictions that fettered the intercourse between the different ranks of orthodox Hindu society of the period, and to
gLING CHOS

establish a community on a basis of the equality of its members, irrespective of sex, by means of the purifying worship of the one god Siva. It seems clear that the movement found favour in the eyes of the Jain traders of the period, who would have ranked, as Vaisyas, below both Brahman priest and Ksatrya warrior under the Hindu scheme of social precedence. The community encountered the hostility of the Jains, who remained unconverted, but clung tenaciously to its simple faith in the worship of Siva, and in his emblem, the linga. We must assume the probability that the Brahmins, who in Ladak (W.) existence was possess, historical evidence, tended by degrees to assert for themselves social precedence as upas or phujogas, i.e. the priests of the community, for which position their knowledge and descent would give them special fitness. In time, indeed, they came to be regarded as the very incarnations of the god Siva, and thus they were holy, imparting holiness in a special degree to the water in which they had bathed their feet, known as tirtha, so that it has a prominent part to this day in the Lingayat ceremonies. Once the original notion of universal equality of rank had yielded to the priests a precedence incompatible with such equality, the way was prepared for the introduction of further souls, and the members of the community commenced to claim over the latter converts a precedence modelled on that which the priests had established against them. In such a manner the essential doctrine of equality became compromised, and the Lingayats continued to certain rites and ceremonies as the test of Lingayat orthodoxy. Thus, when the more recent cases of caste conversion occurred, a section of a Hindu caste became Lingayat, not as the founders of the sect would be believed by being admitted to a footing of equality on the common ground of the worship of Siva and of his emblem the linga, but by investiture through certain rites and ceremonies with the linga, retaining their distinctive social status as a functional caste, with which other Lingayats would neither marry nor dine. It must be admitted that in the case of most of the Lingayat subdivisions the linga will take food in the house of the members, but here all traces of the original equality have disappeared; and the Lingayats of to-day present the curious and interesting spectacle of a religious sect broken in the course of centuries into social fragments, of which the other sections remain essentially sectarian, and the Lingayats possess the attributes of ordinary Hindu castes. As in the case of Christianity in some parts of India, the social barriers of caste have proved too strong for the communal basis of the orthodox religion.

gLING CHOS.—The gLING chos (gLING-mythology), or gLING glos (gLING-hymnology) contained in Tibetan folk-lore, and is perhaps the most ancient religion of that country. It is distinguished from the ancient mythology of countries such as Finland and Russia by the fact that it has not to be pieced together from fragmentary allusions scattered through the whole range of Tibetan folk-lore, but can be gathered from common sources. Among natives of Tibet the use of the term gLING chos (gLING-glos) is in more general use than that of gLING shos (gLING-chos); in more general use.

1 The term gLING shos was first employed by the present writer. Among natives of Tibet this name gLING shos (gLING-glos) is more general use. In a hymnal discovered in Upper Kansu the words lha shos and don shos are used for this type of religion.

2 Some of these gLING glos will be found in E. Lader's Zwei... (1901-1902) 103. 125, seng sen... (1901-1902) 109-109, seng seng... (1901-1902) 110-111, dono rob... (1901-1902) 112.

3 This is the actual pronunciation. In literature the name is spelt bSapta bhaRta (Sakatkar or India).
eighteen agus (see below) take the part of human beings.

3. Yog klu, the under world (literally, the nápas below).—Like sTang lha, Yog klu is also a heaven. There is, however, a king called Icogpo (probably Icogpo is an abomination, with his servants and his subjects, which are remarkable for the large number of their children. The klu, or nápas (female nápas), are famous for their beauty, and Kesar is warned not to fall in love with them. For this reason, at the present day, the Ladakh women still desire to look like klunon, and wear the perog or berog, a leather strap set with turquoises. This perog represents a snake growing out of the neck of a woman, which, according to Indian Buddhist art, is the characteristic mark of nápas.

3. The colours of these realms.—The most original system of colours seems to be contained in the Sheh version of the Kesar-saga. According to it, the colour of sTang lha is white—perhaps on account of the reddish colour of the ground; and Yog klu is blue—this may be due to the deep blue colour of many Tibetan lakes. The klu generally lives near the water.

According to the Lower Ladakhi version of the Kesar-saga, the colour system is as follows: sTang lha is white; Bar btsan is red—perhaps on account of the reddish colour of the ground; and Yog klu is black. A still more advanced stage is represented in the Vasistha Mohini (without doubt based on that of Tibet). Here sTang lha is white; Bar btsan is yellow; and Yog klu is black. The change from red to yellow has probably something to do with Tsong-kha-pa and his reformation of Ladakhi Buddhism.

4. The devil bDud.—Occasionally, to the three realms of the world a fourth is added, that of the devil bDud, and then all the three realms become united in opposition to this new realm. The colour of the devil and of his realm is black (Sheh version) or violet (Lower Ladakhi version). It is situated in the north. The devil tries to carry away the gods of the gods. He is in possession of a beautiful castle, great treasures, and a girl who is kept in a cage. Near his castle is the well of milk and nectar. In size, appetite, and stupidity he closely resembles the giants of European mythology and folklore. There seems to be a close connection between Yog klu and the devil's realm, as they both lead a lecherous and dissolute life. Or, gradually the devil developed into a separate denizen of his own, a most dastardly character, while the klu did not. Other names of the devil bDud are aDre lha btsan bog, Curnlug, Srinpo ('gre'), and sDipa ('sinful').

Of a very similar nature is agu pa. He is probably a mountain- or cloud-giant. He devours not only Kesar, but also sun and moon.

5. The seven and the eighteen agus.—Next to Kesar, the greatest heroes of the Kesar-saga are the eighteen agus. Kesar is their leader, and together with him they form a group of nineteen beings, in whom the present writer is inclined to see personifications of the twelve months plus the seven days of the week. Just as Indi had a group of seven ádítas before there were twelve, we find occasionally a group of seven agus who act by themselves, the others being forgotten. There is a female agus among the group of seven, and there is always a traitor among the agus. They are described as human heads on human bodies, thus being similar in the Ladakhi version to the Chinese representations of the zodiac. The list of the eighteen is as follows:

1. Pànsang yna ru skyen, with a goat's head.
2. sDaug em, with a puma's head.
3. sRig kras khrab thun, with a falcon's head.
4. kha yiin (dga'nya), with a white beard.
5. slya rdo-rje, with a soup-spoon for a head.
6. sZha sngag, with a moon for a head.
7. mBa upon gongsa, with an arrow-blade in the head.
8. Ada rgyal po, with the sole of a boot for a head.
9. Aba dmé bar lhan, with the head of a robin for a head.
10. Bsheg bzhung, with a cone-shaped mirror for a head.
11. Dbyin gongsa, with a colour for a head.
12. Lag la, with a band for a head.
13. sDang khang rings, with a foot for a head.
14. Rong nag mluğu, with a donkey's head.
15. Sál khan bslampa, with a man's head.
16. sDla' rgyud gspod, with an old man's head.
17. sNa yna ru bka' chis, with a turquoise for a head.
18. sZha sa'va, with a white shell for a head.

The following is the list of the seven agus: (1) sDla' pa, (2) d'Kan, (3) Gonnga batha, (4) sTha mihi'i, (5) sNa yna ru a'tha, (6) mBa upon gongsa, (7) sPam otsog.

Both lists are from the Lower Ladakhi version. Certain names will be found to differ in different villages. It looks as if there were not much hope of finding the clue to the ancient zodiac.

6. The Lokapalas.—There is some likelihood that the gling chos has always had deities for each of the four cardinal points. It is quite possible that the Indian Amoghasiddha, Vajrasattva, Rata-srabhava, and Anahita were the gods of the four quarters before they became Dhyānibuddhas. In close correspondence with them we find in the gling chos the following deities of the four quarters: Don yod gruupa, North; rDoje sems sPung pla, East; rSeres lung khyung klan, South; sNangba mtha' yin, West. It is not necessary to doubt that these deities were introduced from India together with Buddhism. It is more likely that the names represent an instance of mutual influence between pre-Buddhist Tibetan and Indian mythology. The name Don grub, which corresponds exactly to the Indian Siddhartha, was not necessarily introduced with Buddhism. Siddhartha was a common name in India long before the Buddha's time, and may belong to a deity similar to Don grub and Don yod grub of Tibet. There are also four 'kings' of the four quarters, who correspond more closely to their Indian equivalents, and may therefore have been received from Buddhism; but even these have nothing to do with Buddhism. Like the deities mentioned above, they belong to the four quarters, and to nothing else in the gling chos.

7. The Tree of the World.—It is called the 'king-willow,' or the 'far-spreading' tree. It has its roots in Yog klu, its middle part in Bar btsan, and its top in sTang lha. It has six branches, and on each branch a bird with a nest and an egg. On the first branch there is a huge bird Khyung with a turquoise egg; on the second, the wild eagle with a turquoise egg; on the third, the bird 'white head' with a pearl-white egg; on the fourth, the eagle 'white-kidney' with a silver egg; on the fifth, a snow-pleasant with a coral egg; and on the sixth, the white falcon with an iron egg.

8. Outline of the Kesar-saga.

(1) Prologus to the saga: the creation of the earth.—The forefather and his wife sow some seed which grows into a huge tree, the fruits of which are gathered into a barn. There the fruits become changed into worms, which eat one another until one huge worm is left. This worm becomes the worm maila. The child kills an ogre with nine heads, and builds the world (gling) out of its body in seven days. Don yunma mna is married to eighteen girls, to whom she bears the eighteen agus. The agus, eager to gain riches, start for the castle Puchi djal don. sDla' pa arrives there first, all the rest the richest, and bears the prophecy about what will happen in the course of the Kesar story.

(2) Birth of Kesar.—sDla' pa assists the king of heaven in his flight with the devil, in the shape either of yaks or of birds. He is allowed to ask a boon, and asks that one of the three sons of the king of heaven may be sent to the earth as king. All the sons are asked, and Don grub, who is the eldest in spite of his youth, decides to go. He dies in heaven, and is born on earth as Gov bzhag bhamo. (The name Kesar or Kyesar is still in use in the present day.)

The 'reborn one' arrives from Gov bzhag bhamo's eating a halibone, and the child is born
through the rites. It is a most ugly shape, but at pleasure expands into a beautiful shape with wings and moon and moon as attributes. The traitor among the agus makes some unreasonable attempts to hide himself. Together with Kesar, sun and moon and all kinds of animals are born.

(3) Kesar's marriage to dBruguma.—Kesar meets dBruguma on the hill of gathering roots. There are a great number of stories as to how he teases her. dBruguma is to be married to the traitor among the agus, but Kesar wins her through his skill and cunning. Her parents are distressed with them, as they see him in his ugly shape, and treat him with contempt. He promises her a beautiful shape, and should a cloud of beautiful shape (this yak looks almost like a cloud), and who will bring a wing of beautiful shape, she will look at it. The yak looks almost like the sun). The agus try; but only Kesar succeeds. Now he is accepted as son-in-law, and the wedding is celebrated. (Here Kesar is the inventor of bows.)

(4) Kesar's victory over the giant of the north.—After religious preparations Kesar decides to start for the north to kill the devil. He sends his wife to leave dBruguma, and allows her to accompany him, but the queen of heaven sends her back. In the north Kesar is met with a giant in an ugly shape, which he delivers. They have an enjoyable time together until the devil returns. Before his arrival Kesar is hidden in a pit which is dug inside the room in a miraculous way. Although the smell of the woman's body, and, although his book of magic is smashed, he is not deluded. By means of the bow, the girl goes to sleep. Then Kesar is dug out again and kills the devil. The girl gives Kesar the food and drink of forgetting (This yak, thus can forget dBruguma, the land of gling, and everything.

(5) iBruguma abducted by the king of Hor.—Because Kesar does not return to the castle, the young king of dBruguma is absent. At that time the traitor among the agus sits on the throne of gling, and takes the title of king. He has a beautiful form, but is easily pleased. He uses all sorts of means to seduce dBruguma, and takes her away to the castle of Hor. She, however, finds the king of Hor admirable, and goes to him. But when she looks closer, she finds the king of Hor hideous. The king of Hor, who is the bride of Kesar, and the girl goes away to the castle of dBruguma. (This is the Siegfried story.) Agu d'Palle sends two words to dBruguma, and Kesar is rescued. In the meantime the girl reaches the land of gling. The horse arrives there before him, and Kesar's adventure story is set in.

(6) Defeat of the king of Hor.—The road to Hor, with its many obstacles, is described. First Kesar is led by a fox, then he gains the shape of a cow. There is the door of rocks which opens and closes of its own accord; there are the stones flying about between heaven and earth; and the watchmen of Hor, who are killed in the same manner as Sansone killed the Philistines in the ball. Kesar arrives in the shape of a beggar, and pretends to be a son of the smith of Hor. Unfortunately, after certain difficulties and leeds the trade of the smith. At a tournament he shows his superior power, and gains the victory in every contest. He is therefore sent with a message to the approaching agus of gling. On this occasion he dresses all his followers from gling home again. He compels the smith to assist him in the fabrication of an iron chain, which is to be thrown on the top of the castle of Hor. When it is finished, Kesar climbs to the top of the castle by means of the chain, and kills the king of Hor, and regains dBruguma. On their way back to gling, however, he is met by Kesar, who is offered to the door of rocks to induce it to open. In gling, dBruguma is first punished for her treachery, then she is restored to her former position, and another wedding is celebrated.

(7) Kesar's journey to China.—(The Tibetan word for China—yang rgya—means 'the black country'.) In a certain practice story until the castle of the king of China falls to pieces and the kingdom of China becomes ill, Kesar is sent to go to China and heal the king. He sends the traitor auy, Khar thang, in his place. Then he starts himself. The journey is one chain of obstacles and defeats. He is killed, blinded, and wounded. All are overcome, and on Kesar's approach the king of China becomes better. He now tries to keep his word, and gives Kesar his daughter (Yul dgon mo chenpo). But the girl runs away with Kesar. He is, however, induced to go back again. The king of China points him into a pit with three dragons, with which he does not meddle. He escapes in the shape of a fly, goes back to gling, andrules the land of China with leprey (snow apparently). The traitor among the agus has meanwhile gone back to gling, turned dBruguma out of the castle, and seized the treasure. Kesar, however, fished, and Kesar lives happily with his wife. The leprey in China is stopped by another journey made by Kesar to that country.

9. Is the Kesar-saga a myth of the seasons?—This was the present writer's idea from the first. As he was, however, assailed by several critics on account of his practice to write the story of the 'Lower Ladakhí version of the Kesar-saga' for the Bibliotheca Indica, he was driven back to his former position. At any rate, he cannot help believing that myth and the seasons (mixed up, perhaps, with other material) were the Kesar-saga. Only a few instances may be noted: sun and moon are attributes of Kesar's beautiful shape, rain and hail of his ugly shape; he wields the sword of lightning 'in the middle of black clouds'; there is a full description of spring given on the occasion of Kesar's return to gling (see above, §§ 8 [5]); the agus seem to point to an antecedent zodiac; winter is apparently contrasted to leprey; marriage to the yak, and the animal leaves the female one, but leaves them with the hope of new offspring; Kesar's enemies are powers of darkness; the giant of the north; the king of Hor, also in the north; China is the black empire.

10. Relationship to other mythologies.—As has become evident, there are great similarities between the gling chos and the mythologies of various Aryan nations. This, however, does not mean much, for even Kesar himself is a created being, and his wife is an ordinary, earthy human being, which he converts into a beautiful shape, while the male animals leave the female one, but leave them with the hope of new offspring; Kesar's enemies are powers of darkness; the giant of the north; the king of Hor, also in the north; China is the black empire. The similarity is very apparent.
even called, in historical works, a sinitor to the white grandma. (3) There can be hardly any doubt that the system of colours as we find it in the gLing chos has influenced the pantheon of Lamasism with its white and black (and golden-faced) occupant. Still, it cannot account for all the different shades of colours. Some of them were probably introduced from India. (4) Most of the deities of the gLing chos, dbangpo rgyudshab included, have been incorporated into the pantheon of Lamasism, where they have to be satisfied with an interior rank.

12. gLing chos and Bon chos.—The gLing chos was perhaps not such a pure religion of nature as it was in the past. Of the dances of the gLing chos, 1) the künsal, 2) the rgyudstan, 3) the great nyingma dances, 4) the goals, c.e. in the world songe in the name sengge dkarmo yu rabcan, 'white lioness with the turquoise locks,' the personification of the glacier has something to do with the Indian word stambha. In the name of the smith Hemis, who teaches Kesar, the first part hem seems to be the Indian word hintam, 'snow.' We find the word hem in the sense of snow also in the name Hembabs, which means snow-falling, and such Indian words as rikampa, 'monster,' Sitra, Sitia and Liaqar as names of the gLing chos which are found occasionally in the name gLing chos—which shows what an important part India has played in the shaping of certain tales of this ancient religion.

13. Sacred numbers in the gLing chos.—Holy numbers in the gLing chos are 3, 7, 9, and 18. But it is remarkable that, whilst the first three of these numbers are quoted without a following number, the 18 is often followed up by 19; e.g., 'They danced for 18 days and 19 priests.' The 19 is favoured apparently as the sum of 12 + 7, the months of the year plus the days of the week.

14. Animism in the gLing chos.—Here we may mention the following peculiarities: (k) ykyer, the wind; shag gling zilupa, the rain; sengge dkarmo yura, the glacier; bya khyung dken skgma, (apparently) the sun; sengge dkarmo, the moon; mya mo mig duwa, the morning-star; yon, skyur, animals living in rocks and trees. It is remarkable that several of these personifications are mentioned together with the representatives of the animal world. Some of such representatives are: kyung yon yod nyla, for fishes; byo snyig snyadro, for birds; kyungkhyung khaklo, for horses; byo snyiog snyadro, for yaks.

15. Festivals of the gLing chos.—(1) The Lohan, or New Year's festival. It is the festival of lamps and lights. Pencil-cedars are used for the decoration of houses. There are horse-races, and a goat is offered before a white tho tho (altar of the gLing chos). The heart is torn out of the living animal and offered to the tho. In the monasteries mask-dances are held, which were probably intended originally to drive the evil spirits over the demons of winter. Only at Hemis do the mask-dances take place in June, perhaps as a last remnant of a former festival to celebrate the highest point reached by the sun. (2) Strange phantoms. This is the spring festival of driving out winter. At Khaltse a clay figure of human shape is carried outside the village and destroyed there. At other places the spirits of winter and disease are banished into magic squares of sticks and strings (donmo) and destroyed outside the village. (3) The Kesar-festival. The festival is called 'Kesar-festival' only in Upper Kanavar. In Ladakh it is called ma dhay, 'arrow-shooting.' It is celebrated in spring. They Ling shes is played and sung; and the boys run themselves with arrow-shooting. There are processions round the fields to bless them, the tho tho (altars) are decorated with fresh twigs, and pencil-cedars are burnt. (4) The Sbrub tho, or harvest festival. In Sbrub tho the boys dance with poles covered with fragrant alpine flowers. Offerings of grain are carried to the monasteries. The dates of all these festivals are fixed by the lamas, and the lamas take part in them.

16. Anima and gLing chos.—In the course of this article some of the names of the gLing chos are given with their English translation. The author has not ventured to translate all these names, because scholars are at variance with regard to the meanings of certain of them. In the names of the eighteen agus there is always contained the distinguishing mark of the agus which forms his head; thus in no. 4, kha rgyan means 'old month,' i.e. a month surrounded by a white beard; in no. 1, ru skyes means 'horn-producer,' or goat. As for the group of seven agus, which has much in common with the heroes of such folk-tales, c.e., 'Nebel kommen durch die ganze Welt,' in the name of no. 4 the ability to see clearly is indicated; in the name of no. 5, the ability to hear clearly; in no. 6, to shoot well. There are certain names occurring in the gLing chos which are not found in any living language in the world songe in the name sengge dkarmo yu rabcan, 'white lioness with the turquoise locks,' the personification of the glacier has something to do with the Indian word stambha. In the name of the smith Hemis, who teaches Kesar, the first part hem seems to be the Indian word hintam, 'snow.' We find the word hem in the sense of snow also in the name Hembabs, which means snow-falling, and such Indian words as rikampa, 'monster,' Sitra, Sitia and Liaqar as names of the gLing chos which are found occasionally in the name gLing chos—which shows what an important part India has played in the shaping of certain tales of this ancient religion.

LITANY.—See ANIMALS.

LITANY.—A litany, according to the modern use of the word, may be described as a devotion consisting of a number of short prayers or invocations, to each of which a response is made by the people. It may be either recital or recitation, it may be liturgical, i.e. connected with the celebration of the Holy Eucharist, or independent, and it may be used as a usual prayer or used only on special occasions. Proces- sional psalmody which is not of the responsive form is not now usually called a litany, but at one time the word was applied to anything sung in procession. The modern use of the term is the result of a long and somewhat complicated history. It is especially necessary to trace the growth of two forms of devotion which were originally distinct, but which have condescended to form the modern litany. These are the liturgical responsive prayer and the procession.

1. Earliest use of the word.—The word arraesthesia is not common in classical Greek, and it seems to be used in the quite general sense of a supplication. The earliest mention of the word in common use with Christian services appears to be by Basil (c. A.D. 357; Ep. cxxvi. ad Cler. Nectes.)." (Opera, iii. 311 l)."

Objection has been raised to some innovations which Basili had made. "These things were not," he says, "the ordinary days of the great Gregory (i.e. Gregory Thaumaturges, c. 254)."

"Neither," replies Basil, "were the litanes which you now use. And I do not say this by way of approving, for I see you using them, that you all should live in tears, and in continual repentance."
These litanies were, therefore, penitential devotions of some kind, but there is nothing to indicate their precise character. The word πορεία was used in a similar general sense in the West.

2. The liturgical litanies. — The earliest description of Eucharistic worship is contained in the Apologies of Justin Martyr (A.D. 148). Here common prayers are spoken for ourselves, and for all others in all places, immediately before the Kiss of Peace and the Offertory, and therefore after the lessons and homily (Apod. i. 65). Whether these already took the form of the later litanies, is not certainly known; and the response *Kyrie Eleison* is not yet mentioned. And there is not further detailed information about the form of service until the liturgies which date from about the end of the 4th century. Here, however, the liturgical litanies are found in the form in which it has preserved in the Eastern Church ever since. It consists of a number of short petitions offered by the deacon, to each of which the people respond *Kyrie Eleison,* and the usual place for it is after the homily, but this is not infrequent. Some form of the kind appears to be almost universal in the Eastern liturgies. Many examples will be found in Brightman (Liturgies Eastern and Western, esp. pp. 4, 471, 921 for the most ancient forms, all the 4th century), and the usual name for these devotions in the East is Λατρεία, but λέιταρία (lit. 'stretched out,' i.e. the earnest prayer), or σωφάρη ('continuous'). There is nothing to show when Kyrie Eleison was first used in the service of the Church. But the use, as is always universal in the Eastern liturgies, it must have been very early, and the expression is so natural, and would be so easily suggested by passages of the OT, that no explanation of its introduction is needed. For the 4th century, when the Byzantine liturgy was most thoroughly harmonized and nationalized, it was pointed out by Claude de Vert (Exposition simple, littérale et historique des cérémonies de l'Eglise, Paris, 1706-13, i. 94; cf. Epictetus, Diss. abi Arriano digesae, ii. 7). The Pericrinitio silece (ed. G. F. Camarurini, Rome, 1838, p. 4) mentions the Kyrie as the response made at Jerusalem to the deacon's list of names, and it appears in the litanies mentioned above as belonging to the 4th century of the ancient liturgy.

3. The liturgical litanies in the West. — It is probable that the Western liturgies originally contained litanies closely similar to those of the East. This was certainly the case, as far as can be judged from their scanty remains, with the liturgies of the 10th century. For example, in the Roman litanies, there is also another place in the service as we know it now, as was pointed out by Claude de Vert (Exposition simple, littérale et historique des cérémonies de l'Eglise, Paris, 1706-13, i. 94; cf. Epictetus, Diss. abi Arriano digesae, ii. 7). The Pericrinitio silece (ed. G. F. Camarurini, Rome, 1838, p. 4) mentions the Kyrie as the response made at Jerusalem to the deacon's list of names, and it appears in the litanies mentioned above as belonging to the 4th century of the ancient liturgies.

4. Processions in the East. — During the centuries of persecution it was not likely that forms of devotion so conspicuous as processions would be used by Christians. The first historical mention of them appears to be in A.D. 235, in connexion with the Arian controversy. The Arians, not being allowed to hold their assemblies in the city of Constantinople, used to meet in the public squares during the night, and to march out at dawn to their places of worship, singing hymns. Fearing lest the orthodox should be attracted by this ceremonial, St. John Chrysostom instituted counter-processions on a more magnificent scale, in which silver crosses and lights given by the empress Eudoxia were carried. Processions were prohibited by the emperor in consequence of the disorders which they caused, but the custom of using processions, especially in times of emergency, continued. Sozomen mentions a legend to the effect that the antiphonal singing used at such times had its origin in a vision of Ignatius of Antioch, the third bishop from St. Peter, in which he saw angels singing responsive hymns to the Holy Trinity (HE vi. 8; Soc. HE vi. 8). These occasional processions were, however, quite distinct from the litany in the Eucharist.

5. Processions in the West. — Processions became common in the Western Church at about the same time as in the East, but these originally appear not to have been independent. They were probably at first transformations of pagan processions. The Roman festival of the Robigalia, intended to secure the crops from blight, was kept on the 25th of April, and the procession called the Litanis Major, which took place on the same day, St. Mark's Day, seems to be a direct descendant of this. Even the actual routes of the heathen and the Christian processions were nearly the same. The institution of the Greater Litany of St. Mark's Day has been generally ascribed to Gregory I., but it was prob-
ably earlier, and perhaps dates from the pontificate of Liberius (352-366). The Litany ordered by Gregory on St. Mark's Eve, A.D. 490, in order to avert a pestilence, seems to have been distinct from the Litania Major. Another ancient Roman festival, the Ambarvalia, was observed on three successive days in the month of May, and also had the fertility of the fields as its object. There is here a close resemblance to the Rogation processions on the three days before Ascension Day. These are said to have been instituted by Māmertus, bishop of Vienne (c. 150), in the occasion of various public disasters (Sid. Apoll. Ep. v. 14, vii. 1; Gregory of Tours, Hist. Franc. ii. 34); but such processions had probably been practised at an earlier date, and were only revived on this occasion. These rogation or litanies, called Litanie Minores to distinguish them from those of St. Mark's Day, spread rapidly through Gaul, and were adopted and reorganized at Rome by Leo III. (756-816). Both the Greater and the Lesser Litanies were ordered to be used in England at the Council of Clovesho (A.D. 747) (A. W. Haddan and W. Stubbs, Councils and Ecclesiastical Documents relating to Great Britain and Ireland, Oxford, 1860-71, iii. 368). It may be noted that in the decree of this council, and elsewhere, the word 'litanies' is used, not as the term 'litanies' is used now. Thus the term 'litanies' has no equivalent terms ('litanie, id est, rogationes'), and also that the terms seem to include all the devotions connected with those days. There is no allusion to responsive prayer, and the only reference to processions is a mention of the churches being carried about. The words 'litanies' and 'rogations' were still used in quite a comprehensive sense.

6. Mediaeval litanies.—Hitherto the liturgical litanies in the Mass and processions have been regarded as distinct. But it is easy to see how they would coalesce. Various kinds of singing have always been used in processions, but that particular form of responsorial singing in which the people answer with an unvarying refrain was so naturally adapted for processional use, owing to the ease with which the refrain could be taken up by a moving crowd, that litanies of the type of the Eucharistic etene came to be very commonly used in processions not only in the Mass, but on all sorts of occasions, so that the word 'litanies' came to mean a form of prayer with a response, either processional or stationary, and either regular or occasional. As the processional use was the most conspicuous and popular, the word 'procession' came to be used almost everywhere in the book which contained the mediaeval litanies was called the Processional. The litanies in most common use also assumed a regular structure. They consisted, as a rule, of the following parts: (1) the Kyrie Eleison, alternated with Christe Eleison; (2) a number of invocations of saints by name, with the response 'Ora pro nobis'; (3) a series of short prayers against various evils, called Deprecations, with the response 'Libera nos Domine'; (4) a list of books, and for various objects, called the Supplications, with the response 'Audi nos Domine'; (5) the Agnus and the Kyrie, and a collect. Such litanies became very popular, and Cardinal Baronius estimated in 1601 that there were then 80 different forms in use. The invocations of the saints just mentioned formed a conspicuous part of most of these litanies. It is not clear when these invocations were first introduced; it was certainly before the 12th century, but there are to be found in the Stoudseven Missal, and in a litany which probably belongs to the 8th cent. printed in Warren, Lit. Celt. Ch. (p. 175), but they may be much older. Some of the later litanies became little more than a string of invocations. It has been suggested that these lists of saints originally grew out of a heathen formula

excited by the Pontifex Maximus, but there appears to be little or no evidence for this.

It has been noted that litanies, in the sense of responsive prayers, were often, though not necessarily, sung in procession, and so were commonly called processions. On the other hand, devotions sung in procession were often called litanies even though they were not responsive prayers. Psalms and anthems were also frequently used. For instance, Bede says (HE i. 23) that at the first meeting of St. Augustine with King Ethelbert the missionaries appeared in procession bearing the image of our Lord upon the Cross, and singing litanies; and then he specifies what they sang, and it was clearly an anthem, and not a litany in the usual modern sense. Again, the processions before High Mass on Sundays became, during the Middle Ages, a very popular and conspicuous devotion, but the psalmody was not usually in form a litany. In the 8th cent. at Rome it was so, or it was regarded as such; for, when there was a procession, as it has been mentioned, the Kyrie at the beginning of Mass was omitted. Later on the Kyries became a fixed part of the service, and the processional psalmody took a different form. From the 12th cent., however, there was a tendency to use the term 'litany of the saints,' which had been included in the liturgical books. The Litany of Loreto had already been sanctioned in 1587. All others were forbidden to be used without the approbation of the Congregation of Rites. It is probable that this decree was never very strictly enforced, but it was renewed in 1727, and in 1821. A decree, however, of the Congregation of Rites, dated 23 April 1869, allowed the private use of litanies sanctioned by the Ordinary. The Litany of the Blessed Virgin only 'came to mean a form of prayer with a response, either processional or stationary, and either regular or occasional. As the processional use was the most conspicuous and popular, the word 'procession' came to be used almost everywhere in the book which contained the mediaeval litanies was called the Processional. The litanies in most common use also assumed a regular structure. They consisted, as a rule, of the following parts: (1) the Kyrie Eleison, alternated with Christe Eleison; (2) a number of invocations of saints by name, with the response 'Ora pro nobis'; (3) a series of short prayers against various evils, called Deprecations, with the response 'Libera nos Domine'; (4) a list of books, and for various objects, called the Supplications, with the response 'Audi nos Domine'; (5) the Agnus and the Kyrie, and a collect. Such litanies became very popular, and Cardinal Baronius estimated in 1601 that there were then 80 different forms in use. The invocations of the saints just mentioned formed a conspicuous part of most of these litanies. It is not clear when these invocations were first introduced; it was certainly before the 12th century, but there are to be found in the Stoudseven Missal, and in a litany which probably belongs to the 8th cent. printed in Warren, Lit. Celt. Ch. (p. 175), but they may be much older. Some of the later litanies became little more than a string of invocations. It has been suggested that these lists of saints originally grew out of a heathen formula

excited by the Pontifex Maximus, but there appears to be little or no evidence for this.

It has been noted that litanies, in the sense of responsive prayers, were often, though not necessarily, sung in procession, and so were commonly called processions. On the other hand, devotions sung in procession were often called litanies even though they were not responsive prayers. Psalms and anthems were also frequently used. For instance, Bede says (HE i. 23) that at the first meeting of St. Augustine with King Ethelbert the missionaries appeared in procession bearing the image of our Lord upon the Cross, and singing litanies; and then he specifies what they sang, and it was clearly an anthem, and not a litany in the usual modern sense. Again, the processions before High Mass on Sundays became, during the Middle Ages, a very popular and conspicuous devotion, but the psalmody was not usually in form a litany. In the 8th cent. at Rome it was so, or it was regarded as such; for, when there was a procession, as it has been mentioned, the Kyrie at the beginning of Mass was omitted. Later on the Kyries became a fixed part of the service, and the processional psalmody took a different form. From the 12th cent., however, there was a tendency to use the term 'litany of the saints,' which had been included in the liturgical books. The Litany of Loreto had already been sanctioned in 1587. All others were forbidden to be used without the approbation of the Congregation of Rites. It is probable that this decree was never very strictly enforced, but it was renewed in 1727, and in 1821. Celt. Ch. (p. 175), but they may be much older. Some of the later litanies became little more than a string of invocations. It has been suggested that these lists of saints originally grew out of a heathen formula

excited by the Pontifex Maximus, but there appears to be little or no evidence for this.
Common Prayer of 1549. This litany was constructed with great care, and several sources were used. The chief portion was taken from the Sarum Rogationtide litany, and the main structure of this was adhered to, but the invocations of the said androgynous prayers were greatly shortened, being reduced to three clauses, which were themselves omitted in the First Prayer Book. Passages were also introduced from a Sarum litany for the dying, called Commenentatio Animæ (also omitted in the First Prayer Book), and a considerable part of the Supplications was taken from a medieval German litany which was revised by Luther in 1529, and published in German and Latin. This litany was included in the Consolatio of Archbishop Hermann of Cologne, and so came to England, and it was used for the litany in Marshall's Prayer of 1535. It must be noted that the English litany falls into two main sections: the first ends with the collect that follows the Lord's Prayer—a collect being the natural ending of a litany. What follows is a translation of suffrages which were added to the Sarum litany in time of war. The reason for their insertion was no doubt that war was going on in 1544, but they were appropriate for use at other times, and were retained. These suffrages are preceded by the antiphon and Psalm verse which began the Sarum Procession on Rogation Monday. Unfortunately, the accidental omission of one of the Amens at the end of the collect has led to the ridiculous custom of using the antiphon ('O Lord, arise, help us') as a sort of response to the collect. Until 1601 the conclusions of most of the collects were not printed in the Book of Common Prayer; in the revision of that year the Amens were printed, but most of the endings were omitted by mistake. Although in his adaptation of the old litanies Cranmer added little or nothing of his own, he made a noticeable change in the rhythm: the old petitions were set in short and simple Cranmerian style, with a view to compression or, more probably, because he preferred sonorous periods, grouped several petitions together, and enrichted them with epithets and synonyms. For instance, the Deprecations of the Sarum litany begin thus:

- From all evil—Deliver us, Lord.
- From the crafts of the devil—Deliver us, Lord.
- From the wrath—Deliver us, Lord.
- From everlasting damnation—Deliver us, Lord.

In the new version this becomes:

- From every sin—Deliver us, Lord.
- From the pains—Deliver us, Lord.
- From the anguish—Deliver us, Lord.
- From the durance of hell—Deliver us, Lord.

At the same time Cranmer intended to translate other processional hymns, such as 'Salve Festa Dies,' for he wrote to Henry VIII. in 1545 to say that he had done so. The attempt was probably relinquished because he became aware that he did not write so skillfully in verse as he did in prose. The English litany has remained substantially unchanged since its first appearance in 1544. In 1549 the invocations of the saints were omitted, and in 1550 a petition about the tyranny of the Bishop of Rome, 'The grace of our Lord,' was added at the end in the same year. In 1661 the words 'and rebellion, ' and 'sloth,' were added, and 'Bishops, Pastors, and Ministers of the Church' was changed to 'Bishops, Priests, and Deacons.' The collection of collects at the end of the litany was altered more than once, and most of them were removed to other places in the Book of Common Prayer.

This litany was intended to be used for all the purposes for which the ancient litanies were employed. It was issued for occasional use at a time of distress, and it was sung in procession in the usual manner. Later on royal injunctions ordered it to be sung kneeling before Mass, and this became the usual, but not universal, practice. The present rubric allows either the stationary or the processional use. It was also related to the Rogationtide processions, being derived mainly from them, and it took the place of the Eastern cæteræ as a preparation for Mass. It was ordained from the first to be said on Wednesdays and Fridays, the days of the Passion. For a long time Mass was anciently said, and, although its use on Sundays was not specified in the rubric until 1552, this was probably taken for granted from the first. Unfortunately, this special characteristic of the litany for Mass was obscured later on, partly by the placing of the 'Grace' at the end, and partly by the rubric of 1601, which directs it to be said 'after Morning Prayer.' This made no practical difference so long as Mass, Litany, and Mass continued to be said in their natural order, but in recent years it has caused the litany to be regarded as a sort of appendage to Matins, and in many churches it has led to its being altogether separated from the Mass.

9. Lutheran litanies. Cawood mentions above, Luther published a revision of a medieval litany in German and Latin in 1529. The original edition does not appear to be extant, but the English litany was printed in 1541, and it was used in both languages for some time. The use of the Latin form seems to have died out in the 17th cent., and the German form, although it continued to be used on various occasions in North Germany, never became a popular form of devotion. The Calvinistic bodies objected to this form of service altogether, and the litany was one of the parts of the English Book of Common Prayer which were most disliked by the Puritans.

LITERATURE (American).—The literature of the aborigines of America may conveniently be treated under two topics, viz., purely autochthonous or literary expression, and works produced under Caucasian influence.

1. Autochthonous literature.—This group in-
cludes songs, orations, stories, legends and myths, rituals and possibly dramas, and chronicles. The sources of this literature are mainly oral tradition, that is, the telling of some time before the coming of Europeans and the annunciation of their written records, the most curious of which are the quipus—knotted and coloured cords—employed by the Peruvians. Petroglyphs and pictographs were wide-spread, and reached a considerable development in the direction of abstract symbolism, while among the Mayas, Aztecs, and other Mexican tribes they clearly gained the stage of hieroglyphic writing. Little progress has been made, however, towards the decipherment of the Mexican codices, even when conducted by the most skilled. Similarly, the records and chants of the American Indians will be treated under SECRET SOCIETIES (American) and PRAYER (American). Oratory was an art of prime importance among the many tribes who conducted their internal affairs by means of oral expression and obtained their policies. Gravity of men and strict decorum characterized the orator, but his expression was often intensely passionate, and there is abundant testimony from white hearers to the power and effect of Indian oratory, of which many fragments are preserved in scattered reports. More systematic records have been made of myths and legends, which are often documents of considerable length and no mean artistry. Their compilation and study, as a rule, of formal literary composition may be studied in records of identical myths taken from different tribes (e.g., the three versions of the ‘Irquonio Cosmology,’ recorded by J. N. B. Hewitt, 21 RBEW [1899-1900]). Legends of a historical character (as, e.g., the legend of Hiawatha) give place in some tribes to conscious chronicles, or year-counts (see esp. G. Mallery, 19 RBEW [1888-90], ch. x.; J. Mooney, 17 RBEW [1895-96]. ‘Calendar History of the Kiowa Tribe of Indians’). The ‘Mound of the Cherokee’ classifies Cherokee myths as sacred myths, animal stories, local legends, and historical traditions. He traces many animal stories that have passed as of Negro origin to American Indian sources (notably the ‘Ehre Rabbit’ stories of Joel Chandler Harris), and it is certain that the American Indians possessed tales designed for entertainment, often of a humorous character, as well as others intended for edification.

The artistic quality of which American Indian expression in capable may be suggested by a few examples. A. C. Fletcher (27 RBEW [1866-68], p. 453) records an Omaha song of four verses (or, with repetitions, seven), which she translates:

“No one has found a way to avoid death, to pass around it; those old men who have not it, who have reached the place where death stands waiting, have not pointed out a way to circumvent it. Death is difficult to face!”

This song is set to a moving native melody, which has been harmonized by Harvey Worthington Loomis (‘Lyrics of the Omaha and Haudenosaunee,’ 19 RBEW [1901]).

An impressive example of Indian eloquence is the speech of Smohalla recorded by Mooney (17 RBEW [1895-96], p. 729 f.), which is a reply to the white commissioner’s request that the Wanapan shall settle down to agriculture. The following is a fragment of Smohalla’s peroration:

“You ask me to plough the ground! Shall I take a knife and cut my mother’s bosom? Then when I die she will not take me to help her to rest.

You ask me to dig for stone! Shall I dig under her skin for her bones? Then when I die she cannot enter her body to be born again.

You ask me to cut grass and make hay and sell it, and he rich like white men! But how dear I cut off my mother’s hair!”

In the Iroquois creation myth, there is a somewhat subtle humor in the account of the fall of Attaleeke, the demiurgic Titanus, from the sky-world to the earthworld, in a manner very much seeming, that there was light below, of a blue color. She looked, and there seemed to be a lake at the spot toward which she was falling. There was nowhere else any water, the many ducks on the lake, whereon they, being waterfowl of all their kinds, floated severally about. Without interruption the body of the womanne-being fell in.

Now, at this time the waterfowl called the Loon shouted, saying: “Do ye look, a woman-beeing is coming down from the water, her body is floating up hither.” They said: “Verily, it is even so.” Now, verily, in a short time the waterfowl called Blitter said: “It is true that ye believe that her body is floating up from the depths of the water. Do ye, however, look upward.” All looked upward and forward, moreover, said: “Verily, it is true” (21 RBEW, p. 379).

With this may be contrasted a fragment of the Navaho myth of the creation of the sun (27 RBEW [1866-68], pp. 252-57), which is not without a touch of grandeur:

‘The people then said, “Let us stretch the world”; so the twelve men at each end expanded the world. The sun continued to rise as the world expanded, and began to shine with heat, but when she reached the great and the people suffered much. They crawled everywhere to find shade. Then the voice of Darkness went four times around the world crying: the men at the cardinal points to go—expanding the world. “I want all this trouble stopped,” said Darkness; “the people are suffering and all is burning; you must continue stretching.”

The more civilized Indian peoples of Mexico, Central America, and Peru show a corresponding advance in formal literary composition. The Aztec rituals recorded by the Spanish friars, as in the written record, or as written, were recorded by the friars. They were recorded by the friars and consisted of dramas, odes, histories, chronicles, oracles, spells, calendric computations, laws, etc., judging from the fragments which are preserved, while the existence of a secular artistic literature is probable. Brinton is of the opinion that the Central Aztec peoples possessed an autocratic dramatic art (see Library of Aboriginal American Literature, no. iii., ‘The Guageonte, a Comedy Ballad in the Nahua-Spanish Dialect of Nicaragua,’ Philadelphia, 1883); and Clements Markham regards the ‘Ollantay’ as an example of a pre-Spanish dramatic literature (see Markham, The Indians of Peru, London, 1910, which contains a translation of this drama). For this literature of the semi-civilized nations see the art. ANDRENS, Chilian Ballad, etc.
Mexico respectively. To these might be added the names of Tezozómoc, Chimalpahin Quauhtiuhuanitzin, Nakak Pech, and Fernando Hernandez Arana Xabila, Mexican and Central American post-conquest chroniclers of native history (see respectively E. K. Kingsborough, Antiquities of Mexico; Cronquist, Mémoires de l'École des Années de San Antonio Chimalpahin Quauhtiuhuanitzin, Paris, 1880; D. G. Brinton, Library of Aboriginal American Literature, vols. 1-8). In N. America, George Cupway (Kagigegado, 1815-63) was the author of several books, dealing chiefly with his own people, the Ojibwa, while Charles A. Eastman (Ohiyesa, 1858-1932) is an author of essays and stories, striving to preserve the native life and ideals of his Sioux kinsfolk.

H. B. ALEXANDER.

LITERATURE (Babylonian).—Our knowledge of Babylonian-Assyrian literature has been gained chiefly by excavations. Only a few monuments and tablets, among the thousands of clay tablets which served the ancient Babylonian and Assyrian priests to record the deeds of the rulers of those Empires, to chronicle their historical events, to fix the common prayers, incantations, and religious rites, to place the outcome of their superstitious belief in certain systems, and to transmit the ancient myths and legends into posterity. As a matter of fact, these documents are not throughout conceived in the Semitic tongue of Babylonia. It is now well known that in the third millennium before our era the fertile alluvial plain of the Euphrates and Tigris, which were the chief rivers of Babylonia, was inhabited by a non-Semitic race called the Sumerians, and to them must be attributed the primitive culture of that country, the building of its earliest cities, the first written records on clay tablets, the invention of the cuneiform script, the development of which out of a picture writing can still be traced. At what time Sumeri, i.e., Babylonian, tribes invaded Sumerian territory, and how the process of amalgamation between the two races developed, cannot as yet be ascertained. It may be fairly assumed, however, that at the time of the Babylonian king Hammurabi, who replaced the various feudal governments of his predecessors by a vast Babylonian Empire under one absolute sovereignty, the process had come to a standstill, and subsequently the Sumerian literature was gradually superseded by that of the Babylonian-Assyrians.

Babylonian-Assyrian literature actually begins in the time of Hammurabi, whose inscriptions (with one exception) and whose famous collection of laws (see Laws of Hammurabi and Assyrian) are conceived in pure Semitic Babylonian. Before entering into a detailed enumeration of the various branches of that literature, attention must be called to the fact that the difference between the two branches of the Semitic languages consists merely in dialectic varieties, so that Babylonian and Assyrian literature, practically speaking, are to be considered as identical, and are differentiated only by the respective time of their original dawning. The so-called Semitic tongues of Western Asia—Old Babylonian Empire, the Assyrian Empire, and the Neo-Babylonian Empire—were the history of the ancient East can now be authentically reconstructed from the historical inscriptions of the Babylonian-Assyrian literature. The great kings of those monarchies the gaining of immortality by means of a careful tradition of their exploits, their successful campaigns, and building operations appeared most desirable, and so they caused the records of those deeds to be inscribed on a number of clay prisms, on cylinders and tablets, and on the animal colloids at the entrances of their palaces. The great extent of such texts is illustrated by a recently discovered tablet, on which the events of a single year, 714 B.C., are recorded so minutely that an English translation of the text would fill five columns of the London Times. Long prayers supplement the historical contents of these inscriptions, interspersed with the enumeration of the titles and abilities, virtues and religiousness, of the royal personages therein glorified. As a rule, the contents are arranged according to the years of reign or the campaigns, in chronological order, followed by an account of the building operations and, in some cases, of the hunting matches of the respective kings, while, at the end of the inscriptions, the blessing of the great gods is invoked upon a successor preserving faithfully the work, and their wrath against his desolate land. To the historical documents must also be assigned the branch of the epistolary literature dealing with public affairs. It is from an extended correspondence between Hammurabi and one of his highest officials that we learn the most valuable information concerning the life and times of that first Semitic ruler in the united Babylonian kingdom; the personal care for the welfare of his vast dominion, the building of temples and palaces, the regulation of the temple-taxes, and the use of intercalary months by order of the crown. Of less importance are the documents of a correspondence carried on in the middle of the second millennium between
the Pharaohs of Egypt, then rulers of the whole civilized world, and the kings of Western Asia, including Palestine, the Phoenician ports, and the island of Cyprus, which have become generally known as the Tell el-Amarna find. Letters, proclamations, petitions to, and decisions by, various kings, and short notes accompanying requisites for war were in constant use down to the end of the Neo-Babylonian Empire, and are of a historical value similar to that of the royal inscriptions—narratives above, and various so-called "epigraphs" which were added to the numerous bas-reliefs on the walls of the palaces, illustrating the kings' campaigns and other achievements.

Babylonian-Assyrian literature in the narrower sense of the word has become known chiefly from the documents preserved in a great Royal Library founded at Nineveh by Ashurbanipal, the last great king of the Assyrian Empire, who reigned from 668 to 626 B.C. and was called Sardanapalos by the Greek writers. This Library, generally known as the Koyunjik Collection, the various portions of which have been secured since the middle of last century for the Trustees of the British Museum by Sir Henry Rawlinson and others, consists of tablets containing inscriptions of ancient Babylonian and Sumerian works, and deals with every branch of wisdom and learning then appreciated by the Assyrian priests, who, by command of their royal patron, collected and catalogued, recorded, and preserved in the Library of their day, manuscripts which had been gathered from the oldest cities and temple archives of the whole land. Recent excavations have in some instances also brought to light a number of hymns and prayers, certain omen-texts, and as few control tablets which must be attributed to an earlier period than that of Ashurbanipal, and apparently belonged to the mass of original documents from which the copies in the Library were made; and the same may be said of certain collections of the Neo-Babylonian time, in which, again, copies from the Koyunjik Collection have been found. An exact idea of the literary achievements of the Babylonian-Assyrians, however, can be formed only upon a parallelism of the Library itself. Such a parallelism yields the following results.

Apart from the epistolary literature, a few drafts for royal inscriptions, and numerous commercial texts—the last extending from early Babylonian times to a later period—Assyrian literature was devoted chiefly to superstitions, religious rites and ceremonies, incantations and prayers, and, in close connexion with both branches, to medicine, astrology, and philology.

A large proportion of the documents here concerned deal with the appearance and actions of various animals, and it has been justly remarked that in these inscriptions survivals may be seen of a very ancient animal-cult. Being one of the certain parallels in Egypt—which in later times seems to have been superseded by an exquisitely astral religion. Closely connected with these animal omens are the numerous and systematically arranged texts bearing on monstrosities and other unusual features of births, as well as the large collections of documents dealing with the inspection of the liver of an immodate wether. The movements of various birds, the actions of dogs and horses, the behaviour of a thing of a kind, and the invasion of locusts were especially observed for the compilation of such omen-texts. Another means of divination used by the Babylonians was pure water, into which a small quantity of sesame-oil was thrown, and the visual appearance of the interference-colours, re-discovered by Newton, and certain structures of rings and bubbles, from which the events of the future were predicted. The link between these forecasts and the religious texts must be sought in the medical prescriptions, which were laid down and redacted into a kind of pharmacopoeia. Various diseases, arranged according to the limbs they mainly affected, were enumerated in these collections, and the draughts, decoctions, and other therapeutics are described in detail. Mental disorder was attributed to the influence of evil spirits, and on this account the medical texts are frequently interspersed with incantation formulae which otherwise constitute a class of literature by themselves. Three or four "series" of tablets containing such incantation-texts, accompanied by directions for the respective ceremonies, have become known to us. They are chiefly directed against the pernicious actions of witches and sorcerers, supposed to be neutralized by destroying the images of these witches, mostly by burning. In the majority of cases the text of these incantations is in the interlinear bilingual style, i.e. in Assyrian and Sumerian; and in several instances it can be proven that the Sumerian original has been taken over from ancient sources, portions of which still exist. On the other hand, it can also be deduced that Semitic Assyrian priests themselves also composed such interlinear texts, using the Sumerian language, then long extinct, in much the same way as medieval monks used Latin. Moreover, even pure Semitic incantation-texts, whose interspersing is preserved in Ashurbanipal's Library—a fact from which it may be concluded that such incantation-texts even at his time were recited in the old sacred language. And the same holds good for the psalms, liturgical prayers, and other types of prayers which are written either in Sumerian only or accompanied, in Assyrian times, by a Semitic version. Whilst the incantation-texts, however, are mostly preserved as parts of certain literary compositions or "series," the prayers and similar religious documents stand for the most part isolated, and only by their style can they be recognized as belonging to various classes. Of such, the prayers called after "the lifting of the hand," the hymns exhibiting a parallelism in a number of cases, and addressed to certain deities, and the compositions showing acrostics may be mentioned as specimens.

Of special interest among the religious texts are the legends and myths, of which a number of "series" have been preserved. A few, e.g., the Babylonian Creation Legend and the Deluge Story, both of which have parallels in the OT, can be proved to reach as far back as the Old Babylonian period. It cannot be ascertained at present, however, at what time the account of the Deluge was incorporated in a great national epic, the so-called Gilgamesh Epic, which is founded on astral religion and seems to refer to the life in the nether world. Similarly the "Descent of the goddess Ishtar to Hades," an isolated poem preserved in Ashurbanipal's Library only, appears to depict nature's death in the autumn and its resurrection in the spring, and the story of Nergal, the lord of tombs, and his consort, the goddess Erishkigal, likewise contains a description of the abode of the dead. Immortality was not granted to mankind, as we learn from another myth, the story of a pious man called Adapa, who, being misled by chance, refused to partake of the food of life and the water of life, which were offered to him in heaven.

As has already been remarked, it may be concluded from the Gilgamesh Epic and from other mythological texts that in the Assyrian time at least an astral religion was being practised by the inhabitants of the Euphrates and Tigris. This appears to be borne out by another branch of Babylonian-Assyrian
literature, viz. the astronomical texts. A large composition, comprising at least 70 tablets, is devoted to observations of the movements of the celestial bodies, including atmospheric phenomena, such as thunder-storms, hurricanes, and earthquakes, and to the forecasts taken from such observations and referring to the welfare of the king, the growth of vegetation, and the increase of cattle and other animals. As early as in the 7th century B.C. these astronomical documents were paralleled by those in the astronomical texts dealing with the diurnal risings and the culmination of luminous fixed stars and constellations, while the Neo-Babylonian time documents with astronomical observations and calculations have been found which bear witness to the highly developed various facets of the later Babylonians for determining the velocity of the sun and moon, the length of the year, and the revolution of the five planets then known.

An equally high standard was attained by the Babylonian and Assyrian priests in grammar and lexicography. Those sacred Sumerian incantation-texts, hymns, and prayers must have early prompted the protectors of religious traditions to collect helps for studying the extinct tongue, and the first of times and events involved a study of the Semitic native language of those priests as well. Paradigms of verb forms, lists of synonymous words, and, above all, large collections of Sumerian ideographs explained according to their pronunciation and meaning have thus been handed down. And the numerous lists of names of animals, stones, plants, and wooden objects, of stars, temples, and deities, afford a clear insight into the wisdom and work of the philologists, by whom the earliest colleges on earth were founded and literary tradition was first carried on.

Babylonian literature was deeply influenced, as has been shown, by its older Sumerian sister, and the Assyrians, in developing it, seem to have played a role similar to that played in later centuries by the Syrians who conveyed Greek learning to the near East. On the other hand, the cuneiform Babylonian script spread all over Western Asia, and the Hititite and Mittanian nations, the Chaldeans, and the Cananites appear to have adopted it in one or other form, and certainly become familiar to some extent with the literary documents of the Babylonian people. Babylonian legends found their way to the ancestors of the Issae, and the early Babylonian documents were studied in the middle of the second millennium by the learned priests of the Egyptian Pharaohs. Finally, the late Assyrian omen and astrological texts wandered to the East as far as China, left remarkable traces in the Indian literature, and were transmitted to Greece, where actual translations of such texts have been found. In this way also Babylonian literature has in the last instance influenced Christianity, and has left its marks throughout medieval times down to the present day.

LITERATURE (Buddhist).—The sacred canon of Buddhism has been handed down in two forms. One, written in Pali and preserved in Ceylon, Burma, and Siam, contains the doctrine of the older school, the Hinayana ('Little Vehicle'); see ART. HINAYANA. The second, known as Mahayana or 'Great Vehicle' (see art. MAHAYANA), was하세요. This canon agrees largely with the Pali canon both in wording and in arrangement. But there are also various divergences. These are to be explained by the descent of both from a common original in the Magadhi dialect, from which the Pali canon was derived in one part of the country, and the Sanskrit canon, later, in another. While the other sects had no complete canon, each regarded as specially sacred one or more texts, which either incorporated parts of or replaced a theoretically acknowledged canon. The great bulk of these Sanskrit Buddhists belonged to the Mahayana, or 'Great Vehicle'; see ART. MAHAYANA), a canon, which was the attainment of the condition of a Bodhisattva, or future Buddha, who brings nirvana within the reach of the entire human race.

The forms of Buddhism preserved in Pali and in Sanskrit have commonly been called 'Southern' and 'Northern', respectively, because the former prevails in Ceylon, Burma, and Siam, and the latter in Nepal, Tibet, China, and Japan. The distinction is thus made misleading, since all Buddhist canonical literature has been written in the North of India. The Pali canon contains a reference to the Sappasutta, or 'Long Sermon', confuses several persons by the erroneous implication that it excludes the older school of the Hinayana. It is, therefore, more appropriate to speak of 'Pali Buddhism' and 'Sanskrit Buddhism.'

The languages in which the two canons were composed require to be more precisely defined. Pali is the sacred language common to the Buddhists of Ceylon, Burma, Siam, and Cambodia, but Pali Sutta are written in the four different alphabets of those countries, while it has become the regular practice to print European editions of Pali texts in Roman characters. The Pali language in which the texts have been handed down cannot be identical with the dialect in which the canon of the 3rd century B.C. was composed; the latter could only have been the language of Magadha (Bihar), in which Buddha first preached, and which must have been used by the monks of Pataliputra who put together the canonical forms of such a Magadhi canon may be found in the Pali texts. Furthermore, it is noteworthy that the titles of the canonical texts enumerated in Asoka's edicts inscribed in Brahmi script on rock edifices differ from those in the Pali text.

Another canon is that of the Magadhi language, which, like other literary languages, is the result of a mixture of dialects. It is indeed in all likelihood Magadhi — a conclusion supported by the tradition that each of the seven dialects of Magadha is represented in the canon. The language of the other canon is either correct Sanskrit or a Middle Indic dialect which, approximating to Sanskrit, is best termed 'mixed Sanskrit' (originally as a rule called the 'Gandhāra dialect').

No work of Buddhist literature goes back to Buddha's time. But much contained in the canon may very well have been handed down the words spoken by the Master, such as the famous sermon of Benares, especially if we consider the tenacity of the verbal memory in Indian oral tradition.

Almost the whole of the oldest Buddhist literature consists of short collections containing speeches, sayings, poems, tales, or rules of conduct, which are combined into larger collections, called sūtras, or, in modern transcriptions, 'buddhasutra', in order of 'back', in order of 'back'. The formation of the sūtras of the Vedas (cf. HYMNS [Vedic]). These three aggregate collections, called the Tripitaka, form the Pali canon.

The canon as constituted in Asoka's reign must have undergone a heavy change and the time when it was fixed in the 1st B.C. in Ceylon. But thenceforward it has been handed down with great care. Some modifications, indeed,
must have taken place even after the 1st cent., because it is otherwise difficult to account for the numerous contradictions appealing in the canon. The lectures on the short subjects should be regarded as not very different from the Magadha canon of the 3rd cent. B.C. For the quotations occurring in the Asokan inscriptions diverge only slightly from the extant text, while the titles of seven texts mentioned in one of these inscriptions are partly identical with, and partly similar to, those which are found in the extant Sutta-pitaka. Moreover, the sculptures and inscriptions of the monuments at Sânchî and Bhûrîhut (c. 200 B.C.) afford further evidence, in the existence of a collection not unlike the extant Sutta-pitaka. But the earliest direct evidence that the Tipitaka as a whole had already assumed its present form is furnished by the Mahâvihâra-pitaka, which dates from the 1st cent. A.D. The age and authenticity of the Pali tradition are confirmed by the Sanskrit canon, which, as already stated, is so closely allied to it as necessarily to be derived from the same original. The texts which the sacred literature comprises will now be summarily described in regard to their chief contents.

1. THE PALI CANON.—1. Vinaya-pitaka.—The first of the three main divisions is the Vinaya-pitaka, the 'Basket of Discipline,' which supplies the regulations of the Order (saṅgha), and for the conduct of the daily life of monks and nuns. It includes rules for reception into the Order, for the periodical confession of sins, for life during the rainy season, for housing, clothing, and other matters of daily necessities. Here and there are also to be found stories, some of which contain the oldest fragments of the Buddha legend, while others are valuable for the light that they throw on the daily life of ancient India.

2. Sutta-pitaka.—The second 'basket' is the Sutta-pitaka, our best source for the dhamma, or religion of Buddha and his earliest disciples. It contains, in prose and verse, the most important products of Buddhist literature grouped in five minor collections named nikāyas. The first four of these consist of suttas, or ‘lectures,’ being either speeches of Buddha or dialogues in prose occasionally interspersed with verses. These four are regarded as the earliest compositions, and legal procedure in cases of schism. Here and there are also to be found stories, some of which contain the oldest fragments of the Buddha legend, while others are valuable for the light that they throw on the daily life of ancient India.

3. Abhidhamma-pitaka.—The third is the Abhidhamma-pitaka, or 'Collection of Grounds of Knowledge,' which consists of 66 books, divided into two major collections of Abhidhamma, a cosmological treatment of the working of the universe, and a psychological treatment of human faculties. Each of these books is further divided into series of chapters, each of which has a special subject. The Abhidhamma-pitaka is the most systematic and philosophically profound part of the Tipitaka.
canon, some go back to the earliest period. It is composed for the most part in verse, and, in fact, contains all the most important works of Buddhist Indian poetry. Of the works which it embraces the following may be mentioned. The Khuddo-
pitaka, or 'Short reader,' comprises nine brief texts to the mystic prayers in the Buddhist cult. The first is the Buddhist creed; the second gives the ten commandments enjoined on monks; and the ninth is the fine Metta-sutta, in which kindness towards all creatures is praised as the true Buddhist cult. The Dhamma-pavada, or 'Words of religion,' the most familiar and longest known work of Buddhist literature, is an anthology of maxims chiefly expressing the ethical doctrines of Buddhism. More than one half of its 425 stanzas are by some of the earliest disciples of the Buddha. The Udāna, or 'Solemn utterances,' consisting of old verses and prose stories (probably later additions), is a glorification of the Buddhist ideal of life and of the endless bliss of nirvana. The Vinaya-pakṣa, or 'Rules of Buddha,' is composed in prose and verse used in such a way that the same idea is expressed in both. Very often the verse simply repeats the statement of the preceding prose. The oldest of the verses gives the date from the time of Buddha himself. The Sutta-nipāta is a collection of poetical suttas, many of which, as shown by internal evidence, must go back to the beginnings of Buddhism, and have arise at least among the first disciles in India. They are important as supplying information about the original doctrine of Buddha, besides representing an early, though not the earliest, stage of the Buddhist legend. The Thera-gāthā and Therī-gāthā, or 'Songs of nuns and monks' and 'the poems of great spiritual merit exalting mental calm as the religious ideal, and describing the value of Buddhist ethical doctrine from personal experience. It is quite possible that here may be included poems composed by some of the earliest disciples of Buddha, but several are much later, since they represent a Buddha cult like that of the Mahāyāna. The Jātaka is a book consisting of about 350 stories of former 'births' of Buddha in the character of a Bodhisattva, or future Buddha. It consists partly of poetry and partly of prose, but only the verse portions have canonical value. For a discussion of the work see art. JĀTAKA.

3. Abhidhamma-pitaka. — The Abhidhamma-pitaka, or 'Book of higher religion,' treats of the same subject as the Sutta-pitaka, differing from that collection only in being more scholastic. It is composed chiefly in the form of question and answer, like a catechism. The starting point of this collection appears to have been the Sutta-
pitaka, one of the texts of which, the Anguttara-
nikīyā, may be regarded as its precursor. Its first beginnings seem to have been certain lists called māttās, which are already mentioned in the Vinaya-pitaka.

While the Pāli canon (apart from additions) was entirely composed in India, the non-canonical literature was the work of monks in Ceylon. There is only one important exception, the Mānasika-
pitaka, which must have been written in the north-west of India. It represents a dialogue supposed to have taken place between a Buddhist teacher and Menander (Mīlinda), the Greek king who was living about the time of Buddha, under the Indo-Greek dynasty. The author, whose name is unknown, must have lived at a time when the memory of this king was still fresh. As the Greek domination came to an end soon after Menander, his works hardly have been remembered for more than a century. That the original portion of the work, books ii. and iii. with parts of i., is thus as old as the beginning of our era is supported by the fact that it bears comparison with the very best dialogues in the Sutta-nipāta. Books iv.-vii., besides differing in character from the rest, are wanting in the Chinese translation made between A.D. 37 and 429. The second half contains various poems and is the work of learned monks in Ceylon.

II. SANSKRIT BUDHIST LITERATURE. — While one ancient sect created the Pāli canon, various later sects produced a Buddhist literature in pure or mixed Sanskrit, of which many extensive literary works have been preserved, though others are known only through Tibetan and Chinese translations. The great bulk of this Buddhist Sanskrit literature belongs to, or has been greatly influenced by, the later Mahāyāna school. That school, though acknowledging that the Theravāda, or 'Doctrine of the Elders,' went back to Buddha, regarded it as inadequate, because it made nirvana attainable to the few only through the life of a monk. In order to bring salvation to all humanity, the Mahāyāna taught that every man could aim at being born as a Bodhisattva (q.v.); and any ordinary man, even a Paradhā, could attain salvation by the practice of virtue and devotion to Buddha. The Buddhists are divided as to when and during the beginning, their earthly life and their nirvana being nothing but an illusion. The Buddhists preceding Gantama, instead of being six, are now believed to be thousands or even tens of thousands, and this enormous increase in the number of Bodhisattvas is revered as having for the salvation of mankind refrained from entering nirvana. Under the influence of Hinduism a new mythology grew up in which a number of Hindu deities were thus associated with the Pali suttas, and the practice of worship and devotion to Buddha, and a much stronger devotion to Buddha, analogous to that of the Brāhmaṇa Bhagavad--gitā (q.v.), was made. Brahma doctrine influenced the development of Mahāyānam in the philosophical side also. For, while the old Buddhism denied the existence of the ego only, the Mahāyāna doctrine also denied the existence of everything (expressed by the formula 'netre śāntaḥ, 'everything is void,' either as complete nihilism or as ideal nihilism (ujjñāna-nirviśeṣa, or 'doctrine' that nothing exists except in consciousness').

1. Hinayāna. — The large realist sect of the Sarvastivādin ("followers of the doctrine that everything is"), besides having an extensive literature, possessed a Sanskrit canon which, however, only fragmentary parts of the Udāna, Dhammapada, and Ekottarāgama (corresponding to the Pāli Udāna, Dhammapada, and Anguttara-
pitaka) have as yet been discovered. The Mahāyāna, or 'Book of great events,' is a text of the Lokottaravādin ("followers of the doctrine" that the Buddhavas are supernatural beings), a subdivision of the old schismatic sect, the Mahāsāṃghikas, or 'adherents of the great community.' Its chief content is a miraculous biography of Buddha, written in mixed Sanskrit. It is of great importance as containing many old versions of texts that also occur in the Pāli canon, such as the Brāhmaṇa's ascetic, the Mehaśānta-pitaka, which must have been written in the north-west of India. It represents a dialogue supposed to have taken place between a Buddhist teacher and Menander (Mīlinda), the Greek king who was living about the time of Buddha, under the Indo-Greek dynasty. The author, whose name is unknown, must have lived at a time when the memory of this king was still fresh. As the Greek domination came to an end soon after Menander, his works hardly have been remembered for more than a century. That the original portion of the work, books ii. and iii. with parts of i., is thus as old as the beginning of our era is supported by the fact that it bears comparison with the very best dialogues in the Sutta-nipāta. Books iv.-vii., besides differing in character from the rest, are wanting in the Chinese translation made between A.D. 37 and 429. The second half contains various poems and is the work of learned monks in Ceylon.

The Lalita-vistara, or 'Detailed account of the play of Buddha,' though it seems to have origin-
LITERATURE (Buddhist)

ally been a Buddha biography of the Sarvastivādins, has been extended in the sense of the Mahāyāna, of which it bears all the characteristics. It is a still unpublished prose, with occasional long metrical pieces in ‘mixed Sanskrit.’ Containing old and new elements side by side, it is valuable for the development of the Buddhist legend from its earliest beginnings to the deification of Buddha as a god above all gods.

The Buddha-charita, or ‘Life of Buddha,’ is an epic composed in pure Sanskrit. It is the work of Asvaghosa (q.v.), a genuine poet, who, as one of the pioneers of the Mahāyāna and a contemporary of Buddha, must have composed it in the 1st or 2nd A.D. Originally a Brāhmaṇ, he joined the Sarvastivādin sect, but laid great stress on devotion to Buddha. His epic, however, contains no pronounced Mahāyāna doctrine.

Another work of the same school, dating probably from the 4th A.D., is the Jataka-nāta, or ‘Garland of birth stories,’ by Aryasura. It is composed in a mixture of verse and prose, conforming to the style of classical Sanskrit literature. It contains 29 jātakas, illustrating the perfections, or ‘perfections,’ of a Bodhisattva, and nearly all occurring in the Pāli Jātaka Book.

Cogitate with the preceding works are a number of collections of avadānas, or ‘stories of great deeds,’ some of them, probably from the 2nd cent. A.D., contains pieces from the Sanskrit canon of the Sarvastivādins, and nothing connected with the cult of Bodhisattvas or with Mahāyāna mythology. Dating from about a century later, but inelegant and improbable from the 2nd cent. A.D., contains pieces from the Sanskrit canon and quotes individual canonical texts, besides having several legends common with the Pāli canon. Most of the stories are written in good simple Sanskrit with occasional gāthās, but others show the elaborate metres and long compounds of the artificial classical style.

2. Mahāyāna.—The Mahāyāna, not representing a homogeneous sect, possesses no canon. But there are two main schools or traditions of texts, which, composed at different times and belonging to different sects, are also called Jātaka-sūtras. The most important and most characteristic work of the Mahāyāna school is the Sūtra-dharma-pud-derika, or ‘Lotus of good religion.’ It contains a matter of different date represented by Sanskrit prose and by gāthās in ‘mixed Sanskrit.’ Its original form dates perhaps from about A.D. 200. Saivyamuni is here no longer a man, the mendicant of the Pali suttas, but a god above all gods, who has lived for countless ages and will live for ever. His doctrine is that every one can become a Buddha who has heard the preaching of Buddha, performed meritorious works, and led a moral life. Even those who adore relics, erect vihāras, or make Buddha images obtain the highest enlightenment (see LOTUS OF THE TRUE LAW).

A whole sūtra, the Kāraṇīya-sūtra, akin in language and style to the later Hindu purāṇas, is devoted to the exaltation of Avalokiteśvara, the ‘Lord who looks down’ with compassion on all beings, here the typical Bodhisattva who, in the exercise of infinite pity, refuses Buddhahood till all beings are saved. The yearning for salvation (mokṣa), which is moral and religiously expressed than in the figure of Avalokiteśvara (q.v.). The cult of this Bodhisattva is known to have been in existence before A.D. 400. More mythological is the Śākhyatā-devyā (c. A.D. 100), or ‘Detailed account of the Land of Bliss,’ which is devoted to the praise of the Buddha Amitābha (‘of unmeasured splendour’). The Gaṇḍā-vyāha (q.v.) contains the life of the Bodhisattva Mājusri (q.v.), who occupies a prominent position in Mahāyāna cult and art.

Other Mahāyāna sūtras are of a philosophic and dogmatic character. The Lankāvatāra-sūtra (a Dharmasūtra) describes a visit paid to the demon king Rāvana in Ceylon by Buddha, who answers a number of questions about religion according to the doctrines of the Yogācāra school (founded by Asanga). The tenets of a number of philosophical schools are also discussed here. The Dādhanāmāvatāra (a Dharmasūtra) represents a lecture by Buddha in India’s heaven, about the ten stages by which Buddhahood is to be reached. It dates from before A.D. 400, when it was translated in Chinese. The Samaññaphala (a Dharmasūtra), or ‘King of meditations,’ is a dialogue in which Buddha shows how a Bodhisattva can attain the highest enlightenment by various stages of contemplation. The Saṃvatsara-prabhuma (a Dharmasūtra), dating from before the 6th cent. A.D., is a philosophically, partly legendary, and partly ritualistic in its contents. The Hindu goddesses Sarasvati and Mahādevi are introduced, and magical formulae and Tantric practices are dealt with. The Rājasthāna-sūtra (before 400 A.D.), besides containing Buddha’s description of the qualities of a Bodhisattva, introduces a number of jātakas. Its main interest lies in its prophecy of the future decay of religion; for its realistic descriptions must largely reflect the lax morals of the time of the Bodhisattva. The Saṃvatsara-prabhuma, 6th cent., and the Rājasthāna-sūtra, 4th cent., deal with the six perfections of a Bodhisattva, but especially with the last, prajñā, ‘wisdom,’ the knowledge of the doctrine of nothingness, which denies not only being, but also not-being. The doctrine of the Mahāyāna sūtras was systematized by Nāgārjuna, originally a Brāhmaṇ who flourished about A.D. 200 and founded the Mahāyāna school, one of the main branches of the Mahāyāna. In order to remove the otherwise insoluble contradictions of complete nihilism, he lays down in his Mahāyānāsūtra the doctrine that Buddha’s words depend on two kinds of truth, the conventional and the ultimate, which are the highest truth in the highest sense. It is only through the lower that the higher truth can be taught, and it is only through the latter that nirvāṇa can be attained. This distinction resembles that between the higher and the lower knowledge in the Vedānta system of the Brāhmaṇs (see MAHĀYĀNAKA, MAHĀYĀNIKAS).

Nāgārjuna cannot be regarded as the originator of the Mahāyāna doctrine itself. There must have been teachers and texts of that doctrine more than a century before his time; for Mahāyāna texts were translated into Chinese in the 3rd cent. A.D., and the Gandhāra type of Buddhist art, which represents the Mahāyāna doctrine, came into being about the beginning of our era.

Asanga (q.v.), the eldest of the three sons of a Brāhmaṇ from Peshāvar, probably flourished in the first half of the 4th cent. Originally an adherent of the Sarvastivāda school, he became the main exponent of the Mahāyānāst Yogācāra school, which recognizes existence in consciousness (vijñāna) only, denying the reality of the phenomenal world. The only absolute entity is truth (evaluate), which is not available outside the mind of the bodhisattva, in the sense of which is attainable solely by those who practise yoga in ten stages. Yoga (q.v.) was thus brought into systematic connexion with the Mahāyāna doctrine. Asanga expounds the tenets of this
school in his Mahâyâna-Sãtrâlaksâra, a work containing of memorial verses (tâkrita) in various metres and a commentary written by himself. Asanga's brother, Vasubandhu, one of the most important figures in Buddhist literature, distinguished for profound learning and great powers of metaphor, and a prodigious scholar of logic, having written authoritative works representing both the great divisions of Buddhism. His most important work, belonging to his earlier and Hinayâna period, was his Abhidharmakośa, which deals with ethics, psychology, and metaphysics, but is known only through a Sanskrit commentary and Chinese and Tibetan translations. In later life he was converted by his brother Asanga to the Mahayâna doctrine, when he composed a number of commentaries. The other is the Bodhicaryâvatâra, or 'Entry into the practice of enlightenment,' a religious and moral treatise, inculcating the pursuit of the highest moral perfection. The aim in both works is the attainment of enlightenment as a Bodhisattva by means of infinite compassion and the generation of Bodhims, that is, wisdom being the belief in nothingness (ânityâtâ).

An indication of the decay of Buddhism in India is the approximation of its latter literature to that of Hinduism. Thus the Mahâyâna sūtras show strong resemblances to the Brâhmanic purânas, containing, like these, mahâtmyas, or glorifications of particular localities, and stotras, or hymns addressed to various deities. There are also separate stotras in the Mahâyâna, dedicated to Vaishnavas and Siva; many of them glorify the goddess Tara, the female counterpart of the Bodhisattva Avalokitéśvara.

A further sign of degeneracy is the increasingly important position which the dhâranis, or 'spells', began to assume in Mahâyâna literature. They appear to have existed from the 3rd cent. A.D. They were probably in their earliest form intelligible sūtras containing Buddhist doctrine, but unintelligible mystic syllables gradually began to predominate. In many cases the influence of the Saivite tantra they became pure gibberish and entered as essential elements into the Buddhist tantras.

The Tantras (q.v.), which probably date from the 9th to the 11th cent., and are composed in barbarous Sanskrit, represent the final stage in the degradation of Indian Buddhism. They are treated partly concerned with ritual (kriyâ-tantra) or rules of conduct (charita-tantra), partly with the esoteric doctrine of the Mahâyâna (yogâ-tantra). The former class is a revival of the old Brâhman ritual of the Gâyâyâs, and the mystical syllables contained in them are addressed not only to Buddhás and Bodhisattvas, but also to Saivite deities. Most of the tantras, however, are concerned with yoga, starting from the mysticism of the Mâdhavânumpyika and the Yogachâra schools. The yoga here aims at the highest knowledge of nothingness (ânityâtâ), not only by asceticism and meditation, but by magical rites, hypnotism, and other expedients. The teaching and practice of this yoga are a mixture of mysticism, sorcery, and eroticism, accompanied by disgusting orgies. Nothing of Buddhist remains in them, for they differ, no respect, except in being described as 'propagated by Buddha,' from the Saivite tantras, inculcating as they do the worship of the Śiva and Śaivite gods, and introducing numerous esoteric deities into their cult.

A. A. MACDONELL.

LITERATURE (Chinese).—The vast mass of Chinese literature is divided into four classes—classics, histories, philologies, and belles lettres. The term king, translated 'classic,' means originally the warp of a web, and by metaphorical extension comes to mean what is invaluable, rare. The Chinese classics are, therefore, those books which are regarded by the Chinese as canonical. Taoism and Buddhism as well as Confucianism have their classics; but in speaking of the Chinese classics one has in view the books which have been preserved in Chinese and Tibetan translations only. If we speak of them as 'sacred,' we expose ourselves to mis-leading associations. We do, indeed, meet with the phrase Sheng king as designating the Confucian canon, where Sheng is the word which indicates the warp of a web. But this term is only an indication of holiness. Originally, however, it refers to perfection of wisdom ('sage,' 'sagely'), and does not of itself suggest any relation to the divine. Of the perfect Sage it is said:

He is seen, and the people all reverence him; he speaks, and the people all believe him; he acts, and the people all are pleased with him (Docet, of the Mem, xxxi. 3).

The authority of the classics is due not to any special inspiration, but to their connexion with sages or sagely men who possessed this ideal development of human nature. Degrees of authority are recognized; Mencius, c.g., in some of his pronouncements is held to have fallen short of the perfect balance of the sage. The study of the classics was founded on and almost confined to the sages, their influence has been enormous. Less legitimately their connexion with the sages has given them a pre-eminent share in that reverence, passing into superstitious awe, which is felt for the great men of the past.

Among the commentators on the classics, Chu Hsi (A.D. 1130-1200) has long been considered to be the standard of orthodoxy. The number of books embraced in the Chou Iâ, or Chou Iâ classics, on the Imperial edition of the T'ang dynasty included thirteen books. The present canon, taken in the strictest sense, includes the Five Classics and the Four Books.

1. The 'Five Classics.'—(1) K'ing, The Book of Changes.—The germ of this is the Eight Trigraphs, further elaborated into sixty-four, alleged to have been copied by Fu Hsi, a legendary ruler of early China, from the back of a mysterious creature which appeared from the waters of the Yellow River. The diagrams are combinations of whole and broken lines, and are supposed to correspond to the powers of nature—heaven, earth, fire, water, etc. Wen Wang added to the diagrams his 'Definitions'; Chou Kung supplemented these with his "Observations"; and, finally, Confucius added 'Ten Chapters of Commentary,' and the classic was complete. As being the joint work of these four sages, it enjoys a great reputation. It is a compound of oblong lines and taoistic speculation and of a system of divination. But with regard to its meaning and its origin, whether it is native to China or may be connected with Babylonia or elsewhere, various opinions have been held by scholars.

(2) Shu K'ing, The Book of Historical Documents.—We read of a canon of one hundred
historical documents, ascribed on inadequate evidence to Confucius, with a preface the Confucianist's authorization of which is even more doubtful. What now exists is this preface and fifty-eight books of documents, the tradition of which is traced back to two early collections, Fu Sheng and Fu Tse. The twenty-five books which rest on the sole authority of the latter are gravely suspect. The whole collection of documents, by no means forms a continuous history, falls into five divisions—the books of "Five Classics," the book of "I Ching," the Shang records, and the chronicles. The earliest documents refer to a period about 2000 B.C., the latest to 627 or 624 B.C. Whatever be the admixture of legendary matter, the documents are of much historical interest. As a record of early moral and religious ideas their value is also great. The political ideal is a benevolent autocracy, and sovereignty is conferred or withdrawn according to the righteous judgment of God, who raises up the instruments of his providence.

(3) *Shi King, The Book of Odes.*—This comprises three hundred and five odes, with the titles only of six more, traditionally said to have been selected by Confucius from the numerous pieces extant in his time. This account greatly exaggerates the size of the collection. Confucius attached great educational value to the odes. He claims that their design is summed up in this: 'Have no depraved thoughts,' but, while they are free from indecencies, a number of them spring from irregular passion. The subject-matter of the odes is various—praise of virtuous kings and ministers, and of chaste and submissive wives; longing for absent friends, and the joy of reunion; the griefs of neglected officers and forsaken wives; complaints of injustice and wrongs; and the praise of careless or wicked rulers; celebration of State banquets and sacrifices. The odes are not arranged in chronological order, but in four classes: (1) 'Lessons from the States,' 15 books of odes from various feudal States; (2) 'Minor Odes of the Kingdom,' 8 books; (3) 'Greater Odes of the Kingdom,' 3 books; and (4) 'Odes of the Temple and the Altar,' 3 books. The earliest odes date from the Shang dynasty (1705-1122 B.C.), and the latest from the time of the Chou dynasty. Much can be gathered from the odes illustrating early Chinese civilization.

(4) *Li Ki, 'Collection of Treatises on the Rules of Propriety or Ceremonial Usage.'—Of the Li, the book of Li, the last only has a place among the Five Classics. It is a collection condensed from a larger group of documents in the 1st cent. B.C., and augmented and finally fixed in the 2nd cent. A.D. The various treatises, which are not arranged in any logical order, cover a great variety of subjects—birth, capping, marriage, death, mourning, sacrifices, education, and intercourse between persons of different grades and ages. There is much of the same detail, but it is from them we learn the genius of the Chinese race as embodied in religious and social usages.

(5) *Ch'ün Ch'ün, 'Annuals.'—Ch'ün Ch'ün, Hl, 'Spring and Autumn,' a common name for annuals, is the only one of the Five Classics ascribed to Confucius himself; but it falls so far short of Mencius's *economy* of the *Ch'ün Ch'ün* which he knew that doubt—not supported by other evidence—has been expressed as to whether our *Ch'ün Ch'ün* is in reality his work. This work is indeed the product of later time, and may be merely transcribed from the annals of 1 nu, Confucius's native State. It is an absolutely told record of such things as the beginnings of the seasons, State-covenants, wars, deaths of persons in charge of the government, and especially notices of eclipses are important as affording chronological data. The record runs from 721 B.C. to the 14th year of Duke Ai, when Confucius's work ends, and is supplemented by his disciples up to the time of his death, 16th year of Duke Ai (478 B.C.). Even Chinese scholars admit that the record is not impartial, and is guilty of concealing the truth. An attempt has been made to show that the most characteristic of the work is the *Analects.* These were probably compiled by Confucian scholars of the second generation. Conversations with Confucius and disconnected sayings of his, mostly quite brief, form the staple of the work; but bk. 19 contains sayings of disciples only, and these occur also in other books. The main themes are ethics and government. In spite of the general failure even to seek after righteousness, it is maintained that human nature is made for virtue, which is a life-long task. For the attainment of virtue there is sufficient strength, if only it is exercised. Hence the importance of moral culture, though some may be incapable of it. The ideal man (Chun Tzu) is depicted, and such topics as filial piety, friendship, and love are treated. 'Reciprocity'—not to do to others what one would not have done to oneself—is the highest moral rule. There is intentional reticence on extra-human matters. In politics the moral ends of government are emphasized, and the influence of a virtuous ruler over his subjects. Bk. 10 contains many particulars as to Confucius's deportment and habits. More important are the scattered estimates of Confucius by himself.

(2) *Ts'ao Hsieh, 'The Yesing.'—The Yesing,' is so called with reference either to the importance of its matter or to the mature age of its students. The text appears to be fragmentary. In one recension it forms a section of the *Li Ki;* but as usually printed, it is arranged by Chu Hsi, though without authority, into text by Confucius and comment by Ts'ao Tzu. The book professes to trace the development of morality from investigation of things, through extension of knowledge, and the cultivation of the mind, to the heart, up to cultivation of the person (which is the central idea); and then on to regulation of the family and tranquilizing of the empire. The work, though not without some excellent moral ideas, is small and insignificant.

(3) *Chung Yang, 'The Doctrine of the Mean' (probably rather 'Equilibrium and Harmony'), is ascribed to Kung Chi, grandson of Confucius, commonly known as Tzu Shih. This treatise, like the *Ts'ao Hsieh,* forms a section of the *Li Ki.* Human nature, as given by heaven, is the source of morality. In its original state it is 'equilibrium'; as developed into right action it is 'harmony.' The beginnings of this development lie at hand in ordinary duties and virtues, particularly in 'reciprocity,' which is here developed positively (= the Golden Rule; cf. *E.E.* vi. 316). Such development of nature is exhibited in the sages. When it is so developed that fact and ideal coincide, we have 'sincerity.' Some have this sincerity by innate endowment; some attained to it by moral instruction. It is the *summon summon,* and has a transforming influence on things and men. Confucius is eulogized extravagantly, though not without eulogy, with the ideal man who is the equal of heaven.

(4) *Mencius* (371-288 B.C.).—Seven books of his teaching remain, which are credibly ascribed to Mencius himself in collaboration with his disciples. The main topics are ethics and politics. Human nature is made for righteousness. This original constitution is the child-heart which good
literature (Dravidian) - Dravidian literature is the record of the best of the thought of those peoples of S. India who speak languages designated by Kunārīla Bhatta, in the 7th cent. of our era, as Andhā Drāvida. The four principal literary Dravidian languages are now Telugu, Tamil, Kanarese, and Malayalam. According to the Census of 1901, the Dravidian population of India is spoken by 231 millions of people, Tamil by a little over 150 millions, Kanarese by 105 millions, and Malayalam by 67 millions. That the Sanskrit-speaking Aryans were acquainted with S. India at an early period is shown by the Telugu, the oldest Dravidian language, by the grammatical Pāṇini (probably c. 350 B.C.), and the Indian invasion into the South came at a later period that the southern Dravidian languages retained, with but few exceptions, their own characteristic grammatical structure. Their vocabulary was, however, enlarged by the inclusion of Sanskrit technical terms and words in their corruption. So widely did this Aryan influence on the literature of the South spread in course of time that J. Viswanath (Ibid., p. 36) says: 'Not one Telugu, Kanarese, or Tamil book now in existence is independent of Sanskrit. Writing was not applied to vernacular languages before the 4th century. It was the Aryan Brahmins or Jainas or Buddhists who first having learned the common Sanskrit language, but its development by the nāysisc authors, and composed works. The preliminary of the Jain period must have lasted two or three centuries' (Siddhānta Sāras, August 1905).

The southern inscriptions of Aśoka show that writing must have been familiar to the people by the 3rd cent. B.C. The present southern scripts are derived from the oldest, the northern; Sanskritized Tamil script is of about the 4th cent. of our era. Telugu and Kanarese alphabets date from the 5th cent. Previous to any writing or written records the folk-songs of the people, their moral aphorisms as well as their literary outbursts of love and war, set as they were to music, were handed down by memory from generation to generation. V. Sundaram Pillai states that more than 19,000 lines of the hymns of the early poet Sambandhur, not later in date than the 7th cent., are still extant: 'Most of them appear to have been uttered impromptu, and all of them being lyrical are set to music. The original tunes are now mostly forgotten. They were lost in the later airs introduced by Aryan music in the north' (Some Mideitating in the History of Tamil Literature, p. 5).

The intrusive Aryan influence so blended with the indigenous Dravidian element that the Aryan het (stāty) completely ousted the primitive domestic musical instrument (yīd), no reliable description of which remains on record. Similarly, the old grammars and the grammars of the Pāṇini and Andhā school of grammarians have been superseded by the North Dravidian, the Nānd, composed by a southern Jain grammarian, Pavanandi, about the beginning of the 13th century. The Nāndkī lays down the rule that has to reject the old and obsolete usage and to adopt new and the heretofore views of his time. It is in the 11th and 20th centuries, the Nāndkī lays down the rule that has to reject the old and obsolete usage and to adopt new and the heretofore views of his time. In the 11th and 20th centuries, it has gradually become the accepted rule of the day, and poetry and prose are constructed by the learned only when they are as different as the spoken vernaculars of Aṅglo-Saxon is from modern English. The more they hold themselves aloof from the colloquial language of the time and the more they are swathed in archaisms, the more they merit the praise of poeta. The earliest, and therefore the purest, Dravidian literature, as freest from Aryan influences, lies enshrined in works dating from the 2nd cent. of our era. Collections known as the Ten Classical Poems are assigned to a very early date; these were succeeded by Eight Compositions of various authors. Eighteen shorter stanzas, included in the moral aphorisms of the Kural or Tirumular, followed, and the four hundred quatrains of the Nāladiyār, said to have been composed by a Jain poet of about the 8th century. The latter quatrains show strong Aryan influences, denoting that they do with pure and unbroken Dravidian metaphysics— the pain of existence, transmigration of the soul, and release therefrom. Some of the quatrains are mere translations from such Sanskrit epics as the Mahabharata. Pope, who translated and annotated the Indian epics in his scholarly edition, described it as 'The Bible of the Cultivators of the Soil.' Its style, however, is so classical that no cultivator of the soil could understand the meaning of the verses unless explained to him in the language that he is accustomed to speak. The moral epigrams of the Kural and Nāladiyar, in couplets and quatrains, have been acclaimed as the highest achievements of Dravidian literature. Pope (Kural, p. xiv) truly says of the Kural (and the same applies to the Nāladiyar) that a line 'is often little else than a string of crude forms artfully fitted together.' Style such as this, framed on Sanskrit corrupt compounds, can hardly claim the title of literature for literary purposes and then taxed the natives to write and compose works. The preliminary of the Jain period must have lasted two or three centuries' (Siddhānta Sāras, August 1905).
LITERATURE (Egyptian)

Jiivakachintamani. These poems, amid a surrounding of love and romance, give a vivid view of early Jain and Buddhist life in S. India and reliable accounts of the doctrines of the Jain and Buddhist faiths. They still awaited translation into English to make them available for historical purposes. Later scholars have contended the peculiar charm of the stately and leisurely style of the original, its melodious and harmonic sequences of sound, and the subdety of its quaint and involved conceits of metaphor. J. Vinson (Journals of the Bombay Arch. Soc., p. 79, 1873) has given a valuable and balanced judgment respecting the comparative value of the best of Dravidian literature.

A part perhaps are the recitals of sentiments moral, it is not a poem of any importance until that tradition complete as a law unfatigued by the Europeans. Its description are styled, monotonous, poems of mausoleum cost of expression, quotations, indeed, to be otherwise entertained, considerable is asserted by the poets in their own work to resemble them; the so proverbial are the great spirits, to which expressions, to the extent, is the form known in a modern.

This Aruan influence so permeated the whole spirit and communiqué of the Dravidian period that Appakani, a grammarian of the 17th cent. contemnously declared that Telugu adaptations from the Sanskrit were merely for the use of women and Sudras. The Dravidian scholar, G. V. Ramamurti, who quotes the above in his Monumenta on Modern Telugu (Madras, 1913, p. 3), further states that, should a Brahman read the Ramayana for religious merit, he reads the Sanskrit original and not a Telugu adaptation. The same writer, who is also a advocate for a reformed pure Dravidian literature freed from Sanskrit corruptions, states only the truth when he says:

"A Sanskrit original, whether it is the Ramayana or Mahabharata, is much simpler in style and language than a translation of it" (op. cit. p. 6).

Nevertheless, the simple peasant values these Telugu, Tamil, Kamarase, or Malayalam imitations of, or adaptations from, the Sanskrit poems, epics, and prabandhas. Read as they are by professional reciters under the village tree during the long starlit evenings, they hold the simple folk in spellbound wonder and awe as they listen to a running transcription and commentary in the current vernacular. They teach the village folk the simple story of life, of the rewards and joys of those who had faith in the gods and thereby gained salvation through the grace of the deity, of the triumph of good over evil, of all the loved stories of wise devotion and patient suffering under unmerited calamities.

LITERATURE (Egyptian).—The great bulk of Egyptian sacred literature may be grouped in three divisions: (1) the Pyramid Texts; (2) the Book of the Dead, with its related group of books, the Book of Anu Uard (or of knowing that which is in the under world), the Book of Breathings, the Book of Gates, etc.; and (3) miscellaneous writings, such as the hymns to Osiris, Amun, Isis, Ra, Osiris, Hapy, Amen, etc., such writings as the Lamentations, and the Festival Songs of Isis and Nephthys and the Litanies of Seker, and a number of legends concerning the gods and their relations to mankind.

1. The Pyramid Texts.—These constitute by far the most important body of Egyptian sacred writings known to us, not only because they exhibit the religious beliefs of the nation at a very early period in its history, but also because they are the remains of primitive traditions embedded in them enable some of the Egyptian beliefs to be traced back even to pre-historic times, and because the development manifest results in the later versions of them shows how gradual but important changes were happening in Egyptian religious belief within a definite period.

The great pyramids of the 11th dyn. kings have no interior inscriptions, and it was supposed that this was true of all other pyramids until the discovery, in 1850, of the 1880 Mariette's workmen at Saqqarah managed to effect an entrance to the pyramid of Pepy I. of the 5th dyn., and later on that of Merenre of the same line, and found that both contained lengthy hagiographic inscriptions, he wrote an account of them. Eventually inscriptions were found in five pyramids, of which the oldest is that of Unas of the 11th dyn., and the others are those of Teti, Pepy I., Merenre, and Pepy II., all of the 5th dyn. The inscriptions thus discovered a period of about 150 years, from 2395 to 2175 b.c. or, on the opposite side, dating, from about 4210 b.c. onwards. Immediately after their discovery the texts were edited by Maspero, and the attention devoted to them has been steadily increasing.

These texts are, then, the oldest body of religious literature extant in the world, and a great deal of the material embodied in them carries us back to very much earlier times than their own sufficiently early date, referring to primitive customs and conditions of life which had long been extinct by the time of the 5th and 11th dyn. The later versions show traces of editing, which has been undertaken in order to meet the new developments of religious thought arising in a period of 90 years. Broadly speaking, the object of these writings is to secure blessedness in the after-life to the King on the walls of whose tomb they are inscribed; for there is as yet no trace of any idea that the immortality postulated for the Pharaoh may be also the property of the common people. The whole contents of the texts are directed towards the one purpose of securing entrance to the abodes of bliss for the dead king, and unification with the gods when his entrance is secured. These contents fall under the following divisions: (1) funerary ritual and eternal offerings, (2) magical charms, (3) ancient ritual of worship, (4) ancient hymns, (5) fragments of ancient myths, and (6) prayers on behalf of the dead king.

The material is arranged in sections, each of which is headed by the word, 'Utter (or recite) the words.' Of these sections the pyramid of Unas contains 225, and the other pyramids make up the number to 714. The amount of material is thus considerable, as may be judged from the fact that in Sethe's edition it fills two quarto volumes, and contains over 1000 pages of text. It is arranged in the most haphazard manner possible, the scribes re-
such as those which describe how the dead king in the other world praises and disembowels the gods, cooking them in his kettle, and eating them,

‘The great ones for his morning meal,
Their middle-sized ones for his evening meal,
Their little ones for his night meal’,

so that ‘their magic is in his belly,’ have their own value as literature for the wild power and vigour of imagination which they reveal, but they are still more valuable as survivals of a period when the Egyptian, whom we have never seen save in the decent, ordered civilization of the dynastic period, was actually an unregenerate savage, with beliefs on the same intellectual level as those of other uncivilized races.

2. The Book of the Dead.—Next in importance to the Pyramid Texts comes the collection of sacred writings which has for long been regarded as representative of Egyptian religious literature, and is most widely known by the totally misleading title of The Book of the Dead. The only justification for the use of this title is that the texts are more or less regularly used in the collection were, like the Pyramid Texts, entirely designed for the advantage of deceased persons in the other world. The Egyptians themselves called the collection ‘The Chapters of Port em Hru,’ or ‘The Coming Forth by Day’ (or ‘Ascending by Day’), a title which is misleading in every way. Among the contents of the chapters suggest that it may have something to do with the powers which the knowledge of them conferred upon the deceased to go in and out from his tomb, and to live an unlettered life in the other world. Concerning the early history of the Book of the Dead we have no certain information. In fact, there is practically no literature extant from the period between the VIth and the Xth dyn. to show the development of religious thought in the middle kingdom. However, under the Xth and XIth dynasties, there begins to appear a series of texts which are regarded by some as an early recension of the Book of the Dead. These texts are written no longer on the walls of tombs, but on the inner surface of the wooden coffins in which the well-to-do people of the period are buried. They are generally written in black ink, and are ornamented with coloured borders representing the usual funerary offerings and the symbols of the various deities. The text thus preserved is taken from the Pyramid Texts, the other half consisting of material which is met with later in the genuine Book of the Dead; so that, really, the inscriptions of this period occupy a middle position between the old texts, whose object was the service of the king alone, and the later book, which was a popular compilation intended for the use of all and sundry. It might be useful, therefore, to distinguish these Middle Kingdom texts by some such title as that of ‘Collin Texts,’ which Breasted employs to denote them.

The writing of these texts is marked by the same carelessness and inaccuracy which characterize the later versions of the Book of the Dead. The scribe’s sole object was to cover the prescribed surfaces as rapidly as possible; it was never expected that his work would be seen again, and consequently he took the least possible trouble with it. In one instance the same scribe repeated five times over in a single coffin. Apparently the thought that by his carelessness he might be prejudicing the safety of his patron in the other world did not worry the Egyptian scribe.

The Collin Texts are intermediate in character, as in time, between the Pyramid Texts and the Book of the Dead. The old solar ideas of the Pyramid Texts are still present; but the Osirizing process, already begun, has been carried a stage further, and now we have indications of the
LITERATURE

Egyptian

intrusion of the essentially Osirian idea of an under-world in the old solar idea of a celestial heaven. Bronze-epitaphiographically sums up the dip of the balance in the Coffin Texts towards the Osirian side by the remark that in the Pyramid Texts Osiris is lifted skyward, while in the Coffin Texts Ra is dragged downwards (p. 237). The idea of a Western Elysium, in contradistinction to the solar idea of an Eastern one, begins to appear, and the character of the Elysium begins to approximate to that of the Sekhet Aarn, 'Field of Balances', as found in the Book of the Dead. Thus one of the chapters of the Coffin Texts is concerned with 'Building a House for a Man in the Nether World, digging a Pool, and planting Fruit trees. Already the Coffin Texts exhibit instances of the desire, which reaches full development later, of furnishing the deceased with words of power to enable him to assume various transformations. Various texts enable him to transform himself into 'the blazing eye of Horus', into an 'etern-bird', or into 'the servant at the table of Hathor'; and along with this development comes another which reaches an extraordinary pitch in the Book of the Dead—that of charms to protect the deceased against the dangers of the under-world. There are charms to prevent the head of a man from being taken from him, for repulsing serpents and crocodiles, for preventing a man from being obliged to walk head downwards, and so forth. This kind of rubbish, towards which the Egyptian mind is naturally inclined, increases steadily in amount until the really valuable morality of the Book of the Dead is almost choked under its senseless bulk.

The Book of the Dead, properly so called, makes its appearance with the New Empire, and following centuries e.g., under the XVIIIth and XIXth dynasties. The change from inscriptions on tomb-walls to inscriptions on the inner surfaces of coffins is now followed by a further change; the texts which form the new compilation for the use of the dead are now written on rolls of papyrus, and placed in the coffin. The various versions extant from the XVIIIth to the XXIInd dyn. have mainly been derived from tombs near Thebes before the end of the new kingdom is period is known as the Theban Recension. It cannot be too clearly understood that there never was a standard text, or anything even remotely approaching to such a thing. Probably no two papyri or two pages of them, or two sections of them, and the divergencies are extraordinarily great. The size and content of the so-called Book of the Dead which was buried with any particular man depended entirely upon the power or the will of his friends to purchase a satisfactory copy for him or the reverse. The poor man has a meagre roll a few feet in length, containing a pitiful selection of a few of the more important chapters; the rich man may have a supplement which run from a few feet in length and containing anything up to 120 or 130 chapters. In the XVIIIth dyn. the scribes began to ornament the text with designs in black outline, known as vignettes. Little by little the practice developed, and in the XXIInd dyn. the illustrated papyri had become the rule. The illustrations are often beautiful pieces of illumination, and sometimes attention has been given to them at the expense of the text.

In the most notable papyri of the XXIInd dyn. the copying of the text has been so laborious, with the expense of the text, which has become very corrupt, and also begins to contain passages which are not found in the older versions. This tendency is accentuated in the XXIInd dyn. papyri, which contain sections that, strictly speaking, have no connexion with the Book of the Dead. And from this time onwards there is a falling off in the versions, until a time comes when the book seems to have been written. This period coincides with the decline of the power of the priests of Amen-Ra.

In the XXVth dyn., however, the book takes a new lease of life. It now appears to have been reduced to some sort of order, to have been, in fact, edited and systematized. The result of this editing is the Saite Recension. It contains four chapters which have no counterparts in the earlier versions of the Book of the Dead.

In the Ptolemaic period we have a version which is best represented by the Turin Papyrus, from which Lepsius prepared his well-known edition. It is the longest extant collection of texts, containing nominally 185 chapters—some of them, however, are really vignettes, and others duplicates, the number of actual chapters being 153.

Meanwhile a number of short religious works had been compiled, containing what at this period was deemed to be most essential in the old versions of the book, and these are more commonly found in the end of the Ptolemaic period than the full version. These are known as the Shau-en-Saaten ('Book of Breathings'); they contain no hymns, but only things up in the world, which does not directly refer to the life of the deceased in the world beyond. They may be regarded as an epitome of all that the Egyptian hoped to obtain in the spirit world.

In the Roman period there are still found small rolls of papyri inscribed with statements referring to the happiness of the deceased in the next world; and even in the early centuries of the Christian era the knowledge and use of the book were not quite extinct, for several of it are found on coffins as late as the 2nd century.

If we take into consideration the fragmentary versions in use as late as the 2nd cent. A.D., the actually extant documents of Egyptian religion, the Pyramid and Coffin Texts, and the Book of the Dead, cover a period of practically 5000 years on the most limited system of dating; and, allowing for the fact that even in the earliest texts theological ideas are to a great extent developed in a stereotyped manner, we are perfectly within reasonable limits in saying that these documents represent the theological development of at least 5000 years. Petrie's system of dating would, of course, considerably extend this period.

already been lost, as there are several chapters which contain glosses on the various allusions, and these glosses do not always agree. Very often the chapters do not, indeed, al- lowed from the Pyramids of Pharaohs, of One and of Two. Gemnikoi, of Abydos, and of Khmun-khet, writings essentially as the same character as the book of Proverbs, while the Lay of the Harper (or Lament of King Antef) may have been composed with the Egyptians, and a remarkable comment on the social and moral condition of the land in the Middle Kingdom is found in the Adumptions of Ipuwer.

C. MISCULARINE WRITINGS.—For hymns, etc., see Literature in art, Hymns (Egyptian). A good popular rendering of the Legends of the Gods is found in M. A. Murray, Ancient Egyptian Legends, London, 1913. The Adumptions of Amon have been rendered by A. H. Gardiner, The Adumptions of an Egyptian Sage, Leipzig, 1908.

LITERATURE (Indian Vernacular).—The literature of the modern vernaculars of India may be divided into two main classes—that written under Muslim influence, and that written under Hindu influence. The former dates from the Mogul conquest, and was composed mainly in the Urdu form of Hindustani. Up to the introduction of printing at the beginning of the 16th cent., it was written almost all in verse. The earliest works date from the 16th cent., and the standard of composition was set by Walli, Aurangabad in the Deccan, who flourished at the end of the 13th cent., and who is known as 'the Father of Urdu.' Urdu being the technical name for the form of Hindustani used by these poets. From the Deccan the taste for this literature spread to Delhi, where Walli found numerous successors, and thence to Lucknow. The most celebrated of the Delhi poets were Raifi's Sanda, best known for his satires, and Mir Taqi, famed for the purity of the language in which his Ghalzai and Mathakai were written. These flourished in the 18th cent. Among the Lucknow poets the most celebrated was Mir Ijazan (18th cent.). Hindustani prose hardly existed as literature till the foundation of the College of Fort William in Calcutta at the close of the 17th cent. It began with the preparation of text-books for students at the College, and since then has had a prosperous existence. It has been specially successful in the department of fiction. The novels of such authors as Katun Nath Sarwar and Abdul Halim Sharrar are worthy of a wider circle of readers than that to which they are
condemned by the language in which they are written.

Although the above literature grew up under Muslim influence, its language has been successfully adopted by many educated Hindus, some of whom still use it today, and it is now recognized as a master of an exceptionally pure style.

The beginnings of Hindi literature in the modern vernaculars were religious. In the North, up to about the 18th century, the language of religion was Sanskrit, but in the South, Tamil, was employed at a much earlier period. There is a great collection of Saivite texts in Tamil, said to go back to the 2nd or 3rd century. The more important of them are described in the art. DRAVIDIANS (South India). To these can be added a long list of Vaisnavite works in the same language dating from before the time of Rāmānuja (12th cent.). The most noteworthy of these are referred to by A. Govindacharya in two papers in the JRAS (1911, p. 955 ff., and 1911, p. 935 ff.). The Dravidian doctors employed both Sanskrit and Tamil for their writings. As a rule, it may be said that the Vaidyagala, or Northern Tamils, wrote in Sanskrit, while the Tamilalais, or Southerners, wrote in Tamil.

In Northern India vernacular religious literature is of enormous extent and, considered merely as literature, of great merit. It owes its origin to the spread of the Vaisnavite Bhaktivāmarga under Bhāratīya, and to his followers. Tuitardāri, vol. ii, p. 539 ff., esp. 540. All the great writers of this early period belonged to humble ranks of life, and were not Sanskrit scholars. Each therefore wrote in his own vernacular.

In the art. BHAKTI-MĀRGA (vol. ii, p. 543) it has been pointed out that the foundation of the religion is the belief in the fatherhood of God. This is not the only true scope of the belief, in which Rāmānuja is regarded as the most perfect presentation of the Deity, and on this idea is based most of the lofty poetry that India, ancient or modern, has produced. In the Ganges valley, Kālār (15th cent.) preached the doctrine in wise and pithy sayings that are still household words in Hindoostān. An offshoot from his teaching was the Sikh religion, whose sacred book, the Adi Granth, is a collection of hymns by various authors formed by degrees in the course of the 15th century (see the ADI GRANTH, SIKHS). Both Kabir and Nānak (the founder of Sikhs) were more or less sectarian in their teaching. A greater man than either, but the founder of no sect, was the famous poet Tulsī Dās (15th cent.; there is also a religious epic entitled the Rāma-charita-māna, or ‘Lake of the Geetes of Rāma,’ and of at least eleven other epics. His influence down to the present day over the people of Hindoostān cannot be doubted. It is the life of Tulsī Dās (15th cent.), that the religious epic devoted to the life and exploits of Lord Rāma, which is written in the language of the people. The epic, therefore, wrote in the Awadh dialect of Eastern Hindi, and this form of speech has ever since, in the languages only one employed for celebrating the deeds of Rāma-chandra, and, indeed, for epic poetry of every description.

In Hindoostān proper, numerous followers and imitators of Tulsī Dās have narrated the story of Rāmāchandra, and the same subject has also, though to a less extent, attracted the attention of the great writers of the last two centuries. In Bengal there is the 16th cent. Rāmāyaṇa of Kirtībābha Ojha, which is still recited at village festivals. In Marāṭhī, the learned Mōrjāṇṇ wrote several poems dealing with Rāma, but the favourite devotion of the Marāṭhī language is Kṛṣṇa. In the south of India we have a Tamil Rāmāyaṇa written by Kamban in the 11th cent., a Malayālām Rāma-charita of the 15th or 14th cent., and a Kanarese Rāmāyaṇa by Kummār Vālmikī, said to be one of the oldest works in that language.

The literature based on the presentation of Kṛṣṇa as the Deity differs from the Rāma-literature in one important particular. The love of God is represented, not as that of a father to his child, but as that of a man for a maid. The soul’s devotion to the Deity is pictured by the self-abandonment to Kṛṣṇa of his queen Rādhā, and all the hot blood of Oriental passion is encouraged to pour forth one mighty torrent of prayer and praise of the divine Lover. This tendency is based on sexual relations; and, though the mystics who first wrote of it did so in all purity of conscience, in later years it developed into erotic poetry of a character too gross for description.

It is natural that several of the best works of the literature of this school should take a lyric form. According to tradition, Kṛṣṇa’s earlier exploits centred round the town of Mathurā, and it was from this locality that his worship in the Ganges valley spread to other parts of North India. Hence, as the Rāma-literature is couched in Awadhī, so the Kṛṣṇa-literature of Hindoostān is mainly recorded in the Braj Bhaktivādī dialect spoken round Mathurā. Its most famous writer was Śārīrā (16th cent.), the blind bard of Agrā. His Śārīrā-vārca, or The Ocean (of songs) of Śārīrā, and the epic of Tulsī Dās are considered to have exhausted between them all the possibilities of Indian poetry—no later poet could write anything original. In spite of this dictum, there are two important writings in the 17th cent. Bhārī Lāl of Jaipur (17th cent.), composed the Set Sań, or ‘Seven Centuries’ of verses, a collection of a hundred masterpieces in dainty miniature painting of scenes or incidents in the life of Kṛṣṇa. Numerous other works in this literature of religion followed Śārīrā in the Ganges valley. In Bhārī, to the east, he was preceded by Vidyāpātī Thākur (15th cent.), who, however, wrote in his own language, an old form of Bhārī. He was the first of the old master-singers of Eastern India, and was followed and imitated by Chattānyā and other religious lyric poets in Bengali, Assam, further east, and, in the west, Rājputānā, Kashmīr, Gujarāt, and the Marāṭhā country have all been prolific in this style of composition, the most famous writers being Mārā Bāj, the poetess of Māwar (15th cent.), and Tukārām (17th cent.) the Marāṭhā. In the south of India we have the great Tamilhymnology, the Nālīyāṭṟṟōrambūram, of the 16th cent. The most outstanding works of the devotional literature devoted to Siva in the north. The best known is that of Bengal, where the worship of Durgā, the ḍālōṭi, or energetic power of Śiva, is very popular. There were numerous writers who dealt with the worship of Śiva, but that of the god most admired is probably Mulakāndārāma Chakravarti (17th cent.), author of the Śrimānta Sandhyāgar, of the Sāiśītīyamāra.
LITERATURE (Jewish).—The term 'Jewish literature' is used to cover those writings of the Jewish people which were composed after the completion of the Biblical (OT) canon, and which are devoted to the discussion or exposition of Judaism—its teachings, its history, and its documentary sources—and designed primarily for Jewish readers. This definition excludes all such works of Jewish and non-Jewish origin which were written in Hebrew and meant for Jewish readers, deal with matters of general learning or literature.

1. THE TRANSITION FROM ORAL TRADITION TO WRITTEN RECORDS.—Between the completion of the Hebrew canon and the rise of Jewish literature there is an interval of several hundred years, and the reason why the literary activity of the Jews was so long in abeyance is that they regarded it as unlawful to commit their teachings to writing. The Talmud relates that the rabbis of Babylonia at this time suffered no other book to approach it; all subsequent documents must be regarded orally (בש לוהי תורת קדשים); 'to set down the oral teaching in writing is forbidden.' Thus even the Biblical Apocrypha were "regarded as הפסוקים, 'ex-traneous books.' That the production of new works was unlawful must have been prevalent by the time of the elder Sirach, and hence his collection of proverbs could not be received into the canon; an author who wished to reach the public by a book had to publish it under some ancient and venerable name, such as Daniel. That the Alexandrian Jews were at that time displaying a remarkable literary fertility does not affect the Jewish authorities in Palestine at all, for the works of the former were written in Greek, and could, therefore, make no claim to canonicity. Thus all the crown of the Jews vanished in its epoch remained unwritten translations of the Bible, prayers, academic and popular instruction, the development of law and custom, of ethics and religion—all these were carried on by oral instruction only. Apart from letters and fugitive notes relating chiefly to ancient pedigrees, there is only a single document that has come down from ancient times in a written form, viz. the roll of festivals (קדים ותקועים), a list of joyous memorial days of the Jewish nation (4th St.; יפתעהנופ לאוגר). For the first complete literary production we are referred to the Mishnah, which was redacted c. A.D. 200 by R. Judah Nath. Whether the Mishnah was at once committed to writing is a question which is still—as it has been for a thousand years—a subject of controversy among scholars; and, while there are no incontestable indications of its having been in written form from the first, yet our reliable sources rather support the hypothesis that at the time of its reduction and even for centuries afterwards it was still transmitted in a purely oral form (JE viii. 614). By the time we reach the redaction of the Babylonian Talmud, however (c. A.D. 500), the ancient prohibition must at length have been set aside, the change being necessitated, indeed, by the exigencies of the day in the desire of the State in forbidding the continuance of the seminaries in their traditional ways—and also by the enormous growth of the material, which had now become too great a load for the human memory. In view of the fact that the Amora'im and the Saboraim found it necessary to break with the past by committing the Talmud to writing, and they thereby cleared the ground for the growth of a Jewish literature. Once the ban against writing had thus been lifted from the Halakha—that important domain where the interdiction had been observed most rigorously—Jewish scholars formed the resolution, hesitatingly at first, but with time ever the more confidently, to write down and make known or generally known the facts of their people's life and doctrine.

2. LITERARY PERIODS.—Jewish literature, in the fifteen centuries of its development, has passed through a variety of phases. To the period from c. A.D. 550 to 1065 we must assign its initial stages, in which the various branches of literature had to be evolved and wrought into form. While formerly knowledge of every kind was contained and indiscriminately massed together in the Talmud, special departures were made now and then, and the various departments of the mass, and were dealt with in monographs and more or less systematically. To the Gaonic Sa'adya b. Joseph (A.D. 892-942; see art. Sa'adya) belongs...
the distinction of having been the first to treat of the Jewish literature in special works, and thus to have laboured as a pioneer, so that he has been rightly named "the chief of the speakers in every place." From A.D. 1000 to 1200 Jewish literature passed through its most marked period of development, viz., a Hispano-Arabic, which displays a powerful tendency to scientific thoroughness and systematization, and a Franco-German, which in more characteristic fashion further elaborated the traditional materials of knowledge. The period from 1200 to 1500 was one of decline, and from 1500 to 1750 one of profound decay, during which the literary activity of the Jews was mainly confined to Poland and the East; but, from the advent of Moses Mendelssohn (p. r. 1729-86), Jewish literature, now in contact with the spirit of European culture, experienced a fresh revival which, mainly under the influence of Leopold Zunz (1794-1866), developed into a scientific treatment of Judaism, i.e., a metaphysical and critical discussion of the thought, expressed in the Jewish teachings and evolved from the Jewish mind, and has since found expression in numerous works, not only in Hebrew, but in all the languages of Europe. We cannot here trace Jewish literature throughout its various epochs in all its phases; it suffice to examine the chief departments in which it was specially active, to indicate the tendencies that asserted themselves in it, and to search for the reasons that led to the success of this or that particular work.

A characteristic feature of Jewish literature, as contrasted with the literatures of other peoples, is that it is not so much the work of individual authors as the collective product of the spirit of entire epochs. In many cases, too, it is ill preserved--there is a result of the history of the Talmud, and, further, that it did not merely serve an intellectual interest, but also provided for a religious need, and was in consequence often disseminated and transmitted by untrained hands, in a form very different from what was originally intended.

11. The several departments of Jewish literature. Jewish literature in its entire range may be conveniently brought under the following heads, in the following order: (1) Scripture study and investigation of the Hebrew language; (2) works relating to the Talmud; (3) historical literature; (4) systematic theology; and (5) liturgical and devotional poetry.

Scripture study and the Hebrew language. Jewish literature is first of all, as it was originally, exegesis of Scripture—biblical study in the broadest sense of the term. Targum and Midrash constitute its earliest forms, and perhaps the two were originally one, for the Targum was of the nature of paraphrase, and thus involved a kind of exegesis. Traces of the old, non-literal rendering of the Scriptures are found in the so-called Palestinian Targums—the Targum of Jonathan, and the Targum of the Pentateuch, however, the rendering to which Aquila first gave the name of the Targum of Onqelos, and which assumed its definite form in the Babylonian schools of the 3rd cent. A.D., became the standard of authority; it was recited in the synagogue, and was generally regarded by the Jews as the Targum. For the Prophets, again, the acknowledged standard was the so-called Targum of Jonathan—not much later in date than the Targum Onqelos; here, too, the other Palestinian Targums fell into the background. For the Haggadah there was in the period of the Talmud no recognized Targum at all, and the renderings which we now possess were separately executed in the course of centuries, some of them, indeed, not having been completed till after A.D. 1800 (cf. J.E xi. 1574)....
LITERATURE (Jewish)

did a large amount of highly meritorious and exemplary work for the discovery of the verbal sense. If it failed to gain recognition in its ripest results—what is called the "Biblical literature"—by Samuel b. Menahem (c. 1085-c. 1174)—have, in fact, been re-discovered by modern scholarship; but the favourite and most widely circulated commentary of the Middle Ages was the work of Solomon b. Isaac of Troyes, called Rashī (1010-1105), who combined the old method of the Midrash with the effort to ascertain the plain meaning; and consequently, though he certainly gives the dry details of exegesis, we also find in his work passages of an attractive and edifying character. His commentary eclipsed all others in general esteem; from the outset to the present day it has been widely read, and has formed a subject of study by itself; while in the course of centuries it has drawn to itself over a hundred special commentaries, and ranks in the popular mind as the "commentary" ֶابة וַתִּשְׁכַּה (cf. JE xt. 324 ff.). A blending of the characteristic tendencies of the Spanish and Northern French schools appears among the scholars of Provence, from the 13th century, onwards; cf. JE vii. 494 ff.), whose exegetical works on the Prophets and the Hagiothapha were specially prized. The re-discovery of the predecessors and successors of the exeges, named as also the historical and textual development of the period, has been the work of modern scholarship. In Kimḥi's commentaries we find a new type of exegesis—the philosophical, which soon passed into the mystical. Of the works that favour this type, there are many exeges. A major work of the type which is most stubbornly materials into a popular and generally accessible form attained a great vogue. These include the long-popular commentaries of Don Isaac Abarbanel (1437-1508; cf. JE i. 236), and also those of the so-called Kabbalists (JE iii. 292), dating from the 12th century and the end of the 12th century. The larger field of exegetical literature is well represented. 

Closely associated with the exegesis of Scripture were the works dealing with Hebraic philology. Linguistic study among the Jews was but rarely regarded as an end in itself, but, as the science of the language in which the Scripture was written, was mainly a matter of ritual investigation. The literary treatment of Hebrew grammar and lexicography was systematically prosecuted by the Hispano-Arabic school, the many works on which, however, were composed in Arabic, and the majority of them have been neglected by little note; the philological writings of Juda b. David Haiyuj (b. c. 930; JE vi. 271 ff.) and Abū al-Walīd Marwān ibn Jānāh (early 11th cent.; ib. vi. 594 ff.), important as they are, were re-discovered only recently. The works of Abraham ibn Ezra enjoyed an enormous vogue, as did also, and even in a still greater degree, the grammar and dictionary of David Kimḥi, which have in many quarters retained their pre-eminence until recent times. The translations of the Talmud into Hebrew seem to have been more regarded than the Talmud itself, and the scholarly organs of the Hebrew Press, as well as the Biblical and Talmudic literature, as its germ are found in the Midrash, and as it purports to be nothing more than an exposition of and a complement to the Scriptures. It consists of two parts, the Mishna and its commentator, while the greater part of its development, for, although there is but one Mishna, there are two commentaries upon it—one of Palestinian, the other of Babylonian, origin. In the process of historical development, however, the commentaries of Palestine were at first the more important, and it is their success that the Talmud underwent a great change, and its place as an authoritative guide to the practice and religious law. The two Talmuds are not related to the Mishna in the same way; in the Palestinian Talmud we have the commentary to forty Mishnaic Tractates, belonging to the four Orders; in the Babylonian Talmud we have thirty-six only, principally from the second, third, fourth, and fifth Orders, while of the first and sixth Orders only one tractate in each is dealt with.

As the Talmud, until the dawn of the modern epoch, occupied the central place in Jewish learning, and formed the supreme standard of religious thought and practice among the Jews, it became the nucleus of an enormous literature, which, in connection with its more outstanding representatives, may be summarized in the following divisions. 

(a) Explanatory works. For so intricate a work as the Talmud, explanation was indispensable; its own expositions were frequently very brief, and the links of connection could be supplied only by those who had been initiated into the peculiar mode of its dialectic; moreover, the language of the Jews, like their general conditions of life, underwent a process of time
radical changes, and was no longer the same as was presupposed in the Talmud. The need of explanation was felt at an early date, and every effort was made to attach the text and transmitted with it; thus we find writers reproducing the works of those who preceded, and adding value to their text by explanations drawn from commentaries dating from the 6th. On the other hand, what we may call an editorial and expository literature was not felt to be necessary until much later, for it may be said that the Talmud had been completed by this time. The task of the 12th-century editors was, then, not to reproduce them with verbal accuracy, but to make the works more comprehensible, to give them a general interpretation, and to supply written commentaries—first of all in the form of explanation of the Talmud itself in the compendious classical commentaries, and then in the form of a new and more comprehensive dictionary, of which the most celebrated was the Ḥabbah of Nathan b. Jehiel of Rome (1146; cf. J.E. ix. 185 ff.). The codification of the Talmud was also produced in N. Africa (c. 1000; cf. J.E. ix. 574). In Spain little progress was made; the commentaries are said to have been produced about the year 1040. In France, on the other hand, we have short explanations giving the context. The most important of these is the Tarbiz of Joseph b. Hai (c. 1400) and the Shishah of Rabbi Shemuel ben Kalonymus (1650), both of which were produced in the same century. The most important of the later Talmudic works was the Machzor of Nathan b. Jehiel (1357), a native of Germany, who took Talmudic text as his groundwork, and added to it numerous notes from the authorities, which was generally given in the printed editions of the Talmud.

A new mode of expository literature was the Talmudic printed books, which were printed in Yiddish, and which was generally given in the printed editions of the Talmud.

The Talmud of the Middle Ages was, therefore, a very important work in the history of Jewish literature.

The Talmud of the Middle Ages was, therefore, a very important work in the history of Jewish literature.

Maimonides in the Middle Ages. The most notable contributions to the literature of the Middle Ages was the work of the Palestinian seclued Maimonides, who was born in Jerusalem in the year 1135. He was the son of a Jewish merchant, and was educated in the Talmudic schools of his day.

His most important work was his Guide to the Perplexed, which was written in Arabic, and was translated into Hebrew, and became a standard work in the study of Jewish law.

Maimonides, in his Guide to the Perplexed, was the first to give a systematic exposition of Jewish law and philosophy, and he was the first to give a systematic exposition of Jewish law and philosophy, and he was the first to give a systematic exposition of Jewish law and philosophy.
and an active correspondence by letter had been carried on between the heads of the schools in the Talmud in Palestine and those in Babylonia. In proportion as the Jews became more and more dispersed, correspondence became more and more necessary; and, in addition to the well-known increase in the number of responses; from that period itself, indeed, no fewer than fifteen more or less voluminous collections of replies have been preserved. Nor, when the centre of Jewish life was transferred to Europe in the Middle Ages, did the interchange of opinions diminish either in extent or in vigour. Thousands of opinions and legal pronouncements by eminent Rabbis of medieval times have been preserved, and were often used as an unofficious source of information. The number of works embodying such responses is so numerous that it must be content to mention only the most extensive and the most generally consulted: from the Middle Ages we have those of Meir b. Isaac of Rothenburg (1235-1309), and his "Tiferet Ha-Talmud" (1310), and that of Isaac b. Sheshet (1320-1406), all belonging to Spain; from the dawn of the modern period, those of Israel Isserles († 1469) and Joseph Kolon (c. 1600), as also that of David ibn Abi Simha († c. 1570); and from more recent times those of Ezekiel Landau (1770) and Moses Sofer († 1829). On the literature of the responses, cf. also J.E. xl. 240ff., (d) Systematic works.- Mention must be made, lastly, of that branch of the literature which deals with the problems of the Talmud in a methodical and systematic way—a mode of treatment but little practiced in the earlier period, and, indeed, never strenuously applied till modern times. The earliest work aiming at systematic treatment is the Seder Tanaim, which was composed by a member of the exilarchs, or their group, about the year 1075. This work, which aimed at systematically surveying the whole of the texts of the Talmud, has unfortunately been lost. Its chief value lay in the fact that in this afterwards the Shochet Ha-Talmud of Samuel b. Nappuli, (extant only in part, which, however, is printed in a modern edition) and the Shabbath of Nissim b. Jacob, both of the 11th century. Of great importance in a methodological sense, too, are the references by which Maimonides is believed to have contributed to the science of the Mishnah and several of its divisions. Later works worthy of mention are the "Ha-Sanhedrin" of Samuel b. Saul of Chisago (c. 1200) and the Haltathath 'Olam of Joshua b. Levi of Trieren (c. 1160); the latter has drawn around it numerous commentaries, and has often been republished. A new epoch in these respects is the systematic study of Talmudic texts which was inaugurated by S. L. Rapoport (1790-1867); cf. J.E. xxvii. 202ff. Other later works on the subject of the Talmud, as also in parallel, the Derosth Millin, dealt with the problems of the Talmud in a scientific way, at once systematic and critical. The work which has been most republished by Rapoport has been followed by Z. Frankel (1861-75); th. v. 482ff. In his Dorath ha-Mishnah (1857-74), &c., Abraham Geiger (1816-74); th. v. 581ff. Numerous treatises have been published, and S. L. Weiss (1815-1905); th. xii. 493ff. in the historical work named below.

3. Historical literature.—The post-Biblical historiography of the Jews took its rise as an element in the systematic treatment of the Talmud. The majority of the earlier works in this field were written chiefly with the object of re-constructing the chain of tradition and of determining as accurately as possible the genealogies of eminent figures. But, as the chroniclers, with the exception of Jewish historical literature are found in the Talmud itself, and those furnished the pattern for the earliest developments. The chronology of the course of history from the Creation to the destruction of the Second Temple is given in the Seder Olam Rabbah, the nucleus of which was the work of Joseh b. Hanai (c. A.D. 180). An annalistic work, though dealing only with the family of the exilarchs, is found in the Seder Olam Zuta, a genealogical register, which cannot have been drawn up before the 7th cent. A.D., and which assumes a disparaging attitude towards the exilarchs of the day. The biographical annals of scholarship, again, are represented by the Seder Tanaim u-Masoroth (c. 489), and the Seder Hanamid (c. 550), the latter is not so useful as the original principal source for the period between A.D. 500 and 1000. To the same class belongs also the Seder ha-Qabbalah, compiled in 1161 by Abraham ibn Balaam of Toledo, who is chiefly concerned to exalt the contemporary Rabbis and to preserve their names, for, though he gives somewhat more detailed information regarding the Jews in Spain of the two preceding centuries, yet even there his manifest purpose is to trace the development of learning and recognized authority. The work of Abraham Zacuto, who was, for a time a professor of astronomy and chronology in Salamanca, but after the expulsion of the Jews from Spain settled in the East, was upon similar lines; his Sifrei Yawma (1534) contains a detailed study of most of the Talmudic authorities, and also a chronology brought down to his own day. For centuries this work was known only in a form containing a series of notes which had been written on the margins of the original shape in 1537. Jehiel Heilprin, of Minsk, wrote his Seder had-Doroth (c. 1700) solely for the purpose of supplementing the data of Zakuto and bringing the Rabbinical genealogies down to his own times.

A further incentive to the writing of history was provided by the peculiar fortunes of the Jewish people, and in particular by the sufferings and persecutions which they had to endure almost without intermission during the Middle Ages. These oppressions are chronicled in a vast number of fragmentary records, both in prose and in poetry, but there are very few connected and continuous accounts. We shall enumerate here only the more extensive compilations over whose type still extant. A narrative of the persecutions which harassed the Jews, chiefly in the Rhine country, in connexion with the Crusades is given by A. Neumauer and M. Stern in their Hebrewische Berichte uber die Judenverfolgungen unserer nation (Hamburg, 1857), and the lastly, "the Seder ha-Tamid," which is printed in the synagogues the name of which had been misused; in those days of incessant persecution it was the practice to read (commemorate) in the synagogues the roll of those who had perished as martyrs; and memorial books were drawn up in the various communities, and were published. The most comprehensive of these books was published by S. Salfeld under the title Das Martyrologium des Nürnberger Memorbuches, Berlin, 1898. The earliest connected account of the persecutions was composed by Judah ibn Verga († 1455), whose Seder ha-Tamid was supplemented by a younger relative named Solomon and another writer named Joseph, and published in its enlarged form. The best-known account of the Jewish martyrs of the Middle Ages is from the hand of the physician Joseph Ibn-Kohen, who lived in the 18th cent., and resided in various Italian cities; his Eney ha-Bedekh describes with accuracy and graphic power the persecutions and banishments suffered by the Jews from the destruction of the Second Temple. A strange combination of martyrology and the history of learning is found in Gedolah ibn Yahya's Shalshelet haq Qabbalah (c. 1550), which, though much earlier than the chronology given above, is an early date to be untrue and yet incredible, and has been more recently edited in Hebrew, but also translated into many other languages. Even more rarely, if possible, do we find medieval Jewish writers attempting to write profane history in Hebrew. A work of later date deserving of mention is Joseph hak-Kohen's Chronicle of the Kings of France and Turkey, written in 1533, while, a few decades afterwards, David Gans († 1613, in Prague) published, in his Sdhut Dibrah (Prague, 1594) an account of Jewish history, from their respective beginnings to his own time; this work appeared also in a Latin translation. In general, however, Jewish writers restricted themselves to the composition of popular narratives of particular episodes.

It was not until comparatively recent times, indeed, that Jewish history was treated in a coherent and orderly manner. In 1829 I. M. Jost began the publication of a history of the Jews in
many volumes and in various forms, in which he was primarily concerned to recite the political foundations of Jewish thought and the most outstanding Jewish theodoligical development in an appendix. Leopold Zunz, while he wrote nothing of the nature of a systematic work on Jewish history, furnished in his Zur Geschichte und Literatur (Berlin, 1845) copious material for all such by way of history, and suggestions as to the method of treating them. The best-known and most widely circulated work of this class, the Geschichte der Juden by H. Graetz (2nd ed., Leipzig, 1833-79), aims chiefly at exhibiting the development of the Dogma of the Jews in relation to their political position and the martyrology suffered by them, while A. Geiger's Des Judentum und seine Geschichte (Brechen, 1871) deals solely with their religions development. J. H. Weiss, in his Heb. Der Der w' Dichter (Vienna, 1871-91), is likewise concerned only with the development of Judaism on its spiritual side. On the historical literature cf. also M. SteinSchneider, Die Gesch.-Literatur der Juden, i. (Frankfort, 1905), and art. 'Historiography' in JE vi. 125 ff.

An important source of information regarding the history of the Jews in the Middle Ages is found in the copious narratives of the numerous Jewish travelers. The most important of such books of travel is the Ma'drakah of Benjamin of Tudela, who (c. 1165) made a journey from Spain to the East and back, and noted down in a ready style 'all that he had seen or heard.' In the edition of the Ma'drakah prepared by A. Asher (London, 1840), Zunz has given a detailed account of the geographical literature of the Jews ii. 230 ff.

4. Systematic theology.—A great part of the Talmud and the Midrashim is devoted to the religious and moral teachings of Judaism; Haggadah in particular is concerned mainly with the problems of theology—with dogmatic and ethical ideas. No more than the Bible itself, however, does the Talmudic literature give a systematic presentation of theological doctrine. It was, in fact, only under the influence of Muslim theology that Jewish writers first essayed to deal systematically with the doctrinal fabric of their religion, and to support it by arguments. Their works, written with a view to be translated into Hebrew—largely through the efforts of the family of Ibn Tibbot, in Lame—and in this form given to the Jewish world. The earliest speculative theology among the Jews was Sa'diya Gaon, who, in his Emunoth ve'Doth, written in 933, sought to bring the doctrinal teachings of Judaism into relation with contemporary philosophy. Bahya b. Joseph (first half of 11th cent.; JE ii. 446 ff.) was an extraordinary success with his Hilkoth beit-Lebaboth, which treats chiefly of the moral teachings of Judaism; the book was read far and wide, and was in its day perhaps the most popular work of general philosophical literature among the Jews. Judah Halevi (JE vii. 346; see also art. HALEVI), in his Kuzari, renounced philosophy altogether, and based theology exclusively upon the revealed faith and the experience of the Jewish people; the work, by reason of its poetic mode of treatment in the style of the Platonic Dialogues, enjoyed a great vogue. By far the most eminent work in this field, however, is the Moseh Nihbhikhim of Moses Maimonides, which, like his Midrath Tovim mentioned above, is distinguished at once for its richly systematic narrative and for the keenness and independence of its thought. Although the book, with its free handling of Jewish doctrine, aroused hostility on many sides, and was even publicly burned at the instance of Jewish accusers, yet in influence it stands supreme; all later study of Jewish philosophy revolves around the Moseh, and the most outstanding Jewish theodoligical writers, Spinoza, Moses Mendelsohn (qq.v.), and Solomon Maimon, found in it the incentive to the construction of their own systems. The Moseh marks the culminating point of Jewish philosophical literature in the Middle Ages. Of writers belonging to the time after Maimonides we mention only Levi ben Gershom (qq.v.) c. 1350; JE viii. 26 ff., who, with his Milhamoth Adonai, was the first to make a stand against the authority of Aristotle; and Hasdai Crescas (c. 1350-IV. 339 ff.), whose Or Adonai was drawn upon by Spinoza as an important source; and Joseph Albo (c. 1415; ib. i. 924 ff.), whose Ilkhirim was an enormously popular book.

The period after Maimonides was, however, on the whole one of prolonged decadence in philosophical studies, which were, in fact, regarded as positively unlawful. The enlightened philosophy of Maimonides brought forth a counterpoise in the composition of the Qabbalah (see KABBALA), a peculiar medley of speculative ideas and curiosities which was put forward as an esoteric doctrine of ancient origin, and sought to attach itself to the earliest authorities; its representatives, indeed, did not scruple even to disseminate writings purporting to be the thoughts of the great personages, including Moses and the Patriarchs. The most notable book of such speculative secret doctrine was the Zohar, which was put into circulation c. 1300 by Moses de Leon, and passed off as the work of Simon b. Yohai, a writer of the 2nd cent. A.D. It takes the form of a commentary on the Pentateuch, but is interspersed with many systematic treatises, which bear special names, and are perhaps later insertions. The Zohar was regarded with the utmost reverence; it recognized a divine word that was ranked higher than the Talmud or the Bible itself; its real origin was brought to light only in recent times. The name of Isaac Luria (1572) marks a further stage in the development of the mystical literature. Luria himself wrote nothing, his pupils promulgated his teachings in a vast number of biographies of their master, of commentaries to the Bible and the book of prayer, and of legal and ethical works. Likewise Hasidism (cf. JE vii. 212 ff.; see also art. HASED), the last phase of Jewish thought, was ranked higher than the Talmud or even the Bible itself; its real origin was brought to light only in recent times. The name of Isaac Luria (1572) marks a further stage in the development of the mystical literature. Luria himself wrote nothing, his pupils promulgated his teachings in a vast number of biographies of their master, of commentaries to the Bible and the book of prayer, and of legal and ethical works. Likewise Hasidism (cf. JE vii. 212 ff.; see also art. HASED), the last phase of Jewish thought, was ranked higher than the Talmud or even the Bible itself; its real origin was brought to light only in recent times.
LITERATURE (Jewish)

Regensburg (†1217; JE vii. 356 ff.), a work of high ethical value, which, though not free from the superstition of its time, is pervaded by an admirable spirit of piety and an earnest desire to foster the moral and religious sense. The books and morals were in many cases translated into the language of the country in which they arose, and they form a large part of the Judeo-German, Judaeo-Spanish, and Judaeo-Arabic literatures. From the time of their composition onward they have had an enormous currency, and even at the present day the most widely read and systematic work on Judaism is the Ethik des Judentums of M. Lazarus (Frankfort, 1888, 101). The theologies of the Jews also involved the work of pointing out the lines of demarcation between their own religion and other creeds. The Jews, who from an early period formed but a sparse minority among the adherents of other faiths, had abundant occasion for the formation of a number of explanations of Biblical passages which had been interpreted in a Christological or Muhammadan sense, or of systematic treatises on the cardinal doctrines of Christianity or Islam. Of writings directed against Christianity the Tullath Yohai (on which see ERE vii. 552) was not used so much by Jews themselves as by Christian controversialists. Of Jewish polemical works that created a considerable stir, mention may be made of the Yechezkel of Lipman-Mishenas, a resident of Prague (c. 1400), who in that work brought forward three hundred and forty-six passages of the OT as telling against Christianity, and the Hizqiz Emunah, in which Isaac Troki, the Qarait, made a systematic attack upon Christian doctrine (c. 1580). Both of these works were translated into various languages, and many attempts were made to refute them by Christian theologians. On the polemical literature cf., further, JE x. 102 ff.

At the same time polemical activity was likewise directed against the Qaraites and other Jewish sects, but for the most part it finds expression incidentally in more general writings, and we are unable to specify any monograph of this importance.

5. Liturgical and secular poetry. — The worship of God supplied the most powerful impulse to the post-Biblical development of Hebrew poetry, which, now termed piyyut, was revived with a view to enriching the liturgy. All instruction in andhabituation of Jewish history and religion, which in the olden time had been the work of the preacher, fell, from c. A.D. 600, to the function of the psalm. It was under the influence of the Arabs that Jewish religion spread widely in the East, and it was from them that it borrowed its artistic forms, but it required first of all to mould the Hebrew language to its designs—a process which, after long-sustained efforts, was at length brought to full realization in Spain. The most distinguished poet of the Middle Ages was Eleazar b. Jacob ha-qoil, who lived probably c. A.D. 750 in Palestine; he composed over two hundred well-known poems, which have found a place in the Jewish prayer-books of the East. In the 10th cent. the art was carried over into Spain, and Judaism and Christianity were collected by J. B. de Rossi in his Bibliotheca Judaica Antiquissima, Parma, 1890, while Stephen Spalding in his Collections of Poetical and apologetical Literature in ancient and modern languages, Christian and Jewish, Leiden, 1857.

Nearly all countries, though we must note the exception of Spain, which had its own eminent figures in this field, and where medieval Hebrew poetry attained its highest level between 1040 and 1140. The most outstanding names were those of Solomon ibn Gabril, Moses and Abraham ibn Ezra, and Judah Halevi (qq. e.). Poems by these writers are found in all prayer-books, but such compositions form only a small part of their poetic work: they also wrote secular poems—"clayans," which, it is true, soon fell into oblivion, and were rediscovered only in recent times; a number of them still await publication. On the piyyut cf. JE x. 652 ff.

While liturgical poetry occupied the place of supreme regard, other branches of poetic art were by no means neglected. Of these the most widely cultivated was the didactic, which was turned to account in every department of knowledge. The piyyut itself sometimes assumed a didactic form, and in adaptations in verse relating to the calendar, philology, and Biblical study, the Halakha, the laws of religion, Talmudic jurisprudence, philosophy and polemics, history, medicine, astronomy, etc., and poems in all these branches of study there are in large numbers (cf. JE x. 981). Of more importance, as being more closely in touch with the poetic spirit, is Jewish lyric poetry. The religious and polemical, once so widely cultivated, are now but the earliest development of the lyric in the ordinary sense, i.e. the poetry that finds its themes in love, wine, war, patriotism, etc., took place in Spain, where the supreme master of this form was Moses ibn Ezra, where Judah Halevi won renown by his occasional poems and his poetical descriptions of nature, and where Abraham ibn Ezra and Judah al-Falari (early 13th cent.) found recognition as keen satirists. The greatest Jewish secular poet, however, was Nathan of Born, Solomon of Rome—the contemporary, perhaps a personal friend, of Dante—who combined Oriental fantasy with Italian erotics, and gave expression to them in highly polished Hebrew verse, writing, indeed, with such audacious abandon that the Shiloah Avich, forbade the reading of the poet's Malchiboth on the Sabbath, while even in our own time Graetz has accused him of having profaned the Hebrew muse. Another lyric writer worthy of mention is Isaac ibn Ezra of Nagar (c. 1570); his polemical works, and the history of Israel, works upon a basis of love-songs and their melodies, and writes with such intensity of passion and such daring anthropomorphism that he too incurred the censure of the Rabbis. Moses Haoyyin Luzzatto (1707-47) deserves mention as a writer of great emotional power, and as the first who composed epic poetry in the Hebrew language.

Jewish poetry, like Jewish literature in general, passed through a long period of barrenness, which lasted, indeed, until it was vitalized by the modern renaissance of intellectual interests. The majority of the more distinguished poets of the present age are of Russian origin, the most eminent of all being Judah Loeb Gordon (1831-92; cf. JE vii. 47 ff.), whose achievement, however, lies more in the field of satire than in that of the lyric. Of living poets, a special reference is due to H. N. Bialik, whose lyric poetry has justly met with the highest appreciation, and whose compositions have already been translated into nearly every European language. The last few decades have witnessed the rise of a copious Hebrew literature of general interest.

LITERATURE (Pahlavi).—Pahlavi ("Parthian," i.e. "heroic, belonging to heroic times"), or Middle Persian, literature dates, so far as its contributions to religion are concerned, from the 8th to the 11th cent. of our era; and its chief value in this regard is the elucidation of Zoroastrianism and Manichaeism (qq.v.), since it explains and supplements the data contained in the Avesta (q.v.). At first glance, the contents of Manichean literature, besides giving fragmentary renderings of Christian texts, the religious material in Middle Persian falls into three categories: translations of Avesta texts, original compositions on Zoroastrian religious subjects, and Manichean and Christian literature.

1. Translations of Avesta texts.—These translations are combined with running commentaries, sometimes of considerable length; but they are handicapped by failing to understand the original, especially in its grammatical relations, since the inducted type of the Avesta language had yielded, long before the composition of any Middle Persian of which we have any indication, to the analytic type of the Sasanian period. This facilitates certain data, and only in unimportant details from that of Modern Persian and other modern Indo-Iranian dialects. At the same time, the Middle Persian translations of the Avesta possess a real value and must be consulted in any attempt to decipher the meaning of the Avesta original, particularly in view of the allusions, etc., preserved by Iranian tradition (see further, art. INTERPRETATION [Vedic and Avesta]). The principal Pahlavi translations are of the Pahlavi Fravashis to the Zend texts; e.g., ed. F. Spiegel, Avesta, Vienna, 1853-58; L. H. Mills, The Ancient MS of the Yazna, with its Pahlavi Tr. (A.D. 1329), generally quoted as J.S.; Oxford, 1893, and Gathas, Leipzig, 1892-1913 (also with Sanskrit and Modern Persian versions, and Eng. tr.); the Vendidad separately by D. P. Sanjana, Bombay, 1805, and H. Janasp and M. C. Ganderia, ibid. 1907, Nyayisukta (ed. [also with Sanskrit, Persian, and Gujarati versions, and Eng. tr.]); the Fravashi Veddik (ed. E. Weidner, 1890, and K. Salemann, in Trouwens 2e congrès des orientalistes, Petrograd, 1917, vii. 293-294), vii. vii., xi. (ed. J. Darmesteter, Études orient., Paris, 1885, ii. 298-298, 292-292, 333-339; a complete ed. is promised by Dhalia), Nirangist (ed. D. P. Sanjana, Bombay, 1894; tr. of Avesta portion by Darmesteter, Zend-Vedika, Paris, 1892-93, iii. 78-148, and SBE iv. 304-368), Aygumudat (ed. and tr. W. Geiger, Erlangen, 1878, and Hidifret Nekch (ed. and tr. Hoshang Jamasp A. and M. H. Lang, in their Arda Yarsh, Bombay, 1879-74, and tr. Darmesteter, Zend-Avesta, Paris, 1892-93, iii. 78-148, and SBE iv. 304-368), Agyemudet (ed. and tr. W. Geiger, Erlangen, 1878, and Hidifret Nekch (ed. and tr. Hoshang Jamasp A. and M. H. Lang, in their Arda Yarsh, Bombay, 1879-74, and tr. Darmesteter, Zend-Avesta, Paris, 1892-93, iii. 78-148, and SBE iv. 304-368) are known to exist in MS. 2

1 Translations of the Pahlavi version of F. XXX. and iv. have been made by H. Hobeinach (Rei zoestie, Leiden, Munich, 1872, and SRA, phil.-hist. Classe, 1873, pp. 631-684), of iv. by W. Geiger (Bod. Curs. Cultur. Phil., i. 168-202), and of xxiv. xxvii. and xxviii. 1 by M. H. Harg (Essays on the Sacred Language, Writing, and Religion of the Parsis, London, 1874, pp. 36-38), and of xxix. 3 by C. R. D. Jervis (Leipzic, 1908), and of Zend, i. by W. Geiger (Erlangen, 1877), of i. viii. by H. Harg (op. cit. 522-539), and of xxvi. by R. Horne (SDGP, xvi. [1898] 23-41). 2 The authenticity of the Vihardist-Donk (ed. Pehtohan, Bombay, 1848) is too dubious to be considered here. The book, of which the copies (in the Staatsbibliothek, Munich, and in the library of A. W. V. Jackson, Columbus Indiana, U.S.A.) are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, and are presented as having been translated by the Paris for baptism, and are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for baptism, are presented as having been translated by the Paris for
LITERATURE (Pahlavi)

...tion of Ahura Mazda (ed. and tr. E. Sachau, SWAW lixvii. [1871] 828-838; also tr. Darmesteter, Une Prière judéo-persane, Paris, 1891); and Namaštavtāsh, a translation of the name and attributes of Ahura Mazda.

Some one turned to the Dinkurt as a source for knowledge of the religious philosophy of the Sassanid Zoroastrians (and, like the larger work, doubtless embodying a large amount of older material) is what may be termed response literature. This treatises of all sorts of matters on which questions might arise. One of the most important works of this type is the Dāštīstān-i-Dīnīk, the Religious Opinions of Maneschar, high priest of Pars and Kirman, in reply to the questions raised by Abas and others (tr. West, SBE xxviii. [1882] 3-276; the first 15 questions ed. D. L. Sanjana, Bombay, 1897); with this is connected a long and important Pahlavi Rīvāyat (ed. Banamji Nasravanji Dhabhar, Bombay, 1915), while the same Mādigrān-i-guṭastak Aḥābi, recounting the disputation between the heretic Aḥābi and Atar-Farabag (who began the compilation of the Dinkurt) before the khāliṣ al-Maʿāmān about 825 (ed. and tr. Barthelheim, Paris, 1887).

Yet another important type of Pahlavi literature is that of didactic admonitions. To this class belong the Pond-arānāk-i-Zarrāštī (not the Prophet, but probably the son of Atūr-pārā Maraspandān; ed. and tr. P. B. Sanjana, in his Ġange-Shtegyngagān, Bombay, 1888); and Andar-i-Aťar-pārā Maraspandān, being the advice of Atūr-pārā to his son Zarrāštī (perhaps the person mentioned just above; ed. and tr. Sanjana, op. cit.; also tr. C. de Harlez, Mission, vi. [1887] 60-78); Pond-arānāk-i-Pardīg-Imān-i-Bīrābin (ed. and tr. Sanjana, op. cit.; Fif Dispositions for Priests and Ten Admonitions for Laymen (ed. Jamaspji, op. cit. 129-131); Characteristics of a Happy Man (ed. Jamaspji, op. cit. 162-161); Vāyav nāmend-i-Ātār-pārā Maraspandān, the dying counsel of Atūr-pārā (ed. Jamaspji, op. cit. 144-153); Andar-i-Aťar-pārā Maraspandān, Injunctions to Beh-dins, Admonitions to Mazdgārānīs, and Sayings of Atar-Farabag and Bīrābin (tr. Sanjana, op. cit.).

3. Manichaean and Christian literature.—Until comparatively recently it was supposed that Pahlavi literature was exclusively Zoroastrian; but the discoveries made in Central Asia by M. A. Stein, C. D. F. Griffen, and F. P. Pethe have revealed a new province of extreme interest and value. The decipherment of the MSS found by these explorers has only begun. Here it must suffice to say that we already possess Pahlavi versions of somewhat extensive portions of Manichaean literature—a fact the more important since this religion had hitherto been known only from the writings of its enemies. The most important collection of these texts thus far is That of F. W. K.CriticalSection (ed. Schacht, Rasselas, I. A. R. O. [1905])

...the complete work is found in Pázand and Sanskrit versions. Many of these are given in editions of Pahlavi texts enumerated above, but we must also note the ed. of Nasringsheh, Paris, 1889; and of the latter ed. by C. de Harlez, Mission, vi. [1887] 60-78).
Sanskrit Writings of the Parsee, ed. S. D. Bharncha (Bombay, 1906) ii.

Persian literature.—Apart from Persian translations into English (West, 
and others), there is a large amount of Zoroastrian literature in Persion,  which, for the most part, still awaits study. The Zarathushtra-nama, dating from the 12th cent., which is now accessible in original and translation by F. Rosenber, (Petrograd, 1904), gives a legendary biography of Zararoster. Another work of importance is the Shud-dru ('Hundred Gates'), which discourses a number of subjects of note in Zoroastrianism. Two of its three recensions have been translated into English (West, 1896, and 1899), and a third, giving the chronological development of the second volume of which has been edited by M. N. Unvah (not yet published) and analyzed by Rosenberg (Notices of lett. persian, Petrograd, 1906).

It contains a large number of Rikyats (religious traditions) and parables, as well as cosmology and eschatology, pp. 111-139. Vagis F.Amikisirfand (attributes of the Amsheh Spentas, pp. 194-192), Aphid-

Sanskrit literature of the Parsi-Persian, and Zoroastrian, is the subject of a number of recent recensions of the Urvat-nama (pp. 72-80), the Akst-n F-Ahmad (containing the horoscopes of Zaroster, Moses, Alexander the Great, Christ, Maulana, and others), as well as cosmology and eschatology, pp. 111-139.

Another recension of the Urvat-nama (pp. 72-80), the Akst-n F-Ahmad (containing the horoscopes of Zaroster, Moses, Alexander the Great, Christ, Maulana, and others), as well as cosmology and eschatology, pp. 111-139.

The interesting secular works in Pahlavi, Fazand, and Parsi-Persian, such as geographical matter, social rules, and tales, do not come within the sphere of religion. Finally, it may be mentioned that translations of the Avesta have been made not only into Persian (for specimens see, in addition to works cited above, Darnastern, Etudes iran., ii. 262 fl.), but also, from the 15th cent., into Gujarati, the vernacular of the Indian Zoroastrians (see the Pronpologia to K. Geldner’s ed. of the Avesta, Stuttgart, 1896, pp. viii-xi: Darnastern, Zend-Avesta, i. p. xlii; and the modern religious literature of the Parsees is chiefly written either in Gujarati or in English.

LOUIS H. GRAY

LITERATURE (Vedic and Classical Sanskrit).

I. The language.—The name ‘Sanskrit’ (usni-

skrit, ‘adorned,’ ‘perfected,’ perfect passive parti-

ciple of the verb sanskrd, ‘to adorn,’ from savit, ‘together,’ and aru, ‘to make’) is ordinarily applied to the whole ancient and sacred language of India.

It belongs more properly to that dialect which may be defined more exactly as Classical Sanskrit, the language which was treated by the Hindu grammarians, Panini and his followers.

For more than two thousand years, until the 16th cent., Sanskrit has led a more or less artificial life. Like the Latin of the Middle Ages, it was, and is, even today, to a very marked extent, the means of communi-
cation and literary expression of the priestly, learned, and cultivated classes.

The more popular speech upon which it was based is known as bhata (‘speech,’ from bhata, ‘to speak’), of which there is no direct record. Sanskrit is distinguished more obviously from the phonetically later, decayed dialects, prakrit and Kshatriya, by the second person of the ening language of the canonical writings of the Southern Buddhists. The relation of the Prakrit and Pali dialects to Sanskrit is closely analogous to the relation of the Romance languages to Latin.

On the other hand, Sanskrit is distinguished, although much less sharply, from the oldest forms of Indian speech, preserved in the canonical and wholly religious literature of the Veda (Skr. veda, ‘knowledge,’ from ved, ‘to know,’ connected with Gr. eido, ‘I know,’ Lat. videre, Old Bulgarian vidé, ‘I know,’ Gothic wist, ‘I know,’ Old High German wissen, Germ. wissen, Eng. wit, ‘to know’).

These forms of speech are in their turn by no means free from important dialectic, stylistic, and phonetic differences. It is difficult to say what the name Veda (or, less properly, Vedic Sanskrit), which is thus distinguished from the language of Panini and its forerunner, the language of the Epic, whose proper designation is Sanskrit, or Classical Sanskrit.

Vedic differs from Sanskrit about as much as the Greek of Homer does from Attic Greek. The Vedic apparatus of grammatical forms is much richer and less definitively fixed than that of Sanskrit. The latter begins with the wealth of form of the earlier language, without, as a rule, supplying the proper substitutes for the lost materials. Many case-forms and verbal forms of Vedic have disappeared in Sanskrit. The subjunctive is lost; a single Sanskrit infinitive takes the place of a dozen very interesting Vedic infinitives. Sanskrit also gave up the most important heirloom which the Hindu language has handed down from pre-historic times, namely, the Vedic system of accentuation. In the 12th cent. the recorded Vedic accents have proved to be of paramount importance in the history of the Indo-European languages. Vedic, however, notwithstanding its somewhat unsettled wealth of form and its archaic character, is not a strictly popular dialect, but a more or less artificial ‘high speech,’ handed down through generations by families of priestly singers. Thus both Vedic and Sanskrit, as is indeed the case more or less wherever a literature has sprung up, were in a sense caste languages, built upon popular idioms.

The grammatical regulation of Sanskrit at the hands of Panini and his followers, however, went beyond any academic attempts to regulate speech recorded elsewhere in the history of civilization.

Older forms lying behind the Vedic language are reconstructed by the aid of Comparative Philology. The Vedic people were immigrants to India; they came from the great Iranian region which is the other side of the Himalaya mountains. The contemporary forms of Vedic (and to a less extent Sanskrit) with the oldest forms of Iranian speech, the language of the Avesta and the cuneiform inscriptions of the Achaemenian Persian kings, yields the rather startling result that these languages are collectively mere dialects of one and the same old idiom. This is known as the Indo-Iranian or Aryan (in the narrower, and proper, sense) lan-
guage. The reconstructed Aryan language differs

less from the language of the Veda than Classical Sanskrit does from Pukrit and Prakrit. The language of the Iranian Avesta is so much like that of the Veda that entire passages of either literature may be converted into good specimens of the other by merely eliminating the special sound changes which each has evolved in the course of its separate existence. The literary style, the metres, and above all the mythology of Veda and Avesta are closely enough allied to make the study of either to some extent directly dependent upon the other. In fact, the spiritual moments of the Avesta, as well as the stone monuments of the Aryan kings became intelligible chiefly by the aid of the Vedic language. Since the revival of classical learning there has been no event of such importance as the publication of the Vedas, the Veda and the Bhagavad-Gita. The language of the Avesta is a Sanskrit dialect, and originated the science of Comparative Philology in all its bearings. Linguistic Science, Comparative Mythology, Science of Religion, Comparative Jurisprudence, and other important fields of study were formed by the researches of scholars who endeavored to prove their very existence to the discovery of Sanskrit or were profoundly influenced by its study.

3. The Rigveda.—The Rigveda is on the whole the most important as well as the oldest of the four collections. A little over 1000 hymns, equaling in bulk the surviving poems of Homer, are arranged in ten books, called mandalas, or ‘circles.’ Six of them (i.—vi.), the so-called ‘priestly books,’ form the nucleus of the collection. Each of these is the work of a different rsi, ‘seer,’ or rather a family of poets, traditionally descended from such a rsi, as may be gathered from certain statements in the hymns themselves. The eighth book and the first fifty hymns of the first book, belonging to the family of Kusa, are often arranged strophically in groups of two or three stanzas. These form the bulk of those stanzas which are sung to melodies of the Veda (Aryan), the final verse of the ninth book are addressed directly to the deified plant soma, and the liquid pressed from it, in order that it may be sacrificed to the gods. The remainder of the first book and the entire tenth book are not ‘stanzas in character and problematic as to arrangement. On the whole they are of later origin and from a different sphere. Their themes are partly foreign to the narrower purpose of the rahas; worship hymns of a more popular character than the hymns which appear in considerable numbers. The poems of the former class reappear, usually with variants, in the Atharvaveda.

On the whole the Rigveda is a collection of priestly hymns addressed to the gods of the Vedic pantheon (see VEDIC RELIGION) during sacrifice. This sacrifice consisted of oblations of intoxicating soma, pressed from the ‘mountain-born’ soma-plant, which reappears in the Zoroastrian Avesta under the name of sona (q.v.), and was therefore the sacred sacrificial fluid of the Indo-Iranians, or Aryans. In addition, melted butter (ghrita, or ghita) was poured into the fire, personified as the god Agni (Lat. ignis), who performs the function of messenger of the gods (as saktis). The ritual of the Veda is to a considerable extent pre-historic, and advanced in character—by no means as simple as was once supposed. But it is much less elaborate than that of the Yajurveda and the Brahmanas (see below). The chief interest of the Rigveda lies in the gods themselves and in the myths and legends narrated or alluded to in the course of their invocation. The mythology represents an earlier, clearer stage of thought that is not found in any other parallel literature. Above all, it is sufficiently primitive in conception to show clearly the processes of personification by which the phenomena of nature developed into gods (anthropomorphism). The original nature of the Vedic gods, however, is not always clean, not as clear as was once confidently assumed to be the case. The analysis of their character is a chapter of Vedic
philology as difficult as it is important. In any case enough is known to justify the statement that the keynote of Rigvedic thought is the nature of life.

4. The Yajurveda. The Yajurveda represents the exceeding growth of ritualism or sacramentalism. Its śṛngās, 'liturgical stanzas and formulae,' are in the main, thoug not wholly, of a later time. They are partly metrical and partly prose. The materials of the Rigveda are freely adapted, with secondary changes of expression, and without regard to the original purpose and order of their composition. The main object is no longer devotion to the gods but the thought later to become the centre of thought: its mystic power is conceived to be a thing per se, and its every detail has-won into all-importance. A crowd of priests (seventeen is the largest number) conduct a vast, complicated, and pain-taking ceremonial, full of symbolic meaning even in its smallest minutiae. From the moment when the priests seat themselves on the sacrificial ground, strewed with sacred grass, and proceed to mark out the alters (red) on which at length, in a rainless sky, and with every utensil blessed with its own fitting blessing, every flaw is elaborately expiated. These formule are conceived no longer as prayers that may, or may not, succeed, but as inherently connected with the proceeding. The whole system is built on rain while pouring some sacrificial fluid, rain shall and must come; if he makes an oblation accompanied by the curse of an enemy, that enemy is surely destroyed. In fact, and in brief, the Yajurveda is a code for the sacrifice, the sacrifice in its every detail of act and word.

5. The Sāmaveda. The Sāmaveda is the least clear of all the Vedas as regards its purpose and origin. Its stanzas, or rather groups of stanzas, are known as śāsanā, 'melodies.' Three are preserved in forms: (1) in the Rigveda, as ordinary poetry, accented in the same way as other Vedic poetry; (2) in the Sāmaveda itself in a form called archā, a kind of libretto composed of a special collection of stanzas, most of which, though not all, occur also in the Rigveda (see above); here also there is a system of accents, peculiar in its notation, but apparently with reference to the rāga-śāna, 'the third scale,' the most common of Indian modes, we find the real sāna here and not only the text but the musical notes are given. This is still not yet a complete śāna. In the middle of the śāna-explanatory syllables are interposed—the so-called stobhas, such as oh, ha, hi, ho, hi, and at the end of the stanzas certain concluding syllables—the so-called nidhanas, such as atha, u, iti, and sit. The Sāmaveda is devoted chiefly to the worship of Indra, who is a bīn-terting, braggadocio god and who has to be bewildered himself with some in order to slay devils. It seems likely, therefore, that the śānas are the civilized version of savage shamanism (the resemblance between the two words, however, is accidental) an attempt to influence the natural order of things by shouts and exhortations. It is well understood that the Brahmanas were in the habit of blending their own hereditary practices and conceptions with the practices and conceptions of the people. The śāna-melodies and the exclamationsinterspersed among the words of the text may therefore be the substitute for the self-exciting shouts of the shaman priests of an earlier time.

6. The Atharvaveda. The oldest name of the Atharvaveda is atharvangirnō, a compound formed of the names of two semi-mythic families of priests, the Atharvans and Aṅgiras. At a very early time the former term was regarded as synonymous with 'holy charms,' or 'blessings,' the latter with 'witchcraft charms,' or 'curses.' In addition to this name, and the more conventional name Atharvaveda, there are two other names, the reductively restricted to the Atharvaveda: bhāgavangirnō, that is, 'Bhūgus and Aṅgiras,' in which the Bhūgus, another ancient family of fire-priests, take the place of the Atharvans; and Atharvaveda, probably Veda of the Brahman, or holy religion in general. As regards the latter name, it must be remembered that the Atharvaveda contains a large number of theosophic hymns which deal with the brahma in the sense of the Neo-Platonic Nyaśa, as a kind of pantheistic personification and its pious utterance. The Atharvaveda is a collection of 730 hymns, containing some 6000 stanzas.

7. The Vedic schools. The reductives or collections of these four Vedas are known as Sāṃhitās, each of them is divided down in various schools, branches, or recensions, called charagya, śākha, or bheda, the term śākha, or 'branch,' being the most familiar of the three. These 'branches' represent a given text or formula, and every stanza is a little from one another. The school differences of the Rigveda are unimportant, except as they extend also to the Brāhmaṇas and Śītras of that Veda (see below). There are two Sāmaveda schools, the union of the two forming the Sāmavedan and the Rājaśyanas. A very persistent tradition ascribes nine schools to the Atharvaveda; the Sāṃhitās of two of these, the Saunakiyas and Paippaladas, are published, the latter in an interesting chromo-photographic reproduction of the unique manuscript of that text preserved in the library of the University of Tübingen. The Yajurveda, especially, is handed down in recensions that differ from one another very widely. There is in the first place the broad division into White Yajurveda and Black Yajurveda. The most important difference between these two is that the Black Yajurveda schools intermingles their stanzas and formulae with the prose exposition of the Brāhmaṇa (see below), whereas the White Yajurveda schools present the Brāhmaṇa in separate works. The White Yajurveda belongs to the school of the Vājasaneyins, and is subdivided into the Madhyāvyavahāra and the Uttarāvyavahāra. The former of the Black Yajurveda are the Taittiriyas, the Maitrāyanis, the Kañcadas, and Kapishthālas. Sometimes these schools have definite geographical locations. For example, the Kañcadas and Kapishthālas were located at the time when the Greeks became acquainted with India, in the Panjāb and in Kasmīr. The Maitrāyanis appear at one time to have occupied the region around the lower course of the river Narmada; the Taittiriyas, at least in modern times, are at home in the south of India, the Deccan.

8. The Brāhmaṇas. The poetic stanzas and the ritualistic formula of the Vedas collectively go by the name of mantras, 'pious utterance,' or 'hymn.' These were followed at a later period by a different literary type, namely, the theological treatises called brāhmaṇas, the Hindu analogon to the Hebrew Talmud. The Brāhmaṇas are exegetical and commentative, bulky expositions of the sacrificial ceremonial, that is, of the ritual, discussing its value or reason, speculating upon its origin, and illustrating its potency by ancient legends. Apart from the light which these texts throw upon the sacred literature of ancient India, they are important because they are written in a connected prose—the earliest in the entire domain of Indo-European speech. They are especially important for syntax: in this respect they represent the oldest Indian stage even better than the Rigveda, owing to the restrictions imposed upon the
latter by its poetic form. The Brāhmaṇas also were composed in schools, or recensions; the various Brahmana recensions of one and the same Veda differ at times even more widely than the Saṁhitās of the mantras. Thus the Rigveda has two Brāhmaṇas, the Aitareya and the Kaṇāyikā, or Śākhāyāna. The Brāhmaṇa matter of the Black Veda is given partly in the Sarvaśastra, or collected in the mantras of that class (see above); on the other hand, the White Yajurveda treats its Brāhmaṇa matter separately, and with extraordinary fullness, in the famous Sarvaśastra Brāhmaṇa, the 'Brāhmaṇa of a Hundred Paths,' so called because of its contents of a hundred lectures. Next to the Rigveda and Atharvaveda Saṁhitās this work is the most important production in the whole range of Vedic literature. Two Brāhmaṇas belonging to the White Yajurveda have been preserved entirely, that of the Tandis, usually designated as Pañcavachikā Brāhmaṇa, and that of the Tālakāvaras or Jaininiyas. To the Atharvaveda is attached the very late and secondary Brāhmaṇa of its contents harmonize so little with the spirit of the Atharvan hymns that it seems likely to have been produced in imitation of the 'school' conditions in other Vedas.

9. The Aranyakas and Upaniṣads.—A later development of the Brāhmaṇas is the Aranyaka, or 'Forest Treatises.' Their later character is indicated both by the position which they occupy at the end of the Brāhmaṇas and by their partly theosophical character. The name 'Forest Treatise' is not altogether clear. Either these works were recited by hermits living in the forest, or, owing to the superior sanctity of their contents, they were taught by teacher to pupil in the solitude of the forest rather than in the profane atmosphere of the town or village. The two important Aranyakas are the Aitareya and the Tātāṭīyīya, belonging to the second Vedic schools of that name. The chief interest of the Aranyakas is that they form in contents and tone a transition to the Upaniṣads, the older of which are either embedded in them or form their concluding portions (see above. Aranyakas, Upaniṣads).

10. The Śrānta-Sūtras, or manuals of the Vedic ritual.—Both the mantras and the mantras are regarded as revealed (śrutī, or 'revelation'); the rest of Vedic literature as tradition (smṛti), derived from holy men of old. This literature has a characteristic style of its own, being handed down in the form of Sutras, or maxims, so called familiarly known as Sūtra literature, or the Sūtras. They are, in the main, of three classes, each of which is, again, associated with a particular Vedic school, reaching back, as a rule, to the school distinctions of the Saṁhitās and the Brāhmaṇas. The first class of Sūtras are the Śrānta or Kalpa Śrāntas, which may be translated 'Sūtras of the Vedic Ritual.' They are brief mnemonic rule-books compiled, with the help of oral tradition, from the mantras, clearly of the same stock as the law of expiation, are found in Vedic texts, especially the Atharvaveda and the Tātāṭīyīya Aranyaka. The Law Sūtras, in their turn, are, like the Sūtras, are either directly attached to the body of canonical writings, or to a certain Vedic sense it is familiarly known as Sūtra literature, or the Sūtras. They are, in the main, of three classes, each of which is, again, associated with a particular Vedic school, reaching back, as a rule, to the school distinctions of the Saṁhitās and the Brāhmaṇas. The first class of Sūtras are the Śrānta or Kalpa Śrāntas, which may be translated 'Sūtras of the Vedic Ritual.' They are brief mnemonic rule-books compiled, with the help of oral tradition, from the mantras, clearly of the same stock as the law of expiation, are found in Vedic texts, especially the Atharvaveda and the Tātāṭīyīya Aranyaka. The Law Sūtras, in their turn, are, like the Sūtras, are either directly attached to the body of canonical writings, or to a certain Vedic sense it is familiarly known as Sūtra literature, or the Sūtras. The form and style of Sanskrit literature differ a good deal from those of the Vedas. As regards the language, it is to be noted that prose in Vedic times, was developed to a tolerably high pitch in the Yadavas, Chalukyas, and Chaulukyas; in Sanskrit, apart from the strained scientific language (sūtra) of philosophy or grammar, or the diffuse and inorganic style of the commentators, prose is rare. It presents itself in genuine literature only in the literary Gita reflections, and partly in the drama. Nor has this prose improved in literary and stylistic quality, as compared with the earlier variety. On the contrary, it has become more and more clumsy and hobbling; full of hackwork, pious sounds, gerunds, constructions in the passive voice where the active would do, and other artificialities. As regards the poetic medium of Classical Sanskrit, it also differs from the Vedic. The bulk of Sanskrit poetry, especially the Epi, the sāstra, and the drama, is the development of the Vedic anuvādānā metre of four octosyllabic lines of essentially iambic cadence. But numerous other metres, usually built up on Vedic prototypes, have been constantly more elaborate and strict than their original; in the main they have also become more artistic and beautiful.

Notwithstanding the wonderfully unbroken character of Vedic literature, Sanskrit literature also differs greatly from the Vedic. The chief distinction between the two periods is that the Veda is essentially a religious collection, whereas Sanskrit literature is, with rare exceptions such as the Bhagavad Gita, or the metrical Law Sūtras, profane. In the Veda lyric poetry as well as legendary and expository prose are in the service of prayer and sacrifice; in Sanskrit epic, lyric, didactic, and dramatic forms are all for Vedic poetic product. The great epic, the Mahābhārata, is by far the most important representative of the former kind. Of somewhat similar free style are the eighteen Purāṇas (see below), of much later date than the Mahābhārata. The beginnings of the artistic style are seen in the other great Hindu epic, the Rāmāyana. But the finished style of the kīrpa is not evolved until the time of Kalidasa about the 6th cent. A.D.

The Mahābhārata, or 'Great Bharata Story,' the greatest of Hindu epics, is a huge authorless compilation for which tradition has devised the name Vyasa, 'Redaction;' as author. It is written for the most part in the epic metre, the sthāka, and contains altogether about 10,000 stanzas of four lines each, about eight times the length of the Homer poems.

The kernel story of the epic, which is interrupted by many episodes, or interwoven narratives, tells how the ancient and wicked dynasty of the Kurus was overthrown by the prince Bhéchatá and Pandu. At a gambling-match depicted in the most vital language, Paribhāṣa, the king of the Kurus, the Pandu princes, rule them as their kingdom, and exiles them for thirteen years. But this is only the preparation for the final war, the eighteenth battle, between the opposing royal houses and their allies. In this the Kurus are finally overthrown and destroyed.

The hero story is not only interrupted by episodes, but in general made the pivot around which philosophical (religious) and ethical discussions of great length revolve. The epic has assumed the place in Hindu literature of an encyclopedia of moral and religious instruction.

A Bhārata and a Mahābhārata are mentioned as early as the 'House Books' (see above) of the later Vedic literature, but all dates assigned to the original simpler epic which preceded the encyclopaedic poems in its finished form are mere guesses, except that it obtains the essentially present form in the 4th or 5th cent. of our era.

Among the episodes of the Mahābhārata, the Bhagavad Gita, 'The Song of the Divine One,' or 'Song Celestial,' is pre-eminent. It is in some respects the most interesting and important book in post-Vedic literature.

When the rival armies of the Kurus and the Pandus are drawn up against each other, Arjuna, the leader of the Pandu, seated on a throne, resolves to enter upon the slaughter. Then the god, one of the incarnations of Viṣṇu, as Arjuna's charioteer, addresses his two armies by pointing out that action, which is the performance of duty, is the obligation of man in the world, although, finally, abstracted devotion to the Supreme Spirit alone leads to salvation. The poem is conceived in the spirit of eclectic Hindu theosophy or philosophy. At the bottom is the Vedic doctrine of duality, challenged by the poet with monistic Vedantist pantheism (see Bhāgavata Purāṇa).

It is not likely that the poem formed part of the original 'Bhārata Story,' but there is no information as to its date and authorship. The Mahābhārata has been translated into English prose at the expense of Pratapa Chandra Ray (Calcutta, 1895), and by M. N. Dutt (do. 1895).

15. The Rāmāyana. — The Rāmāyana, the second of the great epics, is, in the main the work of a single author, Valmiki. It is said, on the other hand, and though it is not entirely free from digressions, it tells a connected story of great interest in epic diction of the highest order. It is to this day the favourite poem of the Hindus. The central figures are Rama and his devoted wife Sita; the main event the conquest of Lanka (probably Ceylon).

Dāsāratha, the mighty king of Oudh (Ayodhyā), having grown old, decides upon Rāma, his eldest son, as the next king, but his intriguing second son, Kaikēya, succeeds in changing his mind in favour of his son Bāhurūṇa. Rāma, banished for fourteen years, retires with Sītā to the forest. Upon the death of Dāsāratha, his son Bāhurūṇa refuses to usurp Rāma's throne, but seeks him out in the forest in order to place him on the throne in his capital city. Rāma in turn refuses to cross his father's decision; he offers his gold-embroidered shoes as a token of his resignation of the royal throne. But Kanthi, who is placed on the throne, the shoes upon the throne, and holds over them the yellow parasol, the sign of royalty; he himself stands by and looks on. In the meantime Rāma makes it his business to fight the demons who molest the inhabitants of the forest in their holy activities. As he goes, he also destroys the demons, who live in Lanka, revengefully kidnaps Sītā. Then Rāma forms an alliance with Hanumān and Sīvaguru, the kings of the monkeys, who build for him a wonderful bridge across from the mainland to Laikā. Rāma slays Rāvana, is reunited with Sītā, returns home, and, conjunctly with Bhārata, rules his happy people, so that the golden age has come again upon the earth.

The story, notwithstanding the fact that it presents itself outwardly as a heroic legend, lies under the suspension of containing one or more mythic roots. Certainly in the Veda Sītā is the personified arrow of the field, the beautiful wife of Indra or Purjanyā (see Vedic Religion). Hence Rāma certainly continues the qualities of Indra, the slayer of demons. The story also seems to typify the advance of Brahmanical civilization southward towards Ceylon.

The Rāmāyana consists of seven books, in about 25,000 stanzas. It exists in three recensions, which differ one from the other in their readings, the order of the stanzas, and in having more or less lengthy passages. The most popular of others. The best known and most popular recension has been translated by the Anglo-Indian scholar R. T. H. Griffith in five volumes (Benares, 1870-73).

16. The Purāṇas. — Somewhat related in character to the great epics are the Purāṇas, eighteen in number. They are later poetic works of mixed cosmogenic, epic, and didactic character. The
word पुराण occurs frequently in the prose texts of the Veda as a designation of the Veda's own cosmogonic and legendary lore; the name is also applied to the Mahabharata. In its most distinctive sense the word refers to a class of writings which certainly do not date before the 6th cent. As a prose form पुराण seems to be sectarian or religious manuals for the people, written in the interest of either the worshipers of Vishnu or those of Siva. Though the fundamental later Hindu triad—Brahma, Vishnu, and Siva—is recognized, nevertheless the Vaishnavite Puranas do not hesitate to say: 'Vishnu is the divinity of the gods, Siva of the devils. To Brahma all alike refer only in a perfunctory fashion. According to ancient tradition, the ideal Purana is divided into five parts, viz. (1) the mahā-bhārata, or secondary creation, or the destruction and rebuilding of the worlds; (2) genealogy of the gods and patriarchs; (3) manvantaras, or periods of reigns of the Maha; (4) the history of the dynasties of kings. Though the extent of these parts and the subject-matter roughly follows that order, the entire type of composition is of secondary importance; it borrows its themes very largely from the Vedas. Each Purana represents religious beliefs, practices, and legends in an exaggerated, fantastic, often disordered fashion (see PURANAS).

17. The 'artistic epics.'—The Hindus consider six कथयस, or 'artistic epics,' entitled to the epithet great 'mahā-kātyas'. But their artistic, or better, artistic character is obscured by their reality from the sphere of genuine epic; they are interesting on account of their wealth of descriptive power and delicacy of illustration; they are deflected from the portrayal of strong character or stirring action. Moreover, the dramatic, poetical, commonplace, and with lyric, erotic, and didactic elements, as well as with bombast and play on words. Nevertheless, no less a person than Kālidāsa, the world's greatest dramatist, is the author of the two best known artistic epics, the कुमāra-sambhāva, or 'Birth of the War God,' and the राजगुरुवा, or 'Race of Rāgini.' The former consists of seventeen cantos, the first seven of which are devoted to the story of the birth and wedding of the deities Siva and Pārvati, the parents of the youthful god of war. The real theme of the poem appears only towards the end, in the account of the destruction of the demon Tāraka, the object for which the war was fought. The story, which in nineteen cantos, describes in the first nine the life of Rāma, together with that of his dynasty. Then in the next six cantos comes the story of Rāma himself, the same theme as that of the Ramayana. The remaining cantos deal with the twenty-four kings who ruled as Rāma's successors in Ayodhya. The remaining कथयस deal for the most part with themes from the Mahābhārata and Ramayana.

18. Lyric poetry.—Every form of artistic Sanskrit literature, whether dramatic, or didactic, or confessional lyric, has a strong lyric cast. At the bottom these three kinds, in the Hindu poet's hands, are but thematically differentiated forms of the same poetic endowment. Ornate figures of speech, luxuriant richness of colouring, carried into literary composition from the gorgeous climate, flora, and fauna of India, subtle detail-painting of every sensation and emotion—these are the common characteristics of Hindu artistic poetry. Lack of any special emphasis or specialization of these conditions, yet it has its individual traits, the most important of which is the refined elaboration of the single strophe, in distinction from haphazard composition. In form and name these strophes are inflected and varied. In no other literature have poets endeavoured so strongly to harmonize the sentiment of a stanza with its metrical expression. The most elaborate continue in the style of the रामायण, or 'Ramayana,' the गोविण-वाच, or 'Godiva's Song,' and the रोमन्निवर, or 'Cycle of Seasons,' both by Kalidasa.

The theme of the former is a message sent by a god, either from heaven, or from the earth, or from the sea, which shall return to the god's wife, whom he sends down upon her couch through the watches of the night, the longing of her exiled husband. May the cloud, after its return with reassuring news, and never himself be separated from his lightning spouse. The 'Cycle of Seasons' is famous for its descriptions of India's tropical nature, matched all along with the corresponding human moods and emotions.

The bulk of lyrical poetry, however, is in short stanzaic stanzas, such as the didactic sententious proverb poetry which the Hindus also cultivated with great success. In fact the most famous collection of such stanzas, that of Bhattari, composed of lyric, didactic, and philosophical poems, Bhattari composed in the 7th cent. A.D., is perhaps the most remarkable Hindu poet next to Kalidasa.

His stanzas, 300 in number, are divided into three centuries—the 'Century of Love,' the 'Century of Regret,' the 'Century of Resignation.' There is no action in these stanzas; there are, however, within the narrow frame of a single stanza, the poet pictures to the world for whom the wide universe is summed up in man, from whose glowing eyes there is no escape. But, after singing wonder, the poet finally declares that he has become an altered man. Youth has gone by; his thoughts, freed from infatuation, are all for contemplation in the forest, and the whole world he accepts but as a wisp of straw.

The second master of the erotic stanza is Anamurt, author of the अनमूर्तत्त, or 'Century of Anamurt.' He above all others is the master of the four moods of love: bliss and dejection, anger and devotion. None of the Indian lyrists treats love from the romantic or ideal point of view; it is always sensual love. But a certain delicacy of feeling and expression, as well as appreciation of those qualities of love which attract irresistibly, only finally to repel, lifts their stanzas above the coarse or commonplace. It is in the Hindo 'nine-song,' favoured with the universal, though rather theoretical, Hindu aestheticism.

19. Didactic poetry.—Even in erotic lyrics the Hindu's deep-seated inclination towards speculation and reflection is evident. This has not yet been the highest in their religion and philosophy, but it has assumed shape in another important product of their literature, the gnomic, didactic, sententious stanza, which may be called the 'Proverb.' O. von Lilienfeld calls it the '3000-verse' Petroglyphs, a collection of no 3000 of these stanzas. They begin with the Mahābhārata, and are particularly common in the moral essays of the fable literature. Their keynote is again the vanity of human life, and the superhuman happiness which awaits resignation. The mental calm of the saintly anchorite who lives free from all desires in the stillness of the forest is the resolving chord of human unrest. But for him who remains in the world there is also a kind of salvation, namely, virtue. When a man dies and leaves all behind him, his good works alone accompany him on his journey into the next life (metempsychosis). Hence the practical value of virtue almost overrides the pessimistic view of the vanity of all human action. These gnomic stanzas are gathered up into collections such as the संतीयत, or 'Century of Tranquility,' or the महा-मुदय, or 'Hammer ofolly'; but the ethical saw is really at home in the fables of the पुराण, or 'Ramayana' and Hitopadesa. These works are paralleled by Buddhist compositions (see below). In fact, a Buddhist collection of this sort, the धार्मिक पुराण, or 'Way of the Law,' contains perhaps the most beautiful and profound words of wisdom of all Hindu literature.

20. The drama.—The drama is one of the latest
yet one of the most interesting products of Sanskrit literature. With all the variety of literary dates in India there is no good reason to assume for this class of works a date earlier than the 5th or 6th cent. of our era. Certain Vedic hymns in dialogue are all that the early periods of Hindu literature suggest as a possible partial, yet very doubtful, basis for the drama. The Sanskrit word for ‘drama’ is nāṭakam, from the root nāṭ, nart, to dance (whence ‘march girls,’ etc.). The word therefore means literally ‘ballet.’ It is not denied that dance came early according to the development of the drama. In various religious ceremonies of earlier times dancing played a part; at a later time the cult of Siva and Vīṣṇu, and especially of Vīṣṇu’s incarnation Kṛṣṇa, was accompanied by pantomime dances. These pantomimes reproduced the heroic deeds of these gods, and were accompanied by songs. Popular representations of this sort, the so-called gātakas, have survived to the present day in Bengal. They are not unlike the new pantomime of the Christian Middle Ages, and their modern continuation, the passion-play. The god Kṛṣṇa and Rādhā, his love, are the main characters, but there are also friends, rivals, and enemies of Rādhā. The gātaka, a mixture of singing, dancing, and reciting dialogue, while unquestionably in some way connected with the origin of the drama, are nevertheless separated from the original by a wide gap from the finished product of the nāṭakam as it appears in such works as those of Kālidāsa in the two epics, or they move in the sphere of actually existing Hindu literature. The themes and events are not different from those of other Hindu literature. They show no foreign admixtures. It must not be forgotten that certain general coincidences between the drama and the theatre of different peoples are due to common psychological traits; hence general historical connexions in such matters requires the most exact proof.

The chief dramatic writer is Kālidāsa, the incomparable Hindu poet, master at the same time of epic and lyric verse (see above). Three dramas are ascribed to him: the Sakuntalā, the Urvārī, and Mālavikāgītā, or Mālavikā and Agnimitra. From a time somewhat earlier than Kālidāsa comes the drama Mṛchakabotkāṭhā, the ‘Clay Cart,’ said to have been composed by king Sūdraka, who is praised poetically as its author in the prologue of the play. Similarly, during the 7th cent. A.D., a king named Harṣa is said to have composed three existing dramas: the Ratnavali, or ‘String of Pearl’; the Yajñavalkya, whose hero is a Buddhist, and whose prologue is in praise of Buddha; and the Priyadarśikā. From the 8th cent. A.D. date the dramas of Bhavabhūti, a South Indian poet, the most distinguished dramatist next to Kālidāsa. His most important prologues are the Mālati-amṛtasundarī, or ‘Mālati and Madhava’; and the two dramas Māhābhārata- charitā and Uttararāmacaritā, both of which deal with Rāma, the hero of the Rāmāyana. Finally may be mentioned Vaiśākhadīta, the author of the Mudrārakṣasā, the ‘Seal of the Minister Rāksasa,’ a drama of political intrigue, whose composition also dates from the 8th century.

Action is the body of the drama — such is the dictum of the poet in a commentary on his own, and the shaping of the Hindu drama. It is known that Greek actors followed Alexander the Great through Asia, and that they celebrated his victories with dramatic performances. After the death of Alexander Greek kings continued to rule in North-Western India. Brisk commerce was carried on between the west coast of India and Alexandria, the later centre of Greek literature and artistic life. Greek art and Greek astronomy certainly exercised strong influence upon Hindu thought, but the chief points of resemblance between the Hindu drama and the Greek comedy are as follows. The Hindu drama is divided into acts (from one to ten), separated by varying periods of time; the acts are followed by a prologue. The chief stage manager (sādhaka). The stage was a simple re-entrant, not shut off from the auditorium by a curtain, but, on the contrary, the curtain was in the background of the stage; it was called sāyana — that is, ‘Greek curtain’ (_seen_). The characteristics of the Hindu drama resemble in some respects those of the Attic comedy. There are courtesans and parasites, braggarts and cunning servants. Especially the standard comic figure of the Hindu drama, the vidyādha, the unromantic friend of the hero, compares well with the go-between, the scourus eares, of the Greek-Roman comedy. The vidyādha is a hunch-backed, bald dwarf of halting gait, the clown of the piece. Though a Brahmin by birth, with maliciously humorous intent, he does not speak Sanskrit, but the popular dialect, Prakrit, like the women and the inferior personages of the drama. He plays the unfeeling idealist, intent upon his material reward; he is always invited to good dinner, to the hero’s sentimental flowery romance. Although it is just possible that one or the other feature of the Hindu drama may be due to outside influence, the inner matter is certainly national and Indian. The themes are, for the most part, those of the heroic legend in the epics, or they move in the sphere of actually existing Hindu literature. The themes and events are not different from those of other Hindu literature. They show no foreign admixtures. It must not be forgotten that certain general coincidences between the drama and the theatre of different peoples are due to common psychological traits; hence general historical connexions in such matters requires the most exact proof.

21. Fables and stories. — No department of Hindu literature is more interesting to the student of comparative literature than that of the fables and fairy tales. There is scarcely a single motive of the European fable collections that does not appear in the Hindu collections. The study of the migrations and relations of fables and fairy tales was first elevated to the position of a science by Theodor Mommsen in his Parabelsammlung (Leipzig, 1859). On the other hand, the procedures and instructions which are woven into the fables present the best and most practical picture of Hindu ethics. The most important and extensive collection of fables and tales is Buddhist, being written in Pali. This collection is
LITHUANIANS AND LETTS.

Designated as the Jātaka, which seems to mean 'Birth Stories.' Buddha is made to appear in every one of them as the wise or successful person or animal of the fable; he himself points the moral (see Jātaka). The two most important Sanskrit collections are the Paññatāntra and the Hitopadèsa. The Paññatāntra, or the celebrated Sanskrit book of this sort, existed at least as early as the first half of the 6th cent. A.D., since it was translated by order of kings, the most important of which are Pahali, the literary Persian language of that time, and some of the so-called Vedic glosses of Yāska, the so-called Neighasonryas and the Nirukta, and the Prātiṣhākhyas, or phonetic treatises pertaining to the treatment of a prose text in a given school or sākha (see above). Later, but far more important, is the Grammar of Panini, one of the greatest grammarians of all times, and his commentators Kātyāyana and Patanjali. Mathematics and astronomy were cultivated from very early times; the so-called Arabic numerals came to this country from India, and were designated by them as Hindu numerals. Indian medical science must have begun to develop before the beginning of the Christian era, for a physician named Kāniska was the head physician of king Kaniska in the 1st cent. A.D. The germ of Hindu medical science reach back to the Atharvaveda. The Bower Manuscript, one of the oldest of Sanskrit manuscripts (probable 5th cent. A.D.), contains passages which agree verbally with the works of Sūruta and Charaka, the leading authorities on this subject.

LITERATURE.—The most convenient sketch for English readers is A. A. Macdonell's Sanskrit and Modern History of Sanskrit Literature, one of the volumes of 'Short Histories of the Literature of the World,' edited by Edmund Geese (London, 1890). The bibliographical notes at the end of the book are a distinct help to more extensive study. Readable and popular in style is H. W. Fausset's Literary History of India (London, 1896). Max Müller's History of Ancient Sanskrit Literature (London, 1869) deals only with the Vedic period, and was important in its day, but is now antiquated. A. Weber's History of Indian Literature (from the German by T. Zachariac, London, 1878) is a learned and technical work, not at all adapted to the wants of the general reader: it represents the state of knowledge of a quarter of a century ago. The German work of L. v. Schroder, Indische Literatur und Cultur (Leipzig, 1878), is instructive, and readable account of Hindu literature: copious translations and digests of the texts themselves render this work very helpful. For recent treatises in English, consult R. C. Lattimore's Aristarchus and the Literary Life of the Hellenistic East (London, 1951), and J. J. McCannel's A History of Indian Literature (London, 1922). The Literatur der alten Indien (Stuttgart, 1893), and V. Henry, The Cultures of India and Pakistan (London, 1908), are also thorough and instructive works.

LITHUANIANS AND LETTS.—t. Ethnography.—The Lithuanian and the Letts belong to the Aryan family of peoples, and together with the Burussians or Old Prussians, who became extinct in the 17th cent., form a distinct ethnological group. This group, now generally considered as Baltic, had already ramified into its several divisions in its pre-historic period, and its unity is now seen only in certain common elements of popular tradition and in the sphere of language— as regards which, however, the Lithuanian exhibits a much more archaic type than the Letts. The original home of the Lithu-Lettish or Baltic race was probably the basin of the lower Niemen, and, as that district is virtually coterminous with the Lithuania of to-day, while the Letts are found in Courland, the adjacent Prussian littoral, the southern half of Livonia, and Polish Livonia in the government of Vitebsk, it would appear that the Lettish branch had reached its present location
by migrating to the originally Finnish districts of Courland and Livonia, and that, on the other hand, the Lithuanians remained fast upon their ancestral soil. Consequently, neither member of the group is of great account, nor is it likely that either was ever important. The Lithuanians number some one and a half million, about 120,000 of them being in Prussia; the Letts less rather than more—the estimate varying from 1,200,000 to 2,000,000. In a physical respect both branches are mixed, though the mixture has been in no way detrimental to them, since many individual Lithuanians and Letts still exhibit all the distinctive marks of pure Aryan descent, while the rest, men and women alike, are generally self-reliant and sympathetic, well-formed, and often even handsome.

2. Political history.—The historical fortunes of the two peoples have run in quite distinct courses.

(a) Lithuanian.—The history of the Lithuanians opens in the 11th cent. with prolonged frontier wars with Russia, from which, however, they emerged so successfully, and with their integrity still so far complete, that one of their princes, Mindaugas (1138), was recognized by the pope as king of Lithuania, actually contemplating the founding of a united Lithuan-Russian State. This design, however, was frustrated by Mendow's death (1203) and by internal embroils. Nevertheless, it was the right of the Lithuanian principality to retain complete control of the Grand-duke Gedymin (†1341); and then, under the leadership of his sons, Olgerd (whom his brothers recognized as sovereign Grand-duke) and Keistut, the young nation succeeded in extending its sway from Poland to the Ugra and the Oka, though it did not include the western districts (Nadrauen, Schelauen, and Sudauen), which the Teutonic Knights had brought under their control during the years 1274–83.

At the death of Olgerd, in 1377, his place was taken by his favourite son, Jagiello, who, however, soon quarrelled with Keistut (†1382) and with his son Witaut, the outcome of the dissension being that the Utraquist Hussites in Lithuania took advantage of the situation, and although nominally the sovereignty of Jagiello was not thereby infringed, Jagiello had shortly before (1386) married Hedwig, queen of Poland, thus opening the way for a political alliance between Poland and Lithuania. The Lithuanians thereby threatened the independence of the former. Witaut strained every nerve and took all available measures to avert this danger. Not only did he seek to promote the independence of his country in a political sense, but he also endeavoured, by working for a union between the Greek and Roman communions within its borders, to make it ecclesiastically self-dependent. While these endeavours proved to be in vain, they won him the confidence of the Utraquist Hussites in many of his actions, which was upon the death of King Wenceslaus they offered him the Bohemian crown, and it was only the unpropitious political conditions of the time that prevented his acceptance of it. He was now all the more ready to assume the crown of Lithuania, which, indeed, the Emperor Sigismund, with a view to the complete severance of that country from Poland, had thrice offered him already. Here, again, however, Witaut was disappointed, as Poland, instead of the passing the crown to him, and he died shortly afterwards (1430)—four years before Jagiello, who, as Queen Hedwig's consort, had at her death (1399) become king of Poland.

In the succeeding period the Lithuanians repeatedly took occasion to assert their independence in relation to Poland, but this did not prevent the principality of Olgerd from gradually becoming a Polish feudatory. Witaut himself had been repeatedly compelled by the necessities of war and by external troubles to make concessions to Poland, and his successors, under the increasing pressure of the steadily growing power and wealth of Moscow, were forced in even larger measure to purchase the help of Poland by ever closer fusion with that State. These rulers, moreover, almost without exception bore the name of Jagiello, and united in their individual persons the Grand-duke of Lithuania and the crown of Poland. The eventual result was the incorporation of the two countries in a single political organism whose fortunes were controlled by a common Diet. The incorporating union was effected at the Diet of Lublin in 1569.

(b) Lettish.—At the very outset of Lettish history we find the merchants of Lübeck taking steps to find an outlet for their commerce in the district of the Lower Dvina, and they were followed by German missionaries, who there founded the earliest Christian settlements. While these attempts at colonization were not at once greatly successful, they had, nevertheless, the effect of making Livonia a nation of its own. The Western Letts, indeed, were being against that heathen land the enthusiasm for war against unbelievers which in that period of the Crusades dominated the thought of Christendom. It was owing to this enthusiasm that Albert, canon of Bremen (†1200), was able to secure a permanent footing in Livonia (1200), and as its bishop—supported as he was by constant immigration from Germany and by the Livonian Order of the Sword (founded in 1202)—to establish there a German colony in 1207 as a frontier district of the Empire. Its suzerainty was shared by Albert and the Order in such a way as to make the power of the bishop preponderant; but this position of matters was fundamentally altered when, in 1227, the Livonian Order was merged in the Order of the Teutonic Knights, the latter thus adding the domain of the former to its own. Taking as its model the Prussian State, in which it alone held the reins of sovereign power, the Livonian Order set itself being subordinate to it—the Teutonic Order sought to curb the episcopal power among the Letts, and it was all the more successful in this policy as it managed to subjugate the lutherto unconquered northern districts. So powerful that it was far as the Lettish provinces, Livonia and Courland, were concerned, was virtually completed by 1290. The Order, nevertheless, did not thereby win respect, but had constantly to take the field against unfriendly neighbours, and, as the fortune of war was on the whole unfavourable to it, while its powers were sapped by internal dissensions, and the secularization of its Prussian territory in 1525 isolated its Livonian domain, its authority in the latter latter also was a treasure the power of the Grand-duke of Poland a century later, and accordingly, as to be expected, the two divisions came to diverge widely from each other, not only as regards their language, but also in the moral, and most of all in the religious, sphere. Eastern Lithuania, which at the time of Jagiello's death was almost entirely pagan, was thrown open to Christianity by Jagiello, who himself had embraced that faith at his marriage with Hedwig,
and strove with all the zeal of a new convert to propagate it among his own people of Lithuania; they became more and more closely bound to Poland, and the Church of the Polish Court and the Polish State soon gained complete spiritual authority among them. In the Lithuanian territory the former was a Roman Catholic country, and such, except to a very small extent, it has always remained; its non-catholic population consists only of a small number of Lutherns, who were won to that communion through efforts directed from Courland, and of some 40,000 adherents of the Reformed Confession, whose forefathers were induced to renounce Roman Catholicism under the influence of Prince Nicholas Czarny Radziwill. The ecclesiastical history of the Western Lithuanians and the Letts took a different course. As in the Prussian territory of the Teutonic Knights, under the Grand-Master Magrave Albert of Brandenburg became a secular Protestant duchy in 1525, so in Livonia and Courland the Lutheran teaching was enthusiastically welcomed, and, in fact, won universal acceptance. Most of the inhabitants remained faithful to it, so that Protestantism is to-day almost universal among the Letts. The Letts, however, are so imbued with the personal belief in the heavenly bodies, especially the sun, as also in the existence of divine beings who control all created things. Pre-eminent among these divine beings was ‘God’, designated by the primitive Aryan name ḏeva (Lat. deus). He was regarded generally as the highest supramundane power, but sometimes, like ὄνομα in Homer, he was a distinct mythological figure, and as such probably identical with Perkinas (Lett. Perkohoms), the thunder-god, who presided over the heavenly bodies, and was regarded as armed. An ancient folk-song tells that, when the moon was unfaithful to his wife, the sun, and became enamoured of the morning star, Perkinas cut him in pieces with a sword. According to Lithuanian belief, Perkinas was the sun-god. Perkinas’s aunt washed the sun in the weared and dust-covered sun, who was once called the daughter of God, and who herself had sons and daughters; in popular songs these play a great part as mystic powers, but are always represented as human in all respects. We hear frequently also of the ‘children of God’, and it would seem that the mythological imagination did not distinguish between the latter and the ‘children of the sun.’

The sun, nevertheless, was not regarded as the wife of ḏeva (or of Perkinas), as appears not only from what has been said, but also from a Lettish folk-song which tells how, when Perkinas set out to find a wife beyond the sea, he was attended by the sun in whose abode, and who was believed that Perkinas was a polygamist, and in another of their folk-songs he is said to have as many wives ‘as the oak has leaves,’ though none of them plays an independent part in the mythology.

We need have no hesitation in assuming that the ancient religion of the Lithuanians and of the Letts alike recognized the existence of other divine beings, and the way in which these are associated shows that they originated in the observation of nature and human life. But, with the exception of Laimė, the goddess of fortune, none of them comes down to us under a common Lith-Lettish name, and we must be the more cautious in connecting such beings with the ancient religion because many of the divine names of the Lithuanian religion rest upon the misconceptions or fabrications of later times. There is adequate evidence, however, for Russian authors to speak of demonic beings, such as the lāūnās (‘fairies’) and the pābās (‘goblins,’ ‘flying dragon’), and it is equally certain that the Lithuanian religion was dominated from primitive times by the conception of Bēzev (Lith. beizis), the croaker; Lētta. Now, to make that conception never became perfectly distinct, it nevertheless formed so definite an antithesis to the idea of ‘God’ that we cannot doubt the presence of a dualistic element in the Baltic cult.

Corresponding to the belief in demonic beings, superstition of a more general kind was, and still is, very prevalent. It manifests itself in a belief in witches (rāgnia, ‘seersess’), in the practice of casting lots (Lith. būršti; Lett. božu), in notions regarding countless and pointed phenomena, and exclusively to the belief that the dead continue to exist in a condition not unlike that of their earthly life. As the majority of these-graves contain skeletons, not ashes, they likewise show that the Lithuanian cemeteries were not merely churches. As to the situation of the Lithuanian abode of the dead, there seems to have been no general agreement, some data suggesting the sky, others a nether world. In various localities we find traces of a doctrine of metempsychosis.

Whichever the cult had a special class of priests cannot be made out. It had certainly no temples in the proper sense, and the ‘ades sacre’ of which we hear should probably be regarded as slight erections in which fire was kept burning. Sacrifices were common, and were offered not only by way of petition and thanksgiving, but also as propitiation; to judge from the Lettish designation, jeedu ‘offering’; the offerings were evidently of a religious character, and consisted originally of flowers and fruits, but we have historical evidence that there were from the first other kinds of sacrificial gifts, while, if not among the Letts, yet among the Lithuanians and Borussians, we find traces even of the practice of human imanodation.

5. Sociological features.—Our data regarding the political and social conditions, the prevailing sentiments and morals, of the ancient Lithuanians and Letts are not sufficient to enable us to give a full and clear account of their civilization. With varying degrees of certainty, however, we may make the following statements regarding their mode of life: they were efficient in war, and were divided into numerous divisions or cantons governed by chieftains; they lived by tillage, cattle-rearing, and hunting, and practised all manner of handicraft and trading; they lived in separate homesteads, and their family life was of the patriarchal type; marriage was based upon and capture of brides, and, while the wife was subject to the husband, she held a place of high honour among her children; finally, both peoples had a remarkable liking for song, but did not possess the art of writing.

6. Literary development.—One result of the lack of writing is that the Lithuanians are a pure people who live alone; the art of reading and writing is only a recent acquisition of the body. If
times. It was, in fact, only when the Christian Church began to make use of texts written in the native languages—long after the invention of printing—that literary documents were at length produced. A Lithuanian and a Lettish translation of the Bible was undertaken—by Johannes Biskupius, subsequently a clergyman and published in 1547, the latter by various clergy- men belonging to Courland, in 1586—a Lithuanian version of a Roman Catholic catechism by a canon named Michael Dunkas (1585), and a work translated by a protestant Lithuanian nobleman named Piktiwiez (1598), are the earliest known writings in the Lithu-Lettish languages. Like most of these earlier literary works, the further development of Lithuan-Lettish literature was long due to clergy-men, and thus, naturally enough, that literature, even when it is not of a distinctively religious character, is in its earlier stages largely pervaded by Christian feeling and moral earnestness. Among the Letts the most outstanding figure of the earlier secular literature was Pastor G.F. Stender (1714-96); among the Lithuanians, Pastor Christian Donalitius (1714-90), the distinguished author of a poem entitled 'The Seasons.' As contrasted with this earlier literary and philosophical heritage of Lithuan-Lettish peoples, this progressive movement, which proceeded at first but slowly, has within recent decades become very vigorous, and alike in the field of politics and in that of letters has produced great, if not immortal, work. As a result of the more recent poetic production of Lithuanian and Lettish writers is well worth the attention of foreign readers. Yet even the best of it is not to be compared in poetic quality with the lyrical survivals of the earlier eras, falling far short of the beauty of many Lithuanian folk-songs (datinos), and also of the charm of the countless Lettish lyrics in quatrains (dvecmenys).

LOCKE.

1. Chief dates in his life. John Locke was born on 29th August 1632, at Wrington, Somersetshire. Brought up at home till the age of fourteen, he was then sent to Westminster School, from which he passed in 1652 to Christ Church, Oxford. He found little satisfaction in the scholastic kind of training that was given there, and, after his election to a Senior Studentship at Christ Church in 1655, he held lectureship and tutorship. His patriotic interests eventually turned more to scientific and medical studies. His connexion with medical practice happened in 1666 to bring him into contact with Lord Ashley, afterwards Earl Shaftesbury, who figured so prominently in the politics of Charles II.'s reign; and the meeting had an important influence on Locke's life. In the following year Locke went to London to act in the double capacity of confidential adviser to Shaftesbury himself and tutor to his son, while he was also engaged in political work and held some appointments. Shaftesbury was dismissed from his place in 1675, and in 1676 Locke had to go to France for his health. He remained abroad for four years, first at Montpellier and Paris, but in 1679 returned to England to assist his friend Shaftesbury once more. The two years that followed the state- man's fall and flight were stormy, and, though Locke had disapproved and probably kept clear of the final plots, he thought it prudent in 1683 to return to France. His health compelled his retirement from this office. His death took place at Oates on 28th October 1704.

2. Characteristics as a thinker and writer. 'Perhaps no philosopher since Aristotle has represented the spirit and opinions of an age so completely as Locke represents philosophy and all that depends upon philosophic thought, in the 18th cent.—especially as it concerns Britain and France.' (A. C. Fraser, Locke, Preface) Locke's claim to be regarded as thus representative may be based alike on the variety of the subjects on which he wrote philosophy, education, politics, religion—and on the aims and ends of his thought. In all directions he exhibits the merits and the defects which are attributed to the period. He is impatient of authority and of 'the jargon of the schools,' seeks to put aside preconceptions and see the truth of things genuinely for himself, believes firmly that 'reason must be our last judge and guide in everything,' and desires sincerely to pursue truth only and for its own sake. On the other hand, he has no adequate knowledge or appreciation of the heritage of the past, nor, always with the happy result, does his thought always make the move in the direction of thoroughness and system. The deficiency is partly explained, no doubt, by his occupation with practical affairs, which interfered with continuous philosophical pursuits; and, partly, too, by the direct practical aims of much that he wrote. The practicality of his aims is itself characteristic. Locke's 'discontinued way of writing' goes also to explain his great fault as a writer—the endless repetitions with which he wearies his readers. In the 'Epistle to the Reader' with which he preceded the Essay, he admits frankly that he has not been at great pains to correct the fault, and at times it certainly seems to let his pen run on almost as if it pleased 'Da Brittan and France.' (A. C. Fraser, Locke, Preface). Locke's intention upon expressing his whole thought fully and clearly, and his great desire to drive home his point and to gain the full assent of the reader. When he writes with any care, his plain style is as excellent as it is simple, and, when he is moved to earnestness, he writes with force and real impressiveness. His faults are seen at their worst in his controversial writings. Although he professes his eagerness to be shown his errors, he seems rather to have been rather impatient of criticism. He is too much taken up with exposing the misunderstandings and misrepresentations of which his critics have been guilty to try to penetrate to the real motives of their criticisms. Hence his replies do not carry us much further, while even as polemics they have their defects. For, although Locke can be very effective both in direct retort and in irony,
he is too apt to weaken his case, not merely by over-elaboration, but also by an insistence on the length of his own and his critics' statements which the reader feels to be petty and unpardonable.

3. The 'Essay concerning Human Understanding' (1690).—In the prefatory 'Epistle to the Reader' Locke tells us how he was started upon the line of inquiry which resulted, after some twenty years of interrupted labour, in the publication of the Essay. He was discussing with a few friends on a subject which he does not specify, but which we know from another source to have been 'the principles of morality and religion' (see Fraser's ed. i. p. xvii). The baffling character of the difficulties which arose in the course of the discussion caused Locke to ask himself whether, before entering upon such subjects, it was not rather 'necessary to examine our own abilities, and see what objects our understandings were, or were not, fitted to deal with.' He took up the task of this examination, and found it expand far beyond his first expectations. The aim of his work was, as he states, the same throughout, viz. that determination of the certainty, extent, and degree of human knowledge which is the theme of bk. iv. of the Essay, and to which all the rest of the work is subservient. Locke seems to think that we do not believe ourselves to have any certainty of correct knowledge, and, with effectively certain preliminary matters had to be cleared up. To know is to have ideas about things—this at least, whatever more. If, then, we are to arrive at right conclusions about the state of knowledge, we must arrive at right conclusions about the medium in which alone it exists; i.e., we had better try to take stock of our ideas, and see how we come by them. To Locke it was plain that we come by them only through experience. To convince the reader that our knowledge and our ideas have no other source, Locke devotes bk. i. of the Essay to showing that there are no 'innate' principles or ideas, unless we understand the term 'innate' in some sense which makes the assertion of such innate knowledge either insignificant or misleading. If there are no such innate ideas, then we must look to experience and experience only for the origin of all our ideas, and must try to trace them back, one and all, to their source there. This is easy to understand if we consider the existence of Locke's teaching on this point, but it really constitutes one of his claims to be regarded as the founder of modern psychology.

Yet it was hardly as a psychologist that Locke himself was interested in the question of the origin of our ideas; it was rather because he thought that, by seeing how, and at what point, our ideas emerge or are formed in the course of experience, we should be better able to measure the knowledge which we get by means of them. We should know, in short, what the actual experience is from which the ideas are derived, and on which, therefore, the knowledge which we have by means of the ideas is based. The results of Locke's stoic taking of our ideas in bk. ii. can be here only summarized.

He finds that all our ideas may be traced back to two great sources: sensation, which gives us the ideas from which the whole knowledge of the external world, and religion, which is the perception of the operations of our own mind, and which gives us ideas such as those of reasoning, believing, willing. The ideas derived from (one or both of) these sources may be either simple—such as the ideas of yellow, thinking, pleasure, unity—or complex. The complex ideas are subdivided (ii. ch. xiii.) into ideas of modes, substances, and relations. By 'modes' are meant 'such complex ideas which, however compounded, contain not in them the supposition of subsisting by themselves, but are considered as dependences on, or affections of substances: such as are the ideas signified by the words triangle, gratitude, murder.' They may be either simple (unmixed or mixed, according as they are merely attributes of one substance or otherwise) or complex, and then the modes like gratitude and murder are mixed modes. Under the above heads Locke proceeds to survey and examine the most important ideas or classes of ideas that enter into our knowledge. The classification is open to criticism in various ways, but where it principally fails Locke is in dealing with the more abstract contents. Yet it is too much influenced by the point of view of logical analysis to be a truly genetic or psychological account of the growth of our ideas. Finally, both interests are crossed by the further interest in the knowledge-value of our ideas, though the last point of view takes us over to the theme of bk. iv. Thus the discussion of primary and secondary qualities in ch. viii., and the discussions of power, substance, and idea, which we have been considering, are as definitely concerned with the knowledge-value of our ideas, and with the nature of the realities known by means of them, as any part of bk. iv.

In bk. iii. ('Of Words') Locke applies his analysis of ideas to the interpretation of the words by which we express them. The most striking feature of the book is in the effort to make clear the distinction of real and nominal essence is applied to the names which signify mixed modes (e.g., mental ideas) and substances respectively. When we define man, for example, we lay down certain abstract ideas, or combination of abstract ideas, by reference to which our application of the term 'man' is determined. This abstract idea is the 'nominal essence' of

\[1\] The term 'idea' is used by Locke in a very wide sense—'for whatever is the object of the understanding when it thinks.' The equivalent in modern psychology is a term like J. Ward's 'presentation.'
The nominal essence, then, is for Locke nothing more than the statement of the meaning in which we intend to use the general name, whereas the 'real essence' of a thing is the real being on which the denomination of the thing itself. So in Locke's view the ideas of mixed modes are ideas which we ourselves frame or put together at our own discretion. Therefore, so far as they are concerned, nominal and real essence coincide, and there is nothing, unless the complexity or vagueness of the idea to which it relates may prevent it, to distinguish their essence exactly and completely. But in the case of substances we are dealing with things which have a real essence, and, since in Locke's view of real essence a real essence is not known to us, we have their case no guarantee that the distinctions which we draw by means of our abstract ideas or nominal essences will truly represent the real essences of the things themselves. In fact, by introducing the notion of essence at all we are assuming a priori that each kind of thing might with division of things into species, and this assumption is liable at any point to turn untrue. The lines of division which we suppose to exist may be found to break down. Hence Locke concludes that in the case of substances our general names express merely the nominal essence. 'The boundaries of species are made by us,' though, of course, we are guided in making them by those superficial resemblances among things which nature presents to our view.

In bk. iv, we come at last to those conclusions regarding the nature and extent of knowledge—or, what is the same thing, of probability or probable judgment—to which the rest of the work had been subsidiary. Knowledge is defined by Locke as 'the perception of the connexion of and agreement, or disagreement and repugnancy of any of our ideas,' which is the basis on which Locke distinguishes four sorts: (1) identity or diversity (e.g., 'blue is different from yellow'), (2) relation (e.g., geometrical equality), (3) co-existence (of attributes in a subject or substance), and (4) real existence (agreeing to say 'God is'). Further, our knowledge of the agreement and disagreement of our ideas has different degrees of evidence. It may be (a) immediate or intuitive—and all certainty goes back to such intuition—or (b) demonstrative, i.e., resulting from a series of steps, and therefore in Locke's view not quite so clear as immediate intuition, even though each step has, or ought to have, intuitive evidence. Lastly (c), there is 'sensitive knowledge,' our knowledge of the particular existence of external things when they are actually affecting our senses. The last degree of knowledge Locke regards as inferior to the other two, though not open to serious doubt. Whatever falls short of these degrees of evidence is Locke's knowledge of mixed modes. From these preliminary determinations Locke proceeds to a series of discussions in which three problems are intertwined in a way that is rather confusing to the reader: (1) the problem of how far knowledge which is real in the sense of being authentic or valid, and not a mere imagination, (2) the problem how far this real knowledge is also general or universal, (3) the problem how far knowledge which is real in the first sense is also real in the further sense of being a knowledge of real existence, i.e. a knowledge of things which have a substantive existence or reality. The clue to Locke's answer to all three problems lies in the sharp opposition which he sets up between his own position and that of the rationalists, e.g., of the Scotch system, who accept with easy readiness the literal truth of a social compact, with the subsidiary doctrines of a state of nature, natural rights of the individual, and tacit consent of the individual to submit to the established government. In one and the same sentence (bk. ii. ch. xiii. § 149) he tells us that in a constituted commonwealth 'there can be but one supreme power, which is the legislative;' yet that 'the legislative being only a fiduciary power to act for certain ends, there remains still to be observed that those ends be not remove or alter the legislative, when they find the legislative act contrary to the trust reposed in them.' He tells us (xl. § 134) that the legislative is 'sacred and unalterable in the hands where the community have once placed it,' yet admits that, as a result of historical changes, the legislative...
may cease to be representative and may therefore strike terror to the minds of private men. (Works, viii. 157.) And then, to complete the reader's confusion, he assigns the task of reforming the legislative to that royal prerogative whose arbitrary exercise he elsewhere denounces. In view of such incoherences we must not have recognized Locke's treatise primarily as a pamphlet for his own time; it has at all events more historical than theoretical importance.

5 Toleration. — Locke's writings upon toleration supply a lack between his position in civil and his religious doctrines. In 1689 he published in Holland a Latin Epistola de Tolerantia, which was translated into English in the same year. Criticius (attributed to one Jonas Proost of Queen's College, Oxford) drew from Locke A Second Letter concerning Toleration and A Third Letter for Toleration in 1690 and 1692 respectively, and twelve years later he had even begun a fourth, of which, however, only a fragment was written. The original letter is a businesslike piece of writing. Locke can see nothing at all in his critic's arguments, and it must indeed be admitted that the position which the critic had chosen to defend was an absurd one. In the case of those who will not embrace the true religion, the magistrate ought to employ force, in the shape of moderate penalties, to compel them to consider the error of their ways. Against this position Locke showed that it was again and again that moderate penalties fail, that 'the true religion' must for practical purposes mean the magistrate's own religion, and that the arguments by which the critic sought to escape from these conclusions were either circular or question-begging. The practical force of Locke's argument lies in this, that the sincerity of religious dissent makes compulsion futile, while the actual divisions among Christian sects make it practically so. Philosophically these considerations were reinforced and explained by his view that in matters of religion there is no certain (or demonstrative) knowledge, and that we must be content with 'a persuasion of our own more or less in the degree of knowledge.' (Works, vii. 129.) He had also laid down clearly in the first letter the religious ground that it is 'in the inward and full persuasion of the mind' that 'all the life and power of true religion consists' (p. 11). 'I cannot be saved by a religion that I distrust, and by a worship that I abhor' (p. 28).

It can hardly be said, however, that the constructive argument of the original letter is in itself satisfactory. It is based on Locke's narrow conception of the State as concerned with little but the security of life and property, and as limited in its functions by the supposed consent of the individual. His argument is qualified, too, in ways which make its consistency doubtful. Thus we return to the theory of 'promises, covenants, and oaths, which are the bonds of human society, can have no hold upon a atheist' (p. 47), and, in effect, to Roman Catholics, because their religion requires them to submit themselves to a 'foreign jurisdiction' (p. 40). And this refusal does not square very well with that 'absolute liberty, equal and impartial liberty,' which, the reader was assured at the outset, 'is the thing that we stand in need of.' Locke wants to separate sharply and completely the spheres of the civil power and the Church. As he denies to the magistrate any right to prescribe articles of faith or forms of worship, so he condemns those who upon pretence of religion do run into the idea of peculiar authority in civil concerns: 'I say these have no right to be tolerated by the magistrate' (p. 46). But it seems strange that, with the recent history of his own country in view, he should feel unable to say that the proper man to prescribe the religious beliefs in civil concerns was almost certain to be made by the dominant religious sect, whatever it might be. The magistrate who was not to tolerate such ecclesiastical pretensions would hardly be able to avoid needing another to religion. Nor was it to be expected that any religious sect, whether Catholic or Puritan, which was firmly convinced that it alone taught the true way of life and that its rivals were spreading pernicious errors would be willing to have both the use and the control of the civil power. As in other cases, so here, Locke's argument makes a great show of robust common sense, but does not go very deep, and involves large tacit assumptions.

6. Religion.—One of these assumptions, no doubt, was that latitudinarianism of his own religious views which found expression later in his Reasonableness of Christianity (1685). In that work he seeks to show, by the evidence that the one and only gospel-article of faith is this, that Jesus is the Messiah, the promised Saviour. To believe this, to repent of our sins, to endeavour after a sincere obedience to the Saviour's commandments—this can produce only outward conformity, not inward conviction, that what was punished was therefore really dissent and not 'want of consideration,' and that any end which justified moderate penalties would equally be served by the use of such penalties. Locke anticipates the objection that, on the strength of reported miracles, the statement that Jesus is the promised Messiah is merely a historical, and not a saving, faith; but it can hardly be said that he sees its evil force of the objection. He speaks, it is true, of the 'oblation of a heart, fixed with dependence on, and affection to God' as 'the foundation of true devotion, and life of all religion,' and describes faith as 'a steadfast reliance on the goodness and faithfulness of God' (Works, vii. 129, 131), but he does not explain sufficiently how this religious faith arises out of the historical belief. He insists on the inability of plain people, 'the day-labourers and tradesmen, the spinners and weavers,' to understand these assumptions, and on the consequent necessity for an authoritative religion and morality. 'The greatest part cannot know, and therefore they must believe' (p. 146). But whether such an appeal to authority would find its most natural satisfaction in Locke's simplified Christianity, or is even quite consistent with it, is not so clear. Among other advantages of an authoritative revelation he speaks of the support which it affords to morality, and he leaves us in no doubt as to the kind of support he has in view.

'The philosophers, indeed, showed the beauty of virtue; they set her off, as drew men's eyes and appreciation to her; but leaving her unenforced, very few were willing to expose her. The generality could not refuse her their esteem and commendation; but still turned their backs on her, and forsook her, as a match not for their turn. But now there being put into the scales on her side, "an exceeding and immortal weight of glory;" interest is come about to her, and virtue now is visibly the most enriching purchase, and by much the best bargain (p. 150).

It has to be remembered, however, that appeals to self-interest — the favourite passion, as Butler calls it — were characteristic of the age.

7. Education.—Locke's views on this subject are contained in his Thoughts concerning Education (1693) and the posthumous Conduct of the Understanding. The latter connects directly with the Essay, and was originally designed to form a
LOCKS AND KEYS.

chapter of it. It has been highly praised, but, like other writings on the general education of the individual, must be about as obvious and well known to all as the proverbial pot of scalding water. Indeed, it is almost obvious. Perhaps its main value, after all, lies in the ample illustration which it affords of Locke's own intellectual attitude and temper of mind. The other works make a much more vivid and explicit illustration of the various parts of educative thought.

The limited and practical aim of the Thoughts is emphasized by Locke himself, viz. to set forth 'how a young Gentleman should be brought up from his infancy.' As a medical man he does not divide his researches into strictly intellectual and training. The characteristic feature, however—and the conspicuous merit—of the book is the paramount importance which it gives to the training of character.

That which every Gentleman...desires for his Son, besides the Estate he leaves him, is contained (I suppose) in those four Things, Virtue, Wisdom, Breeding, and Learning' (§ 134).

The order expresses Locke's deliberate estimate of the relative importance of the qualities named, and this order aptly reflects the trend of the subject consistently throughout the book. No render of the Thoughts is likely ever to confuse education with instruction. So too, in the ease of intellectual education itself, Locke insists, in his Considerations, that the business of education 'in respect of knowledge, is not, as I think, to perfect a learner in all or any one of the sciences, but to give his mind that freedom, that disposition, and those habits, that may enable him to make of himself, and of all things, what shall appear to himself to' (§ 12). A writer who goes carefully into details must, of course, expose himself to criticism. Locke's advice as to bodily training is in some points certainly not such as medical authority sanctions, and some of his views on moral training are at any rate open to question. But there can be little doubt about this, that Locke is at his best in dealing with such matters. His fresh and independent view of his subject, his steady insistence on character as central, important, his own kindliness and affection for young people, and his practical common sense combine to make him an admirable exponent of the spirit in which the educator should go about his work.

LITERATURE.—The best ed. of Locke's works is, according to A. C. Fraser, that of E. L. F. 4 vols., London, 1777. The reference is from the World, 2nd ed. (1811). The entire work has been edited by Fraser, 2 vols., Oxford, 1894. The chief life is that of H. R. Fox Boverie, 2 vols., London, 1876. There are several notices by writers of Locke's life and philosophy by Fraser, London, Edinburgh, 1890, T. Fowler, London, 1890, and S. Alexander, ed., 1888; and E. Fishclnan's John Locke: ein Bild aus den geistigen Kämpfen Englands im 17ten Jahrhundert, Stuttgart, 1886, is a work of similar character. In addition to the histories of philosophy, the chapters on Locke in the following works may be referred to: R. Adamsom, The Development of Modern Philosophy, Edinburgh, 1893, and A. Leslie Stephen, History of English Thought in the 19th Century, London, 1892, both vols.; The Cambridge History of English Literature, Cambridge, 1907-12, vols. viii. (W. H. Scegley). Of more special works there is G. von Herlitze, John Locke und die Schule von Cambridge, Freiburg, 1893; G. Geil, Uber die Abhandlungen von De Motu, Strauburg, 1887; and R. Sommer, Locke's Verhältnisse in Deutches, Berlin, 1887) deal with the difficult question of Locke's relation to his predecessors; that of E. Poschmann (the Logik John Locke) 1890 with the philosophy proper.

H. BARKER.

LOCKS AND KEYS.—Before the invention of bolts or, later, of locks and keys, a variety of devices were in use to secure safety. Many peoples at a low level of culture live in shelters or huts, one or more sides of which are quite open (Tshimbu, Kongo; Senoufo, Lombo, etc.), and others live in a house only for occasional purposes—sleeping, birth, sickness, death, etc.—so that there is no need of a fastening. But in other instances, even where no doors exist, attempts

are made to render the entrance secure. The huts of the Eskimos are approached by a narrow winding passage along which stockades are built, and the door is approached by a winding passage trodden stockaded. In Fiji, the Caroline Islands, Kivai Island, among the Indians of the Chaco and of Guyana, and in the Highlands of New Guinea, small, very low or very narrow, or is merely a small aperture at some height from the ground (cf. Pr 17).2

Sometimes the doorway is closed merely with a couple of large plantain leaves or palm leaves held in place, with a placed at a coco-nut (Solomon Islands, Roro-speaking tribes of N. Guinea), or with a portiere (ancient Peru), or with a kind of blind or mat which can be raised or lowered at desired (Uapues, Samos, Tonga, Tiasela, New Mexico).3 To this might be fastened pieces of metal or shell which chattered and so gave warning when any one entered (Tiasela), or, as in New Britain, a rattle was hung in the doorway, so that any one entering at night might strike his head against it and warn the inmates.4 In Bonin, where locks were known (§ 1), a cord running through a staple, and attached to a block of wood, served to keep the door closed. Or, again, a wooden screen is slid across the entrance—a kind of primitive door (J. M. E. Eki, Eo, Bageish).5 This is secured by thongs (Baganda, Melanesia ['but the tying can be done from without through an opening made for the purpose']), by props or a wedge (African tribes, Zunis [stone wedges]), by props or a wedge (Mexico, Upper Congo, Grelos, Dayaks, wild Malay tribes, Zunis).6 In some instances such doorways or doors are further protected by charms or fetishes which will work evil on any one trying to enter. These are analogues of the keys which have been placed at a keyhole to prevent fairies, spirits, etc., from entering through them (§ 3).7 As knotted strings or thongs served for tents, so they were also sometimes used to fasten doors. In Babylonia and Egypt seals sometimes served the purpose of locks and keys, but bolts were also used, and over those of the temple of Samaš in Babylonia ilations of oil were poured as well as other parts of the door

LOCKS AND KEYS.—Before the invention of bolts or, later, of locks and keys, a variety of devices were in use to secure safety. Many peoples at a low level of culture live in shelters or huts, one or more sides of which are quite open (Tshimbu, Kongo; Senoufo, Lombo, etc.), and others live in a house only for occasional purposes—sleeping, birth, sickness, death, etc.—so that there is no need of a fastening. But in other instances, even where no doors exist, attempts
LOCKS AND KEYS

121

(cf. § 3 (d)). A conqueror in Egypt sealed the doors of a house after having bolted them.1

1. Primitive locks and keys.—In some of the instances cited above a bar set against the movable door from within and held in place by various means is found. Doors and gates swinging on hinges were a feature of the more ancient cities, or iron, or wood, or across from one doorpost to the other, the ends being set in holes in these (Dt 3 f., Neh 7, Is 45, Jg 16), or with bars and bolts (Neh 3, Balaclaya, Egypt). In Homer, H. xii. 435 ff., two bars are pushed out from square holes in the doorposts and meet in dovetailed fashion in the centre. A bolt or wedge keeps them in position. The primitive bolt, at first of wood, then of metal, slid into a staple on the doorpost.2 Where folding doors were used, probably a vertical bolt was placed behind them.3 Before the use of locks and keys a simple method of sliding a bolt was used in Greece as well as in central and northern Europe, in the shape of a bent hook or sickle-shaped rod. This was inserted in the door and caught in a hole in the bolt or on a projecting knob. Such keys have been found in archaeological remains. A similar key about 2 ft. long made of iron with a brass handle ornamented with ring money, and with a hook at the chief's door key, is in use in N. Nigeria.4 Another method was to hold the bolt in place by means of a peg also worked from outside by means of a string. A further development, supplying the use of a key, consisted in using a peg in an upright position to correspond to the sockets in the bolt. These pegs might be fastened in different ways according to the type of lock in use. In one type two pegs fell into notches in the bolt, when it was pulled horizontally and held in place. To raise these a T-shaped key was used.5 It was pushed vertically through a hole in the door, given a quarter turn, bringing the arms into a horizontal position, and then pulled slightly back so that the arm of the T fell into holes in the pegs, which could now be raised. The bolt was then pulled back by means of a string.6 In the second type a number of small pegs dropped into holes in the bolt and are then flushed with its lower surface. The key consisted of a rod, and the teeth fitted variously upon the shorter piece. When inserted below the bolt, the teeth raise the pegs flush with its upper surface, and the bolt can then be pushed back by the key. Innumerable varieties of this type of lock are known, and the key is probably that known as 'Lacoonian' with three teeth, the invention of which was attributed to the Laconians. Locks and keys of this type were used in Egypt, among the Romans (often of an elaborate pattern), Greeks, Scandinavians, and possibly the Celts.7 Both of these locks are of the 'tumbler' type, as is also the third, the tumbler being a bolt of a bolt.8 In this the pins drop into holes in the bolt, which is hollow, until they are flush with the upper side of the hollowed-out part. The key consists of a rod with upright teeth corresponding in size and position with the pegs. It was inserted into the hollow of the bolt and raised the pegs, so that the bolt could be pulled back. In this case the key, which is sometimes of large size, was put through a hole in the door large enough to let the hand pass through with it. But in some cases the lock was fixed on the outside. This type of lock was used in Egypt (perhaps not earlier than Roman times), and is still found in remote parts of the W. Highlands, among the Negroes of Jamaica, in British Guiana, (where it may have been introduced by settlers), and among the Zunis (perhaps of Mormon origin).9

The first of these types is supposed to be the kind of lock which Penelope opens in Odyssey, ii. 46 ff.,95 regarded as fastening the bolt from outside. Penelope unloosens it (probably it was tied by a secret knot); then through a hole in the door she inserts a bar of metal bent twice at a right angle; its end strikes on a knob fixed on the bolt and pushed it out of its staple. If there were two bolts, both, connected together, could be shot at once.10 A large key of this kind is often represented on monuments as a hieratic survival, carried by priests.5 It is akin to the type already described. In Benin a key and bolt working somewhat on this principle are in use. The bolt has a knob; the key is a metal rod, to the end of which is attached another piece bent twice at a right angle and having a knob fixed on its end. This key is inserted through a hole in the door, the keyhole being at a height above the bolt corresponding to the size of the key. The end of the key impinges on the knob, and, when a turn is given to it, the bolt is slid along. The bolts in the king's palace were of carved ivory.6 Locks and keys more or less of this type, but of wood, are used by the Wambs of British Central Africa. The key has teeth of 2 or 3 inches in length. When it was inserted vertically, it might be inserted horizontally into the bolt in place. Possibly these are of Portuguese origin.7 Original native locks are made by the Hausa, and are traded among other tribes.8 Du Chaillu refers to native locks used for chests and doors in Goumal, Equatorial Africa, but does not describe them.9 Among savage tribes generally civilized influences are introducing the use of European or American locks and padlocks—e.g., among the Barongas and elsewhere in Africa.10

1 Arisoph. Theor. 431 B; Diels, p. 144; Wilkinson, p. 334; Brit. Mus. Guide to ... Gr. and Rom. Life, p. 1672. A key of this type might consist simply of a bent rod with a pinset. This kind is used in Egypt, Persia, India, Turkey, etc. (Pitt-Rivers, p. 9).
2 Pitt-Rivers, p. 58; Diels, p. 141; Darenberg-Saglio, ep. Ser: 1. H. R. C. E. Cairo is at work (in the field); Darenberg-Saglio, ed. 'Jama,' col. 677 (Etruris, outside bars); Perrot-Chipiez, viii. 186, 281; Hom. H. xxiv. 453, 567c, etc.
5 Or, as in the Force islands, a key has teeth which fit into notches in the pegs when slipped in horizontally. The pegs are then raised vertically.
In another type, used mainly in padlocks, the key thrust into the lock compresses springs, thus permitting the shackle to be withdrawn. Such padlocks were used in Egypt, and are still known in W. Africa (possibly of Egyptian origin). They were sometimes used by the Romans, especially in China and India (the so-called puzzle padlocks). The Romans had flat keys for raising latches, similar to those in use to-day. Both the Greeks and Romans knew the lock with wards through which the key passes, thus moving the bolt backwards or forwards. Keys of a simple type to suit such locks are represented on vases. More elaborate keys are often small and form a part of fingerings, the key lying flat upon the finger. False keys were also used by Roman robbers.

While locks of the primitive types here described were used in different parts of Europe and are indeed still used in remote districts, the ward system, with obstacles to prevent any but the proper key from turning the bolt, was much used during the Middle Ages. The principle of the tumbler lock was applied to locks during the 18th century. Roman keys terminated in a flat or perforated handle; others were of an open lozenge, or of a rectangular, of a circular, or were of a 13th cent. kind, but had little ornamentation. In the 13th to 15th centuries they terminated in a lozenge, trefoil, or quatrefoil. After this, and especially in the 16th century, they had elaboration and became wares of ample size, of which, terminating the stems were filled with ornament, the stem itself was ornamented or took the form of an animal or human figure, or stem and bow took the form of a crucifix. Even the webs were sometimes ornamented or painted.

2. The key as symbol.—The importance of the key, as that by which doors guarding treasure, stores, etc., might be closed or opened, was marked in ancient times. This doubtless originated in the period when locks and keys of a primitive type were first invented and their value made plain to all.

(a) Frequently the wife as Honefleur bears the household keys symbolically. She is the key-bearing lady of the house. Among the Romans a newly-married wife was given the keys of the store-rooms. The divorced wife had to surrender the keys; hence the formula in the Twelve Tables signifying divorce—1claves advenient, exspectavit. The woman released from a house could not get back the keys; 'claves remisit.' Among the Teutons and Scandinavians the bride was decked with keys and girdle. Here also at divorce she had to give up the keys, and 'taking away' or 'giving up the keys' became a formula of divorce. Among the Gauls a widow placed keys and girdle on the corpse of her dead husband as a sign of renunciation in participation of goods—a custom found elsewhere, and also signifying that the widow was free of obligation. Slaves carried keys of various parts of the house, and the janitor bore the house-key. In the Christian Church the church-treasurer who carried the keys of the treasury was known as claviceps. In Is 22:27—laying the key of the house of David upon his shoulder—signifies transference of the supremacy of the kingdom, and the imagery is taken from the large keys opening tumbler locks carried on the shoulder in the East. In Equatorial Africa, as chests containing treasure are a synom for property, and as they are kept locked with either native or American locks, till it is known to whom they belong, richer he is. Hence keys in large numbers are worn as a symbol of wealth.

(b) Since many divinities were key-bearers, their priestesses (not usually their priests) also bore keys symbolically, signifying that the divine powers were theirs, or that they were guardians of the sanctity of the gods. Priestesses are often represented carrying on their shoulder a large key of the rectangular type, already alluded to as an archaic survival; a key represented in a grave-stone signifies the burial-place of a priestess.* Iphigenia is called λαράδιας (‘key-bearer’) of Artemis, and η λαράδιας of Hera. Cassandra bore the keys of Hecate, and in the mysteries of the goddess the priestess was λαράδορα, while the priestesses of Ceres  

(c) As has been shown in the art. Door (vol. iv. p. 551), heaven and the underworld were believed to be regions or abodes with doors and gates. The gods have keys and gates, just as men have locks and keys. In Babylonian mythology Marduk made gates to the heavens and attached secure bolts to them. Samas is said to open the bolt of the bright heaven, and to Ishtar’s supremacy is said to belong the opening of the door of heaven. Hades with its seven gates has also bolts. Over these dust is scattered, and Ishtar threatens to break the bolts when she descends there. The gates of Pluto’s realm are closed with iron bars and keys. The Hebrews had similar conceptions. shut has bars (Job 17:16); cf. Ps 107:19: Hades and the Abyss have locks and keys (Rev 12:9 20). These conceptions were still retained in Christian belief, and nothing is more dramatic in the legends or theology of the Descent than Christ’s breaking the bars and bolts of Hades. Similarly in Manichean mythology the regions of the dark worlds have gates with bolts and with locks and keys differing from all other locks and keys. So also earth, sea, the world, etc., have locks and keys. The Assyrian Ninib holds the lock of heaven and earth, and opens the deep, and Ea unlocks fountains. Cybele is represented with a key—that of earth, which is shut in winter and opened in spring. Eros has keys of love, and Cupid’s arrow is the key of the ocean (πότνως λαράδας). The Egyptian Sarapis has keys of earth and sea. In Hebrew thought the sea has doors and bars, and the earth has bars. In Breton folklore is found the curious idea that menhirs are keys of the sea. Should they be lifted, the sea would rush in. They are also keys of hell. Fairytale likewise has its doors with locks and keys, and the key is sometimes given to a favoured mortal in order that he may obtain treasure.

LOCKS AND KEYS

closing of the doors of that region to allow or prevent entrance or egress. This was more especially marked in Mithraism and Romano-Celtic religion, in which certain of the divinities bear the title κλειστής, clei-geir. Janus, as god of doors, is said to have been represented 'cum clavi et virga' in left and right hands—the key and the rod of the Roman doorkeeper. He sits guarding the gates of heaven with the Hours. At morning the doors of heaven are opened to let out the day, and they are shut again at night. Even more universally he was κλειστής, since all things—heaven, sea, clouds, and the earth—were opened by his hand. Of Portunus, another god of doors, probably of barns and stores, also carried keys, and perhaps some ritual act was performed with keys on the Portunalia.2 Divinities of towns carried the keys of the town—e.g., Athene is κλειστής of the town of Athens.3 According to Parmenides, Dike carries the keys of the doors of day and night, i.e., of heaven, and removes the bar from the door when necessary.4 So Helios, who comes forth from the doors of the sky, is said in the Hymn of Proclus (I. 9) to have keys. The same conceptions are found in Mithraic circles, perhaps partly taken over from these classical models. The Kronos of Mithraeum belief carried a key in his right hand or one in each hand, or, like Janus, a pair of secret keys while the key of the doors of heaven, by which souls enter or pass out to birth. He was addressed as 'the lord who fastens the fiery bars of heaven.'5

Divinities associated with the under world carry its keys: the usual key is that of Hades, kept on monuments or images of the goddess, and is also described as possessing them. She is even called 'the Lady bearing the keys of the Universe.'6 In Caria every fourth year the procession of the key of Deir was celebrated in her honor—a festival which lasted for several days. Panamias (v. xx, 1) describes Pluto as having keys of Hades, which is closed by him so that none can go out thence. In the magic papyri and elsewhere other divinities bear the keys of Hades—Persephone, Euxenis, Anubis—and here we enter the region of mingled classical, Oriental, and Egyptian beliefs which were popular after the decay of the Greek and Roman State religions.7

Openly in the hands of the keys signifies power over the regions; the locks of the doors of which these keys open. As heaven and Hades were regarded as towns or States with walls and gates, so they had locks and keys. The keys are the sacred names of the divine guardians in their several families, who have the power of opening or closing the gates. To those who were worthy of heaven its door was opened; to those who merited hell its door was opened. Once in, there was generally no egress. In Jewish thought Michael is said to hold the keys of the kingdom of heaven (3 Bar 11, cf. 4 Bar 9, Eth. version, where he holds open the gates of righteousness till the righteous enter in).

The power of the keys as associated with St. Peter is of great importance in the art. Binding and Loos- ing. Here it is sufficient to say that the idea of his being dowered with the keys of the kingdom of heaven is sufficiently obvious. The picture is still that of a State or town with gates. St. Peter, as κλειστής, can open to those worthy of the kingdom of its rewards, or can keep the door locked against the unworthy. But it should be observed that, while generally righteousness,

6 W. Edelker, AV 782, 1865, 2217.

obedience to divine law, was the condition of future reward, not only in Christianity but in other religions, and is the principle compelling the opening of the gates of heaven. We find this in Mithraism, in Gnosticism, perhaps in the popular Christianity which was so much mingled with Gnosticism and paganism, and in the syncretistic groups of the period. In these, submission to rites and ceremonies—e.g., of baptism, purification, and communion—possession of amulets, knowledge of the right pass-words or the names of the demonic or divine guardian, and some ritual act compelling the opening of all so many keys with which the soul could unlock the gates and pass onwards or compel the κλειστής to unlock them.1

The name 'key' might be given to anything which had the power of opening or closing. Rabbinic lore spoke of three keys which were given to no third party—the keys of the womb or of child-birth, of rain, and of resurrection of the dead.2 As to the first of these, it is still a divine power which works in conception and birth, opening the womb, and we may compare the phrase of Aristophanes regarding Hera, that she guards the keys of marriage (κλειά γάμου φανήσεως), or that of Pindar when he says of Peitho that she bears the holy keys, the way of the house of love.3 But the thought underlying this is seen in the erotic slang of many languages, which describes the female organ as 'key' and the female organ as 'lock.' The consummation of marriage by these means ensured its association with certain divinities. Similarly any book of secret knowledge or of mysteries or γρα δίκη might be called a 'key.' It contained the means of unlocking mysteries, of opening the way to truth. The book of rites of the Egyptian priest of the god of Truth, and some of the magical texts current in the syncretistic groups already referred to bore the name 'Key.' The name is applied also to any book which purports to explain various matters, or even to literal translations of classical or foreign works; hence withholding 'the key of knowledge' of which Christ speaks (Lk 11) means debarring men from the knowledge of moral or spiritual truth which would give them entrance to the Kingdom of God. In the Christian documents Christ Himself is called 'the Key.'

As a symbol the key occurs in herbalry. It is found in the arms of the popes, of various bishoprics, and of families. It also occurs in the names and signs of shops and inns, and is here of ecclesiastical derivation—the Cross-keys, the Cross of St. Michael, the Golden Key, etc., are traditional keys of St. Michael's chamber, are prominent in folk-tales of the Blue-ribbon group (MacCuUoch, CP, London, 1906, p. 356 ff.).

3. Locks and keys in magic—The importance attaching to locks and keys gave them a place in various magical rites, while their being made of metal adds to their value, since metal of itself has magical power (see CHANGELING, vol. iii. p. 339; FAIRY, vol. v. p. 684; METALS AND MINERALS).

(a) As locks and keys make fast or open, bind or loose, so they are sometimes considered to have a sympathetic effect upon dwellers in the house—e.g., at a birth or at death. It is a common custom to open all the locks at a confinement, lest the delivery should be hindered through their remaining fast, and so to lighten the labour. With this may be compared the Roman custom of presenting the woman with a key as a part of an easy delivery. In Sweden in difficult labour the midwife asks the woman whether she has prayed to the Virgin for her key to open the womb. If not, the midwife

LOCKS and KEYS

says the prayer, the woman repeating it after her.1

If a witch was present at a wedding and snapped a padlock to at the benediction, dropping it into water before the couple could be united, the padlock would not open again until the padlock was recovered. This belief is found in Germany and, in a similar way, in Greece.2

On similar grounds the soul cannot leave the body of a dying person as long as any locks or bolts in the house are fastened; these are therefore unlocked or unfastened and the house-doors are opened.3

In all these we have instances of sympathetic magic—what is done to the lock is Facta done to the living person. They correspond to the world-wide use of knots (g.e.) and bindings in magic.

(b) In many cases the key itself, probably as a symbol of power, is used as an amulet or has magical virtues. Already among the ancient Greeks and Etruscans this use was found (see ERE vol. iii. p. 436). In Italy small keys blessed by the priest are called 'keys of the Holy Spirit,' and are worn by infants as a preservative against convulsions. There, as well as in Portugal, Greece and the islands, Germany, and other places, the key is a frequent amulet against the evil eye. It may form one of the charms attached to the cimarrunt, or round about the child's neck, in the hope that it will work. Sometimes it is phallic, the handle being so shaped.4 In Jerusalem necklaces from which charms depend are worn, and among the latter are a lock and key.5 In China a common amulet is a small key. A silver lock itself is a silver lock. The father collects cash from a hundred heads of families and exchanges it for silver; of this a native padlock is made, and it is used to fasten a silver chain or ring round the boy's neck.6 In Korea the neck ring is also a charm. For a girl it is a real lock of silver with a bar across the top (the bolt), and the key at the side. For a woman it is a mere symbol of the lock. On it is the inscription, 'Longevity, riches, and all you wish.'7 With these practices may be compared an incident in a Danish Märchen: the hero gets a key as a christening gift, and it brings him luck.8 In Norway a large old iron key is used against dwarf-struck cattle. It is hung over the head in the hope that it will work.9 Such keys are supposed to have been forged by dwarfs (cf. the use of elf-shot, FAIRY, § 6). An ancient method of warding off hail from a field was to hang keys round it—perhaps by way of locking the field in from harm, or merely as charms against the hail.10 In Pennsylvania a lock is carried in the seed-bag in order to keep birds from the corn.11 A key, partly for its own virtues, partly because it is of iron, is commonly placed in cradles to prevent fairies from changing the baby.12

In the island of Zacynthos a key is placed on the breast of a corpse, because, being of iron, it will scare away evil spirits, though the popular explanation is that it will open the gate of paradise.13

According to a belief in Brittany, when a wolf is struck between the eyes with a key, the enchantment ends, and the human form is resumed.14

(c) Another magical use is that of the Bible and key. A large key, sometimes an ancient or hereditary key, is placed between the leaves of a Bible, which is then closed and bound with cord. The handle of the key projects and is held in the hand or on the fingers of one or two persons, while some formula is being said. At the psychological moment it twists and turns, thus indicating whatever is desired to be discovered. This has superseded earlier methods—e.g., with a sieve— but Reginald Scot already mentions the use of a palster and key. (i) They are used as a cure for nose-bleeding. Here the patient turns the Bible and key round, while the wise man repeats a charm. Then the latter removes the key and places it down the patient's back, while the patient holds the Bible. This is supposed to cure the bleeding entirely. The latter key is generally used, but seldom now in a magical way. A similar use of Bible and key is for the purpose of 'unwitching' a patient.2 (2) It is also used in divination, usually to discover a thief or a witch. The names of the suspect are repeated with the formula, 'Turn Bible, turn round the key, turn, key, turn, and show the name to me.' At the right name the key twists and the Bible drops from the hand. Within recent years such a use is known to have alock known as a 'sorcerer's key.' The Bible and key (or the key alone) are used in E. Anglia to divine with, and also to help a vessel entering or leaving port. To assist it to enter port, the key is turned towards oneself, and, to leave port, away from oneself.2

(d) The keyhole, as an opening by which fairies, spirits, and the like may enter the house, is often magically protected. Thus in the Sporades it is stopped with a skein of flax to prevent vampires from entering. They would require to count all the threads in the skein before doing so. In Cyprus, on locking up, the cross is signed with the key over the keyhole. In Germany the keyhole is stopped up in order to outwit the Mar ('nightmare') which enters thereby. In legal traditions, such a keyhole is customary to say 'in the name of God, the Compassionate, the Merciful,' when locking a door, as a protection against genii. The door cannot then be opened by them. In Ande a vase of water was placed before the keyhole to prevent visits from a spirit, and in Savoy a watch-glass. The spirit broke the latter and then left in disgust.2 Stable men, cow-houses, etc., are sometimes protected by tying charms to the key—usually a perforated stone (the key-stone which keeps off the demon Marn) and a horn.15 In Babylon demons were said to slip into houses through bolts, etc., 'gliding like snakes,' and it may have been to prevent this that libations were poured over these ($1; for other precautions taken see Door, vol. iv. p. 840).16

(e) Keys were sometimes thrown into holy wells as a propitiatory offering to the spirit or guardian of the well, as at Cricetieth on Easter morning.4

4. The key-flower.—Medieval legend and later story had much to say regarding certain mysterious flowers which could either make locks fly open or cause a rock door in a mountain to swing open and so admit the seeker to obtain treasure hidden there. The flower was blue, red, or white, and was known as the 'wonder-dower' or 'key-flower' (Schlüsselblume); similar properties were also ascribed to the Springwurzel, or 'explosive root,' usually obtained from a woodpecker whose nest had been closed up with a wooden bang. She flew and sought to open the doors, returns with it, and applies it to the bang, which is forced out with a loud noise. It is then taken by the treasurer-seeker, who uses it as the flower is used in other instances.5 Elian and Pliny know of this legend, but speak of a plant, and the latter elsewhere refers to a herb by which all things closed can be opened.6 This is the shāmir of Rabbinic legend, a kind of worm or a stone in possession of a moorhen.7 In connexion with these stories of mountain flowers obtained by a wonder-dower, there are usually mysterious white ladies who guard them, and who, like the Hausfrau, carry a bunch of keys which also give access to the treasure.8 There is a German belief that where the rainbow touches the earth, a gold key, which gives its name to the flower,9 is in the story of Ali Baba, the rock door opens when the mysterious word Sesame is spoken. The word may have stood in an earlier version for the herb aconitum, but in other instances as the name of magical words makes locks and bars open—e.g., those of the Egyptian underground—while even in tales of enchantresses from New Guinea the use of the words, 'Oh, rock be cleft,' and 'Oh, rock be closed,' causes a rock door to open and shut.10 In the lives of saints a not uncommon miracle is to unlock a door when the key is lost. They touch the lock with the hand, but their presence makes the door open. In other instances they pass through closed doors, as modern mediums have claimed to do.11 Probably the point d’appui of these saintly miracles is AC 126.

LOCUST. 125

Introduction.—The Latin word locustā first denoted certain crustaceans—e.g., the lobster—and the English word 'locomotive' is itself a corrupt adaptation of the Latin locusta. Dialectically 'locust' denotes the cockchafer and the insect to which allusion is here made and which is usually called the locust.2

so thick together, but that they could escape a stick warded by a black rainy cloud. 1

Another account, from the Levant, states:—

"Their swarms fill the air, darkening the sky, and the noise of the caterpillars is heard towards nightfall till they light. . . . they often break the branches of the trees. . . . the swarms invariably resume its flight as soon as the sun has set; it is little. . . . it has one time to destroy all the vegetation." 2

In 1889 a swarm over the Red Sea occupied 2000 square miles: its weight was calculated at 42,000 million tons of 

3 Munro, writing of locusts in S. Africa, states that, when driven into the sea, they swim with ease on the backs of a bank from three to four feet thick and from fifty to one hundred miles in length, and the stench from the corruption of their bodies is so intense that it is perceived for a hundred and fifty miles inland. 4 He describes the movements of the locusts as "curious, interesting, and pretty."

3. The locust march.—After the flight the females lay their eggs in the soil, each ovum containing about a hundred eggs.

4 When the tiny creatures issue from their nests . . . the very dust of the ground which was so still before, now seems to thunder. They are driven to move by a process of twisting or rolling over one another, so that for the first few days they receive the name of twisters (south Africa). Within eight or ten days, however, they can jump four or six inches, and after an age of three or four weeks a new characteristic makes its appearance to caper. It is so performed, and in a very graceful manner. The whole countryside moves in a body in one general direction, and more or less in a straight line, as if by common consent, without apparently having any recognised leader or commander. 5

The locusts march thus over the country, they eat everything in their path, and even the bark of trees: they enter houses and "eat the very clothes and curtains at the windows"; they even eat the wool off the sheep; and, last stage of all that ends this strange, eventful history, they will eat one another. When the storks are on their way, they resemble and receive from the Boers the name of an army on the march. 6

"It is in this marching stage that the storks do enormous damage and eat every visible thing in their path, and completely destroy the work of the husbandman. They are unlike the flying company of locusts, which only levy toll here and there, and these, when they pass, leave nothing. 7 The black locust," says Post, referring to Palestine, "now spread like a poll over the land, eating every green thing, even stripping the bark of the trees. 8"

The Syrians beat pans, shout, and fire guns to drive off a swarm. When they have settled, they are harried by government enforcement for per capita contribution of eggs, or offers a price for them by weight. When the larve hatch out, in fifteen or twenty days, tranches are dug in their pathways, or fires are built. 9 The only successful method of exterminating locusts was adopted in Cyprus in 1881. Since 1000 the island had been a wilderness. Matthaei, conversant with the habits of the larve, erected an insurmountable wall of calico and leather round the main area. Unable to pass the smooth leather, the locusts fell into the trench dug beneath. At the same time 1 1 000 tons of eggs were destroyed. The plague has been obsolete ever since.

4. Superstition and metaphor.—Among the Dervishoids of Muzarap, when locusts invaded the gardens, the natives catch one, decorate its head with red lead (in accordance with ceremonial custom), salam to it, and let it go. The whole swarm is then believed to depart. 1

When in Syria, when caterpillars invaded a vineyard or field, "the vines were gathered, and one of the caterpillars

14 Lk 101-4. T. K. Cheyne, Art 'Bucks' in EB. 15 H. E. Tristram, Nat. Hist. of the Bible, London, 1913, p. 261. 16 The form and the 'Buck's good for cattle' English dealers call the pods 'locusts.' The hard brown seeds were formerly used by jewellers to weigh gold and silver, hence the word 'carat.' 'Carob' is the Arabic or Persian name for the tree, Ceratonia silbopa (Cheyne, loc. cit.). 17 Wajippra Radd, se.
Baptist being essentially the prophet of repentance. It is impossible to decide a detail which is itself perhaps legendary. But its typical value is great; and, as such, the carob bean proverb leaves little doubt in identification. Treating the detail as an hypothesis, we can reach the same conclusion in favour of Cheyne's view, for this reason, that, while the carob, like all leguminous food, is highly sustaining (the Levantines have always made such food their staple diet), the nutritious value of the individual locust is extremely small, and insufficient, with honey, to support life.

LITERATURE.—This is fully given in the article, excepting J. H. Fair, Soutenir entomologiques (Paris, 1879 ff.), vii. 416-512, 535-557. A. E. CRAYLEY.

LOGIC.—I. DEFINITION.—Exceptional difficulties lie in the way of a general description of logic, because the definite increment of knowledge which is undertaken by primary sciences is not claimed here in a sense that is comparable. In logic we merely 're-traverse familiar ground, and survey the mental processes. We do not, except accidentally, so much as widen our mental horizon' (B. Bosanquet, Essentials of Logic, p. 2). And exceptional pains are necessary in explaining how unfamiliar processes which reveal no unfamiliar faculties which appear to knowledge of the past (Wolf), of the universal and necessary laws of thought without distinction of its objects (Kant), of the processes of the understanding concerned in the estimation of evidence (J. S. Mill). It is the art of thinking (P. Gassendi, Arnaud, of reasoning (A. Whately, Bain), of forming instruments for the direction of the mind (Burgess, E. Sanderson, Aldrich).

Underneath such summary phrases as 'laws of thought' and 'forms of knowledge,' which have become common in the more modern definitions, there still lie very varied suggestions as to scope and method. The following are influential examples:

2. 'Such a scheme of the view of discovering...the laws by which our faculties are governed, to the end that we may obtain a criterion by which to judge or to explain their procedures and manifestations...we have science which we may call the Nomology of Mind...Pure Logic is only an artificielle development of the various modes in which they (the primary conditions of the possibility of valid thought) are applied...the laws of thought as thought (Kant, 'Regulative Totality, the Constituent of all knowledge' (Logischen Grundbegriffe, 1858-60, §§ 1, 2, III, 5; 157-159).

3. The forms and laws of thought 'are those subjective modes of the connection of our thoughts which are necessary to us, if we are to express and connect thought' (Lotze, Outlines of Logic, Eng. tr., Boston, 1874, p. 6).

4. 'The doctrine of the regulative laws, on whose observance rests the idea of the identity of the intellectual activity of man' (Ueberweg, System of Logic and Hist. of Logical Doctrines, Eng. tr., London, 1877, § 3).

The subject-matter of Logic is Knowledge (gen. Knowledge, or the form of knowledge; that is, the properties which are possessed by objects or ideas in so far as they are part of the world of knowledge...the characteristics by which the various phases of the one intellectual function are fitted for their place in the intellectual system which constitutes the whole of knowledge' (Bosanquet, Essentials of Logic, p. 44, Logic, i, 3).

These definitions with one consent repudiate the relativity, or voluntarist limitation of knowledge...is suggested by the title 'art'; but the responsibilities which must fall on a professed science they acknowledge only with some qualification. Mill does not propose any scientific investigation which is not already sponsored by psychology. Hamilton attains the specific guarantee by relying on conditions that are 'primary.' The others appear to undertake something further, but with the same marks as are attendant on speculative philosophy. Ueberweg expressly relies on 'universal laws of existence' borrowed from metaphysics, and 'laws of the life of the mind,' from psychology, for 'auxiliary axioms' (§ 2). In order that we may avoid the responsibility of the assumption that the unfamiliar processes of which Bosanquet speaks are 'knowledge' in the same sense as our more natural scientific processes are, and that logical doctrine consists of 'theses to be proved' and 'axioms to be applied,' as Ueberweg claims (§§ 1, 4), comparable while and science cannot define logic as the art of raising the natural scientific processes into explicit self-consciousness. The special labour of logical studies, in any case, is to be undertaken with a view to what psychologists describe as 'acquaintances with,' rather than 'knowledge about,' our natural processes.

'Without logic, the mind of man can admirably energise, admirably reason; but without it, does not know itself through and through; and ignores one of the fairest and most fruitful of its faculties. Logic brings to the mind self-acquaintance. Such is its use, and it cannot be a mere 'art,'' (Bartleby 'St. Hilaire, De la Logique et de l'Arétologie, p. xlii).

We might also require of any doctrine which claims to be logical that it shall be (1) reflective, as distinct from assertive, in its significance; (2) teleological or purposive in its principle, (3) a priori or independent in its authority, (4) theoretical rather than practical in its limitations, and (5) disciplinary, not objective, in its motive.

1. Reflexion.—Reflective contents belong to various kinds of philosophical doctrine. In logical doctrine they recover the reference to personality which has been discarded from scientific, and place an 'I know what...would otherwise be a 'So it is.' This reference is the ground for classifying logic with the sciences specially grouped as mental, as in Hamilton's scheme (Lectures, vol. i. ch. 7); or as an 'integral part of philosophy' (Ueberweg, § 6); and it forbids such arrangements as those made by A. Bain and H. Spencer, where, at least in part, it stands first in the series of natural sciences arranged in the order of abstractness. For logic is what it is, not because it leaves out of consideration the spatial and other aspects of reality which natural sciences accept, but because it accepts something which they reject, and so changes the significance of a scientific statement, in scholastic phrase 'a first intention,' into a 'reflective idea,' or 'second intention.'

2. Purpose.—Knowledge is a form of life, and, like other forms, cannot be explained by detailing its constituent energies or organs, without assuming a finality for the whole. For a completely scientific purposes we can say 'since logic forms of knowledge is the motive power of theoretical effort' (Siggurt, § 62, 6); or, to mark off the occasion for logical study, that 'the fundamental fact which underlies all logical reflection is that we make a distinction, from the point of view of value, between the true and the false' (W. Windelband, in Encyclopaedia of the Philosophical Sciences, Eng. tr., i. 11); or, in co-ordinating cognitive life with
other moments of cosmic existence, that 'the
in the Greek Analytic (E. Croce, Introd., p. 260). Logical consciousness reinforces this
roll, though the doctrine is essentially neither
despcription of the experience nor discrimination of
the faculty nor perspective of the event, but ex-
pression of the habit.

3. Independence.—In analogy with Kant's cele-
brated criticism of knowledge, that it all begins
with experience, but does not all spring from
experience, we can say that logical consciousness
begins with knowledge, but does not spring from
it, or wait for a licence from it in the same way
that empirical science has to wait for its special
data. Even the borrowings from psychology and
metaphysics are not for the purpose of conferring
authority on logic, but are methodical devices
for making it precise, for 'unfolding an inward
conviction,' as Butler claimed to do in regard
to conscience. The logical rule is neither more
nor less authoritative than the example, provided
it is understood by the same; the ill may now
stumbles at the fact that when we want to think
about thought we must, in so doing, already follow
the norms of right-thinking—there is no arguing
with him' (Windelband, loc. cit. i. 25). All we
can do is to frame words of instruction to 'make the rule
followed by the understanding a separate object of
thought' (Logic, Introd. § i).

4. Theory.—Cognition gives us the control of
nature; and the reflective faculty, the control of
self; but the logic is the expression of the reflective
faculty so far, and so far only, as the self is cog-
nitive and there is conscience in science. It is
indifferent to the manifestations of personality in
feeling or action, and even in so much of cognition
as control.

5. Discipline.—Thus the motive of logic is not
furnished by the world of objects, but by the aims
of personality; if an art, it is a cognitive art, if a
science, a disciplinary science; and it is sustained
by our solicitude for intellectual self-government.
The historical beginnings of logical theory are to
be found in those racial dispositions and social
conditions which gave occasion for the deliberate
control of our trains of thought. In India it appears
to have originated with rules in ceremonial
deliberation:

'From the Brahminic decisions on disputed points arising in
the course of sacrifice . . . collected in exegetical and philo-
osophical authorities (Gotama, before the 6th cent. B.C.)
evolved a system' (Bodas, Tarka-Sangrah of
Ananatadeva, Introd. p. 29).

And with Gotama the inwardness of logical concern has
outworn its ceremonial form.

'The end proposed is the escaping from liability to trans-
migration, and the attainment of tranquil and eternally
interrupted beatitude' (Aphorisms, tr. J. E. Ballantyne, Introd.
p. 5).

In Greece it originated with canons of public debate and scientific instruction: the propaganda
of sophistical not by the Sophists, the challenges to
the complacency of popular beliefs issued by
Socrates, the polemics of Zeno.

Some of Aristotle's predecessors, he records, 'had given
rhetorical, others interrogative, discourses to learn—since they
instructed that they should instruct their pupils by delivering,
not by the effects of art' (Nepos, Elenchi, ch. 21). The art
which he constructed deepened, like Gotama's, into
direct reflection and self-communion, for 'dialectic (the art of
discovering, investigating, and deliberating)' . . . (the principle
of all methodical thought) (Topics, i. ch. 2, 3, and
Nepos, Elenchi, ch. 2).

But in the Greek, unlike the Hindu, logical illu-
mination, reflection fastened upon conviction at the
point where mental intelligence merged in the
intelligence of humanity at large—just as in Greek
ethics the good of the individual merges in that of
the State. The Greek forms of proposition and
syllogism seem to symbolize a world of intellects,
where a common record of conviction can be main-
tained amid determinations of experience and fore-
sight varying and changing with the individuals;
the Greek analytic science idealizes the inner coherence of such a record, whereby
it dominates the individual intellect, while the
Greek dialectic is the interplay through which vitality, welling from the latter, streams into
the record.

The motive of logic being disciplinary, its method
must be adjusted to the intellectual forces which are
permanently constitutive of civilization; and
its general scope cannot change to the extent to
which other sciences change, where any advance
may open up new vistas of inquiry. Kant is able to
say:

'since Aristotle's time Logic has not gained much in extent,
as indeed its nature forbids that it should. But it may gain in
respect of accuracy, definiteness and distinctness. . . . Aris-
totle has omitted no essential point of the understanding;
we have only to become more accurate, methodical and orderly'
(Logic, Introd. § ii).

Nevertheless, it must share the vicissitudes in
fortune of civilization as a whole. And the more
influential of these, since Aristotle, have been
limited in the range of free judgment during
medieval centuries, the value set upon personality
by modern religion and philosophy, and the acceler-
ating progress of physical sciences in the most
recent times—the words of many among us 'in
connexion with a certain exaggeration in value
which has fallen upon the three Aristotelian de-
partments of doctrine successively in scholastic,
modern, and recent years, and has transformed at
least the dialectic almost beyond recognition.
For the contrasts and controversies between the
historic schools are questions of emphasis and balance in
what might be called the 'dimensions' of logical
discipline, to borrow a conception from geometry;
or in the fundamental 'ideas' used in forming our
conceptions, to borrow from Whewell's philosophy
of all scientific discovery whatever.

In almost every science 'controversies' have 'turned up
the possible relations of ideas, much more than upon the actual
relations of Facts' (Philosophy of Discovery, p. 356).

The dimensions or ideas in which the historic
schools have formed conceptions for logical value
may be distinguished as explicitness, consistency,
relevance, and system.

II. PRINCIPLES.—Parallel with what Whewell
says as to the progress of physical science—
'the science of the universe is a universe to a
conformity with Ideas which we have in our own minds—the
ideas, for instance, of Space, Force, Substance (Natur
and Composition), and the like . . . the Idealization of Facts' (ib.
p. 356)—

we may expect for logic also that
'an exhaustive solution of the great aggregate of logical
problems can only grow up out of the union of all the different
methods of treatment to which Logic has been subjected in
virtue of the inner essential perpetuity of its nature' (Windel-
band, loc. cit. i. 9).

But the different 'methods' must be such as are
grounded, if not 'in the systematic continuity of
the philosophical theory of knowledge,' as Windel-
band requires, still in the unity of dimensions in
consciousness of logical value. The 'principles' of
logic must be these dimensions.

1. Explicitness.—The earliest of such dimensions to
be utilized in the formation of logical concep-
tions was that of explicitness. We must be con-
scious of the definite germinal organization within
our judgments or inferences, whenever occasion
arises to make a decision concerning the
individual, the individual intelligence merged in the
intelligence of humanity at large—just as in Greek
ethics the good of the individual merges in that of
the State. The Greek forms of proposition and
syllogism seem to symbolize a world of intellects,
where a common record of conviction can be main-
tained amid determinations of experience and fore-
sight varying and changing with the individuals;
the Greek analytic science idealizes the inner coherence of such a record, whereby
it dominates the individual intellect, while the
Greek dialectic is the interplay through which vitality, welling from the latter, streams into
the record.

The motive of logic being disciplinary, its method
must be adjusted to the intellectual forces which are
permanently constitutive of civilization; and
its general scope cannot change to the extent to
which other sciences change, where any advance
may open up new vistas of inquiry. Kant is able to
say:

'since Aristotle's time Logic has not gained much in extent,
as indeed its nature forbids that it should. But it may gain in
respect of accuracy, definiteness and distinctness. . . . Aris-
totle has omitted no essential point of the understanding;
we have only to become more accurate, methodical and orderly'
(Logic, Introd. § ii).

Nevertheless, it must share the vicissitudes in
fortune of civilization as a whole. And the more
influential of these, since Aristotle, have been
limited in the range of free judgment during
medieval centuries, the value set upon personality
by modern religion and philosophy, and the acceler-
ating progress of physical sciences in the most
recent times—the words of many among us 'in
connexion with a certain exaggeration in value
which has fallen upon the three Aristotelian de-
partments of doctrine successively in scholastic,
modern, and recent years, and has transformed at
least the dialectic almost beyond recognition.
For the contrasts and controversies between the
historic schools are questions of emphasis and balance in
what might be called the 'dimensions' of logical
discipline, to borrow a conception from geometry;
or in the fundamental 'ideas' used in forming our
conceptions, to borrow from Whewell's philosophy
of all scientific discovery whatever.

In almost every science 'controversies' have 'turned up
the possible relations of ideas, much more than upon the actual
relations of Facts' (Philosophy of Discovery, p. 356).

The dimensions or ideas in which the historic
schools have formed conceptions for logical value
may be distinguished as explicitness, consistency,
relevance, and system.

II. PRINCIPLES.—Parallel with what Whewell
says as to the progress of physical science—
'the science of the universe is a universe to a
conformity with Ideas which we have in our own minds—the
ideas, for instance, of Space, Force, Substance (Natur
and Composition), and the like . . . the Idealization of Facts' (ib.
p. 356)—

we may expect for logic also that
'an exhaustive solution of the great aggregate of logical
problems can only grow up out of the union of all the different
methods of treatment to which Logic has been subjected in
virtue of the inner essential perpetuity of its nature' (Windel-
band, loc. cit. i. 9).

But the different 'methods' must be such as are
grounded, if not 'in the systematic continuity of
the philosophical theory of knowledge,' as Windel-
band requires, still in the unity of dimensions in
consciousness of logical value. The 'principles' of
logic must be these dimensions.

1. Explicitness.—The earliest of such dimensions to
be utilized in the formation of logical concep-
tions was that of explicitness. We must be con-
scious of the definite germinal organization within
our judgments or inferences, whenever occasion
arises to make a decision concerning the
individual, the individual intelligence merged in the
intelligence of humanity at large—just as in Greek
ethics the good of the individual merges in that of
the State. The Greek forms of proposition and
syllogism seem to symbolize a world of intellects,
where a common record of conviction can be main-
right notion; doubt; motive; familiar fact; scholastic tenet; syllogism; hypothetical conclusion; ascertaining; discussion; common error; matter of a reason; permission; necessity; to be argued from—knowing the individual; there are these (sixteen things), there is the attainment of supreme good (Apelphousa, tr. Baillantyne, § 1).1

Most of these topics appear to represent stages in dialectic or in the process of clearing up knowledge by discussion (Adamson, History of Logic, p. 160, etc. Saint-Hilaire). But logic in the long course of its development has always made use of a method dialectical in this sense, which should not be hidden from us as a mere inward motive and significance. While it was as yet only tradition, not a method, its practice was possible and even useful; but when it became literary, the practical utility of the method preserved it alongside of interpretations that were more spiritual. The alliance of the two methods was expressed in the reforms and elaborations made by Dignāga about A.D. 500.

1 Demonstration and refutation together with their fallacies are used in arguing with others; and Perception and Inference, together with their fallacies, are used for self-understanding; seeing this, I compile this Sāstra (Nyāya-pracīsa, quoted in Vidyākālākāra, Hindu Medieval Logic, p. 89).

2 The conception that the same alliance was turned to forensic uses by Cicero, to academic uses by the scholastics, and to educational uses by the many modern and the now contemporary authors who choose to teach a science of argument, and who use it, is an anachronism.

3 The conceptions of explicitness suggested to a modern mind by Gotama's sixteen standards and the explanations which he and his commentators append to them would be such as follow. In place of the logical values upon any given judgment, we must bring into consciousness (1) the extent to which our cognitive faculties are committed to it, perceptually, inferentially, conceptually, or interpretatively; ‘that I shall die’ is inferential, the sense of a sign of truth or reality which is thus assumed as accessible to the faculty, or ‘fit to supply a right notion’—a topic similar to that of the ‘category’ in modern logic, or, in Wheewell, the‘idea’; (3) the question, or pre-determination of a void in the system of our knowledge, which brings faculty and reality into the relation—the problematic phase in the development of a judgment, such as fails us in truism or is perverted in paradox; (4) the emotive root which makes the proposition ‘worth’ the concern of an individual a worthwhile creating; for ‘truth implies a reference to purpose as well as to reality’ (W. R. Boyce Gibson and A. Klein, Problem of Logic, London, 1908, p. 2); ‘that I shall die’ is significant only for the background of life; that I shall not allow heredity for the councils of moral perfection; (5) and (6) the sureness and definiteness which fact and dogmatic or conceptual principle bring with them to their function in inference; (7) the scheme of their co-operation in the inferential synthesis; there must be (a) the probandum, defined by doubt and motive; (b) the reason, appealing to a sign; (c) the example, verifying a principle of signification; (d) the application, investing the reason with the significance of the example; and (e) the conclusion, establishing the probandum as a significate. ‘That I shall die, seeing that I am but human, as my fathers died before they were human? For I am as more adverse critics, I, must die.’ It is the transition from the problematic to the assertory phase of thought that saddens the application and conclusion from the reason and probandum—a transition which disappears in all the other sciences of the universe because it disappears in proofs and static formulations, as distinct from the processes, of knowledge. The remainder of the sixteen topics are adjustments imposed on a conviction by its entrance into an environment of other convictions on the same question, by its encounter with convictions current in the world of other persons, and by the entrance of its motive into a system of other motives within our manifold practical nature, an organism where cognition, after all, is only one of the forces constituting its life.

2. Consistency.—Under the more complex social and intellectual conditions of life in Greece, the logical consciousness of the logos took on the contact of individual thinking with this ‘static formulation’ of knowledge. And the ‘idea’ most essential for forming conceptions suitable to the spiritual emergency is that of consistency. It is not the consistency of the method, which in modern times became the idea of Hamilton and the ‘subjectively formal’ logicians, but that which makes possible the allegiance of individual intellects, with varying perceptions, memories, and premonitions, to common formulations of knowledge.

(a) Interpretative. In recent psychology the paradoxical tenet is held that, while a permanently existing idea appearing in consciousness ‘at periodical intervals’ is a mythological entity, yet the mind can have no ideas of the same (W. James, Text-book of Psychology, London, 1892, chs. xi. and xiv.). Similarly, we may say that, while a judgment identical in many minds is mythological, varying acts of judgment may give allegiance to knowledge.

The philosophy of explicitness suggested to a modern mind by Gotama's sixteen standards and the explanations which he and his commentators append to them would be such as follow. In place of the logical values upon any given judgment, we must bring into consciousness (1) the extent to which our cognitive faculties are committed to it, perceptually, inferentially, conceptually, or interpretatively; 'that I shall die' is inferential, the sense of a sign of truth or reality which is thus assumed as accessible to the faculty, or 'fit to supply a right notion'—a topic similar to that of the 'category' in modern logic, or, in Whewell, the 'idea'; (3) the question, or pre-determination of a void in the system of our knowledge, which brings faculty and reality into the relation—the problematic phase in the development of a judgment, such as fails us in truism or is perverted in paradox; (4) the emotive root which makes the proposition 'worth' the concern of an individual a worthwhile creating; for 'truth implies a reference to purpose as well as to reality' (W. R. Boyce Gibson and A. Klein, Problem of Logic, London, 1908, p. 2); 'that I shall die' is significant only for the background of life; that I shall not allow heredity for the councils of moral perfection; (5) and (6) the sureness and definiteness which fact and dogmatic or conceptual principle bring with them to their function in inference; (7) the scheme of their co-operation in the inferential synthesis; there must be (a) the probandum, defined by doubt and motive; (b) the reason, appealing to a sign; (c) the example, verifying a principle of signification; (d) the application, investing the reason with the significance of the example; and (e) the conclusion, establishing the probandum as a significate. 'That I shall die, seeing that I am but human, as my fathers died before they were human? For I am as more adverse critics, I, must die.' It is the transition from the problematic to the assertory phase of thought that saddens the application and conclusion from the reason and probandum—a transition which disappears in all the other sciences of the universe because it disappears in proofs and static formulations, as distinct from the processes, of knowledge. The remainder of the sixteen topics are adjustments imposed on a conviction by its entrance into an environment of other convictions on the same
according to order of terms (Kant); and puerile that indirect conceptions should be referred to their own list of instances; and an error that syllogism is an estimate of evidence (Mill); and a usurpation that the formalities of deduction should be limited to syllogistic, and to propositions with two terms only, and to terms rather than objective relations, and to the logical relation only of inclusion and exclusion (L. Couturat, in *Encyc. Philos. Sciences*, i. 167-169).

(b) Conceptual.—A second direction in which consistency may be sought is between the thoughts of the moment and an identity or permanency of personal knowledge, hardly distinguishable from 'meaning the same,' as described in psychology, but quite-distinguishable from the impersonal truth or universally human trend assumed by Aristotle.

The pythagorean workers of the impersonal logicians is replaced by an equally mythological content of the personal microcosm, a static conceptual structure to which our ever variable thoughts conform. The 'subjectively formal' or 'conceptual' logic is the content for the stylist of the 'subject.' It originated with Kant's discrimination between the section of his *Critique of the Pure Understanding* which he named 'Transcendental Logic,' where the 'forms' of ideas as contributions of the mind to the constitution of its objects, and the 'General Logic,' where 'forms' are relations of cognitions to each other (*Critique*, bk. ii. Introd. § 2. *Logic*, Introd. § 1). Once more, then, as in the Hindu discipline, knowledge is referred to personality; but personality ceases being an isolated center of motive interest, to be disciplined for its high destiny, but as a realm of mere abstractions, namely cognitions outside the world of natural sciences, yet metamorphosed through the course of transcendental reflexion. Reason itself, not forgetting of this origin, found in knowledge a dimension of 'relevance' as well as one of consistency. In the living thought he found an interplay corresponding to the pythagorean works of the transcendental 'object.' And, while accepting the law of non-contradiction as the principle of such inference as is merely possible, he added a law of reason and consequence, for the cogency of any actual inference. *Logic* proceeds in a tightly ordered second law we encounter transcendental distinctions, such as between 'logical' or *a priori* universals and 'quasi-logical' or inductive. And the neo-Kantian school of logicians better their introductions to the detailed conceptions of intellectual synthesis framed in transcendental logic. To others, however, still following the disciplinary motive, and unconcerned with the origin of the new realm commended to them for study, the only dimension of recognizable independence of every physical or primary object, in which cognitions could be related to each other, appeared to be consistency.

The stricter followers of the Kantian logical idea, e.g., Mauet and Spinoza, regard as sole principles which can be said to be involved universally in the action of thought, the laws of identity, non-contradiction, and excluded middle, and in their hands logic becomes merely the systematic statement of these laws, and the exposition of the conditions which they impose upon notions, judgments, and reasonings (*Adanson*, p. 10).

(c) Symbolic.—More recently, a third direction in which consistency might be followed has been taken, which seems to presuppose, if not the facts abstracts of transcendental logic, yet still the reflective valuations of general logic. Given these, it furnishes a 'elector,' more precise, and more diagnostically useful than expression that reveals and an equivalence between them. Algebra renders a similar service to arithmetic, but without raising any doubt as to the scientific priority of the latter. Symbolic logic is at least a discipline in consistency when we make logical reflexions. Whether it is also a direct discipline in scientific knowledge, as the older formal logic is, and so may supersede or absorb it, is a matter of decision, and an error that syllogism is an estimate of evidence (Mill); and a usurpation that the formalities of deduction should be limited to syllogistic, and to propositions with two terms only, and to terms rather than objective relations, and to the logical relation only of inclusion and exclusion (L. Couturat, in *Encyc. Philos. Sciences*, i. 167-169).

But on every logic of consistency, however judiciously its pretensions may be restrained, one critical comment may be made:

'I do not desire the science of considering this limited portion of Logic apart from the rest ... but the smaller Logic, which only concerns itself with the conditions of consistency, ought to be, at least finally, studied by the logicians which embraces all the general conditions of the ascertainment of truth (Mill, *Essays, of Sir W. Hamilton*).

3. Relevance.—The larger logic was inaugurated by Aristotle through the addition of his *Posterior Analytics* to the *Prior*. No demonstrative proposition (e.g., about numbers or lines) is taken as referring to "any number you may please," "any straight line you may know of," but to the entire subject or to every possible number or line, etc., etc.

Relevance is that in the 'things we know of,' when we possess or receive a demonstration, relieves us from the need of similarly knowing of the 'entire subject.' It is what Boasquiat describes as 'an inmost character' of the content of knowledge, as revealed by the intra-ordinal relations in which it is found capable of standing' (*Essentials*, p. 40). Aristotle conceives relevance as embodied in 'universalis.' Medieval Hindu logicians (Dignaga, Divakara, [c. A.D. 550], and Candali [c. A.D. 590]) taught 'secondary ideas,' or 'abstract conceptions' in the process of inference, and authorized a 'syllogism for self' in which this dispensed with the analogy between 'example' and 'application' still required in the 'syllogism,' an isolated center of motive interest, to be disciplined for its high destiny, but as a realm of mere abstractions, namely cognitions outside the world of natural sciences, yet metamorphosed through the course of transcendental reflexion. Reason itself, not forgetting of this origin, found in knowledge a dimension of 'relevance' as well as one of consistency. In the living thought he found an interplay corresponding to the pythagorean works of the transcendental 'object.' And, while accepting the law of non-contradiction as the principle of such inference as is merely possible, he added a law of reason and consequence, for the cogency of any actual inference. *Logic* proceeds in a tightly ordered second law we encounter transcendental distinctions, such as between 'logical' or *a priori* universals and 'quasi-logical' or inductive. And the neo-Kantian school of logicians better their introductions to the detailed conceptions of intellectual synthesis framed in transcendental logic. To others, however, still following the disciplinary motive, and unconcerned with the origin of the new realm commended to them for study, the only dimension of recognizable independence of every physical or primary object, in which cognitions could be related to each other, appeared to be consistency.

The universal as a principle assures applications that might escape the 'secondary idea.' 'Man is mortal, therefore I, too, must be mortal,' although men instinctively may 'think all men mortal but themselves.' The inevitability was not objective, as Plato's metaphysics might imply, but inferential.

'It does not follow, if demonstration is to exist, that there must be ideas, metaphysics in the sense that it does follow that some unity must be truly predictable of the many' (*Post. Anat. I. 11*).

The predicative unities appear in judgment as predicates that are 'genera' and 'definitions,' and as subjects that are 'second substances'; and in demonstration as the 'essences' of the things which we seek to explain, the 'nature' of the things whose destiny we wish to foretell, the 'reasons' for what we experience, and the 'causes' for what we infer. And, although these conceptions in the dimension of relevance still influence the texts of modern logic, philosophical progress has discarded the static, self-sufficing constitution, which amounts to spring arbitrary reason. The achievements of reason must themselves become conscious under the guidance of logical conceptions more liberal, such as 'conditions of a rule' (Kant), 'laws of connexion' between attributes (Mill), 'coherence' of conceptual 'content' (Lotze), or 'identity of relational system' (Boasquiat). Two distinct operations of reason must be traced: that which explains the comparative complexity of universals whose constituents are available, and that which explains the selection of constituents from the passive sequences of experience.

(a) Deductive.—The definite logic of the first begins with Descartes, and that of the second with Bacon. The interest of modern mathematical
science supplied to Descartes the 'doubt' and 'motive,' to use Hindu logical conceptions, which brought to an end the Aristotelian superstition of 'second substances,' and suggested a scheme of rationalistic determinism—either conception of a further dimension of logical value—that of system. In this we may conceive the 'additional aids' which transform aspiration into accomplished science. Relevance is a selective principle, system a comprehensive.

4. System.—A conviction which cannot be a stable truth through sheer restrictions of internal relevancy may have value through its membership of a world of other convictions—other conceptions not defined by the same question, as in the Hindu system of standards, but by questions in all degrees of kinship to it. (a) Deductive.—Aristotle's Topics marks out a sphere where such value may be traced by exceedingly excluding both the harmony of personal investigation with super-personal truth and the open vision of truth through reason.

The purpose of this treatise is to find a method which will qualify us as disputants in regard to every kind of subject, where the start of the inference is from probable judgments, and which will instruct us how to proceed to a decision. Let us suppose that we ourselves sustain an argument. . . . We can call what appears to all men, or to the mass of people, and, among the wise, to all, to the greater number, or to the most distinguished and authoritative (Top. i, 14).

The wide ramifications of relevance of any conviction to the remainder of knowledge are suggested by a variety of incidental methods or 'auxiliary aids' to insight.

The organ by which we find materials for religious and inductions are . . . collection of opinion from various sources, resolution of ambiguities in meaning, discrimination between species and genera, association of things to each other or in their relation to other things (Top. i, 15).

(b) Methodological.—In the modern era a more systematic study of system was begun by the Neumann Organism of Bacon, the methodological reflections of scientists themselves, and the theories of explanation, as distinguished from eliminative induction, and of approximate generalization, probability, and operations subsidiary to induction, resumed in detail by Mill. But the methods so formulated seem to be episodes in the consciousness of a more comprehensive development in the organization of our ideas. We continuously reform and refine our tentative concepts to meet the exigence of newly experienced facts and thereby (CONCEPT AND INFERENCE). And in this process we both accept limitations from, and contribute pulsations to, a progressive sum of cognitive life.

The logic of system frames conceptions of the limitation and the contribution of the codification of facts by superinduction of conceptual schemata (Whewell), the depth to which conceptions interpenetrate judgment or blur the purity of inferential synthesis (Lotze), the inversion of dependence in our thought between principle and application (Jevons), and the relation of approximation between science and final truth (F. Enriques). In the dimension of system, 'truth can only be tested by more of itself' (Bossav, Lectures on Logic).

LITERATURE.—No bibliography of logic with any approach to completeness appears to have been attempted. J. M. Baldwin, DPhil, vol. ii, pt. 2 (New York, 1905), and the Catalogue of Yen Collected, Univ. Lib., Cambridge, 1895, are the most useful. Reference is advisable to the following selection of representative authors—other conceptions:'

(b) History, scope, and utility.—C. Prantl, Geschichte der Logik im Abendlande, 2 vols, Leipzig, 1883 (the fullest history down to the Middle Ages); P. Harnot, Geschichte der Logik, Berlin, 1881; A. Frank, Épigraphie d'une histoire de la logique, Paris, 1888; P. Janet and G. Séailles, 26è de la philosophie, pt. 2, do. 1887; R. Adamson, A Short History of Logic, London, 1913; W. Whewell, On the Philosophy of Discovery, do. 1869; Eliot, art. 'Logic'; Routledge, 1000 Years of Philosophy, Eng. tr., London, 1933, vol. 3.

(2) Hindu.—P. F. Max Müller, Six Systems of Indian Philosophy, London, 1889; S. Sugiyama, Hindu Logic as preserved in China and Japan, Philadelphia, 1909; J. R. Ballantine,
been done upon them, from the Jain scriptures, that an unwritten and uncodified body of normative principles and methods of thought had long existed in India. The early medieval logics are among the most conspicuous, expanding and reorganising the logical categories applied in earlier works. These categories included classifications of knowledge, doctrines of terms and propositions, methods of induction, fallacies, and, possibly, in the Jain classics, syllogisms. Of the methods and categories themselves the early works say little or nothing. Those works are the expression of the greater or constructive stage of the Buddhist and Jain movements. The Buddhist scriptures are often critical; but they either express traditions we are used to holding the field, rather than the principles and methods of deduction and induction of their day.

Two passages in the Suttas afford an apparent exception to this assertion. In these, certain matters are declared to be 'not in the sphere of tokka', rendered by Rhys Davids and K. Otto Franke 'mere logic' (turaka-stastra, or 'rules of thought', is one of the technical Indian terms for logic). And logic-mongers (takāra) and pedants (tākāra), as we might be said to arrive at fantastic theories. Again, in prescribing a pragmatic criterion of the merits of a religious doctrine, the Buddha is said to have excluded such criteria as authority, tradition, etc., and has declared that 'effect and cause' and 'condition, cause, inference' and naya ('method') practically covering all reasoned thinking in both Jainist and Buddhist books. This depreciation of the five methods and the conceptions of the orthodox theory of knowledge in early Buddhism, has given rise to the mistaken view that Buddhists rejected both logical method and the validity of any knowledge established by it. But a careful consideration of the two Suttas quoted above, in the light of the sober intellectual method prevailing in the great majority of the Suttas, brings us to a very different conclusion. In the latter passage the soundness of any ethical doctrine or gospel is held to be rightly tested, not by metaphorical dialectic, but by a utilitarian calculus. In the former passage the 'logic' that is condemned as inadequate is such as often finds condemnation among ourselves, when we feel rather than discern that deductions are being made from overworked, overdrawn terms, from wrong data, from words ambiguously used. Only a culture which has a logic of recreated inductions will condemn such misuse of deduction as mere logic, since the penalties implied by such effect reasoning that the noble formulation of right thinking should, in popular usage, inure reproach, as if it had failed in general.

The Buddhist Sutta and Abhidhamma Pitaka afford unmistakable evidence of (1) the existence of a current logical doctrine, (2) misuse of the same by dialecticians or 'sophists', deducing from confused terms and wrong premises, and (3) a constant failure in the appeal of argument, and argument, i.e. to logical faculty, and to logical principles. The Suttas, or discourses, are in great part addressed to relatively immature minds—to the 'man in the street' and to the average bhikkhu or sahha (learner in the Order). But the proportion of discourses filled with categorical assertions is very small. Most of them seek to capture the listener by argument. No sentence occurs oftener than Tuva kisā hetu, 'What is the reason of that?'. The prevailing method is no more critical than the Buddhist: it is not to fill with categorical assertions very small. Most of them seek to capture the listener by argument. No sentence occurs oftener than Tuva kisā hetu, 'What is the reason of that?'. The prevailing method is no more critical than the Buddhist; it is to fill with categorical assertions very small. Most of them seek to capture the listener by argument. No sentence occurs oftener than Tuva kisā hetu, 'What is the reason of that?'. The prevailing method is no more critical than the Buddhist; it is to fill with categorical assertions very small. Most of them seek to capture the listener by argument. No sentence occurs oftener than Tuva kisā hetu, 'What is the reason of that?'.
interlocutors is one of gentle 'reasonableness' (to adopt Matthew Arnold's rendering of eminere). And upekkha (upekkha), 'knowledge', 'science', which is the title-word in the oldest Indian logical method, is used synonymously with adhipa (archa), 'truth'; as forming, with dhamma ('right' or 'norm') and kusala ('good'), the threefold foundation on which the perfect man should be established.2 In the somewhat later collection called Abhidhamma Pitaka, where doctrines, put forward ad hominem in the Suttas, are more abstractly expounded by way of question and answer, logical method is more systematically applied. The import of a great number of terms in the medical and metaphysical division, but sometimes, in the dictitivem Indian method of presenting the by us so-called Laws of Thought, thus: Is A B? If not, is A C? If not, is A both B and not-C? If not, is A neither B nor not-B (in other words, is A a chimera)? The expositions, again, are sometimes exercises in converted propositions, sometimes arguments in hypothetical propositions. The books entitled Yamaka and Kathavatthu, respectively, consist entirely of these exercises and arguments. No definite exercise in, or allusion to, syllogism has been found in the Pitakas, although it figures prominently in the earliest Buddhist and Jain treatises on logic. Nor, indeed, do the paired words pāramīya (paramīya) 'cogent, correct' and anyādāna ('mediate knowledge', 'inference') apparently occur in the Pitakas as the indispensable logical terms which they subsequently became.4 Nevertheless, the Suttas and the Abhidhamma texts, when read together, will show how far knowledge and illustrative matter disconcerted, present so varied an appeal to the intellect of their age that it is not surprising if one result of the paramounty of Buddhist culture was to yield a harvest, not only of psychology more general, admirable, that may appear likely to those who see in logic only an academic exercise. By intellectual procedure, according to the norms of logic is the interpreter rather than the discourse which is the condition of the general data of experience inductively and deductively. And that procedure has centred round certain concepts here, round other concepts there. The difference in emphasis thus produced tends to be more absolute, hindering both mutual understanding and also thereby a positive, general advance in philosophy. The system, for instance, of definition by genus and species, by division by dichotomy only, of subsuming the particular under the more general, admirable as it has proved in all quantitative analysis, may prove a hindrance in estimating qualitative values in aesthetic and spiritual inquiry. The Buddhist scriptures did not keep rigidly to this (peculiarly Greek) lines in their analyses. They did not always, or empirically, see things as decomposable substances, in wholes and particulars. Their founder disliked

LOGOS

LOGOS.—The Greek word λόγος has no exact equivalent in any other language. Just as Goethe's Poems, when translated into the English of the Fourth Gospel into German, tries in succession and rejects Wort, Sinn, Kraft, and finally decides upon That, so Latin theology wavered between Verbum, Sermo, and Ratio before accepting 2. Not an ekhandana, but a bhikkhakāra (Mahañca Nikāya, ii. 197). The Suttas, or mother school, were long known as Vihāravibhavā. 3. Abhidhamma Pitaka (PTS, 1907), 100, passim; Abhidhamma Pitaka (PTS, 1915), 2, passim.

2. C. S. D. N. Kadavarkkal, v. 19, with i. 180; Roy Davids, Buddhist Logic, i. 273 (in the Ilam). The formula of causation is repeatedly called Aya (in Buddhist sūtra).
3. Ed. for PTS, 1901-05, 1904-06. The PTS is publishing a treatise on metaphysics, 1802.
4. Pāramīya is used only for 'measure', 'estimate'; anumāna apparently does not occur at all.

C. A. F. R. H. R. DAVIES.
The Logos idea begins with Heraclitus of Ephesus (c. 535-475 B.C.), who, as F. M. Cornford has rightly maintained, represents a mystical reaction against the materialism of the Ionian philosophers. For him the visible world is a symbol of a system which has a beginning and end, and real truth or reality is the divine soul of the world, whose life is manifested in the endless cycle of birth and death, of becoming, change, decay, and renewal. Therefore there is one Logos, the same throughout all the world, which is the end of one. This wisdom we may win by searching within ourselves; it is open to all men to know themselves and be wise. The divine soul is 'Nature,' the cosmic process; it is God; it is Φως, the life-principle, the Logos, life itself. All human laws are fed by the one divine law. It prevails as much as it will, and is sufficient and more than sufficient for all things. This Logos is the immanent reason of the world; it exists (the term is inadequate) between God and the world, being the regulating principle of the universe, the divine intelligence. In Plato, though he was the founder of a philosophy in which the Logos was to find a congenial home, there is but little that bears directly on our subject. The world, he says in the Timaeus (p. 29 f.), is created by a fusion of mind and necessity; it is itself a living and rational organism, the 'only begotten (ωνομικός) son of God, itself a God, and the 'express image' (θεώχε) of the Highest.

In Stoicism the philosophy of Heraclitus received a new life and fresh developments. Like Heraclitus, the Stoics regarded Fire as the primordial substance and the material principle of the divine. Embodied with inherent productive activity, it is the 'semeial Reason' (?key σφραγίας) of the world, which manifests itself in all the phenomena of nature. These phenomena, or, rather, the advances which from them are often called σφραγίας, in the plural. Christian writers like Justin Martyr laid hold of this doctrine to connect Greek philosophy with their own religion. Every man, Justin taught, at his birth participates in the universal Reason, which he identifies with the Johannine Logos which 'lighteth every man.' Accordingly, he argues, hearthenlike Heraclitus and Socrates, in so far as they lived περι Νοότος, may be claimed as Christian, and may be saved. The seminal Logos of the Stoics, when spoken of as a name of the Divine procedure, is the logical principle of the cosmic process, which He directs to a rational and moral end. This power is not present in all creatures equally; only man participates in it so fully that he may be regarded as a real effluence of the Deity. The Stoics distinguished between the Logos φραγίας, the potential, unmanifested Reason, and the Νοός σφραγίας, the thought of God expressed in action. This distinction led to a new emphasis being laid on the other meaning of Νοότος, as 'word.' Plato found in this way Stoicism made it easier for Jewish philosophy to identify the Greek Νοός with the half-personified 'Word of Jehovah.' Words and thoughts, according to the Stoics, were the same things regarded under different aspects. The same Νοός which is Thought as long as it resides in the breast is Word as soon as it comes forth. The distinction between φραγίας and σφραγίας, often used by Philo and the Greek Christians, was first clearly drawn by Aristotle between ὁ Ἄνθρωπος and ὁ ἐν τῷ φύσι. Christian writers found another fruitful idea in the Stoic doctrine that, since the one Logos is present in many human souls, men may achieve commumonence and participation in the same Logos. The Logos-Christ might be explained Stoically as the indwelling revealer of the Father, with whom He is one; as the vital principle of the universe; as the spiritual truth, as Law, or will of God, as the highest morality; and last, but not least, as the living bond of union between the various members of His 'body.' The world, for Stoicism, is simple and unique (ἐν τίνι μόνον); it is a living creature (ζώον εν ζώοις). The Spirit (φύσις) goes through all things, formless itself, but the creator of forms. The Logos, as World-Idea, is also single and simple (ἐν τὶ μόνον), though it assumes manifold forms in its plastic self-unfolding. It is identified with Fate (τελεσκογεία) and Stoelus says:

1 Fate is the λόγος of the θεοσ, or the λόγος of those things in the universe which are directed by providence (ρητωρία). Chrysippus, however, instead of Law, Truth, Cause, Nature, Necessity, and other words (Ed. i. 130).

The question whether Stoicism identified God with the Logos is not easy to answer. E. Zeller is probably right in saying that it was rigidly pantheistic—it was a form of naturalistic monism: Deus sine Nature. Origens says that the Stoics and the Platonists both call the world God; but for Stoicism the world is the supreme God, for the Platonists only God in the second place. But the opponents of Stoicism are too harsh when they say that the Stoics bring in God only in order to be in the fashion. It was their religious need that made them bring Him in. Perhaps they could not consistently find room for any God above the Logos, but in fact they did ascribe to the Deity more personal attributes than could correspond to their Logos. They were certainly able to feel enthusiastic devotion to the Logos as the principle of law and righteousness. This is shown by the famous hymn of Cleanthes:

'Thee it is lawful for all mortals to address. For we are Thine offspring, and alone of living creatures that live and walk the earth moulded in the image of all. Therefore we offer Thy sacrifice, and celebrate Thy power. All this universe, rolling round the earth, owns Thee, and doth fear Thy majesty, that is: 0 King most high, nothing is done without Thee, neither in heaven nor on earth nor on the sea, except what the holy and noble, the just, the wise do in their freedom. They give Thee honour and reverence, and things that arise find in Thee a friend; for Thou hast fitted together good and evil into one, and hast established one Reason (λόγος) that lasteth for ever. Thus live, O Lord, in Thy Law, unbroken ones, and though they desire to possess what

2 From Requalification to Philosophy, London, 1912, p. 131.
is good, yet they see not, neither do they hear, the universal law of God. . . . But O God, giver of all things, who dwellest in dark clouds and rulest over the thunder, deliver men from their sins and forgive all things done by them, and help the poor to obtain wisdom, for by wisdom dost Thou rightly govern all things; that, being honoured, we may repay Thee with honour, since Thy works without ceasing, as we ought to do.

There is no greater thing than this, for mortal men or for gods, to be made new in the image of God (Ps. 8:6).

In fact, this conception of a gerninative principle of Reason which manifests itself in the universe, and especially in the minds of human beings as members of a universal community, prepared the soil on which a world religion might grow. And at the same time the individual was brought into a closer relation with the divine than had been contemplated in any earlier system of Greek philosophy.

2. In Jewish-Alexandrian theology. — Hebrew thought about the ‘Word of the Lord’ does not enter the subject of the present article until the later tendency arose to personify the self-revealing activity of Jahweh. The earlier books of the OT connect the operations of the Memra with three ideas—creation, providence, and revelation. God spake the word, and the worlds were made; then at once His spirit, or breath, gives life to what the Word creates, and renews the face of the earth. The protecting care of God for the chosen people is attributed to the Jewish God in the Memra. Besides this, the ‘Word of the Lord’ inspires prophecy and imparts the Law. The tendency to personify the activities of Jahweh is seen in the expressions used about the Angel, the Name, the Gloaming, above all, the Memra. Similar language about the Word is found in the frequent phrase ‘the Word of the Lord came unto me,’ and in such passages as Ps 147:15, Is 55:11, 12, Ps 33, Jer 25:1. Nevertheless, the personification is more common in a poetical and metaphysical world, except in writers completely under Greek influence.

On the whole, in the later books the conception of Wisdom tends to displace that of Word—a change which really brings the Jewish idea nearer to the Greek. ‘Wisdom’ in Job is the hidden purpose which God is working out in man’s existence—the grand secret of life known only to God. In Proverbs Wisdom is the cardinal virtue; she stands at the corners of the streets, and invites men to walk in her ways. God created or prepared her before the world was made; she was by His side when He planned the scheme of the world-order; she was daily His delight, rejoicing always before Him. Therefore He assures those who listen to her of His power and goodness.

The Ecclesiastes, Ecclesiasticus, and Wisdom of Solomon exhibit a further development of Jewish thought in the direction of Greek philosophy. Ecclesiasticus presents us with a pessimistic philosophy quite alien from Judaism and strongly influenced by Stoicism, though the trend is masked by numerous interpolations. Ecclesiasticus is more Jewish in sentiment; ‘Wisdom’ has found her chief expression in the books of the Law. The book called Wisdom of Solomon is the work of an orthodox Jew, who has no sympathy with the views of Ecclesiastes, and resents their attribution to Solomon; but his doctrine of the divine Wisdom is applicable by God’s decree to all nations; it is Wisdom in man, belonging to the divine essence, and yet existing in quasi-independence side by side with God. Wisdom was the active agent in the creation of the world, selecting and ordering the objects of His creation; in the human spirit she is the teacher not only of every virtue and of all theological knowledge, but of all the human arts and sciences.

The identification of ‘Wisdom’ with the Greek Logos is almost explicitly made, as is the identification of Wisdom with the Holy Spirit of God. In this book, in fact, marks a transition from the OT doctrine to that of Philo, and is of much importance in the history of Jewish-Alexandrian theology.

Philo not only enunciates the two main ideas about the Logos; he achieves a symmetrium of divergent Greek conceptions. His Logos is a combination of the Platonic ideas and Stoic universal causality. He takes over the main Stoic conception, but detaches it from materialism, and tries to harmonize it with the Platonic theory that visible things are only types of realities laid up in the intelligible world. His Logos is much like Plato’s idea of the Good, except that it is regarded as a creative active. Philo found this conception useful, because he wished to conceive of the divine activity Hellenically, without ceasing to believe in the OT Jahweh. Jewish thought had been in danger of separating the Creator so completely from the angels as to produce an intolerable dualism. This tendency had been mitigated by poetical personification. Philo fixed these poetical symbols, and turned them from poetry to metaphysics by identifying the Memra with the Stoic Logos Platonicized.

The Logos dwells with God as His vice-gerent. He is the eldest son of God, and Wisdom is His mother. In other places He is identified with Wisdom. Again, He is the Idea of Ideas, the whole mind of God going out of itself in creation. He represents the world before God as High Priest, Intercessor, Paraclete. He is the Shekinah, or glory of God; but also the darkness or shadow of God, since the creature half conceals and half reveals the Creator. He is the intelligible world, the archetypal universe of the Platonists, and the real life of the world that we know. In man He operates as the higher reason. If we ask whether the Logos is an aspect of the divine nature or an individual of God, the answer is not easy to reconcile. The rational part of the soul exhibits the type of the Logos, the ‘second Deity’; no mortal could be formed in the likeness of the supreme Father of the world, or ever brought into comparison with Him. But elsewhere the Logos appears to be only an attribute of God.

As an orthodox Jew (or one who wished to pass for orthodox), Philo cannot have thought of affirming two divine agents. And yet the Platonic doctrine of a transcendent unknowable being required a divine vice-gerent, while the Stoic Logos had been an independent, immanent world-principle, very different from the Hebrew Jahweh. The amalgamation of these doctrines into the earlier Logos is therefore hard to reconcile. The rational part of the soul exhibits the type of the Logos, the ‘second Deity’; no mortal could be formed in the likeness of the divine Father of the world, or ever brought into comparison with Him. But elsewhere the Logos appears to be only an attribute of God. As an orthodox Jew (or one who wished to pass for orthodox), Philo cannot have thought of affirming two divine agents. And yet the Platonic doctrine of a transcendent unknowable being required a divine vice-gerent, while the Stoic Logos had been an independent, immanent world-principle, very different from the Hebrew Jahweh. The amalgamation of these doctrines into the earlier Logos is therefore hard to reconcile. The rational part of the soul exhibits the type of the Logos, the ‘second Deity’; no mortal could be formed in the likeness of the divine Father of the world, or ever brought into comparison with Him. But elsewhere the Logos appears to be only an attribute of God.

Philo is a thoroughly Plotinian passage he says:

‘God appears in His unity when the soul, being perfectly purified and having transended all multiplicity, not only the multiplicity of numbers but even the dual which is nearest to unity, passes on to the unity which is unmingled, simple, and complete in itself.’ (De Abrahamo, 22).
But this is not a common line of speculation in Philo.

In the NT the technical use of the word Logos is found in the Fourth Gospel (unless we should add the Logos as a poetic designation in Philo; (4) But it is important to observe that St. Paul, especially in his later Epistles, gives us almost the whole of the Logos-doctrine which we read in the Prologue to the Fourth Gospel. The conception of Christ as a cosmic principle is even more emphasized in Colossians than in the Gospel. When we read of the Pauline Christ that He is the image of God, that in Him the Pleroma of the Godhead dwells in bodily form, that He was the agent in creation, and the founder of the Logos through whom are all things, that He pre-existed in the form of God, that He is the first-born of all creation, in whom and through whom to and from all things, that all things are summed up in Him, that He is all and in all, that His reign is co-extensive with the world's history, that He is life-giving Spirit, abiding in the souls of His disciples, forming Himself in them, and transforming them into His likeness, enlightening them and uniting them in one body with Himself, it does not seem that a candid criticism can deny that all the elements of a complete Logos-theology are to be found in the Pauline Epistles. Without assuming any direct influence of Pseudo-Philo, which is perfectly possible, it is notable that the Jewish-Alexandrian Logos-philosophy has a great and increasing influence upon St. Paul's doctrine of the Person of Christ. In proportion as the apocalyptic Messianism which we find in Thessalonians and later, and upon which he was dependent, was abridged or simplified, the Logos-philosophy—a type of which we associate with the name of St. John. It must not be supposed that this statement stands or falls with the authenticity of Colossians and Ephesians. The Epistles to the Corinthians contain similar language.

The large obligations of the author of the Fourth Gospel to the Philonian school cannot reasonably be denied, though they have often been questioned. It is clear from the tone of the Prologue that Philo's conception of the Logos, or something akin to it, was already familiar to those for whom the Evangelist wrote. No explanation of the word Logos is given; and almost every verse in the Prologue is parallel to a verse in Philo. Technical terms from Philo (ἐφόναγμα and παρελεύθερον are examples) abound in the Gospel. Indeed, the whole treatment adopted by the Evangelist presupposes the Jewish-Alexandrian philosophy of religion, and would be unintelligible without it. Nevertheless, it is true that the identification of the historical Jesus with the Logos, and of the Jewish Messiah with the Logos, makes a great difference. Philo had never thought of identifying the Logos with the Messiah—a figure in which he took very little interest. The chief differences (which have often been exaggerated) between the Philonian and Johannine Logoses are these: (1) the Evangelist defines far more clearly the relation of the Logos to God, as a second Person in the Godhead, distinct, though eternally inseparable from the Father; (2) the notion of the Father as a transcendent unapproachable Being, to be known only through an intermediate, is foreign to the Gospel, in which God the Father acts directly upon the world; it is in consequence of the activity thus attributed to God the Father that the creative function of the Logos loses its interest and is not referred to after the Prologue; (3) in the Gospel the Logos, or the Son of God, is often presented as the Logos-Christ is the complete revelation of the character of God rather than of His nature; the revelation of the Divine as self-sacrificing love is an idea not to be found in Philo; it follows that the conception of life, which implies growth, change, and development, has an importance for the Evangelist which it could not have had for Philo; (4) But it is not only the Incarnation? The difference between the two writers here has often been magnified by orthodox critics. Philo believed in theophanies, and could have easily accepted a docteic theory of the Incarnation. The Fourth Evangelist is no docteic; but for him too the Incarnation was primarily a revelation. The Johannine Christ became flesh that we might 'bekold his glory,' and learn what could only thus be taught. But a real Incarnation, the revelation of the Logos through whom are all things, has been inconceivable to Philo, for whom no historical event seems to have any importance as such. The Logos-doctrine of the Prologue may be briefly summarized as follows. From all eternity, before time began, the Logos was. He is supernatural, not simply the Spirit of the World. He did not become personal either at the Creation or at the Incarnation. The Logos was 'turned toward (ἐπὶθέτησα) God. The preposition indicates the closest union, with a sort of exaltation, as in 'kethethetai (of the Logos). The Father alone is the θεός θεοτόκος. The opening words of the Prologue do not (with Meyer, Weiss, etc.) refer to the exaltation of Christ, but to His eternal relationship to the Father. Domination was to the Greeks a light thing. The Evangelist shows that the principles of distinction and deeper unity are in God Himself. 'All things came into being through the Logos,' who is the mediater Agent in creation. Apart from him, he apprehended more and more to the type of Christology which we associate with the name of St. John. That which has come into being was, in him, life. Bossuet, following Augustine, comments rightly: 'Everything, even immortal things, were life in the eternal Word, by his idea and eternal thought.'

The Logos is the light of men as life; that is to say, revelation is vital and dynamic. God reveals Himself as vital law to be obeyed and lived. The cosmic process, including, of course, the spiritual history of mankind and of the individual, is the sole field of revelation. 'The light shineth in darkness.' As the first step in the first creation was to divide the light from the darkness, so the new creation effects the same division in the moral and spiritual sphere. 'And the darkness arrested (3) it not.'

'This is the genuine light, which lighteth every man as it comes into the world.' 'He was (always) in the world, and the world knew him not.' And the Logos became flesh and tabernacled among us. Here (v.14) the Evangelist mentions the Incarnation for the first time. The Logos, who from all eternity was fully divine (θεός), became flesh (assumed visible humanity) at a certain time. It is not easy to say whether the Evangelist conceived of the Logos existing before the Incarnation as 'true man from all eternity'; but 30 and 62 (cf. I Co 15) suggest that he did. It is certainly in accordance with Johannine ideas to hold that the Incarnation, and the Passion as the Sacrament of the divine self-sacrifice, were part of the counsels of God from all eternity. The Logos before the Incarnation was, according to this thought, θεύανθρωπος, though not ἑνδοκρατος. The Prologue thus lends up to the Incarnation of the Logos,

There was nothing strange in this doctrine. The book of Proverbs (62) had asserted the same of Wisdom: 'I was set up from everlasting, from the beginning, or ever the earth was.'

2 This is also Philonic; cf. de Cherub. 35: ἐπιθέτησα γὰρ τὸν θεὸν πάντα πᾶν ἰσός ἐστιν. This too is probably right.

3 This is precisely what Hilgenfeld also says about the Logos.

which is the theme of the whole Gospel, though the historical form precludes any further discussion of the subject on its philosophical side. The neglect of selected metaphysical and illustrative value, and the whole tendency of the treatise is quietly to transmute local and temporal ideas about the Incarnation into a more universal and spiritual form. The highest form of faith, he more than hints, is that which can dispense with ocular evidence. The ascended Christ can be 'touched' more readily than was possible when the Logos had His tabernacle among men.

3. In Christian theology.—The doctrine of the Logos has a very important place in the theology of the early Christian Church. It was the answer of orthodox Catholicism to various theories of the Person of Christ which at that time seemed plausible—those which made Jesus a phantom, or an emanation, or a demi-god. Heretical thought, the down to and including Arianism, tended to rank Christ with the imaginary intermediate Spirits which formed a hierarchy between the supreme God and humanity. The Johannine Logos-doctrine was a barrier against all such theories. The Apostolic Fathers do not supply much material. Ignatius calls Christ λόγος ἀπό εὐγένειας τοῦ θεοῦ, ¹ which has a Gnostic ring, since Valentianus was soon to make Logos and Zoe the offspring of Bythos and Genesis. Tatian has identified the Son with the Logos of God, just as Philo identifies Law and Logos. In the Acts of John the Logos-conception is separated from the man Jesus, so that Christ with His disciples can sing the praises of the Logos. And yet Jealous. This cross of light is sometimes called by Me, Logos, sometimes Jesus, sometimes Christ, sometimes ως, etc. In Montanism (q. v.) this notion of the Logos as a πνεύματος of divine attributes was maintained. The 15-Montesian 'Alogi' represented a reaction against this tendency. They were ‘feeble reptiles’ (ιερον ἀθροίστες) according to Epiphanius. This was a time of unrestrained theological speculation, in which an attempt was made to throw the Logos-conception a mass of heterogeneous elements—Jewish, Greek, and Oriental. The Fourth Gospel had a very steadying effect, when it was accepted as canonical; and so had the writings of the Apologists—Justin, Tatian, Theophilus, and Athenagoras. The Apologists were theological conservatives. They wished to preserve traditional Christianity, with its doctrine of revelation and its reverence for the OT. They do not philosophize for their co-religionists; ² they talk about the Logos to show the pagans that Christianity is in agreement with 'the best thought of our time,' just as our clergy talk about evolution. The philosophy which the Apologists mainly wished to conciliate was Stoicism, which in the 2nd cent. was much stronger than Platonism. So Justin argues that Christ is the 'Spermatie Logos,' the Reason of God, at first immaterial in the Father's bosom, then sent forth as the spoken word for creation and judgment; All men are made in the image of the Logos; and 'those who believe in Christ are men in whom the divine seed, which is the Logos, dwells.' Tatian ³ gives us a Stoic-Christian cosmology. The Logos was first developed from the bosom of the Father. Then, by the will of the Father, He came forth, and the worlds were made. The Logos is the ἐσχίσμα in relation to the creatures. Theophilus ⁴ employs the Stoic terms ἁπάντας and προφοράς, and gives in outline a systematic Logos-doctrine.

¹ Athenagoras ¹ maintains that the Logos did not first acquire a personal existence in connexion with creation. Minucius Felix ² equates the Christian Trinity with Mon, Pater, Spiritus. This is to be noted, because later, under Platonic influence, a principle above Noéς (Mens) was asserted, and this, with Christian speculative mystics, was naturally identified with the Father, with the result that Noéς was now to dispense with ocular evidence. (the will and thought of God transmuted into vital law) had to be awkwardly assigned to the Holy Ghost. This led to confusion. The Alexandrians continued to call the Father Noéς, feeling probably that the Neo-Platonic Abodnîne in no way corresponds to the Christian God the Father. Thus they introduced a distinction resembling that between the Godhead and God in Eckhart; a sublimated conception of Noéς was introduced between the 'divinity' of Christ and the Logos. In Clement of Alexandria the Logos-doctrine is a doctrine of Immanence. The world is an organic whole, moving on to some exalted destiny in the harmony of the divine order. Humanity has its Logos of God, and at the same time has its own Logos or Christ. The Incarnation is no abrupt break in the continuity of man's moral history. Christ was in the world before He came in the flesh, and was preparing the world for His visible advent. Hence the Logos-conception enters into the organic process of human history. The history of man's redemption is, for Clement, the education of the human race under its divine Instructor. As Instructor, the Logos has always been present in the world; He spoke through Moses and through Greek philosophy. He even gave the sun and moon to be worshipped, that men might rise from the lower worship to the higher.³

² He is the Saviour of all, some with the consciousness of what he is to them, others not as yet; some as faithful servants, others hardly even as servants (Strom. vii. 2).

³ Salvation is not a physical process, but a moral growth through union with God; knowledge is not merely speculation, but a growing sympathy and insight into the character of God and His laws. The union of the Logos with God is so intimate that we cannot hold (with the Gnostics and some Platonists) that He is a creature, or that the Logos is in any way a part of God. The Logos is the seed of redemption. The Incarnation is in itself the Atonement by which God reconciles the world to Himself. For Clement, as for other Greek theologians, there is properly only one dogma—the Incarnation.

For Origen's Logos-doctrine see art. ALEXANDRIAN THEOLOGY, vol. i. p. 316. There were two schools which opposed the Logos-theology—the rationalistic Unitarians, who regarded the Logos as a mere power bestowed on Him by God, and emphasized the humanitarian aspect of His Person, and the modalistic Monarchians, such as Praxeas, Noetus, and Sabellius. These maintained the old alliance with Stoicism, after the Catholics had adopted Neo-Platonism as their mistress in philosophy (see, further, art. MONARCHISM). Hippolytus' anti-Sabellian treatises show the line of argument used by the orthodox—a position which was later regarded as not wholly satisfactory. Methodius, a Platonist but not an Origenist, argues that the Incarnation was the necessary complement of the Creation, the imperfection of Adam being natural. There is a double development—in the race and in the individual, both due to the immanent Logos. The xias is perniciously re-enacted in spiritual experience. Macarius ⁴ teaches the same doctrine: in each believer a Christ is born.

¹ Athenagoras ¹, II. 10. ² Oct. v. 10. ³ Strom. vi. 14. ⁴ N. Compl. iii. 5. ⁵ Heim. iv. 21.
The Arian controversy drove orthodoxy into something like a compromise with modalism. The test-word *doulos* gave the Monarchians most of what they wanted, and its adoption soon ended the hostility of this school. The Arian Christology is of material value; and its great opponent, Athanasius, though he writes much about the Logos, does not add anything significant to the doctrine. It was, in fact, no longer thoroughly acceptable to the Catholics. The word *Nyos* was ascribed to appear in the Ngor, symbol; and the Synod of Sirmium (A.D. 451) condemned the doctrine of the *Nyos* λογίανως και ἀρμοστικά. Other terminology, and to some extent other ideas, displaced it. It was never acclimatized in the Latin-speaking countries.

The Logos-doctrine has an obvious affinity with mysticism, and with types of religion which emphasize the divine immanence. It was revived by Eckhart in the Middle Ages, and has been a living article of faith with religious idealists, Christian Platonists, and speculative theists. It belongs to a permanent and very important type of religious thought, and can never lose its value, though there are now many who (like Max Muller) are ardent supporters of the Logos-idea in religions philosophy, while they cannot accept the Johannine identification of the Logos with a historical individual.

The main evolution in Indian philosophy somewhat similar to the development of the Logos-doctrine see art. VACH.

**LOKAYATA.**—This word, which denotes properly 'belonging to the world of sense,' is the Indian name for the materialistic system whose adherents are termed Lokayatikas or Lankayatikas, or more usually Charvakas, from the name of the founder of their doctrinal system. There are clear indications of the presence in India, as early as pre-Buddhist times, of teachers of a pure materialism, and undoubtedly these theories have had numerous adherents in India from that period onwards to the present day.

Although two authorities2 hear witness to the fact of the existence of textbooks of materialism, viz. the *Bhāgavat* and the *Sātras* of Ephaphastis, the mythical founder of the system, yet materialistic doctrines have never gained any further place in the literature of India. In order to understand these theories, therefore, we can only have recourse to a few passages of the *Maha-bhārata*, to the polemic which was carried on against materialism in the text-books of the other philosophical schools, and to the doctrines of King Error in the philosophical drama *Prabhāsottornadojan*. This last was composed in the 11th or 12th cent. A.D., and aims at setting forth in allegorical style the superiority of Brahmanical orthodoxy to all other theories of the universe. The principal source of our knowledge, however, is the first chapter of the *Sarvasiddhantsamgraha*, a compendium of all the philosophical systems of India, composed in the 14th cent. of our era by Nāḍīhavāchārya, the celebrated teacher of the Vedánta, in which the doctrines of Indian materialism are set forth in the greatest detail. Nāḍīhavāchārya begins his exposition with an expression of regret that the majority of the men of his day follow the materialism represented by Čhārvaka.

The Lokayata allows only perception as a means of knowledge, and rejects inference. It recognizes as the sole reality the four elements, i.e. matter, and teaches that, when a body is formed by the combination of the elements, the spirit also comes into existence, just like the intoxicating quality from the mixture of special materials. With the destruction of the body the spirit returns again to nothingness. The soul, therefore, is only the body plus the attribute of intelligence, since the existence of a soul distinct from the body cannot be established by perception. Supersensuous things are, of course, also wholly denied, and are dismissed at times with a mere jest. Hell is earthly pain, due to earthly causes. The Supreme Being is the King of the eternity of whose existence the whole world affords tangible proof. Emanicipation is the dissolution of the body. The post-operative force of merit and demerit, which, according to all other systems, determines the lot of each individual down to the smallest details, has no existence for the Lokāyata, because this conception is reached only by inference. To the objection of an orthodox philosopher, that those who control the universe leave the various phenomena of the latter without a cause, the materialist replies that the essential nature of things is the cause from which the phenomena proceed.

1 On the practical side this system exhibits itself as the crudest Materialism; for it represents the gratification of the senses as the sole desirable good. The objection that sensual pleasures cannot be the highest aim for mankind, since these are only mingled with more or less pain, is met by the remark that it is for us to secure by prudence enjoyment as little alloyed as possible with pain, and to shun as far as is in our power the suffering inseparably connected with it. The man who would have bliss must take skin and bones, and he who wants rice cannot exclude the husks from his bargain. Let him not then from fear of the pain renounce the pleasure which we instinctively feel to be congenial.

The Vedas are declared to be the idle prating of knaves, characterized by the three faults of untruthfulness, internal contradiction, and useless repetition; and the professors of Vedic science decrievers, whose doctrines are manifestly deceptions.

To the Chārvaka the ritual of the Brāhmaṇa is a fraud, and the costly and laborious sacrifices are useful only for providing with a livelihood the cumin fellows who carry them out. 'If an animal sacrificed at the Jyotistana (the original form of the source offering) rises to heaven, why does not the sacrificer prefer to slay his own father?' No wonder that in the view of the orthodox Hindu the doctrine of the Chārvaka is the worst of all heresies. It is natural to conjecture that the Lokayata system was based by its founder upon deeper principles, and developed upon more serious philosophical lines than the information which has come to us from their opponents allows us to understand. The conjecture, however, cannot be established.

**LOLLARDS.**—See Wyclif.
LONGSUFFERING.—Longsuffering is alike a divine attribute and a human virtue. In both its uses its meaning is well represented by 'long-animity', a word of frequent occurrence, and not altogether obsolete.

The earliest example of 'longanimity' quoted in the OED (vol. 2) is from a 1510 tr. of de Initiatione, i. xli: 'Thou shalt Govern [emotions] better littel and littel by patience and longanimite'; the most recent citation of it is from the Spenserian, 17th Jan. 1908: 'His longanimity, under the foolishness of the young woman is really marvellous.'

The literal meaning of the Greek word μακροθυμία of which 'longsuffering' is the translation is 'long-tempered', the opposite of our familiar expression 'short-tempered' (cf. Germ. Langmutigkeit).

In three OT passages (Ex 34, Nu 1418, Ps 8013) the RV substitutes a more literal rendering of the Hebrew phrase (τάχισσα γάρ, 'length of face')—slow to anger—for the AV 'longsuffering'. In many passages (Neh 96, Ps 105145, Jer 155, Jl 23, Jon 43, Na 15) the two translations are interchangeable.

'Longsuffering or slowness to anger is the glory of man as it is the glory of God' (R. C. Treisch, Sermons preached in Westminster Abbey, London, 1861, xxx. 349).

That the two expressions are synonymous in many contexts is evident from the retention in the RV of 'longsuffering' in Jer 155: 'Avenge me of my persecutors; take me not away in thy longsuffering.' The former sentence seems decisive in favour of the interpretation which regards the divine longsuffering as displayed towards the persecutors and not towards the prophet.

'The petition shows how great was the peril in which the prophet found himself, and he believes that if God delay to strike down his adversaries, that longsuffering will be fatal to his own life' (G. J. Ball, The Prophecies of Jeremiah, London, 1800, p. 231).

A similar ambiguity arises in the interpretation of Lk 18: AV translates καὶ μακροθυμεῖ ἐς ἀνθρώπους, 'though he bear long with them'; but RV 'and he is longsuffering over them.' A. Plummer (ICC, 1879) draws attention to the fact that ες ἀνθρώπους may refer to the enemies of the elect, but prefers to understand it to apply to the elect. The meaning, then, would be: 'And shall not God deliver his elect who cry day and night to Him, while He is slow to act for them?' But the analogy of Jer 155 (cf. Sir 337) suggests that the main thought is of God's patient forbearance with those who are at once His enemies and the oppressors of His chosen ones. J. Moffatt renders: 'And will not God see justice done to His elect who cry to Him day and night? Will he be tolerant to their opponents? I tell you, he will quickly see justice done to his elect.' (The New Testament: A New Translation, London, 1915).

The uncertainty in regard to the interpretation of the above and other passages may serve to emphasize what Plummer rightly insists upon, namely, that, although μακροθυμία usually means 'is slow to anger', yet 'it sometimes means 'to be slow, be backward, tardy,' and is almost synonymous with βαθέως, ... So also μακροθυμία may mean 'slow persistency' as well as 'slowness to anger.' Comp. 1 Mac. viii. 4 (op. cit. p. 414).

The RV renders 'patience' (οὐσία) this wider meaning, and regards 'longsuffering' as equivalent to 'patience' in He 62 and Ja 52. The corresponding verb is applied in Ja 5 to the husbandman's patient wait for the harvest. For 'patience' is more frequent in AV translations of δοξολογία, 'the temper which does not easily succumb under suffering,' while μακροθυμία is the self-restraint which does not hastily retaliate a wrong (J. B. Lightfoot, Saint Paul's Epistles to the Colossians and to Philemon, London, 1879).

To the 'longsuffering' of God reference is made in Lk 18, Ro 242, 1 P 32, 2 P 29, and to the 'longsuffering' of Jesus Christ in 1 Ti 218 and probably 2 P 39. In Ro 2 'forbearance' (ἀδραγνία) is linked with 'longsuffering.'

The distinction between these two words is that 'the δόξα is temporary, transient: we may say that, like our word "trace", it asserts its own temporary, transient character. Yet it may be argued, in true Jesus Christ as well as in things which are true of all life, that although it would be worthy of little honour, which should never be exhausted; while δόξα implies its own merely provisional character' (R. C. Trench, Synonymia of the New Testament, London, 1860, p. 190).

As a moral attribute of God, 'longsuffering' is a manifestation of His grace. In the riches of His goodness He waits long and not angrily for the sinner's repentance (Ro 22), and in loving-kindness He tolerates those who deserve His wrath (Ro 9). Yet 'patience and long-suffering point not merely to the suspension of punishment, but to the love and grace which has exhausted its last resource. Owing to the contrast between the apparent impotence of longsuffering and supreme moral perfection, this is a characteristic of the 'eternal life' (1 Ti 1)'. In 1 Co 13 'longsuffering' is said to be an attribute of the 'love' by which we are made partakers of the divine nature. Tertullian (cd. Patrologia, 12) and other writers of this period explain it to mean greatness of soul or magnanimity, but μακροθυμία differs from μεγαλοφωγία, the 'high-mindedness' of Aristotle:

First, it is not a consciousness of greatness, but a longness of conception. Second, it is not the longness of time that dead men alone possess, but a moral and godly frame of mind in exhibited in the life of every Christian. Third, it is not merely pride that stands aloof, but an interested spectator of life's sufferings, though not an active combatant in the strife' (T. C. Edwards, A Commentary on the Epistle to the Corinthians, London, 1865, p. 343).

In the Apocrypha and Pseudepigrapha of the Old Testament (ed. R. H. Charles, Oxford, 1913), inter alia the following instructive examples of the use of 'longsuffering' are found:

Test. Dan 2: 'Unless ye keep yourselves from the spirit of lying and of anger, and love truth and longsuffering, ye shall perish.'

Test. God 4: 'The spirit of love worketh together with the law of God in longsuffering unto the salvation of the elect.'

Test. Jast. 175: 'With longsuffering hide ye one another's faults.'

First 36: 'Who is mighty? He who controlleth his evil disposition; as it is said: 'Better is the longsuffering than the mighty, and he that ruleth his spirit than he that taketh a city.'

LORD'S SUPPER.—See EUCHARIST.

LORETO.—For many centuries the little town of Loreto, situated some 15 miles from Ancona on a hill commanding a view of the Adriatic, has been a notable place of pilgrimage. Montaigne, who visited it in 1589, and who apparently believed
in the miracles of healing supposed to be wrought there describes the town as 'containing few inhabitants except those who serve the needs of the religious devotees' (Journal of Travels, Eng. tr., London, 1893, ii. 196-209). The great basilica, the dome of which is visible from afar, was begun in 1296 and finished in 1303. Since that time many additions and modifications. Of its artistic glories an excellent account is given in A. Colussanti (Loreto, Bergamo, 1910). But the basilica was built only to enclose and enshrine a tiny edicule known as 'in Santa Casa,' which is the real object of pilgrimage. The Holy House is believed to rest on the surface of the ground without foundations, and this fact seems to be authentic. It measures roughly 31 ft. by 13, and its walls are built of human stones. From their shape and colour they are often mistaken for brick, but externally they are hidden from view by a casing of marble richly adorned with sculptures. An ancient statue of wood, of Byzantine inspiration, representing the Madonna and Child, now voluminously dressed and also crowned, occupies a niche inside the little house at some height from the floor, and beneath it stands an altar at which Mass is said. Countless ex votos are suspended all around, but these probably represent only small pious gifts which belonged to the shrine before Napoleon riddled it in 1797. On that occasion the statue itself was carried off and taken to Paris, but in 1801 the First Consul returned it to the niche that it had formed in its ancient temple. The wonderful inscription 'Suscipiat factum est sculptura above it indicate the shrine's official claim to the veneration of the faithful, but the story is more fully told in a Latin inscription set up in the basilica by Pope Clement VIII in 1594. The approved English rendering of which runs as follows:

'Christian Pilgrim, you have before your eyes the Holy House of Loreto, venerable throughout the world on account of the divine mysteries accomplished in it and the glorious miracles herein wrought. It is here that the most holy Mary, Mother of God, was born; here that she was saluted by the angel; here that the eternal Word of God was made Flesh. Angels conveyed this house from Palestine to the town Terasto in Illyria in the year of salvation 2395 in the pontificate of Nicolaus v. Three years later, in the beginning of the second decade of Boniface viii., it was carried again by the ministry of angels a second time. As wood destroyed, in the vicennium of Recanati in the Marches of Ancona, where, having changed its station thrice in the course of a year, at length, by the will of God, it reached the permanent position on this spot three hundred years ago. Ever since that time both the extraordinary nature of the event having called forth the admiration of the whole of the noblest of people, and the wonder of the miracles wrought in this sanctuary having spread far and wide, this Holy House has not lost in the least degree of its fame foundation and remain solid and uninjured after so many centuries, has been held in reverence by all nations.'

This statement lays little stress upon what is perhaps the most surprising feature of the legend, viz. the triple change of site after the arrival of the Holy House upon the shores of the Adriatic. Pietro di Giorgio Tolomei, best known, from his native town of Teramo, as Teramannus, who held the chair of Roman Law at 1474-1476, wrote the earliest version of the translation story that has been preserved to us (the document has been discussed with great critical acumen by Hulfer in his Loreto, l. 50-66), explains that, because the Santa Casa was not sufficiently honoured where it was first deposited near Fiume in Illyria, it was carried thence by angels across the Adriatic to a wood at Recanati belonging to the 'Lady Lorethia'; hence the name which has since attached to the shrine ('inde medio lignis antea M. De Lorethia ad illa domina que eraualls sive domina et patrona'). Here, however, there was

1 Adolfo Venturi (see Hulfer, Loreto, l. 41, n.) assigns it to the early years of the 14th. cent., but it seems to have been mentioned in documents of the year 1459, and other authorities attribute it to the 15th or even the 12th. century. The legend declares it to have been carried by St. Luke the Evangelist.

such a concourse of pilgrims that the wood was infested with robbers and murderers.

'For this reason,' the Relatio Teramani goes on, 'the Holy House was once more taken up by the hands of angels, and was carried to the Mount of the Two Brotanis, and on the same mount by the hands of angels it was set down. The which brothers, on account of the immense reverence and gain which they received from money and other innumerable alms, undertook to set up a large rock, and fixed a large board and strie. Wherefore the angels, in the same manner as before, carried it away from the place where it then was, and brought it to a spot in the public road and there they made it fast.'

The legend also relates how the Blessed Virgin in 1296 appeared in her sleep to a certain man who was devout to her, and in this way made known the whole story. Thereupon sixteen good men and true journeyed to the Holy Land to measure the foundations of the Holy House at Nazareth. They discovered that these exactly agreed with the dimensions of the Santa Casa, and also that a stone tablet commemorated the disappearance of the little building which had formerly been venerated there. Furthermore, in the time of Teramans himself two old men came forward and each testified that his grandfather's grandfather had confirmed from personal knowledge the account of the translation.

This was the story which, with further amplifications, added a small part which belonged to the shrine before Napoleon riddled it in 1797. On that occasion the statue itself was carried off and taken to Paris, but in 1801 the First Consul returned it to the niche that it had formed in its ancient temple. The wonderful inscription 'Suscipiat factum est sculptura above it indicate the shrine's official claim to the veneration of the faithful, but the story is more fully told in a Latin inscription set up in the basilica by Pope Clement VIII in 1594. The approved English rendering of which runs as follows:

'Christian Pilgrim, you have before your eyes the Holy House of Loreto, venerable throughout the world on account of the divine mysteries accomplished in it and the glorious miracles herein wrought. It is here that the most holy Mary, Mother of God, was born; here that she was saluted by the angel; here that the eternal Word of God was made Flesh. Angels conveyed this house from Palestine to the town Terasto in Illyria in the year of salvation 2395 in the pontificate of Nicolaus v. Three years later, in the beginning of the second decade of Boniface viii., it was carried again by the ministry of angels a second time. As wood destroyed, in the vicennium of Recanati in the Marches of Ancona, where, having changed its station thrice in the course of a year, at length, by the will of God, it reached the permanent position on this spot three hundred years ago. Ever since that time both the extraordinary nature of the event having called forth the admiration of the whole of the noblest of people, and the wonder of the miracles wrought in this sanctuary having spread far and wide, this Holy House has not lost in the least degree of its fame foundation and remain solid and uninjured after so many centuries, has been held in reverence by all nations.'

This statement lays little stress upon what is perhaps the most surprising feature of the legend, viz. the triple change of site after the arrival of the Holy House upon the shores of the Adriatic. Pietro di Giorgio Tolomei, best known, from his native town of Teramo, as Teramannus, who held the chair of Roman Law at 1474-1476, wrote the earliest version of the translation story that has been preserved to us (the document has been discussed with great critical acumen by Hulfer in his Loreto, l. 50-66), explains that, because the Santa Casa was not sufficiently honoured where it was first deposited near Fiume in Illyria, it was carried thence by angels across the Adriatic to a wood at Recanati belonging to the 'Lady Lorethia'; hence the name which has since attached to the shrine ('inde medio lignis antea M. De Lorethia ad illa domina que eraualls sive domina et patrona'). Here, however, there was

1 Adolfo Venturi (see Hulfer, Loreto, l. 41, n.) assigns it to the early years of the 14th. cent., but it seems to have been mentioned in documents of the year 1459, and other authorities attribute it to the 15th or even the 12th. century. The legend declares it to have been carried by St. Luke the Evangelist.
other hand, the first papal document which gives any indication of the special sanctity attaching to the Loreto shrine is the bull of Paul II. in 1470, which speaks thus:

"Desiring to show our veneration for the church of Blessed Mary, and the community founded in honour of the same most holy Virgin outside the walls of Rezzasini, which, as the history of it presents the facts attested, and as the faithful may ascertain for themselves, an image of the glorious Virgin, through the wondrous mercy of God, has been deposited, attended by a troop of angels, and to which church by reason of the countless stupendous miracles which the Most High through her intercession has worked for all who devoutly have recourse to her and humble their petitions, etc., etc." 

Here again not the least suggestion is conveyed that the building, even if believed to exist miraculously without foundations, was the actual house of the Holy Family of Nazareth. On the other hand, the terms of this notice lend great probability to the opinion, supported by Hüffer and others, that it was the statue, showing, as we have noticed, Byzantine characteristics, and consequently known to have come from a distance, that was at first supposed to have been brought to Loreto by the hands of angels. Then the fact that the chapel had no proper foundations seems to have given rise to the further development that the building had been miraculously transported from the East. And, finally, a reason was found for this exceptional providence by assuming that the building was none other than the actual Holy House of Nazareth. Considerable support is lent to this hypothesis by the legend of the chapel at Ascanio belonging to a certain lord, who at his death left it to his two sons. They quarrelled over the division of the offerings and were on the point of fighting a duel when, during the night, the angels took the chapel up and bore it to a place about 14 miles off, called Colle di Vertighe, near Monte San Savino. G. B. Mittarelli, a really serious and critical antiquary of the 18th cent. (see his Annuale Commedellinensi, Venice, 1755–75, iii. 89–92), bears witness to the existence of the chapel in his time and also to its great antiquity. Here again, just as at Loreto, the chapel was without foundations, and a great church had been erected over the smaller building to protect and embellish it. Whether the Loreto legend or that of the Colle di Vertighe is really the older it is difficult to decide. In the case of Loreto the negative evidence tending to show that in the beginning no idea existed of the chapel having come from the East was emphasized by the large number of documents of the 14th and 15th centuries which have been unearthed concerning it. It is incredible, as Hüffer shows in his very patient discussion, that the supremely sacred character of the building could have been ignored, as it is, in almost all of them, if men had then believed that this actual Holy House in which God had become incarnate.

The second line of argument, developed by Chevalier and other critics, claims to show that at Nazareth itself nothing was known to have happened in 1291, when the Holy House is supposed to have been transported westwards; no pilgrims ever reported a distant building which was known to have been visited by their predecessors in the 12th and 13th centuries, nor do the accounts of what was venerated at Nazareth as the abode of the Holy Family apply in the least to such an edifice as we now see at Loreto. It may be noticed also that the measurements and proportions of the chapel of the English shrine of Our Lady of Walsingham, which happen to have been accurately preserved to us, do not agree with those of the Santa Casa, while, according to legend, the Walsingham chapel reproduced exactly the dimensions of the Holy House as measured by a pilgrim about the year 1060.

By the time of the Peace of Cateau-Cambrésis in 1559, the legend of the Santa Casa had established itself in popular favour and it is incorporated in a bull of 1557, but with the qualification 'ut pie creditur et fama est.' In 1518 Leo X. identifies himself with the whole marvellous story 'ut inde sigorum comprobationem et testimonium habere profiteretur'. It is certain that this was correct, for Thomas Duchi and Doughty of Musselburgh made his pilgrimage to the Holy Land and brought back that image of the Italian shrine for which he afterwards built a chapel on the land now occupied by Loreto School. Other pontiffs, notably Sixtus V. and in modern times Pius IX. and Leo XIII., adopted the tradition without any question, and Innocent XII. permitted the celebration of a special feast of the translation of the Holy House after a 'proper' Mass and Office. In the latter part of the 19th cent. the story of the miraculous translation was everywhere accepted, and the local traditions of Nazareth itself were modified to suit it. Nothing, however, has been found among these papal bulls or other similar acts of ecclesiastical authority as regards the translation of the chapel, in the face of the historical evidence. The defenders of the tradition still lay stress upon an alleged scientific examination of the materials, particularly the stone of which the Santa Casa is built, and it is claimed that experts have shown that that stone was not found in Italy, but only in the neighbourhood of Nazareth (see D. Bartolini, Sopra Santa Casa di Loreto, Rome, 1861). But these experiments were carried out in 1857, and it may be doubted whether their conclusions can be regarded as rigourously scientific. Let us also notice that the frescoes at Gubbio and in one or two other places, said to be of early date and representing angels carrying a house (the date and details are nearly always matters of controversy), cannot be assumed to refer to necessity to the Loreto legend. It is clear from the Monte San Savino chronicle quoted above that there was at least one rival tradition of the same kind in circulation. These frescoes, then, cannot be appealed to as a conclusive argument in favour of the early date of the Loreto story in particular.

LITERATURE.—The vast bibliography of the subject has been very fully, though not quite exhaustively, by J. Fournier, Bibliographie törtaine, Tours, 1913, and also by G. Hüffer, Loreto (see below), pp. 8–9; only a selection of books and articles can be mentioned here. The text of the early writers who elaborated the legend into the form which ultimately prevailed, viz. Testament, Jerome Angielta, Raphael Riera, and D. Costarini, will be found printed at length in the voluminous work of P. V. Martorelli, Teatro Storico della S. Casa Nazarena, 3 vols., Rome, 1872–85. Besides this, we may note, among other works, the important treatises of G. A. Vogel, De Ecclesia Redacta et Darum Eucharisticarum Acta, 2 vols., Recanati, published in 1529, though written in 1566, and M. Leopardi, La Santa Casa di Loreto, Lugano, 1844. Both these and other research among municipal archives and other MS sources. In the modern controversy, under U. Chevalier, Nota-Diine de Loreto, Paris, 1906, by far the most important contribution to the subject is that of G. Hüffer, Loreto: eine geschichts- und kirchengeschichtliche Untersuchung der Frage des heiligen Hauses, Munich, 1913. Among the texts we may note A. Eichbach, die Loreto, Paris, 1910: F. Thomas, La Santa Casa dana e la Loreto, Lyons, 1910: E. Chirat and M. Picard, La Casa di Loreto secondo un agnoco di Giubelli, Rome, 1891; J. Binet, La Santa Casa di Loreto, 3 vols., Turin, 1911; G. K. Alward, Praktische Quartalschriften, Linz, 1907, pp. 729–810, and 1911, pp. 698–
LOTUS (Egyptian).—1. Name.—First we must dismiss entirely the modern botanical name 'lotus.'

"Lotus, Argemone lotus" is a small leguminous plant resembling a vettil (Proc. Roy. Soc. ivxli. [1900] 225). As plants more or less confused together, being all water-lilies, and popularly called 'lotus,' there may be specified (1) rose lotus (Nelumbium speciosum), distinguished by its long-petalled blossoms and the bud; (2) white lotus (Nympheolea lotus), distinguished by ribbed petals on the bud, rounded when opened; and (3) blue lotus (Nympheolea caerulea), distinguished by smooth, pointed petals. The two Nympheolea lotuses cross, and any intermediate form may occur naturally.

(1) Rose lotus.—This is at present an Egyptian plant unknown in Egypt, except as a cultivated rarity. It was known in Roman times, being found in the cemetery at Hawara (W. M. Petrie. Hawara, London, 1890, p. 52), and described by Athenaeus:

"Lotus grows in the marshes . . . one like that of the rose, and has white and bluish petals; the colour of these flowers which is properly called the garlands of Antinous; but the other kind is called the lotus garland, being of a blue colour." (v. 21).

It was cultivated earlier by Herodotus.

"There are also other liliees like roses that grow in the river, the fruit of which is contained in a separate pod . . . in this there are many berries fit to be eaten."

There does not seem to be any proof that this plant was indigenous, nor that any instance of it was represented in Egypt. It cannot, therefore, be reckoned as of importance in religion or art. Various instances have been alleged, but incorrectly. Loret states that the lotus-flower supporting Horus is a rose lotus; but the petals are equal-ended and striped as white lotus. He also states to be on the head of Nefertum; but that flower appears rather to be a Nympheolea. He agrees that it is not shown on monuments. The capital found at Memphis (Petrie, Palace of Apries, London, 1890, xvii.), like other early capitals, is white lotus, and not rose.

(2) Blue lotus.—This is characterized by the sepals and petals being ovoid with rounded ends. It is frequent in canal scenes of the early kingdom; as a capital at Memphis (Petrie, Palace of Apries, xviii.); as figures of capitals (Zoweyt el-Mayrawy, Vol. II., El-Bersheh, XIXth dyn.: see E. Prisse d'Avennes, Hist. de l'art egyptien, 'iris, 1870), as a garland (P. E. Newberry and F. J. Griffith, El Bersheh, London, 1893) it was placed upon the mummies of Ani, Amenhetep I., and Ramses II. It is represented by the flower upon which Horus is seated, shown by the strong ribbing of the sepalis (K. V. Lanzoni, Dizionario di mitologia egizia, Turin, 1836, ccxiv. 1). This figure is entirely of late date, 8th cent. B.c. and onward. Loret attributes this to the rose lotus; but J. G. Wilkinson emphatically states that it is the blue lotus (Manners and Customs of Ancient Egyptians, London, 1878, II. 132 f.); the ribbing would indicate that it is, as a matter of fact, the white lotus.

(3) White lotus.—This is the most usual lotus-flower of all periods, with straight-edged pointed petals. It is found commonly in the tombs, and is the origin of the regular lotus-capitals. The Egyptian names of these flowers are variously equated. Loret puts the netch, netch, or netch to the rose lotus, seshni to the white lotus, and serpet to the blue lotus. But we have seen that probably the rose lotus was a Persian importation, and could not therefore have a usual name dating from the Vth dynasty (Papyrus, i. col. 440). Now Loret gives Arab authority for the blue flower (Flore phart., p. 116), and the khatnuw (which in the Scutum=seshnu) being also blue. It seems probable that shesni is the blue lotus. The seeds of all three lotus-plants were eaten (Herod, ii. 92), and seshni was gathered in the 11th dynasty with sirup of it is 53°, where it stands in antithesis to myrtle, and is therefore probably a balsam rather than a herb or water-plant. It does not appear to have any connexion with a lotus.

2. Meaning.—Though the lotus is so abundant naturally in Egypt, and so incessantly represented in decoration, yet it seems to have singularly little contact with the religion or writing. Its use as a vocal sign is rare and of late period; and that it appears only as a determinative of the names of such plants. It is never associated with any early god. Nefertum, who wears the flower on his head, is a late deity, the figure first occurring in the XIXth dynasty (A. Mariette, Nyphos, Paris, 1859-80, i. 396), where it appears, as with sirup of it is 53°, as the flower of the god, clearly the blue lotus. Usually he is not represented till the Greek period. Horus, who appears seated on the lotus-flower, is so represented only in the Ethiopian and later ages (G. Colonna-Cerni, Monuments de Chypre, etc., Paris, 1882, pl. viii. G. A. Hoskins, Visit to the Great Oasis of the Libyan Desert, London, 1837, pl. vi. base). As Wilkinson says of the lotus, 'there is no evidence of its having been sacred, much less an object of worship' (iii. 132).

3. Literature.—The principal books are V. Loret, La Flore phantastique, Paris, 1859, for the botany; G. Foucart, Histoire de l'art laotique, de, 1857, for Egyptian architecture; W. H. Goodear, Grammar of the Lotus, London, 1891, for general art connexions, but overthrown.

LOTUS (Indian).—To the Indian taste the lotus has always been the fairest flower: it has enjoyed an unparalleled popularity throughout the length and breadth of India from the earliest times down to the present day, as is shown by its predominant place in architecture and in art. Beginning to be mentioned in the oldest Veda, it plays a prominent part in the mythology of Brahmaunism. In the later Sanskrit poetics it is the emblem of beauty, to which they constantly compare the faces of their heroines. The lotus, moreover, enters into Indian art of all ages and all religions as a conspicuous decorative element. It appears thus on the oldest architectural monuments of Jainism and Buddhism all over India. With the spread of Buddhism to the countries of the Farther East, its use as an ornament in religious art has extended as far as Japan.

1. In literature.—The lotus is already named in the Rigveda. The purandari (later known as a white variety of the Nelumbium speciosum) is once referred to (x. xxiii. 5) as a water-plant. In the Atharavaveda (x. viii. 43) the human heart is compared with this lotus, and the Patha-chanda Varthamaana (xviii. ix. 6) speaks of its flower as 'born of the light of the constellations.' The Yajurveda repeatedly uses (vi. vi. 2) the word. In the Brahmanda-purana it is named a garland of such lotus—pudra-svarja. The blue variety named padma-nirguna appears several times in the Rigveda (vi. vii. 3, vii. xxxiii. 11, vii. lxxii. 1) and still often in the
After Buddha began to be represented in sculpture, from about the beginning of our era, his image constantly appears sitting cross-legged on a lotus-seat, occasionally also standing on a lotus pedestal. In this form it occurs, for instance, at Rajgir in Bihar, in the Kanheri caves near Bombay, and often in the Gandhara monuments of the North-West. From the latter region this type spread beyond the boundaries of India, appearing in Nepal, Burma, China, and Japan. Even when the seat is not actually the flower itself, two, three, or four lotus seats are, in the Gandhara sculpture, placed under a Bodhisattva. These are even found delineated on a footstool on which Gautama rests his feet instead of sitting cross-legged. The number of the petals of such lotuses varies from four to six.

The use of the lotus seat has been extended to images of bodhisattvas not only in India but in Buddhist countries beyond its borders. Thus Mahā rocker is represented sitting in this way not only at Sārnāth, near Benares, but also in Java and Tibet. In a modern Tibetan picture Maitreyā is depicted on a lotus seat, and the figure of a Persian bodhisattva sitting on a seat adorned with lotuses and painted on a wooden panel was discovered by M. A. Stein during his first expedition to Central Asia. Lotuses are found in the Avalokiteśvara sitting on a lotus seat, and in Nepal also as standing on a lotus pedestal. The lotus is otherwise intimately connected with this bodhisattva; for he is represented as born from a lotus, and also regularly holds a lotus in his hand, whence is derived his epithet of Padmapani, "lotus-handed." To him, moreover, refers the Buddhist formula Om maṇipadme hūṃ ("Yea! O jewel in the lotus! Amen"), which at the present day is the most sacred prayer of the Buddhists in Tibet (see art. JEWEL [Buddhist], § 7). The persistence of this application of the lotus is indicated by the fact that it often appears not only in modern Indian brass images of Hindu gods, but even in seated portraits of Mahākāyas of the 19th century.

The lotus seat and pedestal have an almost universal application in connexion with the figures of Hindu mythology. Thus Brähma appears seated on Viṣṇu's navel lotus. The three great gods of India, in the Hindu triune type of that art in India, on all the Buddhist monuments which came into being in different parts of the country from about 250 B.C. onwards. In its simplest form the expanded lotus is very frequent as a circular ornament on pilasters or medallions. In a lotus, Anantarātā, and Bodhi Gaya, as well as in the rock-cut Buddhist temples of Western India, being introduced as a medallion on pillars, panels, and ceilings. Very elaborately carved half-lotuses sometimes appear used thus, or, in Ceylon, as so-called moonstones—semi-circular stone slabs at the foot of staircases. Lotuses growing on stalks also occur in the sculptures of Gandhara and of Mathūra, and often figure in elaborate floral designs on the pillars of the temples of Amaravati.

The lotus is further found from the earliest times conventionalized either as a seat or as a pedestal on which divine or sacred beings rest in a sitting or standing posture. The oldest and most striking example of this use is exhibited in the figure of the Hindu goddess Lakṣmī in the Buddhist sculptures at Udayagiri, at Bharhut, and especially at Sānchi, where it is frequently repeated on the gateways of the Great Stūpa. She is portrayed sitting or standing on a lotus and holding up in each hand a lotus-flower which is watered by two elephants from pots raised aloft by their trunks. This ancient type is found all over India at the present day; it even occurs among the old sculptures at Polonnaruwa in Ceylon.
LOTUS (Indian)

A. A. MACDONELL.

3. In Buddhism.—The symbolism of the lotus-flower (padma, pûndarika, utpala) was borrowed by the Buddhists directly from the parent religion Brâhmanism. Primarily, the lotus-flower appears to have symbolized for the Aryans from very remote times the idea of superhuman or divine birth: and, secondarily, the creative force and immortality. The traditional Indian and Buddhist explanation of it is that the glorious lotus-flower appears to spring not from the sordid earth but from the surface of the water, and is always pure and unsullied, no matter how impure may be the water of the lake. It thus expresses the idea of supernatural birth, and the emergence of the first created object from the primal waters of chaos; hence also the flower was regarded as the matrix of the Hindu creator himself, Narâyana, and his later form as the god Brâhman, who are respectively figured and described as reclining and seated upon a lotus-flower of divine purity.

As an emblem of divine birth, the lotus is the commonest of motives in Buddhist art and literature, as has been noted above (§ 2). In the Bud- dhist paradise of Sukhavati, the goal of popular Mahâyâna Buddhists, where no women exist, every one is born as a god upon a lotus-flower (Sadâkarma-pûndarika) [SBE xxi. (1884) 389, xiix. (1894) pt. ii. pp. x, 62]; and there are lotus-flowers of metricus [SBE xix. pt. ii. 36], The Western notion of the lotus-flower as a symbol of purity is a memory of this old tradition of divine existence.

A form of this myth of divine lotus-birth is probably the myth which invests Buddha with the marvellous power of imprinting the image of a lotus-flower on the earth at every step that he took. The references to this are innumerable in the Pâli canon; but in the book which the present writer has shown to be manifestly the earliest of all the books of that canon, the Mahâpadâja Sutta Jâti (Jâras 1914, p. 603 f.), the account of the infant Buddha's first seven steps makes no mention of the lotus-flower imprints which appear in the later versions.

The lotus was especially identified with the sun. This association rests, no doubt, upon the natural observation that the flower opened when the sun rose and closed at sunset, so as to suggest to the primitive mind the idea that the flower might be the residence of the sun during its nocturnal passage through the air; and that it might be the revivifier, resurrector, or regenerator of the fresh or refreshed sun of the next day. Its very large multi-rayed flowers would also contribute to this association. It is probably from its association with the sun that we find the lotus-flower in the Gandhâra sculptures, and often subsequently, taking the place on Buddha's footprints of the 'wheeled disk of the sun with its thousand spokes.' This possibility was the source of the lotus-marked footprints.

The device of a lotus-flower in the hand seems to have symbolized not merely divine birth but the possession of life everlasting, and the preservation and procreation of life. The ancient Sanskrit name of the lotus, a just guesses as the supreme god of the universe and the possessor of the famous 'Uma mayi padma Hām' formula (see JEWEL [Buddhist], § 7). Probably, therefore, such a meaning may be in part implied in the lotus held in the hand of Avalokitis, the consort of Târâ, to whom that formula is now specially addressed.

In the hands of Maitreya, the next coming Buddha, and other divine bodhisattvas of Gândhâra, the lotus in the hand, however, may have had a metaphorical significance and have denoted the preservation of the life of the law and the re-vivifying of the same. It was possibly in this sense as cheerer of the law that we find a lotus-flower adorns the hands of many of the images of Buddhas and bodhisattvas who do not specially possess the attribute of a lotus held in the hand (see list below).

The gods and goddesses of Buddhists who hold a lotus in their hand are here enumerated; this lotus, with the object which it carries, forms one of the chief conventional attributes of the particular divinity.

The simple lotus, one of the three kinds specified above, is the especial mark of Târâ, Avalokitis, Padmapani, and, occasionally, Maitreya. The lotus surmounted by a sword is an attribute of Amoghâpâsa, Khârâgarha, Sânanâda, Târâ, Padmapinyâvalokita, and Maitreya; surmounted by a lâmundrell (vyêga), it is an attribute of Mânjuśrî and mild Vajrapâni (Sânta); surmounted by a book, it is an attribute of Mânjuśrî and Prajñâ Panâmita; surmounted by a jewel, it denotes Keîtîgarha and Ekaâtā; by a sun, Samanta-bhadra. Among Tibetan saints the lotus is the especial emblem of the founder of the Order of Lâmas, Padmakara, 'the Lotus-born'; and Tsong-kha-pa, the founder of the Yellow-Hat reformed sect, the Gelug, has two, one on either side of him. Images of them symbolically seek the seven treasures (see JEWEL [Buddhist]), are figured usually upon lotus-flowers.

In mythology the 'lotus' gives its name to two out of the twenty-five principal Buddha of the Pâli canon, namely Padmapa (properly Padma) and Padumnattâ, and to several nâga demigods, Padma, Padmottara, and Punendarika; also to several of the Buddha hells, notably Padma, Mahâyanam, and Punazarika (Sutta Nipâta [SBE x. pt. ii. 121]; these appear to be named from the flower-shaped boles which torment the inmates therein). It is also used to denote the highest number known to Buddhist canon, namely 10,000,000, or I followed by 119 ciphers, which is called a padma or, in Pâli, paduma, whilst the white lotus, punendarika, gives 10,000,00000, or I followed by 112 ciphers (R. C. Childers, Dict. of the Pâli Language, London, 1875, pp. 315, 392).

The white lotus, punendarika, gives its name to one of the great canonical texts of Mahâyânist Buddhism, the Sadâkarma-pundarika, and 'Lotus of the True Law.' This is the theistic development of the Buddhist theory which represents Sâkyamuni as the supreme god of the universe and the possessor of the famous law. See following article.

LITERATURE.—This is sufficiently quoted throughout.

L. A. WADDIEL.
LOTUS OF THE TRUE LAW.

LOTUS OF THE TRUE LAW.—No book gives a more accurate idea of the literature of the Great Vehicle or Mahāyāna (q.v.) than the *Sūdrakaṃputrikā, or Lotus of the True Law;* and nowhere is the better fortune and the change of circumstances undergone by Buddha in certain surroundings, from its beginnings down to the earliest times of the Christian era, so much for speculation. In practice, in the religious sentiment that the *Lotus assumes, Sākyamuni is really God, providence, and reward of the saints.*

1. The Buddha, in the Lotus.—In the ancient Pali documents Sākyamuni is a man, a simple mortal, and he moves in a historical background. In the *Lotus* he is a sublime being, eternal or almost eternal, who unvels in a phalanthomorphic setting the 'divinity,' i.e. the divine splendour and the majestic power, which Buddhists now attribute to the Buddhas; he is a god as Hindus and Buddhists understand the word—that is to say, he manifests himself especially by mythological performances, although he is a stranger to all notions of creation or of annihilation. Such a being has no history; therefore, as Kern says (*SBE* xxii. p. ix.), the *Lotus* is a sort of 'dramatic performance, an undeveloped mystery play. . . . It consists of a series of dialogues, brightened by the magic effects and surrounded by supernatural scenery.'

Among the most characteristic episodes we may mention the silence which Sākyamuni maintains for thousands of centuries, lengthening out his divine tongue into the most distant worlds; the appearance of the *Lotus* (xli.); the appearance of innumerable saints and Buddhas eager to hear the teaching of the Master, and coming from all the worlds; the *means of Kern's* excellent translation (*SBE* xxii.) we can appreciate the character of the 'sublime' and the 'supernatural' attributed by the Great Vehicle to the Buddha.

Although completely divine, Sākyamuni is not God in the orthodox sense. He is *Buddha* 'from the beginning'; he is the father of the worlds, the father of the future Buddhas and saints, the universal providence. In order to save human beings and to lead them to Nirvāṇa he appears in a human form which is illusory; he is born, teaches, and enters Nirvāṇa—at least as far as ordinary men can see; but in reality, while illusory Sākyamuni is appearing in this world, the true Sākyamuni reigns on a divine mountain, surrounded by innumerable Buddhas and imparting to them the true teaching, the true law. It is this true Sākyamuni that the *Lotus* shows.

Nevertheless, as we said, this god is not God in the orthodox sense. There is not a single word in the *Lotus* which is peculiar of an orthodox, i.e. 'atheist,' interpretation. Sākyamuni may be styled Swayamibuddha, 2 who is by himself, because, like all the Buddhas, he became Buddha without receiving the teaching from another. He is *Buddha* 'from the beginning'; 3 but, just as the *Lotus* mentions a Buddha who will one day replace Sākyamuni, so we must believe that Sākyamuni is *Buddha* 'from the beginning of this cosmic age.'

We know, moreover, that Brahmā himself 4 the development of the tongue is capable of covering the whole face, is one of the signs of the 'great man' in the ancient sources. Contrary, evidently, to all Buddhist dogmas, the being 'who has attained Nirvāṇa' is 'invisible to gods and men,' since he is annihilated or has entered eternal rest. The appearance of the 'divine Buddha' in the *Lotus* is probably, therefore, only a case of the magical or deceptive power (siddhi) of Sākyamuni.

2 A hill near Rājagaha, which was formed by the neo-Buddhists into a heavenly mountain.

3 This is a name of Brahmā. The *Swayamābhikārya* is a glorification of the Buddha of Nepal (Ś. Levi, *Le Signé, Paris, 1863*).

4 Cf., this expression, with the one described in art. MĀHĀTMA. Moreover, the characteristic of the *Lotus* is probably, therefore, only a case of the magical or deceptive power (siddhi) of Sākyamuni.

is not, properly speaking, eternal. Besides, Sākyamuni is not the only Buddha; other Buddhas reign and teach at the same time as he, his equals in nature, although not necessarily in merit, glory, or activity as a saviour; every Buddha is, therefore, the father of the world, it is not because he creates human beings; it is because by his teaching he is the father of the saints or future Buddhas.

2. The doctrine of salvation in the Lotus.—According to the *Lotus,* the saints of the Little Vehicle (see art. ARHAT), or Hinayāna (q.v.), do not attain Nirvāṇa; they believe that they will not be re-born, but they are re-born to receive the true teaching. The same cannot be obtained except by first becoming a Buddha; and for that purpose it is necessary to enter the Vehicle of the future Buddhas (see art. BUDDHASATTVA). 2 This doctrine is set forth in various parables, the most famous of which is that of 'The Prodigal Child' (iv.); it is not without a somewhat distant resemblance to the Gospel parable.

'If it is the case that a certain man went away from his father and betook himself to some other place. He lives there in foreign parts for many years, twenty or thirty or forty or fifty. In course of time the man died. The other, which is other (the son) is poor; in seeking a livelihood, . . . he roams in all directions and goes to some place, whereas his father returns to another country. The father is vexed at having no son; but one day, when sitting at the gate of his palace, he sees his son and is dealing with the affairs of all the world that is in front of him, he betook himself to the gate of his son, and the son, whom he had sought for some time, and having found him, said to his father: if you are my son, you will come here to me.' The father orders his son to be brought to him; but, before revealing his birth to him, he employs him for some years at all kinds of work, first at the nearest, then, at the most important. The father treats his son with paternal kindness, but the son, although he manages all his father's property, lives in a thatched cottage, and believes himself poor. At last, when his education is completed, he learns the truth. In the same way we are the sons of the Buddha, and the Buddha says to us today, 'You are my sons.' But, like the poor man, we had no idea of our dignity, of our mission as future Buddhas. Thus the Buddha has made us reflect on inferior doctrines; we have applied ourselves to seeking, as payment for our work, only Nirvāṇa, and finding ourselves utterly devoid of the knowledge of the Buddha, and we have preached it without a sufficient basis. But last the Buddha has revealed to us that this knowledge is to be ours, and that we are to become Buddhas like him.

3. Episodes.—Although the last part of the book (see below, § 4) is almost entirely devoted to Sākyamuni, chs. xxi.—xxvi. glorify several Bodhisattvas. We may mention the *episodes* of Avalokita (xxvi.), which is one of the most widely read works in China (see art. AVARAKITASVARA); the myth of the 'healer king,' Bhāsaśārā (xxii.), a Bodhisattva who sets fire to his gigantic body for the salvation of human beings, and who is none other than the sun. In the Chinese Great Vehicle the practice of burning the self is connected with this myth. In submitting to this cruel rite, the monk fulfills the duty of self-sacrifice incumbent on future Buddhas (J. J. M. de Groot, *Code du Mahāyāna en Chine*, pp. 50, 217, 227).

The history of Sādāparibhūtikārya (see the passage *which* is said to have been recited to the Buddha) is the incident of the "always desired one" (xix.), exemplifies the 'superiority of simple mindedness and pure-heartedness to worldly wisdom and scepticism' (Kern, in *SBE* xxii. p. xxii.). We should not have a right idea of the *Lotus* if we did not mention the glorification of the *dāhāraṇīs,* or magical
formule (xx.), and the glorification of the Lotus itself (xx.): 'He who writes this book, or causes it to be written, shall live. I know that, in the Milinda, a Pali book of the Little Vehicle, all that is required to obtain a divine rebirth is to think of Buddha when dying (SBE xxv. [1890], 124); with more reason, in the Great Vehicle, the tendencies of bhakti predominate (see art. BHAKTI-MARGA).

4. Date of the Lotus.—The Lotus was translated into Chinese for the first time in A.D. 255; but this ancient translation is lost. The next one (Keren, see below, xxi.), which probably was to have been added afterwards, the former ch. xxii. becoming ch. xxvii. On the other hand, the former chapters include verses (gōthās) and explanations in prose (the latter more recent). Kern therefore thinks that 'several centuries' separate the primitive reduction from the one which was certainly in existence before 286. Winternitz is not so generous, and places the original about the year 290. The present writer is inclined to favour an earlier date: the sūtras of Amāvīțha were translated into Chinese in 148–170, and show a Buddhology as developed as the Lotus. It is difficult to identify the Bodhisattvas of the Gandhāra sculpture, except Maitreya, but there is little doubt that this sculpture also shows the quasi-divinization of Buddhās and future Buddhas.

L. DE LA VALÉE POUSSEIN.

LOTZE.—I. General philosophical position.—Among German philosophers of the period which opens with the triumphant advance of natural science about the middle of last century, the most eminent name is undoubtedly that of Rudolf Hermann Lotze. Lotze’s significance lies, above all, in his having instituted and constructed an all-embracing theory of the universe which does full justice to the claims of modern science, and at the same time conserves whatever was of real value in the older traditions of German philosophy in the preceding period; it was Lotze, in fact, who first directed those results to genuinely fruitful issues. To him belongs, moreover, the distinction of having stated and defined the problem of the necessity of metaphysics, which was the distinctive feature of the Metaphysik in which he stood forth as an independent thinker who had struck out upon fresh paths, though at the same time the powerful impetus which he had received from Hegel and Herbart is evident in him. In his works Lotze’s fundamental idea of the metaphysical system of the Idea of the Good, finds pointed, if somewhat paradoxical, expression in the concluding statement of the book, viz. that the beginning of metaphysics lies not in itself, but in ethics. In 1842 Lotze issued a second work of importance, his Allgemeine Pathologie und Therapie als mechanische Naturwissenschaften. Here he attempts to apply without reservation the systematic method which he had employed in his earlier work, to the field of organic life, where the scientifically inadequate and, indeed, inadmissible idea of vital force had so long been resorted to; to that idea he likewise devoted a special article entitled ‘Leben, Lebenskraft,’ in which he made the transition from the speculative to the materialistic views then forming their way into psychology. His opinions in the field of aesthetics he set forth in a treatise entitled Über den Begriff der Schönheit (1843), which was soon followed by his Über die Bedingungen der Künstlichkeit (1847)—both appearing in the Göttinger Studien.

II. Life and works.—Lotze’s early life falls within the period dominated by the thought and sentiment of Romanticism. Born on the 21st of May 1817 at Bantzen in Lusatia, he was grounded in classical study at the gymnasium of Zittau. Even as a boy he displayed that combination of critical acumen and lofty idealistic thought which characterized the ideas of a number of his contemporaries. At the age of about sixteen, and given to the public among his posthumous papers, we can clearly trace the rudiments of the comprehensive views which he subsequently elaborated; they reveal a maturity which amazes us in one so young. In 1834 he entered upon his academic course at the University of Leipzig, where he devoted himself to the study of German literature. In 1837 he came into practical touch with scientific pursuits and with the exact methods of contemporary natural science. Simultaneously, however, he sought to satisfy his philosophical and aesthetic aspirations by the study of German idealism, and to this end attended the lectures of Chr. Weisse. What he won from his University studies was, above all, the conviction that the mechanical mode of interpreting nature must be extended also to the organic, and that the current unmetrical doctrine of ‘vital force’ must be banished from the scientific field (cf. his dissertation, De future biologie principis philosophici, Leipzig, 1838); and this challenge to vitalism continued to be one of the leading features of his critical activity until his view of length won general acceptance.

After practising for a time as a doctor in Zittau, Lotze qualified as a Dozent both in the medical and in the philosophical faculty of the University of Leipzig (1838), and from that time to his call to Göttingen in 1844 he not only laboured successfully as an academic teacher (he had become a Professor Extraordinarius in 1842), but manifested a remarkable fertility as an author. In 1841 he published the first of his greater philosophical works, Metaphysik, in which he stood forth as an independent thinker who had struck out upon fresh paths, though at the same time the powerful impetus which he had received from Hegel and Herbart is evident in him. The distinctive feature of the Metaphysik is in constant presentation of the idea that that which truly exists—the ultimate root of reality—is to be found only in what by virtue of its unconditional value deserves to exist in a metaphysical position. This line of thought, reminding us of Platonism and the Platonic insistence upon the supremacy of the Idea of the Good, finds pointed, if somewhat paradoxical, expression in the concluding statement of the book, viz. that the beginning of metaphysics lies not in itself, but in ethics. In 1842 Lotze issued a second work of importance, his Allgemeine Pathologie und Therapie als mechanische Naturwissenschaften. Here he attempts to apply without reservation the systematic method which he had employed in his earlier work, to the field of organic life, where the scientifically inadequate and, indeed, inadmissible idea of vital force had so long been resorted to; to that idea he likewise devoted a special article entitled ‘Leben, Lebenskraft,’ in which he made the transition from the speculative to the materialistic views then forming their way into psychology. His opinions in the field of aesthetics he set forth in a treatise entitled Über den Begriff der Schönheit (1843), which was soon followed by his Über die Bedingungen der Künstlichkeit (1847)—both appearing in the Göttinger Studien.
LOTZE

Lotze, in opposition to the parallelistic theory, quite definitely champions the hypothesis of a causal connection between body and soul; and to this he adhered all his life. As regards the relation between the physical organism and the soul, he held in fact, that the former is simply a system by which external stimuli are enabled to make a due impression upon the latter, and by which, again, the impulses of the soul are brought to bear upon the external world. The life of the soul is thus by no means a mere copy of the bodily life; the truth is rather that the soul governs the body, and makes it subservient to its own higher ends.

From 1856 to 1860 appeared three volumes of Lotze’s great work, Mikrokosmus (Eng. tr., 2 vols., Edinburgh, 1888), in which he set forth his philosophical system as a whole. His previous treatises, devoted almost entirely to a consideration of the basis of human life in nature, are here supplemented by a profound treatment of human life as expressed in history and the forms of civilization, and the work culminates in a survey of the universe from the standpoint of the philosophy of religion. The Mikrokosmus as a whole is dominated by the purpose in which Lotze’s life-work in relation to his age took definite shape—to show how absolutely universal in its application, and at the same time how subordinate in its significance, is the function performed by the causal mechanism in the life of the world. It is in reality the philosophical problem of the age at which Lotze here undertakes to solve; he makes its task to refute the assumption that the modern mechanical science of nature demands as a necessary consequence a materialistic conception of the world; and his conclusion is that mechanism is simply the aggregate of the means by which the higher ideal element in the world can realize itself, and thus must not be allowed to rank as the ultimate reality. In particular, such mechanism does not conflict with that freedom of individual volition which we must postulate on moral grounds; the case is rather that it is to be conceived as simply the necessary condition of the efficient action of the conscious will—-as the mode of its self-realization. And just as little does this mechanism imply that the real world is a mere automaton, having its action fixed as by clock-work; on the contrary, the essential ground of the concatenation and the world as the Infinite, in which the last resort can be conceived only as a living and all-embracing deity.

Lotze’s next work of importance was his Geschichte der Ästhetik in Deutschland (1868). This work (1) gives a historical view, dealing in the main with the aesthetics of Kant and of German idealism, but also treating of Herbart’s views, and making reference to the fresh perspectives opened by the experimental method of Fechner; (2) a history of the fundamental aesthetic conceptions—‘the agreeable in sensation,’ ‘the pleasing element in intuition,’ and ‘the beauty in reflection’; and, finally, (3) a history of the theories of art as developed in the various periods of aesthetics.

In 1874 and 1879 respectively he published his larger Logik und Metaphysik (Eng. tr. of both, ed. B. Bosanquet, 2 vols., Oxford, 1881; Metaphysik, 2 vols., do. 1879, Logik, 2 vols., do. 1888) as the first two volumes of the System der Philosophie which he hoped to crown his life-work. The third part, which was to have treated of ethics, aesthetics, and the philosophy of religion, was never completed. Lotze died in July 1881, shortly after he had completed his work in the University of Berlin, to which he had been called in the spring of that year. For the aspects of his fini theory of the world, the composition of which in system he could not finish, we are therefore dependent upon his earlier works, especially the Mikrokosmus. Much valuable additional material on many points is to be obtained from the dictated portions of his lectures, edited by J. E. Rohlf (Eng. tr., ed. G. T. Ladd, Lotze’s Outlines of Philosophy, 6 parts, Boston, 1881-87).

3. Philosophical teaching.—The scientific foundation of Lotze’s philosophy lies in his investigations of metaphysics; his chief interest is the problem of the causal connection of things, and he arrives at a most characteristic solution of it. As the starting-point of his inquiries he takes the fundamental postulate of all natural science, viz. the assumption of a connexive mechanism among the elements of reality; or, to speak more precisely, he is concerned with the problem of ‘transitive action’ (transses actio, i.e. the question how a change that occurs in one object A can be connected by a universal law with a change that takes place in a separately existing object B. In Lotze’s view the fact of such connexion leaves no option but to discard the theory that separate objects have an independent existence, and to regard all elements of reality as comprehended in a universal unity of being, in the Infinite, so that what was at first conceived as a ‘transitive action’ between separate substances passes into the conception of an immanent operation of the world-ground. This Infinite, if it is to supply a real basis for the facts in question, cannot in the last resort be thought of otherwise than as analogous to our own spiritual being, though, of course, as raised to an immeasurable power and free from the limitations necessarily inherent in human nature as a finite thing. Ultimately, therefore, the world-ground is defined as an infinite spiritual being, or deity, the entire process of things being conceived as occurring among the parts of the Infinite, as being integrated and sustained by the unity of its being.

Lotze then proceeds to deal in a thorough-going way with the idea that this world-ground or deity forms the one ultimate basis of the existence and interpretation of all things. The elements of the real are all merely dependent parts or modifications of the Infinite; at a later period Lotze preferred to call them ‘actions.’ Such actions of the Infinite lie between the inscrutable elementary particles of the material world, or the atoms, which he Speaks of as the ‘elementary actions of the world-ground,’ but as ‘actions always maintained in uniformity by it’; and, secondly, souls, the concrete actions of the Infinite, existing at distinct points of the world-process, and for a section of that process generating a not previously present centre of ‘internalization’ (Verinnerlichung). Outside of and prior to the activity of the Infinite, however, there are no universal laws operative per se, nor any so-called eternal truths; there is no independently valid ‘law of occurrence’ (Recht des Geschehens) or of existence; ‘law’ and ‘truth,’ indeed, simply express the mode of realization by which the Infinite chooses to effect its will and their validity depends absolutely upon the will of the Infinite, and lasts only so long as that will remains one with itself—a self-identity which, however, must be regarded not as a metaphysical necessity, but as a consequence of the ethical nature of the world-ground or deity, in the sense of the latter’s ‘fidelity to itself.’

Further, a vital constituent in Lotze’s theory of the universe as originally formulated was the inclusion of a causal law of causal connexion. The ultimate elements of the real he at first regarded as spiritual entities, as of kindred nature with the Leibnizian monads. He was led to take this view mainly by aesthetic motives, as also by the con-
tion that a purely material reality could have no independent existence. But, as he gradually worked out his doctrine of the infinite, the divine world-ground, his hypothesis of the animate nature of reality was more and more dispelled with, being come over by the less necessary. In his treatise, what it had been designed to supply was equally well and, indeed, even better supplied by the fundamental position to which he latterly attained. He came at length to the above-mentioned conception of the material elements of reality as the mere actions of the Infinite, maintained in a condition of uniformity, and thus differentiated in the clearest possible way from souls. Souls themselves, however, were likewise conceived of as actions of the world-ground, but as specially distinguished by their admirable and at bottom inexplicable capacity of feeling and knowing themselves as the active centres of an out-flowing life (Met., p. 601 f.). Some writers are of opinion that this view involves a denial of the doctrine of free will—a doctrine which Lotze always distinctly insists upon as an essential element in this his theory of the universe, and for the sake of which he rejects, e.g., the pantheism of Spinoza, notwithstanding the profound relationship between that theory and his own. But this was doubtless, therefore, Lotze himself did not believe that his conception as actions of the Infinite in any way implied the surrender of human freedom; but it is nevertheless true that he refers to the subject, only in certain religious-philosophical reflections, and nowhere adequately with the crux which inevitably shows itself at this point, so that in his metaphysical construction he has left here a problem still unsolved.

Taken all in all, however, since the development of Lotze's thought is never guided by a purely systematic interest, but, on the contrary, takes the fullest possible account of experience, his philosophy presents a conception of the universe which is distinguished by a marvellous unity and completeness.

M. WENTSCHER.
early as 25th March 1858, three physicians, appointed by the Prefect of the Department, who was anxious to suppress these manifestations, made a medical examination of Bernadette. In their report, dated 31st March (before the apparitions had come to an end), which is still preserved, the whole story of the early apparitions is recapitulated as the doctors heard it from Bernadette's own lips, and they do not note its complete agreement with the account given by her many years later. Of mental disease or of any moral obliquity which would suggest the probability of conscious fraud the doctors found no trace. There is nothing, in fact, to show that Bernadette wished to impose upon the public. On the other hand, nothing in the report suggests that the medical examiners themselves placed any faith in the story of the apparitions. They think that Bernadette was the innocent subject of a hallucination, and, while calling attention to her naturally impressionable character, they point out a certain development in the intensity of the trance with which the apparitions were normally accompanied. For the rest, they report that the child was delicate but perfectly sane and healthy-minded, and they offer no kind of suggestion that she should be put under restraint (Cros, p. 143).

It is interesting to contrast this report, which was fully justified by Bernadette's subsequent history, with the very unsatisfactory career of the two children who were witnesses of the alleged apparitions of the Blessed Virgin at La Salette in 1846, as well as with the official account of Marie Magnotier, the child Bernadette of L'éponine, already referred to:

'I have no doubt,' says Marillier, 'so far as I am concerned, of the reality of her visions. In my opinion she certainly saw the Virgin at the crack of the wall. . . . She is no doubt subject to hallucinations; but at the same time she is ill-balanced and heavily weighted with the burden of heredity. She is the daughter of a father who was epileptic and of a mother who was doubtless insane, and she has the bearing, the character— in a word all the appearance of a sufferer from hereditary degeneration. She is filled too with the morbid self-love and the enormous vanity so common among the degenerate' (Proc. Soc. Psych. Research, vii. 107).

According to the testimony of a number of persons who, much to the child's distress, pursued her with questions as to what she had seen, none of the doctors could have been present at Bernadette's apparitions. Traps were laid to induce her to take money for herself or her parents, but her simplicity and good sense defeated them all. Though below the average in intelligence, she learned to read and write in school, and until 1866 she remained engaged in humble occupations at Lourdes. She never saw the apparition again after 16th July 1858, though she visited the grotto frequently. In 1868 she became a nun at Nevers and remained there discharging the duties of infirmary and sacristan, as far as her delicate health permitted, until her death in 1879. It is noteworthy that, though her body at the time of her death was covered with tumours and sores, she was found, when the cadaver was officially examined in 1909, thirty years afterwards, entire and free from corruption (see Carrière, Histoire de Notre-Dame de Lourdes, p. 213).

With regard to the apparitions of the year 1858, it is to be noted that Bernadette always described the vision as one of ravishing beauty, and as living, moving, and speaking to her. The recorded words— for there seem to have been others which the child felt that she was bidden to keep secret as revealed by Bernadette to herself— are as follows:

'The Virgin—I saw her again. I asked her if it were true that a grotto (la Pierre) was to be built. She told me it was true. She gave me the name of the grotto. I asked her if a house were to be built there. She told me that a house was to be built. I asked her if she was going to appear there. She told me that she was going to appear; that it was the place where the statue is now seen, the Blessed Virgin appeared Bernadette Soularie eight times—the 11th and the 14th of February, each day with two exceptions to which reference is made in the report, on March 4th, and on March 23rd, April 7th, and July 16th. The Blessed Virgin said to the child on Feb. 16th and the 18th, and on March 23rd, April 7th, and July 16th, 'I do not promise to make you happy in this world, but I shall give you happiness in the world to come.' You will pray for sinners, you will kiss the earth for sinners. Penitence, Penitence, Penitence.' "Go tell the people to come here." "I want people to come here in procession." "Go and drink at the fountain and wash yourself in the grass which is there." On March 25th the Virgin said: 'I am the Immaculate Conception."

One point claims to be especially noted. These visions did not come to Bernadette at command. On two important occasions, as the inscription notices, she failed to see the apparition, viz. on 22nd Feb. and 3rd March, when she herself certainly expected to do so and when a large crowd—in the latter case some 4000 people, many of whom had spent the night upon the spot—had come long distances to assist at the manifestation. But, as sensible critics remarked even then, this arbitrary behaviour of the mysterious lady was an indication that something was amiss. In reply, she said: 'If the child had simply invented the apparition,' she said, 'she would not have kept it secret, for she was anxious to stop the spring. She would have said the Virgins had just been sighted. But, had she done so, the people would not have believed her.'

It is not denied that towards the end of 1857, a number of persons beside the child resided at Soulsou, or were in Lourdes, who saw the spring which the Virgin had blessed. The evidence of such persons was examined by a commission appointed by the bishop of Tarbes, which occupied itself with the inquiry from Nov. 1858 to the end of 1861. It is to be noted, and the fact is proved by contemporary reports made to Baron Massy, the Prefect of Hautes Pyrénées, and to M. Roulant, the Minister of Worship, that for some months the clergy did all in their power to discourage these manifestations. They fully acquiesced in the Government's expeditiously to stop the apparitions—though Bernadette several times asked the lady, as she had been bidden to do, to disclose her name, the apparition down to the sixteenth vision—that on March 25th—only smiled in reply. The dates and utterances of the series of apparitions are thus commemorated in an inscription upon marble which is erected near the grotto:—

'Dates of the eighteen apparitions and works of the Blessed Virgin in the year grace 1858. In the month of February, each day with two exceptions to which reference is made in the report, on March 4th, and on March 23rd, April 7th, and July 16th. The Blessed Virgin said to the child on Feb. 16th and the 18th, and on March 23rd, April 7th, and July 16th, 'I do not promise to make you happy in this world but I shall give you happiness in the world to come.' You will pray for sinners, you will kiss the earth for sinners. Penitence, Penitence, Penitence. 'Go tell the people to come here.' "I want people to come here in procession." "Go and drink at the fountain and wash yourself in the grass which is there." On March 25th the Virgin said: 'I am the Immaculate Conception.'"
apparitions (of the Blessed Virgin) have all the characteristics of truth and that the faithful are justified in believing them to be true.' Since then further ecclesiastical approbation has been given to both the apparitions and to the miracles of Lourdes in numerous ways, both direct and indirect, by the authority of the Holy See.

Any adequate discussion of the marvellous cures which take place at Lourdes must raise the whole question of the possibility of miracles. For Roman Catholic thinkers the possibility that the 60 thousand cases of a dispensation by which the Divine Omnipotence suspends at times the operation of natural causes are fundamental dogmas of the faith. Given the hypothesis that miracles may occur and do occur, it is difficult to imagine any facts more wonderful, either from the invertebrate and organic nature of the diseases healed or from the abundance of the evidence with which the cures are attested, than the miracles worked at Lourdes. For those who wish to examine the subject for themselves no better or more convenient examples offer than the cures with which Emile Zola was brought into contact during his visit to Lourdes, and which he has insinuated under fictitious names into his novel L'Aurore.

Clémentine Tronc (called in the novel Sophie Costeau) was cured instantaneously of a peritonitis fitted of the most aggravated kind which, down to the moment of her bathing in the piscina, was supposed to be incurable. Marie Le Marchand (sister Elise Bouquet) was also instantaneously healed. This was a nature that was being shown before the face of the world. It had been taken away as almost to lose the semblance of a human countenance. The evidence quoted by Bertrin in his last edition (Histoire, p. 529f) shows that seven years after the cure Marie Le Marchand was a healthy married woman with five children. Marie Gedel (in the novel Mlle. de Guirisons) had been in leprosy for twelve years. The other most painful disorders, including tumour and pleurisy, for more than twelve years. It is, however, stated that the only possible remedy was a dangerous operation, but she also was instantaneously cured in the piscina. In the case of Marie Lebrun (Zola's La Guérison) suffering from a tuberculous affection, and had reached the very last stage of consumption, Zola supposes in his novel that the patient, after a temporary rally owing to the excitement of the pilgrimage, relapsed soon after and falls a victim to the old disease which had never really relaxed its hold. In point of fact, the real Marie Lebrun was in the enjoyment of vigorous health in 1908, fourteen years after the date of her cure (see for all these Bertrin, Histoire, who in his last edition has followed these cases up to the latest available date).

But examples of such cures are almost innumerable, and they may perhaps be most conveniently studied, especially by medical readers, in F. de Grandpré's L'Affaire Lourdes, which gives an admirable choice of specially selected examples. It is not, of course, for one moment disputed that modern psychotherapeutics, and especially suggestion, have accomplished many marvellous, but the instantaneousness of the cure, as witnessed more particularly in such cases as those of Pierre de Rudder, Mme. Rouchel, Gabriel Garagan, etc., can in no way be paralleled by any of Charron's experiments at the Salpêtrière or elsewhere. Again, there are the extraordinary cases of the healing of quite young children, as e.g., the two-year-old infant of Dr. Amoureux of Nantes, born with a club-foot and instantaneously cured at Lourdes, of which a remarkable account is given in the Annales des sciences psychiques (1907, 185f). It may be confidently affirmed that the more carefully the evidence is studied, the more certain it becomes that the words 'suggestion' and, still less, 'hysteria' are not capable of accounting for such cases.

In the preface to a booklet on Lourdes published by R. H. Benson a few months before his death, the writer describes his meeting with a famous French scientist—to whom we owe one of the great works of modern times—who has made a special study of Lourdes and its phenomena. The conclusions of this scientist, which, as Benson says, are particularly interesting because 'he is not himself at present a practising Catholic,' were formulated by him as follows:

'(1) That no scientific hypothesis up to the present accounts satisfactorily for the phenomena. Upon this point adds Benson, 'I breathed the word suggestion,' and his answer was to laugh in my face and to tell me, positively, that this is the most fruitful hypothesis of all.

(2) That, so far as he can see, the one thing necessary for such cures as he himself has witnessed or written of is the power of prayer. Where this rises to the intensity of the cures rises with it; where this sinks, the cures sink too.

(3) That he is inclined to link them with a transference of vitalizing force either from the energetic faith of the sufferer or from that of the bystanders. He instance an example in which his wife, herself a qualified physician, took part. She held in her arms a child aged two and a half years, blind from birth; during a procession of the Blessed Virgin, the blindness came opposite, tears began to stream from the child's eyes, his sight returned. When it had passed, the child's eye was open. Again, a week later, the eye was closed. At the close of the procession, the lady, who herself related to me the story, was conscious of an extraordinary exhaustion, for which there was no ordinary explanation.'

In a lecture given by Benson in June 1914 he stated publicly that the scientist here referred to was no other than Prof. Alexis Carrel, whose marvellous experiments in the transplantation of animal tissue have constituted the most sensation of recent biological research. Indeed, signs are multiplying on all hands that in the less conservative circles of the medical profession the brusque dismissal of the phenomena of Lourdes is slowly but surely being abandoned, and fully accounted for is going out of favor. This change of attitude was emphasized not long since by the action of the medical faculty of the University of Lyons. A lady doctor, Jeanne Bon, presented a Thèse sur quelques guérisons de Lourdes (Paris, 1912). This University thesis was officially approved, and certain of the professors superintended its composition. It was only at the last moment that the jury took fright and found a pretext for conferring the doctorate upon the candid date in virtue of some different title. The author in her thesis maintains that genuine cases of tuberculosis, in which laboratory experiment has established the fact that pseudo-tuberculous hysteria was not in question, have been spontaneously cured at Lourdes, and that these cures are effected under conditions of extreme rapidity which conspicuously mark them off from other spontaneous cures of consumption as generally observed. Finally, it should be noted that Lourdes, with the cures of Christian Science and many other faith-healing organizations, the fullest medical investigation is welcomed at Lourdes. Medical men of all creeds are invited to attend at the Bureau des Constatations, to which a permanent medical staff is attached, and every facility for observation is afforded to all scientific inquirers. Patients who believe themselves to have been miraculously healed or benefited are urged to bring their medical certificates and to attend personally at the Bureau that the case may be properly investigated, and efforts are also made to induce them to return after an interval of a year or more to afford the staff of the Bureau an opportunity of inquiring into the permanence of the cure.

LITERATURE.—Many of the earlier books on Lourdes, notably that of H. Lassaire, Notes-Donnees de Lourdes, Paris, 1888, which has been translated into many languages and of which numerous editions have been published, are not always accurate or in the medical knowledge desirable in the treatment of such a subject. The best recent work is undoubtedly Bertrin, Histoire critique des événements de Lourdes, 37th thousand, Paris, 1912 (the Eng. tr., Lourdes: A History of Its Apparitions and Cures, London, 1903, is a valuable abridgement, lacking most of the documents printed in the Appendices). Other valuable works are: F. de Grandpré, L'Affaire Lourdes (Paris, 1912); A. Voué, Quelques Cas de guérisons de Lourdes et le fait qui goute; Aube wonderée, do. 1913; A. Béziers, Les Lourdes, Florence, 1912, Cib che rispondono gli Aversari di
LOVE

LOVE (Psychological and Ethical).—I. The psychology of love.—Love, as a complex psychological experience, may be classed as a 'sentiment' or an 'emotion.' The term 'passion' being here understood not as an explosive emotional outburst, but as a deep and steadfast enthusiasm. Whether we prefer to call love a sentiment or a passion will depend on the point of view from which we regard it. A genuine sentiment is a stable and complex organization of the emotional life, but, whereas the term 'sentiment' implies a higher intellectual development and greater refinement and subtlety of emotional feeling, the characteristic feature of a passion as distinct from a sentiment is its forcefulness. A passion is an emotional complex of a predominantly forceful kind.

A passion has been defined by A. F. Shand as 'an organized system of emotions and desires.'

Where the life of the passions are independently active, they may still exercise some mutual restraint: a dog summoned from the pursuit of a cat by his master's whistle no longer feels the pure joy of the chase, for the fear of punishment and desire for his master's approval. But such restraint is external and contingent: it does not suggest self-restraint. Where, however, the various emotions of the soul have found an object on which they can concentrate their desire or their aversion, or have become devoted to an idea about which they cluster and develop, a system of self-restraint grows up within the emotions.

In every passion there is a system of self-control regulating more or less efficiently the intensity and behaviour of its emotions.1

A mother loves her child. She may tend to be jealous if an aunt or a nurse wins too much the child's affection. But, if her love for the child is genuine, she is grateful for the kindness shown to the child, and the jealousy is inwardly controlled. Or she may yearn to shield him from every danger, but she may comfort him despite her fears to the inevitable perils of hardy growth. Here emotions of solicitude, fear, and self-sacrifice, like those of jealousy and gratitude on the former supposition, all feel the dominance of the steady, distinct

may be found in the Revue pratique d'apothéctique, xxvii. [1914]. There is also a large number of books and articles which discuss the phenomena of love in a critical or hostile spirit, among others, J. Rouby, Les Visites de Lourdes, Paris, 1911; H. Bazudou, Le Porce ouvreure a Lourdes et la psychologie du miracle, do. 1914; D. J. Grandaison, H. Lourdes et la psychologie du miracle, in Revue de psychanalyse, June and July 1913; a discussion of the whole question of faith-healing by several English physicians and magi in the Proceedings of the Society for Psychical Research, and a similar discussion by R. P. Mangan, 'Les Oublions de Lourdes,' in Annalen des Schlesischen Psychologisches, xvii. [1902] 316-334. Two periodicals, the Revue de la Côte de la Grote, provide information regarding the reputed miracles and other incidents occurring during the pilgrimage to the shrine. A bibliography of earlier books on Lourdes may be found in L. Clugnet, Bibliographie du culte local de la Vierge Marie [France, Province d'Avrich, pl. iii., Paris, 1902].

interested love, and, as they feel it, tend to pass into harmony with one another.

A passion is not only an organized emotion; it is also organized desire. For our emotions have their instinctive impulses, and these, when checked, tend to rise to conscious desires, into convergent tendencies often urging in conflicting directions. Now it is of the very nature of a steadfast passion such as love to act alike for a stable and complex organization of the emotional life, but, whereas the term 'sentiment' implies a higher intellectual development and greater refinement and subtlety of emotional feeling, the characteristic feature of a passion as distinct from a sentiment is its forcefulness. A passion is an emotional complex of a predominantly forceful kind.

A passion has been defined by A. F. Shand as 'an organized system of emotions and desires.' When the life of the passions are independently active, they may still exercise some mutual restraint: a dog summoned from the pursuit of a cat by his master's whistle no longer feels the pure joy of the chase, for the fear of punishment and desire for his master's approval. But such restraint is external and contingent: it does not suggest self-restraint. Where, however, the various emotions of the soul have found an object on which they can concentrate their desire or their aversion, or have become devoted to an idea about which they cluster and develop, a system of self-restraint grows up within the emotions.

In every passion there is a system of self-control regulating more or less efficiently the intensity and behaviour of its emotions.1

emotions and desires which, by very reason of its systematic character and the principle which unifies it, is stable, regulative, inclusive, and instinct with a profound rationality.

For the normal development of love the fundamental condition is that there shall be joy in the object. If there is this, the rest will follow; if there is not this, love is doomed from the outset.

The emotion of joy is characteristically spontaneous, expansive, vital. Its very expression bears witness to this.

In joy the features dilate, the eye-brows are arched, the countenance opens out, the voice is louder and fuller, the gait is more buoyant, and the whole man, or at least his heart and lungs dilate, and the brain works more easily and more rapidly. There is increased muscular tension, of sympathetic feeling and goodness in all that is said and done. In a word the expression of joy is the expression of liberty and therefore of liberty. It may also become the fundamental expression of love. And the condition for this is that this expansive emotion, whose primitive bias is to go out of itself, shall fasten round some object and give it an intrinsic value, a value for its own sake.

To have a joy in anything for its own sake is the primary essential for the development of love. Indeed it is this valuation of the object for its own sake, so essential to joy as to love, that is the mark distinguishing joy from pleasure. I am pleased with an object when it gratifies some interest or supplies some instinctive impulse; I have joy because is fulfills my need. It is a pleasure in relation to my sensibility or to my activity. And we speak correctly of the pleasures of sense and of movement. But joy is not self-sufficient like pleasure. No doubt there is pleasure in it, for all our emotions are toned by pleasure or pain, but such pleasure is but the pleasure of the joy. There is also a self-enlargement in joy, but this is not of its essence. The joy itself attaches itself to the object, and to have joy in an object is to value it for its own sake. Joy is thus an active disinterestedness, and its instinctive impulse is not only to maintain its object, but to surrender itself to it and rest freely in it as in something of intrinsic value and promise.

To have joy in an object is to respect its individuality. This is implied in the very idea of delighting in it for its own sake. To have joy in what is real is to subordinate individual opinion wholesale to the truth of the matter; to have joy in what is beautiful is to trust to the inspiration of beauty and not to the contrivance of artifice. The interests of the object dictate at each step the line of advance. And yet, essential as joy is to the development of love, it is not the whole of love, for love includes not only joy, but sorrow, and it includes these as co-operative and interpenetrative emotions. The joy of presence is followed by the sorrow of absence, and this sorrow at absence, possessing the imagination, has a selective and idealizing influence. We remember and dwell on those aspects of the object that tend to endear it and make it appear still more worthy of our joy and devotion, so that, when the object is restored our joy in it is deepened and strengthened by these new insights won through sorrow. Thus sorrow and joy co-operate in the strengthening of the passion of love. But of the two emotions joy is dominant, sorrow 'recessive.' For we go round ever on a search for a lost joy, whereas joy is not a search for a lost sorrow. Moreover, were it not for the joy in retrospect and prospect which is operative in and through sorrow, sorrow would have a contracting and depressing influence on life.

Love, then, is more than its dominant emotion, joy; more than any mere synthesis of joy and sorrow and their respective impulses. It is the inclusive passion and, in this supreme sense, the master-passion.

Love and belief. Belief, following W. James's famous definition, is the sense of reality; or, if we wish to distinguish belief from faith, the intellectual from the intuitive aspects of spiritual sensibility, we might say that faith is the sense of reality, belief the sense of truth. Peirce, in his Illustrations of the Logic of Science (Popular Science Monthly, xii. [1857], 2891), defines belief somewhat differently, but with similar purport, as the goal of thought and the starting-point of action. It is essentially the self-confidence that comes from having reached beyond doubt, and in its place built up settled habits or rules of action, the assurance that one is ready to meet the contingencies of life in any direction. At root this view identifies belief with the sense of power, power being here conceived as the reality with which our life is invested when doubt passes over into belief. To have a sense of power is to believe in one's self, to be ready to set one's own personal mark on whatever one touches; in a word, to hold, in James's phrase, that the fruit et origo of all reality is ourselves.

Now, if we turn from belief so understood to love, and ask what the passion of love has to tell us about reality, we find that for love the supremely real thing is not itself, but the object. Love and belief and love are to meet harmoniously, the sense of the reality and significance of self so essential to the belief that means power must be identical with that sense of the reality and supreme worth of its object which is so essential to the sense of self in the object must be one with our belief in ourselves.

This requirement leaves us with the question: What must the nature of that object be which we can intimately identify with our own selves? It must be at least personal or we could not identify ourselves with it. Moreover, the view that we take of the nature of our own personality must be such a kind that we can conceive it as identified with the personal object without having lost or absorbed in it. If the self is lost in its object, the sense of power, the belief, will also go, and there will be no reconciliation of belief and love. Thus, if belief is to be love's belief, if faith is to be love's faith, the object of love must be in harmonious communion with it, that heightens our sense of personality and makes us more truly ourselves than we were before.

But, it may be objected, when I really love anything, is it not one of the most satisfying features of this experience that I get away from myself? How can I surrender myself to the call of the great starry spaces of ether or of spirit and yet continue to be impressed with the importance of my own individuality?

The question goes to the root of all ethical inquiry. It compels us to recognize that there is something which we currently call our individuality, which is yet too weak to subsist in the presence of what is really sublime in the universe and in history. This individuality, which grapples itself to a finite body and shrinks from all the great things, from the infinite, from suicide and from death, how is it possible to conceive any organized sentiment or passion fulfilling itself within the limits of such being as this? Sooner or later it must strike its roots home into deeper personal ground. Only a self which has these roots of the infinite about its heart can ever ask the question out of which the true love emerges. Only in this infinite self can the will to love and the will to power prove no longer tendencies that are mutually destructive.
2. The ethics of love.—We have spoken of love as a sentiment or passion. We have spoken of it also as a power. We might go one step further back and speak of it as an instinct. As a deep-rooted comitative tendency shaped and determined in connexion with the supreme end of the preservation of life, i.e., of natural or spiritual existence whether in the individual or in the race. There is indeed a strong case for holding that love, as an instinct, provided we do not forget the fundamentally comitative character of all instinctive behaviour, or insist that instinct shall from the outset have at its disposal some mechanism through which it operates. There is such a mechanism for the passion for the ideal, and yet this passion has the originality and fundamental force of an instinct. But this is not the place to attempt a systematic vindication of the independence of the spiritual life. It will be enough if we assume as the fundamental postulate of ethical science that the life animated by the ideals of truth, beauty, and right is not a mere derivative from the natural life of the body, but, as a φάσεως καὶ σωφροσύνης τῆς ζωῆς, in Plato’s memorable phrase,—a heavenly and not an earthly plant—has independent instincts of its own, instincts of spiritual self-preservation, instinctive passions for the ideal and the heroical, and that the instinctive passion παρά εὐεργείαν  

loves love.

Virtue is love.—When love is conceived in this ultimate way as the creative power of a new life, it is legitimate to look upon it as the supreme virtue. By the same instinct which underlies the special power (ἐνεργεία) and special excellence (ἐξουσία) which enable us to live the best life. Now the question ‘What is virtue?’ received in the ancient world a great variety of answers; but of these, three stand out as the closest, those of Plato, Aristotle, and Socrates. They assume that virtue is primarily a matter of habit and of mere rational insight: none the less the habit of right choosing, in which virtue essentially consists, is guided by the practical reason; for to choose rightly is in all things, the moral mean, conceived as the practical reason alone can show where the mean lies. Thus with Aristotle we reach a more inclusive conception of virtue than that given by Socrates. The Aristotelian conception is a substitute for the Socratic only in the sense that it is a deepening or transcending of it. The Socratic ‘reason’ is taken up into the Aristotelian ‘will’ and made to function in its service. Similarly the definition ‘Virtue is love’ does not supersede the Socratic definition. It simply deepens, and by so doing develops and reorganizes it. To do justice to the value of the virtue of human nature we must look deeper than the habit. Moral habits grow from their instinctive foundations, not automatically, but through the enthusiasm which we put into the task of their formation. Hence, when we say ‘Virtue is love,’ we are far indeed from denying that it involves habits of right willing. We simply emphasize the motive power which is at the root of the formation of the right willing; the reason is for us insem for what is good felt as an imperative. If we substitute the habit, it is no virtue; it is no more than the capacity for virtue.

But it is especially in relation to the varied emotions and impulses, to ‘whatever spiritual immortal frame,’ that love stands out as the ultimate virtue of the spiritual life, of the life which aims at a universal or common good. Working through the emotion of anger, it is the root of moral indignation and of justice; through that of fear, it makes the object loved the object whose hurt is intended for that reason; regarding sentiments, transferring their affection from the atomic, private ego to the personal and inclusive self; the composition of others, directed as it is against the merely individual self, is no longer felt as an injustice, but as a personal and therefore excites neither envy nor ill-will.

‘There is no remedy but love,’ writes Goethe, ‘against great supererogities of others.’

Nor can the inclusiveness of true love tolerate the exclusive passion of jealousy. Moreover, with the complete passing of exclusiveness not only jealousy, but pride also, is transfigured, for love is not truly inclusive until it shows itself as ready to be grateful as it is to be generous, as ready to receive as to give. Love again is inseparable from reverence, and as such is the great security of true personal dignity. The negative element is never absent from love’s sense of its own freedom. Inclusiveness does not mean an insuperable barrier between self and not-self. Intimacy with a friend through love means increased respect for him or her personality. There is thus in all love an element of reverence which guarantees that as intimacy grows so also does the value set upon personality.

Again, we reverence the object of our love because we have a joy in it for its own sake, as an end in itself, and this joy is rooted in our sense of its reality, and most intimately associated also with the sense of our own reality. There is an emotional belief in the intrinsic value of its object, is therefore essential to love, for faith is just this sense of personal reality. Once again—this is a central point—love is the source and also the very substance of moral vocation. For by ‘will’ we mean the whole personality as active in deliberation, decision, and resolute conduct. And, when the whole personality is volitionally active in this broader sense of the term, and this activity is motivated by the principle of love, it seems justified in affirming that the power which vitalizes such activity, and the moral excellence which characterizes it—in a word, its virtue—is love. Finally, love is essential to knowledge, so that, if virtue is knowledge, it is an essential reason, and still more fundamentally, love. Love, at the root of our thinking, inspires the tendency to abandon ourselves to our object and identify ourselves with it. This has the effect of facilitating concentration and whole-hearted interest; the power of cleaving to a problem through thick and thin comes with the devotion of love. The best reason is love’s reason, the reason born of sympathetic insight.

Sympathy is the general principle of moral knowledge, and the reason is that ‘it furnishes the most reliable and efficacious intellectual standpoint. ‘Quaintened sympathy means liberality of intelligence and enlightened understanding.’ Or, again, ‘genuine moral knowledge involves the affection and the resolute will as well as the intellectual knowledge of the varied elements of value in the lives of others and in the possi

4. J. Dewey and J. H. Tufts, Ethics, London, 1909, p. 253; cf. also G. Stanley Hall, Advances in Psychology, II, 1905; ‘First, last, and best of a form of love. Interest is intellectual love, and one of the best tests of education is the number, intensity, and distribution of interests... Even phila-sy is not the possession, but the love and wooing of wisdom.’

bilities of our own, save as our affections are strong. Every narrowing of love, every encroachment of egoism, means just something in the way to good.'

So Plato, as we see in the Republic, connects the philosophical element in human nature very intimately with that which makes him fond of what he understands, and again makes him want to understand and the attraction got together. Indeed the very word 'philosophy' implies this.

But there is still one question to be faced if the inclusiveness of love as a virtue is not to be misconceived. There is such a thing as love's hate, for the lover of good is the hater of evil. Hence, so long as evil actually exists, love must exclude it with all the force of its being. Now, in order that evil may actually exist, it must grail itself on to the good. For evil is a sort of disintegration, and nothing can be wholly evil without being wholly disintegrated. Plato points out, in the first book of the Republic, that it is only in virtue of there being honour among thieves that the gang can subsist at all. Evil, in fact, can subsist in actuality only in virtue of the good which it possesses and enslaves. Hence, if love, through successive redemptions of all the elements of good contained in things evil, becomes inclusive of all good, evil as an actuality must cease to be. We cannot, indeed, think of it as annihilated, but we can conceive it as depressed to an infra-actual level of reality. At best it could survive as a real possibility of evil, real, that is, in relation to the will. As an actuality it would have been purged from the world. Then, and not till then, will love be inclusive of evil as of all else. For, though love cannot include actual evil, it must include at all times the possibility of evil, seeing that the possible evil is implied in the possibility of good, and all moral choice is a choice between possible evil and possible good. Hence, when evil shall have been reduced to the status of a real possibility, it will cease to lie outside love. Love will then be all-inclusive.

LOVE (Primitive).—The passion or emotion of love is as difficult to define as life itself, and probably for the same reasons. The following statements are useful:

'Simplest of all primitive is the love of the animals, the love of the animals of the world, the love of the animals of our species.' Again, in its fully developed form the passion which enters into the lives of the great human families. Mr. Spencer thus sums up the matter:

analysis he has given of it:—' Round the physical feeling forming the nucleus of the whole, are gathered the feelings produced by personal beauty, that constitute the feeling towards a new creation of reverence, of love, of approbation, of self-esteem, of property, of love of freedom, of sympathy. These, all greatly exalted, and severely tending to react to their excitements or reactions, are a new, noble, and it might be said a social, might be said a mental state we call love.'

Mantegazzia, speaking of it as a colour, form, and Spence, in his reference to the importance of the sense, rightly emphasize the most remarkable characteristic of sexual love. This is the temporary raising of the individual to a higher power, the intensifying of his capacity, and the personal people said:—' When I am not in love, I am nothing.' Nietzsche has eloquently described this result:

'One seems to oneself transfigured, stronger, richer, more complete; one is more complete, . . . it is not merely that it changes the feeling of values; the lover is worth more.'

For Plato love was a 'divine madness'; he was thinking of its automatism, its sweeping away of reason and even consciousness. It was perhaps this aspect that led Schopenhauer and others to condemn it as an illusion. But love is only a delusion in so far as the whole of life is a delusion, and if we accept the fact of life, it is unethical, metaphysical or religious to refuse to accept the fact of love. 1 Ellis defines love 'in the sexual sense as a synthesis of sexual emotion (in the primitive and uncoloured sense) and friendship.' 1 It is a minimum definition.

There is no doubt that the various forms of love—sexual, parental, fraternal, filial, and social—are kindred emotions. Their relative intensity decreases from the sexual to the social, but, as this decreases, extension increases, and more and more persons may be embraced. It is unnecessary to do more than mention the social and the artificial, for all its love plays a part in society only less important than that of the instinct to live. It brings together the primary elements of the family, it keeps the family together, and it unites in a certain fellow feeling all members of a nation or race.

I. SEXUAL LOVE.—Especially in its sexual grade, love has certainly during the progress of civilization become not only more refined and complex but more intense. 1 This is shown by a comparison with modern savages. Not only is the impulse weak, but the physical development is inferior, and consequently the difficulty of obtaining sexual enfrisment is great. A social result of this last condition is the curiously artificial excitement (see below). Jealousy is frequently absent, among the Central Australians to a remarkable degree.

'Amongst the Australian natives with whom we have come in contact, the feeling of sexual jealousy is not developed to anything like the extent to which it would appear to be in many other savage tribes.' 1

Jealousy, however, seems to have little or no connexion with sympathetic love, but to be entirely concerned with animal instinct and the sense of property, and many savages show jealousy as a remarkable degree as the Central Australians show its absence.

The question remains, and it is important for the study of the origin of the family, whether primitive love was merely organic desire. A priori it is conceivable that the family could have been established, monogamy made the type of marriage, and

1 E. Westermarch, Mf li. 192, quoting Spencer, Principles of Psychology, 1, 456.
2 F. Nietzsche, Der Wille zur Macht, Leipzig, 1911, iii. 235. The neuro-muscular effects in man are curiously paralleled in the animal by the most intense activities, by the development of new weapons, pigments, colours and forms, . . . new rhythms, a new seductive music' (Havelock Ellis, Sex in Relation to Some Composed of the human feelings. Mr. Spencer thus sums up the matter

1 Boyce-Tate, p. 427.
3 'Combination oj psychic or emotional, or not suffering, sorrow, or pain.
more or less permanent unions fixed in social habit, merely by the operation of animal instincts. Similar results of the same causes are sufficient in the case of the animal world to preserve the race and prevent destruction.

The accounts available vary from pessimistic denial of anything but reproductive impulse to fulsome predication of refined and romantic emotion. The contrast illustrates the difficulty of penetrating to the psychological processes or even the social feelings of the lower races.

The Australian bride is generally dragged from home to the man to whom she is allotted. But long-distance romance is manifest from kind treatment. It is pointed out that 'love' must be assumed in Australian marriages by elopement, which was a recognized form of marriage.

The Papuan language possesses no word for 'love.' The Haus has no word for it; but they feel it all the same. The Paharias are said to form 'romantic' attachments.

An observer remarks even of the Arabs that 'the passion of love is a matter of the two sexes; but I doubt whether anything is meant by them more than the grossest animal desire.'

This statement is probably too sweeping, as also is the statement that the Bible contains no reference to romantic love. Love-songs are rare among the lower races, probably a mere result of the imperfect development of literature. But Polynesian peoples are peculiarly at home in love poetry, which may be regarded as proving some degree of an emotional refinement, or rather irradiation, of the passion of love. At the other extreme, physical contact, it has been remarked that kissing and caressing are rare among savages, except towards young children.

Yet among the Eskimo 'young couples are frequently seen rubbing noses, their favourite mark of affection, with an air of tenderness.' Suicide, which is fairly frequent among the lower races, is often prompted by unrequited passion. But there are many trivial reasons for suicide which indicate merely a rudimentary development of character, and special conditions of social structure must also be considered. It may be regarded as a general rule that love, of any degree or character, is not an essential basis of marriage. Among the Inuit, in love-taking marriage is a matter of arrangement; spouses are allotted by the relatives, often in infancy. In many cases such 'betrothed' couples are prohibited from all association until marriage takes place. That love, however, even in the highest society, when the marriage state has been established for some time, conjugal love is more affection than passion, and affection depends on intellectual and moral sympathy; community of interests, habitual association, and maternal care of children contribute to the character of the emotion. These factors also are sufficient to produce permanence in marriage and to bind the family together. It is therefore unnecessary to call in the aid of teleology in general, or natural selection in particular, to explain the origin of the family.

It is possible to argue that 'love has played little or no part in the institution of the family' (see below, § 1). The cannibal Niam-niam are said by a good observer to show an affection for their wives which is unparalleled, and similar statements have been made of many savage peoples.

It is a justifiable conclusion that conjugal love was real, though elementary. Combined with occasional rough treatment, it was still genuine affection, based on sympathy as well as on the sexual impulse. Similarly, of primitive love in general it may be concluded that it possessed the same elements, in a less developed state and capacity, as modern love in its best manifestations.

We need not accept either the frequent denials of any form of love or the attribution of 'chivalrous' love to Bushmen and Congo savages. Lastly, in estimating the evidence of observers, it must be remembered that their diagnosis of love is based on one invariable scientific definition of the emotion.

1. Development of conjugal love. — The extension of the elementary sexual impulse into conjugal affection with its complex associations should be regarded as, sociologically, the most important feature in the natural history of love. This emotion seems to have developed sufficiently in primitive society to assist in breaking down collective methods of mating, which apparently (as in Central Australia) were often liable to be induced by the hard conditions of savage life. The hypothesis is frequently put forward that the family and social organization are essentially antagonistic. But the pacific way in which they work together in existing races, both civilized and barbarous, and

more or less permanent unions fixed in social habit, merely by the operation of animal instincts. Similar results of the same causes are sufficient in the case of the animal world to preserve the race and prevent destruction.

The accounts available vary from pessimistic denial of anything but reproductive impulse to fulsome predication of refined and romantic emotion. The contrast illustrates the difficulty of penetrating to the psychological processes or even the social feelings of the lower races.

The Australian bride is generally dragged from home to the man to whom she is allotted. But long-distance romance is manifest from kind treatment. It is pointed out that 'love' must be assumed in Australian marriages by elopement, which was a recognized form of marriage.

The Papuan language possesses no word for 'love.' The Haus has no word for it; but they feel it all the same. The Paharias are said to form 'romantic' attachments.

An observer remarks even of the Arabs that 'the passion of love is a matter of the two sexes; but I doubt whether anything is meant by them more than the grossest animal desire.'

This statement is probably too sweeping, as also is the statement that the Bible contains no reference to romantic love. Love-songs are rare among the lower races, probably a mere result of the imperfect development of literature. But Polynesian peoples are peculiarly at home in love poetry, which may be regarded as proving some degree of an emotional refinement, or rather irradiation, of the passion of love. At the other extreme, physical contact, it has been remarked that kissing and caressing are rare among savages, except towards young children.

Yet among the Eskimo 'young couples are frequently seen rubbing noses, their favourite mark of affection, with an air of tenderness.' Suicide, which is fairly frequent among the lower races, is often prompted by unrequited passion. But there are many trivial reasons for suicide which indicate merely a rudimentary development of character, and special conditions of social structure must also be considered. It may be regarded as a general rule that love, of any degree or character, is not an essential basis of marriage. Among the Inuit, in love-taking marriage is a matter of arrangement; spouses are allotted by the relatives, often in infancy. In many cases such 'betrothed' couples are prohibited from all association until marriage takes place. That love, however, even in the highest society, when the marriage state has been established for some time, conjugal love is more affection than passion, and affection depends on intellectual and moral sympathy; community of interests, habitual association, and maternal care of children contribute to the character of the emotion. These factors also are sufficient to produce permanence in marriage and to bind the family together. It is therefore unnecessary to call in the aid of teleology in general, or natural selection in particular, to explain the origin of the family.

It is possible to argue that 'love has played little or no part in the institution of the family' (see below, § 1). The cannibal Niam-niam are said by a good observer to show an affection for their wives which is unparalleled, and similar statements have been made of many savage peoples.

It is a justifiable conclusion that conjugal love was real, though elementary. Combined with occasional rough treatment, it was still genuine affection, based on sympathy as well as on the sexual impulse. Similarly, of primitive love in general it may be concluded that it possessed the same elements, in a less developed state and capacity, as modern love in its best manifestations.

We need not accept either the frequent denials of any form of love or the attribution of 'chivalrous' love to Bushmen and Congo savages. Lastly, in estimating the evidence of observers, it must be remembered that their diagnosis of love is based on one invariable scientific definition of the emotion.

1. Development of conjugal love. — The extension of the elementary sexual impulse into conjugal affection with its complex associations should be regarded as, sociologically, the most important feature in the natural history of love. This emotion seems to have developed sufficiently in primitive society to assist in breaking down collective methods of mating, which apparently (as in Central Australia) were often liable to be induced by the hard conditions of savage life. The hypothesis is frequently put forward that the family and social organization are essentially antagonistic. But the pacific way in which they work together in existing races, both civilized and barbarous, and
also the fact that crude types of social organization have been broken up by the family, strongly oppose this partial view.

It is right to notice that a time came when the conditions of life became favorable to an expansion of nervous and intellectual faculties, when the chief obstacle to a gregarious life—security of food—was overcome. But before that there was a different type of gregariousness, which, so far as we know, did possess elements antagonistic to conjugal affection, at least. It is possible that increased security of subsistence assisted the growth of this emotion and strengthened thereby the family bonds. Westermarck has argued:

"Where the generative power is restricted to a certain season and which primitive man seems to have shared with other animals—it cannot be the sexual instinct that causes the prolonged union of the sexes, nor can I conceive any other cause that might account for this habit. Considering that the union lasts till after the birth of the offspring and that it is accompanied with parental care, I conclude that it is for the benefit of the young. It has been said that no one has induced the sexes to remain united and that the male to protect the female after the sexual act, but I am not convinced; and if procuring great advantage to the species in the struggle for existence, conjugal attachment would naturally have developed into a special type of affection." This is an important statement and calls for consideration. In the first place, the assumption that even the earliest paleolithic men were capable only of periodic impulse is insecurely based. That a more or less regular capacity did ultimately develop from a periodic is a different matter.

Secondly, even admitting the above-mentioned view, no account is taken of the phenomena of habit. Habit is the essential factor to-day, and must be kept in mind, in the development of conjugal affection from the primary incidence of the sexual emotion. And here habit is reinforced by many associations, one of which is the care of children. Another, itself a strong emotion, is the proprietary feeling, strengthened by habit. Even the rudest savage who finds a right of property in 'her man,' however badly he treats her. Again, the invocation of 'natural selection' is, when analyzed, merely rhetorical. Westermarck admits that sexual impulse is 'at the bottom' of conjugal affection, but he ignores improved environment. Neither of these factors can, except by a metaphor, be identified with the agents or machinery of 'natural selection.' The fact is that improvement of conditions and development of nervous and intellectual faculties have been accompanied by an increase both in emotions and in their control: the emotion of love in all its grades has been no exception. To apply the doctrine of the survival of the fittest to such a development within the species is a misapplication of Darwinism, or, rather, an unnecessary extension of the doctrine.

2. Development of sexual love. In order to estimate aright not only the course of development, but the character, of modern love in its typical form, it is necessary to note some further elements—in particular, complementary elements—in the love of man and woman. Male love is active and dominant; female love is passive and subservient. In sex life it is possible to inflict pain, or to give a semblance of pain, on the women they love; it is still easier to transfer the whole of one's delight in experiencing physical pain when inflicted by a lover, and an eagerness to accept submission to his will. Such a tendency is certainly normal. Hence, various aspects of married life and of courtship:

Among the Slavs of the lower class the wives feel hurt if they are not beaten by their husbands; the peasant women in some parts of Hungary do not think they are loved by their husbands until they have received the first box on the ear; among the Italian Camorrista a wife who is not beaten by her husband regards him as a fool.3

It is possible that human love, the more active, the female the more passive part. During the seasons when the number of the most timid animal species engage in desperate combats with each other for the possession of the females, and there can be no doubt that our primate human ancestors did so in the same way, to fight for their wives; even now this kind of courtship is far from being unknown among some male pursuers and tries to capture the female, and she, after some resistance, finally surrenders herself to him. The sexual impulse of the male is more closely connected with a desire to win the female, and the sexual impulse of the female with a desire to be pursued and won by the male. In the female sex there is consequently an instinctive appreciation of manly strength and courage.4

A connected result of male superiority in strength, activity, and courage is the element of protection in male love, and of trust on the side of the female. The pugnacity observed in the males, both of animals and of wild men, is one aspect of the general increase of capacity effected by passion. The intimate psychology of love reveals not only an impulse for union, but an association in the male psychosis with an impulse for destruction, and even for devouring. Love often uses the language of eating. The natural modesty and coyness of the female play an important part both in stimulating the love of the male in front of defining it. 'I la pudeur,' says Gyanu, 'a civilised amour.'5 Connected with these differences is the relative slowness of the growth of love in woman; it proceeds by long circuiting. In men its growth is relatively rapid, and its duration generally less. Love, again, is 'only an episode in a man's life, whereas for a woman it is the whole of her life.6

Biologically, courtship is a stimulus of love, a means of producing tunescence. Owing to the differences of secondary characters the noted aspect of the love of the male is expressed chiefly in acts of courtship, that of the female in receiving them. If the preservation of love in a permanent union is analyzed, it will be found that it depends on a more or less continuous process of courtship.

A remarkable development of sexual love was made by the early Christians. This was the practice of close but chaste unions between the virgins and young men (see art. CHASTITY). The poetic or Romantic exploitation of prolonged union, but here ignores the custom led (as is shown by the literature) was perhaps the only sociological result. It is possible that this became a tradition and thus reinforced the medieval valuation and practice of chivalrous love. 'For a medieval knight the chief object of life was love.' It became a formal cult, and theoretically was defined as 'the chaste union of two hearts by virtue wrought.' Dante's love for Beatrice is the highest type of the practice. Its essential condition was that the passion should be hopeless and should not be consummated in marriage. But, as with a similar ideal of love in ancient Greece, so in this case, the reality was generally immoral. The lady as a rule was the wife of another, and adultery was the natural and necessary consequence.

In European civilization to-day the factor of intellectual and moral sympathy in love has become more pronounced with the greater freedom and higher education of women. Sympathy strengthens affection, and affection strengthens sympathy. The element of equal friendship in love has been greatly increased, and thus, curiously, in spite of the levelling which has taken place to some extent in class-distinctions, has made love between members of different social spheres more rare.

LOVE (Primitive)

is a fact that spring and harvest are among savages, barbarians, and modern peasants regular seasons both for germinative and for special development of the sexual feelings. The reason may be partly biological, partly climatic, and partly connected with the food-supply. The probable conclusion is that the conditions being favourable for any sort of expression and perhaps specially so for amorous expression—an increase in the sexual impulse during these periods is established for modern peoples—the opportunity is taken by societies, which express themselves only socially, to stimulate their naturally feeble sexuality and to obtain organic relief.

The principle of dramatization, which is at the root of magical ritual, may be noted in love-charms, of which all folk-ways, from the Australian to the European, have a store, and in a large class of primitive marriage ceremonies, which generally typify union. The latter are organized in love-charms.

The connexion between love and religion is of the same nature as the connexion between love and art and life generally.

* Very much of what is best in religion, art, and life, owes its charm to the progressively widening irradiation of sexual feeling.

4. Homosexual love.—Sexual love between individuals of the same sex is a not infrequent abnormality. It probably occurs, at least sporadically, among savages, though the practice actually realized is a kind of trial marriage. The case is very different in civilization.

(b) The law of parity. A social and a biological tendency act as complementary factors, the one discouraging and the other encouraging love between beings of the same sex. The one tendency is expressed in the remarkable rules of exogamy; the other, which may or may not be connected, is the tendency for those persons to be mutually attracted who are of the same grade of pigmentation. It has been popular belief that persons are attracted by dark, and vice versa; even that short persons are attracted by tall, and vice versa.

A. Bain speaks of the charm of disparity.

* But it has affirmed clearly and repeatedly the charm of parity. It is a law of love in which and marriage those who resemble themselves.

Modern investigations have established this conclusion.

One of these came from the popular notion that married people end by resembling each other. The explanation was that they began by doing. On the other hand, persons are not attracted to members of the opposite sex whom strikingly unlike themselves in pigmenitary characters.

* With this feeling may perhaps be associated the feeling, certainly very widely felt, that one would not like to marry a person of foreign, even though closely related, race. But the barriers between radically different races are occasionally broken by love.

(c) Sexual love. Among primitive peoples there is a constant practice of what may be termed the periodic love-feast. Types of these are to be found among the Central Australians and the Dravidians of India. Certain festivals of medieval Europe have been classed in the same category, with little foundation. A prevalent deduction from these periods of licence was that the sexual character of those persons was degraded. But a closer study of savages makes it certain that their existence is just as little a prolonged debauch as a prolonged idyll (as was the still earlier view, instituted by Rousseau). A more recent deduction was that among the earliest men and the lowest modern savages pairing took place only in spring and at harvest. The festivals in question would be survivals of a periodic pairing-season. Among mammal and other animals (though not domesticated), in a periodic rutting the sexes are brought together by force of instinct. A similar instance of sexual licence occurs in the birth of the infant from an early age displays some attachment to its parents, especially to the mother. If the affection is pure and simple, it is affection mingled with regard for the physical and mental superiority of the parent.

According to Aristotle, parents love their children as being portions of themselves. Esquiens regards this love as a modified love of self or property. A. Bain, however, derived pure parental love from the "intensive pleasure in the embrace of the young." But, as Westermarck notes, "if the satisfaction in animal contact were not the bottom of the maternal feeling, conjugal affection ought by far to surpass in intensity; and yet, among the lower races at least, the case is exactly the reverse. Conjugal affection is very much inferior and of a lower degree to a mother's love of her child. He adds: 'It seems much more likely that parents do not love their children because they love them, but that they love them because they love them.'

According to Herbert Spencer, parental love is essentially love of the weak or helpless. Westermarck notes that West-European parents "when the young are born in a state of utter helplessness somebody must take care of them, or the species cannot survive, or, rather, such a species could never have come into existence. The maternal instinct may thus be assumed to owe its origin to the survival of the fittest, to the natural selection of useful spontaneous variations. But, as stated above, it is unnecessary to regard these instincts as causes of natural selection.

2. Filial love.—Children's love of their parents is generally much weaker than the parents' love of their children. . . . No individual is born with that love, but it 'universally' exists in all human beings from the infant. This early age displays some attachment to its parents, especially to the mother, and this affection is pure and simple, it is affection mingled with regard for the physical and mental superiority of the parent.
Conversely, parental and, still more so, paternal affection includes a regard for weakness and helplessness. Filial love is proved to be normal in primitive races; as with other forms of love, it is both less intense and less complex than in civilization.

3. Fraternal and social love.—All peoples exhibit ‘altruism of the fraternal type, binding together children of the same parents, relatives more intimately allied, and generally members of the same social unit.1 In primitive tribes social organization is the outcome of social needs, and a real social affection and friendly sympathy are proved. As before, Westernmarck applies the doctrine of natural selection to this development.2 With progress in culture social affection becomes a marked feature of religious and ethical practice and theory. Noteworthy examples are the doctrine and duty of charity,3 in Christianity idealized by the Founder’s love for all mankind and by the theory of brotherly love, and the Oriental systems, such as the akshias of Hindu religions.

The philosophical literature which exploits the idea of love is enormous. Plato developed the visual factor of love, the beauty of beauty, though beauty must have an objective element. Greek, Christian, and medieval thinkers developed the connexion between love and faith, love of good and love of God. The amor intellectualis, or the development of the soul, is paralleled by many Oriental theories of contemplation. Throughout, love in religion stands midway between the philosophical and the human conceptions.

III. LOVE-DOSSES.—Deities embodying the abstract notion of love are hardly developed until the higher stages of barbarism are reached, but some points may be noted in the previous evolution. Animistic thought may produce, by a process of normal ‘hallucination,’ the belief that evil spirits, being the father or mother of beauty, whatever beauty may be, must have an objective element. Greek, and Christian, and mediaeval thinkers developed the connexion between love and faith, love of good and love of God. The amor intellectualis is paralleled by many Oriental systems of contemplation. Throughout, love in religion stands midway between the philosophical and the human conceptions.

3. LOVE (American).—The psychology and social habits of the aboriginal American peoples are, on the whole, in line with those of other races at equivalent stages of development. But they exhibit one or two distinctive features. As an instance of the usual conflicting results of observations, there is Morgan’s statement that the refined passion of love is unknown to the North American,4 and that of Catlin, that the North Americans are not behind us in conjugal, filial, and paternal affection.5 An accidental case of difference, not due to observers, is the remarkable fact that the Nahua possessed no word for love, while Quichua, the ancient language of Peru, had six hundred combinations of the word meaning ‘to love.’ Observations of this fact has led to an interesting analysis by Brinton of the expression of the idea in the North American dialects. He distinguishes four methods of linguistic reaction to the emotion of love: (1) inarticulate cries, (2) assertions of love, (3) assertions of sympathy and similarity (2 and 3 are clearly not distinct), and (4) assertions of a desire. It is noted that the Maya possessed a radical word for the joy of love, which was purely psychical in significance,6 while the North American was related, as usual, by certain observers.7 It is clear that the Americans compared favourably with other races in the combination of love with female chastity, and in the filial and social forms of altruism. It is, for instance, stated that the Central Americans at the time of the Spanish invasion were remarkable for their brotherly love and charity to the needy. The Northweesities

The persona of love in the figure of a deity and the worship of erotic forces are perhaps less conspicuous, as might be expected, than in other societies. The Nahua peoples celebrated, it is said, 'a month of love,' during which many young girls were sacrificed in honour of the goddesses Xochiquetzal, Xochitlcatl, and Tlazolteotl, who were patronesses of sexual love. But the Central American deities, with the exception of the leading members of the pantheon, were extremely rarely ministered to by village and city to converse with all and any who came to hear. It is true that its ideals, like those of Christianity, stretched far beyond and away from the range of notions and wishes common among average erranti (collections of normal love as follows: (1) parental, especially mother-love; (2) filial love; (3) fraternal and kin love; (4) friendship; (5) sex love; (6) love of a superior for an inferior; (7) love of an inferior for a superior; and (8) aesthetic and ideal love. It is easy to see that other emotions were blended with these, whereas in the one movement, as in the other, availed to draw to it the hearts of the many as well as the aspirations of the few. And among the deities and the emotions covered by the word 'love,' the teachers of Buddhism and the compilers of its sacred literature met and dealt with every variety of channel, and every degree of refinement or the reverse. We may, for clearness of reference, set out those channels of normal love as follows: (1) parental, especially mother-love; (2) filial love; (3) fraternal and kin love; (4) friendship; (5) sex love; (6) love of a superior for an inferior; (7) love of an inferior for a superior; and (8) aesthetic and ideal love. It is easy to see that other emotions were blended with these, whereas in the one movement, as in the other, availed to draw to it the hearts of the many as well as the aspirations of the few. And among the deities and the emotions covered by the word 'love,' the teachers of Buddhism and the compilers of its sacred literature met and dealt with every variety of channel, and every degree of refinement or the reverse. We may, for clearness of reference, set out those channels of normal love as follows: (1) parental, especially mother-love; (2) filial love; (3) fraternal and kin love; (4) friendship; (5) sex love; (6) love of a superior for an inferior; (7) love of an inferior for a superior; and (8) aesthetic and ideal love. A. E. CRAWLEY.

LOVE (Buddhist).—The way in which early Buddhist literature takes account of the emotion of love is many-sided. It cannot be adequately described, as some have tried to settle it, by a treatment of what is too abstract or, again, too specialized. The hunger for unity or simplification leads some historians to assign to every departure in religions

2 Engels Nibbana, iii., xxxii.
to servant and conversely, and that of layman to reclus or Brahman and conversely. The practical forms which these six several modes of devotion or charity should take are here briefly described. For our present purpose it is chiefly interesting to note that they are prescribed not as mere duties or moral acts, but rather as ways of giving expression to a spirit of 'compassion' felt by the agent. Thus not only should parents in five ways take compassion on (cum-kampanti, lit. 'vibrate towards or after') their children, and teachers in five other ways take compassion on their pupils, but wives, in yet other five ways, should take compassion on their husbands, friends and colleagues, in yet other five ways, should take compassion on any honourable man (kalapattra; this would refer pointedly to Singáda and his companions), in yet other five ways servants should take compassion on their master, and in yet other six ways recluses and Brahmins should take compassion on the laity. The corresponding term in the other six cases of reciprocated service—e.g., of children to parents, husbands to wives, etc.—is 'ministering to,' or 'waiting upon.' And the choice of these two Pali words, differing as they do from those that we should find in a similar European catalogue, is interesting. The former word—to show, take, feel 'compassion'—while it is used in the Sutta, for instance, of the devotion of the good servant, is very often used in the Suttes for the supreme instance of the reciprocal devotion—that of a superior for inferiors—to wit, the compassion moving a Buddha to spend himself for the welfare and happiness of many folk, for the good of gods and men, and to live permanently moved towards the welfare of all that lives and breathes. It was this spirit that he prescribed for those whom he sent forth as missionaries. For all religious forms of service or devotion a Christian catalogue would probably use the word 'love,' however much the sources and outlets of the emotion so termed are shown to differ. The fact that the Buddhist catalogue does not bring in its ethics to supplement, or flow from, Singáda's religious beliefs, but supersedes the latter by the former, and, again, the fact that it substitutes the 'divine emotion' of compassion and the practical devotion of ministry for our more familiar and pragmatic 'love' show no western claim to common caution in making affirmations about love in Buddhism. It may help us further towards some, or away from other, conclusions if we examine in brief detail some of these forms as met with in the five Articles.

1. Parental love.—The typical form of intense and self-surrendering devotion is that of mother-love, just as the type of overwhelming sorrow is that of the bereaved mother. The wise man should elevate to a genuine friend—a watchful, loving, sagacious, sympathizing friend—as the mother is devoted to her child. And not only to his friends: Even as a mother watcheth over her child, her only child, even with life itself, so let us for all creatures, great or small, develop such a boundless heart and mind, that we may let in passionless love for all the world. Upward and downward, near, yea, before, behind, uncumbered, free from ill-will and enmity. This simple is quite in keeping with the chosen term 'being moved, or waiting on, or compassion, since mother-love contains so large an element of passionate, protecting pity.

2. Sex-love.—No case is found of a woman seeking death or religion through the death not of her child, but of her husband. Sati does not appear in any of the stories. The score mentioned above has one case, touched for by the Commentary only, of a man leaving the world because of his young wife's death from snake-bite. And women are recorded, in text and commentary, as having left the world because their husbands had forsaken it for his religion. The power of sex to enthrall is fully acknowledged, as is that of sex-repulsion. But there was no one ancient and moving 'Canticle' of sex-love calling for spiritualized annexation to the Buddha's teaching, such as we possess in the legacy left by Hebrew Scriptures to the Christian apostles. No allegory of the 'compassion' of a Buddha for his adherents is found in the pretty love-song of the Sutta called 'The Questions of Sakká.' Concupiscent—sex-feeling, parent-feeling, and friendship—finds beautiful expression in the old Indian literature, but in poems that are younger than early Buddhist books. This is possibly the outcome of a social evolution—its evolution which in a century or two of Buddhist ethics as to the right devotion in husband and wife may have done much to bring about. It may be noted in this connexion that the Asokan rock and pillar edicts, although they are now and then didactic in tone, are not so much as to make of the Buddhist policy of marriage one of love and fidelity. Again, it is perhaps a pathetic touch in the Anthologies that shows woman at her best ready for the comfradreship, but man blind to it. Mahá-Kassapa, who headed the Order at the Buddha's death, and a Jina himself, is famed as a preacher of marriage, by commentarial tradition, husband and wife, and not in their final birth only. They left the world by mutual agreement, having gone through the form of marriage to please their kin. She, in the poems so fervently extolled her, glories in her ex-husband's gifts and in their 'spiritual friendship' and common vision of the truth. His much longer poem reveals him as both the anchorite and the friend of mankind, even of the outcast, but has no word concerning her. It is conceivable that the larger, more heterogeneous group composing the family in ancient India may have hindered the evolution of the conjugal relation. According to the sidelights thrown by the Suttes on domestic life, it was a girl left that there is no term for love not her husband, but of her father-in-law. She became more or less the servant of him and his wife as well as of her husband. Reference also is occasionally found to a second wife:

'Wooed when sharing home with hostile wife.'

3. Love towards the Buddha.—Filial love alone is the form wherein early Buddhist devotees gave expression to their feeling for the founder of their rule and doctrine. They confessed themselves not seldom as the 'own mouth-born' sons and daughters of the Buddha—a sentiment which, in the later commentarial records, finds an echo in these children being termed severally 'my son,' etc., by the Master. Yet, so far as the present writer knows, none of the usual terms for love or affection is applied to him, and certainly no one is spoken of as loving him by 'taking compassion upon him.' He, as father, teacher, etc., is ministered to or waited upon; it is he who 'takes compassion' on children, disciples, and laity. Honour, worship, or homage, faith or confidence, and the term pannamita, which may be rendered 'resting in,'

1 Rhys Davids, Psalms, ii. 34. 2 Aggántara Níkāya, l. 1. 3 Rhys Davids, Psalms, l. 1594. 4 T. W. Rhys Davids, Dialogues of the Buddha, London, 1899-1906, ii. 301. 5 Rhys Davids, Psalms, l. 49. l. 2041. 6 Majjhima Níkāya, l. 186; Rhys Davids, Psalms, l. 1595. 7 Rhys Davids, Psalms, l. 1595. 8 H. satisfied with'—such are the expressions for the emotion felt, but not 'love.' The Indian words for love were frequently elastic to cover this relation—a relation which was not the less deep and genuine, whether it was expressed in terms of the self-surrendering devotion of a believing and adoring 'heart' or of the intellectual love of the philosophic mind:

1. I see him with my mind as if 't were mine eyes,
By night, by day, incessant, watching ever.
I reverence him while waiting for the morrow.
And thus methinks I'm ever with him dwelling.

Truly my mind with him is joined, O Brahman.

The emancipating force of his teaching drew the imagination:

'God', leaving the men of vision cramped,
Comes as the swan flies to the mighty sea.'

And the charm or majesty of his presence drew by way of sense:

'O wood'son fair the All-enlightened shines
Like a great storm-cloud in the summer sky,
There on the followers pours most precious rain,
Noble of aspect, whose skin
Resemblith gold, say, what is thus? for
To thee with presence so supremely fair!

This adoration for his person is usually accepted, but not always,

'Long have I wished, lord,' said the devoted Vakkali on his deathbed, 'to draw near to the Exalted One, but now is there no comfort for me in the presence of Vakkali, what hast thou to do with seeing this poor frame of me? He who seeth the Norm, he it is that seeth me; he that seeth me is he who seeth the Norm.'

And indeed it was the conviction that, in this man of the long and tireless ministry, carried out purely from sweet compassion for the sons of men, such wisdom and goodness, charm and power, were combined and made to hold sway in this world; and where he lived, the need for superhuman objects of worship from his followers, and which, long after he had passed away, aided the theological evolutions of Mahayana—conception, namely, of Mahajurati, and Avalokitesvara; and Maditeya or Metteyya, the future Buddha, has been conceived as one who will revive the spirit of lovingkindness among men.

4. Love towards devatas. For deity, or the deities of its age, early Buddhism finds no need of adoring devotion. No deities in our sense of the word exist for it. All devas are more like our conception of angels, beings differing from mankind in form and activity and in some of their mental characteristics. They inhabited other more or less adjacent worlds or spheres. On earth were nature-spirits or fairies, usually termed devatā (lt., 'deity'). All were to be treated with goodwill and respect, but nothing more. They were believed to have the power of communicating with man, and are found rebuking and admonishing the lax or lazy recluse. But in the case of the chosen few—a Buddha and his Arhats—it is the devas who render homage and minister to the man, not the reverse.

5. Ideal Love. The emotion of ideal love, though it was not reserved for any personified deity in Buddhism, and though it played largely round the person of the founder, was not otherwise atrophied. It never appears as associated with the whole of that cosmology which, for the more intellectual Buddhists, takes the place of a theodicy. Devotion bestowed on a 'cosmic mechanism,' not planned by divine wisdom, and involving for each and all so much unspeakable suffering, was not to be looked for. But the Norm, as doctrine and as a part of that cosmos, in Pali dhamma and dhammatā, constituted for the intelligent adherent a source of austere affection (rāti). Admiration for dhammatā is a feature in the Brihadāraṇyaka, and the expression 'love for the Norm' (dhammaṅgatā rāti) is met with; e.g. (here called 'the Ideal'),

'Iis love set on the Ideal,
Other loves that Love surpasseth.'

The same emotion is aroused by the idea of Nirvāṇa (nibbānāṅgū patri) also, a stronger form of rāti; and by that of the Sāsana, or 'religion,' 'rule' (āgāramātā).

6. Friendships. 'Goodwill and friendliness' (aryagāpa, adoṣa, mettā) express, better perhaps than the overburdened word 'love,' that expanded sentiment of amity to all living things which the average man can cherish only for personal friend or comrade. The cultivation of amity (orātis), pity, sympathetic gladness, and equanimity formed a sort of sublimated or higher sīla, or code of morals, the first three of them forming a development of that 'vibrating towards,' or compassion, which is so essential an attitude in Buddhist ethics. It is to these that the Elder Revata refers in defending himself against the charge that he lived in the woods to receive stolen goods:

'Since I went forth from home life, and have never aised in business or leisure. Sine I have never harboured conscious wish or plan Uncommons such as are linked with evil.
Never under the quest, all this long interval—
'Let's suite our fellow-creatures, let us say,
Let them be hushed to pain and bury;'
Say, how, love, I do avow, made infinite,
Well trained, by orderly progression grown.
Even as by the Buddha it is taught,
With all I am a friend, comrade to all,
And to all creatures kind and successful;
A heart of amity I cultivate,
And ever in goodwill is my delight.
A heart that cannot drift or fluctuate,
I make my joy; the sentiments sublime That evil men do shun I cultivate.'

If, as certain writers think, we should refrain from applying so warm-blooded a term as 'love' to mettā, 'amity,' this may be justified, perhaps, on etymological grounds, and on the ground that Buddhism sets itself against passionate feeling. But it cannot be justified either by lukewarmness in the exordium to practise mettā and sympathy with pain or joy or by sluggishness in the carrying out of these virtues by leading Buddhists.

It would be hard to give a physical or mental illustration of any exordium so aglow with 'goodwill towards men' as that of the so-called Four Brahmajīhāras, i.e. Best Dispositions, or Four Infinitudes:

'Suffusing, tender and compassionate, such an one with the rays of our loving or sympathy (bhāvanā) thought, and from him forthgoing suffusing this and that quarter, the whole world with living consciousness for reaching even to or, again, as that of the emanation of mind through 'amity':

All the means that can be used as hasse so right doing... are outshone in radiance and glory by this, which takes all those up into itself.'

If this be amity only, we can let love stand aside.

There is no specific and positive injunction to 'love your enemies,' but this is only because the true spirit of the Dhamma would label no fellow-creatures as enemies. All were either to be 'ministered unto' with honour or to be taken compassion upon in that spirit of grave tenderness for the burden of ill on earth—and in the heavens too—which is Buddhism at its emotional best. 'Conquer the wrathfulness by mildness, ... the stingy by giving, the liar by truth.'

7. Altruism. Among the channels for cathartic altruistic sentiment, however termed, the giving of

VOL. VIII—11
the ocean near the mouth of the Loire; and, though Strabo calls these rites Bacchie, it is very probable that they were connected with some form of love-worship.

In the betrothal rites of the founders of Marseille there appear to be indications of the existence of a love-god. We are told that the daughter of the king, after a splendid repast, entered the room with a full cup in her hand, and extended it, by chance or strategy, to some of the men who were sitting by the father, sanctioned it at once, declaring that it was a god who wished it (Aristotle, quoted by Athenaeus, xiii. 36 [p. 576]). According to Plutarch (Arist. Res., xxii., de Mulierum viribus, &c.), it was customary among the Gauls for the father to take place before the altar of the goddess, who, in the case which he cites, happened to be Artemis. It is impossible to say how far those rites were influenced by the customs of the Greeks.

In spite of her beauty, and the love which was shown her by some of the men from the kingdom of the Loire, women were reduced among the Gauls, they were not free to marry, and fidelity to their husbands (see ETHICS AND MORALITY [Celtic], i. 2).

Yet by the 4th cent. A.D., if we may accept the statement of the Emperor Julian, we can learn from St. Thomas Aquinas, “the first and last,” who, writing C. c. 157, saw a beautiful damsels approaching. "She was attired in a strange garb," he writes, "and the Druids who passed by without a word, she replied: "We are the great side, hence we are called the people of the side," i.e. of the mound or hillock. The father wished to know with whom his son was speaking, so the damsel informed him that she had come to invite Conna, whom she loved, to the Meg Meld, "Plain of Delight," where dwelt King Bedadug. "Come with me," she cried. Conna, the Red, of the speckled neck, flame-red, a yellow crown adorning thee; thy figure shall not wither, nor thy youth nor thy beauty till the dreadful judgment." Conna then bore the druid to whom, like the others, had not seen the damsel, chant a magic song against her. She departed, but not before throwing Conna an apple, which was his sole sustenance for a month, and yet nothing diminished the delicacy of the apple. After a while longing seized Conna for the damsels, and at the end of a month he beheld her again, when she addressed him thus: "It is no lofty seat on which Conna sits among the short-lived mortals, waiting fearful death. The ever-living beings (bi bith) invite thee. Thou art a favourite of the men of Tethra, for they see thee every day in the assembly of thy father's house among thy dear friends." The king urged the druid to chant against her, but she made answer: "O Conal of the Hundred Battles, druidism is no race save only men and maidens. When she had ended, Conna gave a bound into her ship of glass, and they sailed away, from that day to this they have never come, and no one knows whether they went (for this text of the saga see Winch.

In his analysis of the Trinity, the great epic of Ireland—which depicts to a great extent the morals of Cuchulainn—H. Zimmerman pointed out that Medb, the heroine of the legend, is the wife of Conchobar, but, having abandoned him, married in succession two chiefs of the same name, Ailill, the second of whom is her husband at the beginning of the account (D'Arbois d'Entremont, Hintergrund in den Erzählungen der irischen Heldensage, SBAW, 1911, pp. 174-227).

An idea of the unusual prominence of the love-motive in the early Irish sagas can be formed from the list of titles given in A. W축h's Essai d'un catalogue de la littérature épique de l'irlande (Paris, 1883).

There are on pp. 34-37 there are twelve stories bearing the title alba, or 'eloquence,' among the more important of which are Aithil Blazon, toin Follail, naísa Fhidhla, to Colubhainn, or 'Eloquence of Eblain, daughter of Fidhla, to Colubhainn' (ed. G. Keating, Hist. of Ireland, tr. J. O'Connell, New York, 1840, pp. 582-841); Aithil Breacan re meicrib Unaig, or 'Eloquence to one of the sons of the god, identical with Longes macus Unaig, or 'Eloquence of the Son of the God' (ed. Windisch, loc. cit., pp. 184-184, 184).

Buch der Philos. Hnhuchenscheln, 'Women, one of the Enchanted Palace' (d'Ars of de Juvainville, p. 224.) is concerned entirely with the rather unlikely story of 'The Marriage of Colubhainn.'

In addition to Cicth na Snìr and Cath Tochmarc, the sagas, such as Tochmarc or 'Eloquence of Graine to Duirainn' (Book of Lecan, fol. 161; Brit. Mus., Harley MS. 520, fol. 25). In addition to Cirth na Snìr and Cath Tochmarc, which are 'Eloquence to the god.'

A most interesting example of the development of the primitive love-theme is found in Cuchulainn's Sick Bed.

Without multiplying examples, it is obvious that the women is usually the aggressive figure in Irish mythology. In Christian times wherein beliefs the pagan love-theme have flourished, the method of procedure is different, as has been pointed out, the man pursuing the woman, who is then against her wishes. Thus, when King Finnachta was bewitched by the enchantress and in great danger of his life, a stranger appeared to him, declaring that he would save his husband's life if she would consent to yield herself to him. She consented with relucrance; and the child born of this union was the 7th century. King Monlog of the annalist says: "Every one knows that his real father was Manannán" (Lecbehair na Midhre, facsimile reprint, Dublin, 1870, p. 135, 19).

In the Christian cycle the love-motive is usually one of wild lust; and, as these scenes are doubtless reflect, to a great extent, the condition of society at the beginning of the Christian era, we can form from them an idea of the status of woman at that period. The nearest approach to a goddess of love is found in Bravan, "White Beoune," daughter of a widow, who has been called the "Venus of the northern sea." (C. I. Elton, origins of English History, London, 1890, p. 291). She was in all probability a goddess of fertility, but appears as Bravan in romance, giving a title: poem to her name, which in itself is perhaps a reminiscence of her former attributes as a goddess of love. Don, the Welsh equivalent of Danu, was also perhaps a goddess of fertility, and had for her children Gwydion, Gilvathwy, and Arianrhod (MacCulloch, p. 103). All these diversities play a more or less important part in the story of Gilvathwy's illicit love for Goeun, the 'founder' of Mab in the Mabinogion.

Returning to magic, Gwydion succeeded in obtaining for Mab from the court of Frydri certain swine sent him by Arawn, king of the Annwn, for the purpose of testing him in his love affair. The trick was discovered, and a battle ensued, in which Gwydion slew Prydervy by enchantment. Having discovered that Gilvathwy had seduced Goeun, Mab transformed him into a swine, and succeeded in the matter, which is also implied by the fact that Gwydion was the lover of his own sister Arianrhod, by whom he had two children. MacCullouch (p. 100) that these myths reflect from time to time such unions, perhaps only in royal houses, were permitted to Arianrhod, her part, while being the mother of her children, it corresponds to a virgin and refuses to acknowledge her children.

The more or less universal type of the treacherous wife is found in the story of the marriage of the goddess, Blodwen, who discovers the secret of her husband's and then places him at the mercy of her lover (T. W. Rolleston, Myths and Legends of the Celtic Race.) This purpose, the 1911, p. 836). In the Welsh romances the element of love, principally to foreign influences, assumes the aspect of woman-worship. This new attitude towards
love is already apparent in Kihkuch and Oloen, which is comparatively an ancient tale, and is further developed in later stories like Peredur and The Lady of the Fountain (see A. Nutt, Celtic and Medieval Romance, London, 1899). It is the main symptom of the extent to which, in comparison with the Irish, Welsh literature had lost its pure Celtic form (Rossetti, "The Lady of the Fountain," 1845 ff.). The relations between the sexes in Wales have already been discussed in ETHICS AND MORALITY (Celtic), III. 1-7.

LITERATURE.—This has been sufficiently indicated in the article.

JOHN LAWRENCE GERRIG.

LOVE (Chinese).—The importance of love as an ethical principle is recognized by Chinese moralists. This can be made sufficiently evident from the classics when asked about benevolence (jin), Confucius replied: 'It is to love all men' (Analects, xi. 23). 'Jin is the characteristic element of humanity, and the great exercise of it is in loving relatives' (Dialectic of Meaning, xx, 5). 'The benevolent embrace all in their love; but they who considered of the greatest importance is to cultivate an earnest affection for the virtuous' (Menelaus, vi, 1, 45).

From these passages it appears that the general affection of love is modified in accordance with the classes of kinship and virtue. The nature of true love is further brought out in such sayings as these: 'For he that is a lover, said Confucius, 'It is only the truly virtuous man who can love or who can hate others' (Analects, vi. 9). 'The Master said, 'Can there be love which does not lead to strictness with its object?' (Ku, vi. 6).

The importance of love as an ethical principle may also be seen in what is said of 'reciprocity' (shu). This is 'in action, to put oneself in another's place.' Primacy is given to it as the rule of life (Analect, xv, 23). 'It is not merely 'Not to do,' another what I would not have done to myself, but, more positively, 'To serve my father as I would require my son to serve me... to set the example in behaving to a friend as I would require him to behave to me' (Dialectic of Meaning, xiii, 5). In the Confucian ethic, however, the exercise of love is limited by retributive justice.

'Some one said, 'What do you say concerning the principle that injury should be recompenced with kindness?' The Master said, 'With what then will you recompense kindness? Recompense injury with justice, and recompense kindness with kindness.' (Analect, vi. 26, 27).

Specially interesting in connexion with the place of love in Chinese ethics is the philosopher Mencius and his doctrine of universal love, as the bond of a perfect social state. The Confucian ethic has no religious counterpart in the classical representation of Shang-ti as benevolent and righteous (cf. art. GOD [Chinese]).

Of love in the narrower sense as between the sexes, neither its more romantic aspects nor its depravations are unreflected in Chinese literature from the Shi King and Shu King down to presentation novels. In view of too evident grossness of thought and life, one is surprised to find the literature no less refined. Love is neither a mysterious superstition, but no grossness in the religious worship reflected in the classics, though it is true that regrettable features appear in popular superstition—spiritual beings may be attracted by the fair looks of maidens and call them to the other world to be their wives; prostitutes may worship a goddess of their own.

According to E. H. Parker (Studies in Chinese Religion, London, 1910), "There is a considerable amount of disguised ling worship, especially in the south of China." He adds, 'In any case, prayers for children, offered up by women, are common enough everywhere.' Such prayers are in themselves innocent, but in some cases the accompanying ritual worship of the idol invoked is somewhat suspect, and is shy of public view. All this is undoubtedly true that there is in China no defilement of vice or any public practice of immoral rites.

LITERATURE.—In the classical religious and ethics, see the relevant works of SBE; and E. Faber, Menelkus, Shanghai, 1897. For examples of popular superstition cf. H. C. Du Bose, The Dragon, Imag, and Demon, London, 1889.

P. J. MACLAGAN.

LOVE (Christian and New Testament).—I. Divine love.—The highest and most satisfying faith which the human mind has attained, or can attain, is formulated in the Christian conceptions of love, 'God is love' (1 Jn 4:16). This is interpreted as meaning not only that God, self-conscious and moral, creates, sustains, and orders all things in love, but that love is His very essence; and the spiritual conflict of the ages has to be waged against the forces opposing this first principle of religion and ethics, the acceptance or rejection of which leads logically to optimism or pessimism.

A few expressions of the belief that eternal love subsists at the heart of all things, and manifests itself through them, may be chosen as typical.

'Let me tell you why the Creator made the universe. He was good ... and desired that all things should be as like Himself as possible' (Plato, Tim., 26 E). 'The Lord is good to all; and his tender mercies are over all his works' (Ps 145).

'For thou lovest all things that are, as if they were the things which thou didst make; for never wouldst thou have formed anything if thou didst hate it' (Wis 11:4). 'And we know that to them love God all things together for good' (Rom 8:28). 'O tender God, if Thou art so loving in Thy creatures, how fair and lovely must Thou be in Thyself!' (Suau, quoted by W. K. Inge, Christian Mysticism, London, 1883, p. 252). For lovers of Nature Wordsworth expresses the conviction that nothing 'Shall e'er prevail against us, or disturb Our cheerful faith, that all which we behold Is full of blessings' (Tintern Abbey, 122 ff.).

There is no doubt in R. C. Trench's large utterance: 'We and all men move Under a canopy of love. As broad as the blue sky above' (The Kingdom of God, 4:6).

"er in Browning's 'cri du cœur': 'God! Thou art love! I build my faith on that' (Paracelsus, v. 51).

And in Carlyle's words there is at least a wishful longing to believe: 'O Nature! ... Art not thou the "Living Garment of God"? ... Is it, in very deed, He, then, that ever speaks through thee... that loves and loves in thee?' (Sartor Resartus, The Everlasting Year).

It is common knowledge, however, that this splendid creed of three syllables is not only severely tested but strenuously contested. The notion that love is the ultimate reality of things implies that transcendent love is Creator and Lord of the world, and immanent love the life which pulsates through it, the Spirit ceaselessly operant in Nature and humanity—is pronounced by many to be a delusion and a snare. One of the chief arguments of free-thought thus emphatically expresses himself: "That God is love is a very lofty, poetical and grading conception, but it is open to one fatal objection—it is not true" (R. Blatchford, God and My Neighbor, London, 1897, p. 25).

One of the leaders of philosophical thought confesses that in the loss of this faith 'we are confronted by one of the great tragedies of life' (J. M. E. MacTaggart, Some Dogmas of Religion, London, 1906, p. 257). So manifest and repellent is the blending of good and evil in human lives that Swinburne makes the chorus of one of his dramas sing:

'The high gods
.... wronged with weeping and laughter,
And fashioned with looking and love
.... The holy spirit on
(Atalanta in Calypso (Poems, London, 1904, iv. 220)."

The bitter pagan belief, that the gods take the same pleasure in the sufferings of mankind as cruel children in the torture of flies, still has its adherents, finding expression, for example, in Thomas Hardy's pessimistic dictum, 'The President of the Immortals (in Eschylean phrase) has ended his sport with Tess.' Some critics of the world-order do not hesitate to declare that 'for all the Sin which the Face of Man has blackened' God needs to take as well as give man's forgiveness (Omar Khayyám, quatrain lviii.).

Worst of all,
science hesitates to say that God is love. The belief so dear to the heart of Linnaeus, that the phenomena of Nature bear witness to the benevolence of the Creator, is supposed to have received a staggering, if not a fatal, blow from the principle of evolution, so that no comforting rod or staff, but only a broken reed, appears to be left in the hand of the man

Who trusted God was love indeed
The Nature, red in tooth and claw
With raving, shed's against his creed.

Confident assertions on the one side and the other help at least to make the issue clear, while they may also suggest that strong feeling is apt to be generated in the attempt to solve the problem of problems. Every man admits 'the one absolute certainty that he is ever in the presence of one Infinite and Eternal Energy, from which all things proceed' (H. Spencer, Ecclesiastical Institutions, London, 1883, p. 548). The question is whether that Energy is controlled by love, or, rather, is identical with love—whether the All-Great is the All-Loving.

(c) What answer comes from the heart of Nature? The search for an answer, whether in the form of a realized survival of the fittest and extinction of the unfit, has gone on through geological ages and is still going on. But if we may demonstrate a truism which modern science has added to the sum of knowledge. And it is impossible, to imagine a God of love ordaining and witnessing that secular conflict. But do they fairly interpret the struggle? The indictment against Nature which was frequently heard in the early andawan bokrlyrlydays of the evolution doctrine is now generally admitted to have been based upon half truths. Unqualified assertions that 'nature is one with rapine,' that any little wood is a 'world of plunder and prey' (Tennyson, Maud, iv, jv.), that the cosmic process has no sort of relation to moral ends (T. H. Huxley, Collected Essays, London, 1898, p. 83; cf. 197), that all progress is attained by the methods of the gladiatorial show or the battle-field, are seen to be almost libel. For the whole range of life upon the earth—vegetal, animal, social—bears witness to something quite different from hatred and strife.

The two main activities of all living things are reproduction and reproduction, and, while the object of the former is to secure the life of the individual, the object of reproduction is to secure the life of the species. If one great factor of evolution is concerned with self-assertion, another is concerned with self-sacrifice, and it is not too much to assert that evolution is not only an abode of the strong, but a home of the loving.

Nature has more to say than 'Every one for himself.' There has been a selection of the other-regarding, of the self-sacrificing, of the gentle, of the loving (J. A. Thomson, The Bible of Nature, Edinburgh, 1985, p. 179).

If Rousseau erred in closing his mind to everything but the love, peace, and harmony of Nature, we are equally at fault if we find in her nothing but discord and cruelty.

Love is not a late arrival, an after-thought, with Creation. It is not a novelty of a romantic civilization. It is not a piece of history. Its roots began to grow with the first cell of life that budded on this earth. It is the supreme factor in the evolution of the world. The Struggle for the Life of Others is the philosophical name for the greatest word of ethics—Creation. Love (not Maud, London, 1894, pp. 274-284). 'The principles of morality have their roots in the deepest foundations of the universe,' and 'the basis of general ethics is ethical in the profoundest sense' (John Fiske, Through Nature to God, London, 1899, p. 79).

If, then, creative evolution is God's theophany—His manifestation infolding His purpose and revealing Himself—the facts of the case, in a wide and impartial survey, go far to prove that His central energy, or ruling motive, and therefore His true Name, is Love. And to Divine overtures of love the human heart cannot fail to respond. Viewing the world as mysteriously 'full of God's reflex,' Charles Kingsley exclaims, 'I feel a rush of enthusiasm towards God' (Charles Kingsley: His Letters and Memoirs of his Life, London, 1877, p. 56). It must be admitted, however, that there is another side. Nature's physical and vital forces do not all inspire confidence, making us 'very sure of God' and ready to acclaim the sentiment, 'All's right with the world.' There are times when it is not easy to 'rise from Nature up to Nature's God,' or to maintain that He has done all things well. The facts that disturb one's faith in the benevolence of the Creator are too many and too complex to be ignored. The life of the forest and the jungle is not all idyllic. The wolf does not lie down with the lamb, nor the lion eat straw like the ox. The tiger and the tarantula are no less real than the fawn and the dove. It is impossible to forget Nature's menaces to the unfit or her savage outbreaks of fire and flood and tempest. Over against Natura Maligna we have always to set Natura Maligna, as T. Watts-Dunton does in a group of sonnets (The Coming of Love). And the existence of pain in the world there are not a few observers, especially those who have been victims, to the conclusion that God, whether personal or impersonal, is no more than an irresistible and inexorable Force, indifferent to pain, success, or failure, and regardless of Hell, nation, or Church, ruled by the unwholesome, the hated, or scorned, rather than trusted and loved. This is the view which lends a tragic pathos to the Promethaeus Vinctus, the book of Job, and other literature of religious doubt.

With the best 'wholesome,' many a man cannot wholeheartedly affirm that 'the variety of creatures . . . is so many Sounds and Voices, Peacocks and Parrots, giving Glory and Praise and Thanksgiving to that Delight of Love, which goes life to all Nature and Creature' (William Law, The Spirit of Love in Works, London, 1892-93, viii, 353).

At the best, the evidence is conflicting. Nature speaks with two voices. We can never be quite sure whether she is a kind mother or a cruel stepmother. Love is not seen at a glance to be her primal law. The men of science seek to decipher the testimony of the rocks do not feel constrained to proclaim with one accord that God is good, and, though they may comfort themselves with the reflection that in Nature's infinite book of secrecy and mystery, only a little has been read, and though there is no religion without mystery, yet the inquiring spirit of man is troubled. Devout but open-eyed spectators of the world-drama are sometimes 'perplexed in the extreme.' They feel as if Nature were betraying the heart that they have loved.

'God is love, transcendent, alpervading! We do not get this faith from Nature or the world. If we look at Nature alone, full of perfection and imperfection, she tells that is disease, murder, and rapine' (H. T. Tennyson, Alfred Lord Tennyson: A Memoir, London, 1897, p. 314).

And, if 'to be with those we love doth work like madness in the brain,' it is the crowning sorrow to doubt the God whose loving-kindness is better than life (Ps 63).

(b) But the God who speaks ambiguously through Nature reveals Himself also through literature. He has His dwelling 'in the mind of man' (Wordsworth, Tintern Abbey, 96). Here it must not be forgotten that the isolation of the human species from the rest of the sentient creation is now known to be unsustained. This fact alone makes evident the ethical ideas and ideals the more wonderful. The basis of society is the family, and the cosmic process which has brought into existence the conscious personal relation between mother and child cannot be said to be indifferent to ethical ends; rather it may be held to exist for the sake of such ends. While Huxley is right enough in maintaining (L. Huxley, Life and Letters of Thomas
LOVE (Christian and New Testament)

Henry Huxley, London, 1900, ii. 264) that moral purpose, in the strict sense, is 'an article of exclusive human manufacture,' he is wrong in denying it a place in the cosmic process. Human nature is an integral part of the universe. If God is personally involved in the human life, he is the crowning achievement.

The development of 'the moral sentiments, the moral law, devotion to unselfish ends, disinterested love, nobility of soul — these are Nature's most highly wrought products, least in coming to maturity; they are the consummation, towards which all earlier prophecy had pointed' (J. Fiske, op. cit. p. 139).

Now, these constitutive elements of the moral life are the root and ground of that assurance of Divine love which must be regarded in the first instance as an instinct or intuition of loving hearts. The writer of the Song of Solomon makes a Hebrew maiden, inspired by her passion of holy love, explain: 'For love is strong as death... the flashes thereof are flashes of fire, a very flame of the Lord.' (8). This means not only that the pure love which glows and burns in the human breast is a fire kindled and cherished by God, but that it is an emanation from, and in quality identical with, His own uncreated flame of love. He 'never is dishonoured in the spark' (Browning, An Wife to Any Husband, 12). Follow the spark, and it leads to God. The natural is seen to be supernatural. 'The spirit of man is the lamp of the Lord' (Pr 20:27). The prophet Hosea, made wise by a patient love outwearing man's own self-willed heart, had the truth flashed upon his mind that a human affection which bears, hopes, believes, endures all things, and never fails, is explicable only as a radiation from the love of God, a revelation of the heart of the Eternal. His own ideal concept in the supreme moral crisis of life, his sensitized mind to receive a new and true image of the Absolute. His forgiving pity, his redeeming love, his confidence in the ultimate triumph of God, gave him an uncircling insight into the controlling principle of the Divine character. Love, he sees, is paramount in heaven and earth, and justice is its instrument. Love is therefore the Leitmotiv of his prophecy, his master-key to the mysteries of religion and history. He dares to make his own "confesso annus" the preface to a stupendous love-tale, of which the scene is the world and the hero is God. He represents Israel's patient Divine Friend as saying, 'I delight in love, and not in sacrifice. When Israel was a child, then I loved him, and I drew them with cords of a man, with bands of love' (6th 11:1-4; cf. 3: 14). Latter prophets and lawgivers reiterate Hosea's teaching in many beautiful forms — I have loved thee with an everlasting love: therefore have I continued my mercies unto thee' (Jer 31: 3). 'He will rest in his love, he will joy over thee with singing' (Zeph 3: 17; cf. Dt 4: 7; 7: 10). Is 48: 63). 'But it is not too much to say that the entire faith and theology of later Israel grew out of Hosea, that all its characteristic theological and ethical views and ideas are to be found in his book.' (C. H. Corin, The Prophets of Israel, Chicago, 1899, p. 53. (c) Jesus linked His gospel with the prophecy of Hosea by repeatedly quoting the words: 'I will love him not (ritual) sacrifice' (Mt 9: 12). No one was so swift as He to discover the evidences of Divine love in Nature. The beauty of flowers, the ways of birds, the benediction of the rain, the glory of clouds, and the splendour of the sun in its strength spoke to Him of a goodness that was over all and in all. He sanctioned the religious use of Nature. He assumed that God is omnipresent in the external world. But that was not His whole message. Nature's goodness was not His evangel. Love and the love of God. 'There is none like my love; there is none like me.' (J. Fiske, op. cit. p. 5).

And it is the spirit of the Ideal Man — His personal expression in word and deed—that constitutes mankind's surest evidence of the love of God. In His compassion for the multitudes, His tenderness to sinners, His hope for the vilest, His yearning to bring back the lost, His forgiveness of those who 'know not what they do,' He is the Revealer of God. He changes Israel's Lord of Hosts into mankind's Father. The writer of the Fourth Gospel represents Him as saying, 'He that hath seen me hath seen the Father' (Jn 14), and the love of God which is in Christ Jesus our Lord is a fact which science must reverently accept. Christ is indeed (herown out not only the spiritual ideals of Israel, but the cosmic ethological strivings of Nature.

Our first reason, then, for believing that God is Love, is the authority of Jesus, Son of God, infinite Love.

(c) The apostles always interpret Divine love in the light of Christ's sacrifice. The love which inspired the early Church was more than that of the Father who makes His sun to shine on the evil and on the good. It was as the love of the Father who withholds not His own Son, but delivered Him up for us all; that of the Son who laid down His life for the sin of the world. In the NT the identification of Divine love with atonement is axiomatic. 'Herein is love'—in a Divine institution which provided a propitiation for sins (1 Jn 4: 10). Personal faith centres in 'him that loveth us, and loosed us from our sins by his blood' (Rev 1), in 'the Son of God, who loved me and gave himself for me' (Gal 2: 20). It was His Spirit of sacrifice that conquered the intellect as well as the heart of the ancient world. His age-long empire is the expression, not of the love of power, but of the power of love. He can never cease to be hailed as 'Gentle and Submissive Son of God, infinite Love.'

2. Human love.—Great and true conceptions of love have not been confined to any single nation. In the Greek classics love is often something much higher, purer, and nobler than sensual passion or natural desire. This fact appears clearly in the cosmicognic myths. The Eros of Hesiod is not 'erotic' in the later sense of the word. The Love is the fairest of the gods, who rules over the minds and councils of gods and men, the great using power, who brings order and beauty among the conflicting elements of Chaos. To the lofty mind of Plato love is the sympathy of affinities, the instinctive rushing together of kindred souls, the harmony of spirits, not without that touch of natural feeling as strengths without dishonouring the union. And the Stoics laid the foundation of a noble ethic in their conception of the brotherhood of men, regarded as akin to God, or even as children of one great Father.

'For we,' says the hymn of the Christians, 'are Thine offspring, alone of mortal things that live and walk the earth moulded in the image of the All' (cf. At 1757).

But Christianity raises love to a higher mood, sanctifies it with a new armour, purifies it by the touch of God, making the nature of man and woman sacramentally holy, and changing the bitterest foe into a potable passion for the husband and the wife. And Christ died.' The very vocabulary of love is changed, Eros, a word too often profaned, giving place to Agape. The natural elements of conjugal love, real and imperious enough, now new to the highest uses, have been ascended to them the intimate communion of heart and soul. The genus of love is seen to be sacrificial, which has its source and sanctification in God's eternal self-giving.

'Three sorts of these lives are faithful prayers, Whose lovers are in God's love enduring' (Tennyson, In Memoriam, xxii.).
One of such lives can it be safely said that 'love is an unerring light, and joy its own security' (Wordsworth, Ode to Duty, 19.4). The strongest affection decays unless it is rooted in idealism. The home of life cannot be built on the shifting sand of passion. Love faints and fails unless it is braced by the sense of duty. Love's elocution's voice, going to the wars, says to Lucasta:

'if could not love thee, dear, so much, Loved I not honour, I.'

It is always the 'higher love'—patriotism, the passion for liberty, the enthusiasm of humanity, the zeal for God's Kingdom, any one of which may claim love's final sacrifice—that gives the affections of which the soul is the repository and an intensity and an earnestness of the life of the pampered individualism. When Christ says, 'He that loveth father or mother ... or daughter, more than me is not worthy of me,' He is calling men to the ideal life, which includes whatsoever things are pure and lovely and of good report. 'We needs must love the highest when we see it' (Tennyson, Guinevere, ad fin.).

The truth is that the heart's deepest instinct—its passionate 'sacred desire'—cannot be satisfied with an earthly affection. The Hebrew poet speaks for the human race when he says that, as the hart pants for the water brooks, so his soul pants after God, thirsts for the living God (Ps. 42:1-2).

The mystical and philosophical students of love from Plato and Plotinus to Augustine and Dante have felt that demands, in the last resort, an infinite object and an infinite response (Fillingworth, p. 33). Modern science has immeasurably widened man's mental horizon, and the vaster the material world becomes the greater is the spirit's unrest in its cage of sense. It is the void of the manly of the ideal, and rest is till it rests in God. The deepest thoughts of a nation are expressed by its artists and poets. Rosseti painted human love languishing for fullness of life, but evermore fearing death. Watts painted divine love leading life per aspera ad astra. Tennyson proclaims that his love would be half-dead to know that it must die (In Memoriam, xxxv.), while his faith in immortality stays itself on its deathless love of a friend.

'Peace, let it be for I loved him, and love him for ever: the dead are not dead but alive' (Psalm, ad fin.).

My love is perfect, my brother, and my God' (I John, 4:16).

Browning repeats in a hundred forms his reasoned conviction that:

'There is no good of life but love—but love!'

What else is good, is some shade hung from love

'Love gilds it, gives it worth' (In a Balcony [Works, London, 1855, p. 177].

And he is certain that love cannot be quenched by death.

'No: love which, on earth, amid all the shores of it, has ever seen the sole good of life in it,
The love, lover growing there, spite of the strife in it,
Shall arise, made perfect, from death's repose of it.' (Christian Erst, v. 97-100).

If love is thus proved to be the essential character alike of God and of the sons of God, this result profoundly affects all human relationships.

(e) True intercourse with God Himself is a fellowship of love. To be right with God is to have a heart of a lover or a child. Though the OT breathes many passionate longings for such an intercourse, it is alone exemplifies it in its perfection. The bare notion of such a divine fellowship was strange to the Gentile whose relation to the object of his worship was always cold and distant. Jesus lived in uninterrupted filial communion with His Father, teaching His followers to do the same. It is their high privilege to know Him, to walk in the steps of Him, to be loved and to love Him. And so to have His love shed abroad in their hearts by the Holy Spirit given to them (Ro. 5:5).

(f) The knowledge of God can be attained only through love. In love's love a 'dry light' helps but little. Theology at its best, like 'divine philosophy,' is always charged with feeling. 'Perceus factit theogoniam.' Selfishness absolutely disqualifies the student of divine things. God reveals Himself to those who tread, like Himself, the 'love-way'—'the way of lowly service' (1 John 3:18). Even as the eye, said Plutinus, 'could not behold the sun itself sunlike, so neither could the soul behold God if it were not Godlike' (Ennead, i. vi. 9). Not to sympathize is not to understand. Love is the present hierarch of the mysteries of God. He who willeth to do the will of God shall be called His brother. His highest teaching (Jn 7:16); but He that loveth not his brother whom he hath seen, and therefore cannot love God whom he hath not seen (1 Jn 4:20), has lost 'the key of knowledge' (1 Jn 11).

(c) The ideal society consists of persons animated and united by the spirit of love, each seeking the good of all and all of each. The programme of Christianity is the renewal of human life and the reconstruction of human society, on the basis of the faith that 'God is love.' While hatred has a fatal power of division, love is the bond of perfectness (Col 3:14). Human associations are strong and stable in proportion as they are welded together by that brotherly love which is the law of the kingdom of heaven.

'Love rules the court, the camp, the grove,
And men below, and saints above.'

For love is heaven, and heaven is love' (Scott, Lay of the Last Minstrel, ii. 5-7).

(d) As man's chief good, love is a task as well as a gift—an Affraged as well as an end. Love is not a passive sentiment or an involuntary emotion. The verb 'to love' has an imperative mood, which the greatest lawgivers—Jesus as well as Moses—frequently use. To this extent Christianity as well as Judaism is legalistic. The practice of love is the highest exercise of freedom. 'The love of the will' is no less real than that of the heart (Fillingworth, p. 110). Love's rise and progress are dependent on a continuous effort, and the more perfect it becomes the more does it embody the inmost desires and strongest impulses of the soul. It is more than good-nature, which is no satisfactory basis for ethics; more than good intentions, which are proverbially delusive; it is a good will—which, according to Kant, is the one absolutely good thing in the universe.

(e) All duties spring ultimately from the one duty of love. It is more than a poetic fancy, it is a literal fact, that, 'as every lovely hue is light, so every grace is love.' Augustine's virtues as the unfolding of love—'Virtus est ordo amoris and in reference to the cardinal virtues he says:

'I would not hesitate to define these four virtues which make such an impression upon our minds that they are in every man's mouth: temperance is love surrendering itself wholly to Him who is its object; courage is love bearing all things gladly for the sake of Him who is its object; justice is love serving only Him who is its object, and therefore rightly ruling; prudence is love making wise distinctions between what minders and what helps itself' (de Moribus, l. 15 [23].)

The law of love is called the royal law (rXarov BpevXOv, da 2), because, being above in dignity and power among the moral virtues, which are only human, action, it brings all the others into subjection to itself.

'All thoughts, all passions, all delights, Whatever stirs this mortal frame, from love springs All are but ministers of love,
And true housewife of God's love' (Coleridge, Lorr. 1-4).

(f) And love is perfected when even its most laborious duties are performed with gladness. It is true that 'tasks in hours of insight will be' (M. Arnold, Morell, 21. Poet. Rod [dude w], p. 256). But the moral life needs the heart to aid the will, and the will, if it moved the will as long as its roots are dry, its strength and fruitfulness are always traceable to hidden springs of
George Herbert calls sin and love the 'two vast, spacious things' which it believes every man to measure (The Agony, 4). The one is infinite. And the stronger subdues the weaker. Where sin abounds, grace—which is Divine love in its redeeming energy—superabounds (Ro 5:20). And all hope for the world lies in the fact that a God of holy love and his Spirit in His children, for ever wrestling with its sin.

1 Is not God now i' the world His love first made?
   Is not His love at issue still with sin,
   Visibly when a wrong is done or left undone?

(Browning, A Death in the Desert, 213.)

Augustine uses a still finer figure than that of the arena. He speaks of the glory of love as 'alive but yet frostbound. The root is alive, but the branches are almost dry. There is a heart of love within, and within are leaves and fruits; but they are waiting for a summer' (In Epist. Jean. of Porth. v. 10). And, with eyes opened by eating of the fruit, men find their Paradise in setting their desire and will be turned,

'Even as a wheel that equally is moved,
By the Love that moves the sun and the other stars.'

(Dante, Vita, xxiii. 141.)

GEORGE HERBERT, *The Temple*:

**LOVE** (Greek)—I. GODS OF LOVE. 1. Introductory. —Gods of love, whether co-ordinate with, or actually in opposition to, deities presiding over marriage and fertility, are products of a relatively late development. Doubtless, too, the moment of gratification gave rise to 'momentary gods,' and served to fix their permanent influence in the cultus; this group will include Aphrodite Ἀφροδιτη in Megara (Paus. i. xiii. 6), Aphrodite *Venus* in Abydos (Athen. xii. 572 C; cf. R. Meister, Griechische Dicht. Stuttgart, 1882), Aphrodite Μουσώτις in Gythium (Pans. iii. xxii. 1), and Aphrodite Ἀφροδίτη in Argos (Hesych. sv. ; Nicand. frag. 23 [Scheffer]). In Provence the phallic demes *Téscro* was dedicated to her service (IG xiv. 2424), and in the closer connexion with the Kuck [enumerated under a decided, quasi- Cretan] Ter (W. Hosnett, The Faith of a Modern Protestant, London, 1800, p. 77 f.)

While, however, all finite love flows from God's infinite love, it is not always conscious of its source. It may well up pure and strong in a heart which has never been able by searching to find out God. And it is none the less acceptable to God though He is not yet its object. This truth is exquisitely expressed in Leigh Hunt's poem of 'Abou Ben Adhem,' who, though not yet one of those who love the Lord, has it revealed to him that, because He loves his fellowmen, his name stands first among those whom love of God has blessed. And it is expressed more authoritatively in Mt 25, where our Lord proclaims that deeds done in love to the least of His brethren are accepted as done to Himself. And they are enumerated as 'the name which has for itself become explicit' (Ullswater, p. 190).

While, however, all finite love flows from God's infinite love, it is not always conscious of its source. It may well up pure and strong in a heart which has never been able by searching to find out God. And it is none the less acceptable to God though He is not yet its object. This truth is exquisitely expressed in Leigh Hunt's poem of 'Abou Ben Adhem,' who, though not yet one of those who love the Lord, has it revealed to him that, because He loves his fellowmen, his name stands first among those whom love of God has blessed. And it is expressed more authoritatively in Mt 25, where our Lord proclaims that deeds done in love to the least of His brethren are accepted as done to Himself. And they are enumerated as 'the name which has for itself become explicit' (Ullswater, p. 190).
an epigram of Theocritus (no. 13; cf. U. von Wilamowitz-Möllendorff, Textgesch. der Euphiletter, Berlin, 1906, p. 118) a woman of Cos thanks her for the worship of Aphrodite in that city, and for a second husband were directed to her (Naupactus (Paus. x. xxxviii, 12)); in Sparta she was entertained to retard the coming of old age (ib. iii. xvii. 11: Orosi. Pop. frag. 2 (Bergk)).

In addition to these functions, however, she promoted increase and growth in the larger world of nature, as appears from such epithets as Διάρμης (Chiduq (Paus. i. 1. 3)) and Εὔδηδα (Syracuse), (Hesych. s.v.), which can hardly apply exclusively to the άρμης of her. Appropriated to her, as the goddess of fertility, was the goat sacred, and she rides upon it (A. Fortwängler, SMA, 1899, ii. 390 ff.: P. Gardner, Mélanges Perrot, Paris, 1902, p. 121 ff.). Moreover, sacrifices of swine were offered to her, as to Demeter, at the festival of the ξύρισις in Argos ( Athen. iii. 96 A; the name of the festival is ancient, as is shown by the mode of its formation: as 'Ανότης-τηπα). As also in Cos (W. Dittenberger, Sylloge inscr. Gr. Leipzig, 1898, p. 621), Phocis, and Phrygia (Strob. ix. 438). And, as just goddesses of the field and of fertility, like the Charites and the Horai (g.v.), were often represented as triads, so we find three Aphrodites in one temple at Thebes (Paus. ix. 15. 7), and also—presumably—entreated in the Βέροια, at the temple of Zeus, there (ib. viii. xxii. 2). In this broader capacity she was worshipped along with Zeus, as was Dion (who in Homer is her mother) in Dodona (ib. iii. xi. 12); II. xii. 5. 220, where the names of Aphrodite and Zeus are found together in a dedication (ib. 551 addit.). Her association with Hermes is, however, to be understood in the same way (Paus. viii. xxxiii. 3; II. xii. 5. 275; C. Michel, Recueil d'inscr. greques, Brussels, 1896-1900, nos. 292 ff. (ib. 441, 442, 448, 490 ff. to be found in the British Museum, London, 1874-83, iv. 796; F. Hiller von Gaertner, Inschriften von Priene, Berlin, 1906, no. 183). As the tutelary goddess of the meadow and of fertility, of the prosperity of man and beast, perhaps also the dedications made to Aphrodite—probably as thanksgiving for εξαρτήρια—by those who were leaving office, as found in Haliacarnassus (Ancient Inscri. in the Brit. Mus., iv. 901), Cos (II. xii. 5. 552), Paros (ib. iii. xi. 229), Megara (ib. 440, 441), Myrtilus (ib. iv. 298 ff.), and elsewhere. As the protectress of a whole people she is called Ακατορός (cf. CGS ii. 638), and in this capacity she was actually accorded a προτάτος at Athens (H. G. Suppl. 314). She invites human beings not usually to enter her eyes, and is thus called Εὔδηδα (Wilamowitz-Möllendorff, in G. Wenzel, Ernstes Orakel Göttingen, 1890, p. 4) and Αυξία (Plut. Amat. 22, though a reference to marriage is also possible here).

Then the sinister aspect of her character as an earth-goddess is likewise duly brought out; she bears the epithets Εποίης (Hesych. s.v.) and Μακροίς (Paus. ii. ii. 5; Athen. xiii. 588 C; Paus. viii. vi. 5, ix. xxvii. 5) as does Demeter in Arcadia; in Thessaly there was a festival of Aphrodite 'Αρώδια or Αρώδανθος (Nilsson, p. 378), which is true, seems to have had a reference to female love; 1 Gardner's attempt to find an Oriental origin for this feature is not altogether in the right; then the goat has no place in the Astarte cult; similarly Furtwängler's efforts to interpret Aphrodite 'Εντομία as a goddess of light are futile, as the associations which she is occasionally portrayed merely implies that at a later period she was identified with Ορίσσως. 2

1 Farnell (CGS ii. 660) and M. P. Nilsson (Griechische Feste, Leipzig, 1906, p. 280) are undoubtedly wrong in seeking to trace in all these instances a connection with Asopus; such a connection in the treatment of goddesses, so far as the Argive festival is concerned, is contradicted by the fact that there was no State cult of Asopus in Greece.

2 C. H. Usener, in Berliner Morgenbl., viii. [1903] 265, where he points out that the distinguishing names given by Pausanias must be of late origin.

probably Περιπόετα (Hesych. s.v.) is also to be interpreted by this conception. According to an ancient theogony, she, together with the Eunyoi and the Moirae, is the daughter of Zeus and Themis (Soph. El. Ed. Col. 42). A kindred figure is the Nemesis of Rhamps (Photo. s.v. Νεμέσια) (Wilamowitz-Möllendorff, Antigonus von Karystos, Berlin, 1881, p. 10), while in Smyrna, again, we find two Αρώδεις (CGS ii. 593 B, C; interpretatio F. T. Welcker, Griechische Götterlegende, Leipzig, 1857-63, iii. 34).

In Aphrodite was merged another goddess, the pre-Hellenic Aridane or Ariadne; the result is most clearly seen in Delos, where she acquired the name Hagne (BCH vii. [1883] 308), and in Amathus, where a festival in which the two sexes exchanged garments was celebrated in the grove of Aphrodite Aridane (Nilsson, p. 369). Then in Cyprus we find a goddess of Spring named Πηγές (K. Meiser, SSCH, 1910, p. 247), who appears again in Crete as Αθην (Hesych. s.v.), and in Pamphylia, where her priestesses are called τηρητοσ (UBG lii. 2521 ff.). Certain goddesses of Hecateus (s.vv. Ακατορός) and Αυξία (ibid.) which bring her into relation with the My-pole have likewise to do with this aspect of her character. In Amathus she is thought of as androgynous under the name of Αφροδίτη (Hesych. s.v.). In Phocis, similarly, we find the androgynous demon Megalopolis (ib. viii. viii. 2). It is usually supposed that the Aphrodite cult of this district was derived from the worship of Astarte, and that it spread thence over Greece (most recently Nilsson, p. 190; cf. also ERE ii. 157). It is thus to be supposed that the Astarte cult of the Greek motherland presents certain features which cannot be explained as importations. There is also the fact that androgynous forms are unknown as regards Astarte (W. Baedeker, Phaistos, 1896, p. 156, and the goddesses are similar to the Hellenic by the figure of Leucippe and the festival of Ariadne in Amatines. The epithet 'Αριοστρος, borne by the goddess in Cyprus (SSCH ii. 1910, p. 245), is certainly met with elsewhere only as a title of a mother goddess (W. Weinreich, Athen. Mitt. des Arch. Instituts, XXVI. [1912] 29, note 1), but the name Αφροδίτη (Soph. Ant. 800) suggests that it was peculiarly congruous with Greek sentiment. Moreover, E. Stutt, Die Griech. Eros-Theophorien, Halle 1911, p. 105) has noted that there are in Cyprus no Phoenician theophoric names formed with 'Astarte.' It is true that in the ancient Greek tradition likewise there are only 'comparative,' but no theophoric, names derived from these eves, and the goddess, thus called Αρώδεις (Wilamowitz-Möllendorff, in G. Wenzel, Ernstes Orakel, Göttingen, 1890, p. 4) and Αυξία (Plut. Amat. 22, though a reference to marriage is also possible here).

Then the sinister aspect of her character as an earth-goddess is likewise duly brought out; she bears the epithets Εποίης (Hesych. s.v.) and Μακροίς (Paus. ii. ii. 5; Athen. xiii. 588 C; Paus. viii. vi. 5, ix. xxvii. 5) as does Demeter in Arcadia; in Thessaly there was a festival of Aphrodite 'Αρώδεις or Αρώδανθος (Nilsson, p. 378), which is true, seems to have had a reference to female love; 1 Gardner's attempt to find an Oriental origin for this feature is not altogether in the right; then the goat has no place in the Astarte cult; similarly Furtwängler's efforts to interpret Aphrodite 'Εντομία as a goddess of light are futile, as the associations which she is occasionally portrayed merely implies that at a later period she was identified with Ορίσσως. 2 Farnell (CGS ii. 660) and M. P. Nilsson (Griechische Feste, Leipzig, 1906, p. 280) are undoubtedly wrong in seeking to trace in all these instances a connection with Asopus; such a connection in the treatment of goddesses, so far as the Argive festival is concerned, is contradicted by the fact that there was no State cult of Asopus in Greece.

2 C. H. Usener, in Berliner Morgenbl., viii. [1903] 265, where he points out that the distinguishing names given by Pausanias must be of late origin.

1 Farnell 'Αφροδίτη (ib. vii. 598) and 'Αφροδίτης are 'comparatives'; there is no Αφροδίτες at all.

Ere" (Hesych. s.v.) and Ευδήδα are 'comparatives'; there is no Ευδήδα at all.
LOVE (Greek)

origin (see W. R. Smith, *Iot. Sem.*, London, 1894, p. 471) to the sacrifice of an *aor agalitta* to Aphrodite in Cyprus.1 The worship of Aphrodite was also influenced by foreign deities in other districts; on the Black Sea there was an *Osipr* of Scythian origin (Hesiod. *frags.* 39, 67), the lady of *Apatron* (H. Lattkecher, *Inscrit. Pont.笠Cir.,* Kriegsdruck, 1893-99, ii. 19).

The function of the goddess was in historical times narrowed down to that merely of the protector of love. It is only as such, with the exception already noticed, that she is recognized in the iconic epic, and it is therefore worthy of remark that her cult was introduced into Smyrna (Tac. Ann. iii. 63) and Ephesia (Michel, *Recueil*, 320 A 6, B25) by means of oracles. Even at a later time theophoric names formed from 'Aphrodite' rarely occur in Ionia proper (Sittig, p. 108). Her temples in that region were almost all devoted to the goddess of love. In this capacity, too, she absorbed Peitho, who had originally an independent cult (in Sikyon [Paus. ii. vii. 7]), but subsequently became sometimes an epithet (*IG* ii. 2, 236), sometimes an attendant, of Aphrodite (Weitzsäcker, in Roscher, iii. 175), as is aptly shown by the figure of Phoebus *Aphroditon* (Nisenson, *dell. star.* 1951) who usually appears as the goddess of female love, although the Aphrodite *Agapeos* of Boeotia (Phanocl. ap. Clem. Alex. *Prot.* ii. 38 [*PG* vii. 177]; Athen. xiii. 603 D; Steph. Byz, s. a. * Apotheos*) seems to have been regarded as a deity of affection and with her there is certainly true of the Aphrodite *Sxoria* of Phœacia (*Pluton. Mag.* 543, 49; in Crete the boys were called *skaitoi* [schol. to *Harp. Me. 990*]). As Aphrodite was brought into relation with the evening star in the myth of Phoebus (Phanocl. *Meg.* [Iren. xix. [1883] 416 ff.; Sappho and Simonides, Berlin, 1913, p. 33 f.), it is easy to see why maidens should mourn their love-pangs to the moon-goddess (schol. to *Theocr. ii. 92*; Hesych. s. v. *osipr*), as the love-deity, largely in the Erotic Fragments (6) the lover invokes the stars and the *seisipr* [[X]

3. EROS.—Besides Aphrodite the only Greek love-deity of real importance is Eros. He too had a more general function as a deity of procreation, viz. in Thespias, where he was worshipped as a stone fetish (Paus. ix. xxvii. 1), as also probably in Parion, in Laconian Leuktra (ib. iii. xxvi. 5), and in the sex-cult of the Lycomids (ib. ix. xxvii. 2; cf. Furtwangler, *Jahrb. des deut. archolog.* 1912, i. 116). In the case painting of the Mollendorf Hermes [Iren. xvi. [1883] 416 ff.; Sappho and Simonides, Berlin, 1913, p. 33 f.)] it is easy to see why maidens should mourn their love-pangs to the moon-goddess (schol. to *Theocr. ii. 92*; Hesych. s. v. *osipr*), as the love-deity, largely in the Erotic Fragments (6) the lover invokes the stars and the *seisipr* [[X]

4. Later developments.—In the sphere of common life the deities of love declined as the practice of hetairism gained currency. In this period the *Agapécs* became a characteristically hetairistic festivity. Among the *Aphrodisiacs* there are a few (Paus. i. xxx. 5, 3) and rare (Michel, *Recueil* 320 A 6, B25) examples. Even in the Erotic Fragments (6) the lover invokes the stars and the *seisipr* [[X]

The goddess, it is true, that there were among them numerous foreign (Syracuse) cults. The high favour enjoyed by Adonis also served to revive the worship of Aphrodite; the deities of love in general now reached their highest vogue, and it is in this period that we first meet with theophoric names derived from Aphrodite, though no doubt—with but few exceptions—in the lower ranks of society (Sittig, p. 108). Eros is represented beside the Charities, and to the right of them (Paus. vi. xxiv. 7), i.e. as their leader, like Hermes elsewhere. From his procreative aspect arose the cosmic character which he bears in Herodas, and among the Orpheids. In consequence of the obvious derivation of his name, however, he remained all along the god of sensual desire. His cult had only a narrow range. In Laconia and Crete sacrifices were offered to him before a battle (Jeph. xiii. 581 C), and the connexion between these and pederasty has been explained by E. Bothe (*Rhein. Mus.* xvi. [1907] 445). We are told also that in the *rude* he had an altar which was supposed to have been erected in the period of the *Pleiades* (Athen. xiii. 609 D; Plut. Sol. 1), but Eutxos (*Hipp.* 538) asserts that offerings were *never* made to him at all. In literature and art his figure was always a mutable one, and he is the subject of no clear-cut myth (J. Boehme, *Philol.* 1901, i. 6); and as regards the identification of the *seisipr* with the *regard* to which he was made, the goddess whose influence pervades the universe.

LITERATURE.—The most important works have been cited in the course of the article. The reader may also consult E. H. von Wilamowitz-Möllendorff, *Wiss. Zeitschr.* [1883] 416 ff.; Sappho and Simonides, Berlin, 1913, p. 33 f.)] it is easy to see why maidens should mourn their love-pangs to the moon-goddess (schol. to *Theocr. ii. 92*; Hesych. s. v. *osipr*), as the love-deity, largely in the Erotic Fragments (6) the lover invokes the stars and the *seisipr* [[X]

II. ETHICAL IDEAS.—1. TI Homeric age.—It remains to examine what ideas concerning the

1 The goddess *eisipr* had another name (H. Lattkecher, *Inscrit.* *Pont.笠Cir.,* Kriegsdruck, 1893-99, ii. 19).
emotion of love and its ethical value were characteristic of the Greeks; and the survey will reveal considerable development in consequence of political and social movements, together with a certain vacillation in the popular morality in the momentous era. The charming pictures of domestic affection which are to be found in the Homeric poems, such as the parting of Hector and Andromache (H. vi. 570 ff.) or the meeting of Odysseus and Penelope (Od. xxvii. 52 ff.), and even occasional comments like "there is nothing mightier and better than when husband and wife keep house with united hearts" (Od. vi. 182 ff.), and the tenderness of the allusion to the soft voices of the young lovers singing together (D. xxii. 125), reflect a condition of society in which wedded love was highly prized. This was the natural outcome of the respect with which women were treated, and of the comparatively high degree of liberty which they enjoyed.

2. Post-Homeric development.—The causes which led to the disappearance of the Achaeian monarchies are imperfectly known to us (see art. KING [Greek and Romani]), and the evidence available does not enable us to determine the period of the changes which lowered women in public estimation by depriving them of their earlier freedom. But signs of their deprecation may be observed even in the utilitarian preepts of Hesiod regarding marriage (Hes. frg. 100 ff.), and the same tone pervades the invective of Semonides of Amorgos (frag. 7), whose pattern wife is the offspring of the busy bee and material increase the gathered store of her mate (frag. 5), while the same simile is employed by Ischomachus in describing to his wife the duties which he expects her to perform (Xen. Econ. vii. 32), and the whole of the training prescribed in Xenophon's dialogue (op. cit. vii.—x.), as well as casual allusions to domestic happiness, shows that the Attic ideal was satisfied by the loyalty of a careful and thrifty housewife (Lys. i. 7). In historical times an ordinary Greek marriage was so entirely prompted by motives of convenience that we read without surprise the typical sentiment of the Athenian orator:—

*While we keep a mistress to gratify our pleasure and a concubine to minister to our daily needs, we marry a wife to raise legitimate issue and to have our property carefully preserved." (Ish. I. 122.)

3. Sappho.—It must not be supposed that in the meantime the passionate outpourings of the lover failed to find adequate expression in literature. In this respect the poems of Sappho occupy so peculiar a position that an attempt must be made to define it. Sappho, however, has no actual love in her name, and it is generally admitted that the story of her unquited love for Phainon and of her despairing leap from the Lycusian rock are fictions due, perhaps, to a misunderstanding of her own words (U. von Wilamowitz-Moellendorff, Sappho and Simonides, Berlin, 1913, pp. 24—40). The grosser suspicions, such as those indicated by Senecon in his reference (Ep. Ixxxviii. 37) to the discussion of Didymus 'an Sappho politics leaf,' are probably to be supported by such internal evidence as frag. 52, and are contradicted no less by the soundest part of the tradition, which represents her as a wife and a mother (Suid. s.v. Zarpó: cf. Sappho, frag. 58), than by the

sincerity and freedom of her genuine utterances. The psychological problem presented by frags. 1 and 2 and Berlin frags. 2 and 5 is to understand how the yearning affection inspired by the loss or separation of such peers to the poet in this century may be expressed in terms usually reserved for the rapturous emotions of sexual love. The solution, so far as the evidence permits us to form a definite conclusion, is to be sought in the character of a remarkable personage. If Sappho was the inspiring genius of a society of beautiful and high-bred maidens, who sought at her hands instruction in the poetical art (frag. 136), and with whom she lived on terms of intimate affection, there was no reason why she should court the attention of other (H. xxii. 125), reflect a condition of society in which wedded love was highly prized. This was the natural outcome of the respect with which women were treated, and of the comparatively high degree of liberty which they enjoyed.

4. Tragic and other poets.—The poetic treatment of love was usually confused, as, e.g., by Minnemans and Aeneas, to its sensual aspect, and it is clear from the history of the tragic stage that a serious purpose, even with the comic sym-
a famous fragment (frag. 533 \( \text{N.}^\ast \)) characterizes the love-goddess, here a personification of the passion itself, in the following words:

'Love is not love alone, but is called by many names; it is the sweetest courtly gift, it is a living fire, it is a vehement desire; it is lamentation; in love is all activity, all peace, all that prompts to violence.'

And over and over again stress is laid upon the irresistible power of Love: he is the mightiest of all the gods (Eur. frags. 260, 430; Menand. frag. 235, iii. 67 K., frag. 449, iii. 129 K.); and not one of them (Soph. Trach. 415), not even Zeus himself (Eur. frag. 68 45; Menand. frag. 290, iii. 69 K.), can withstand his attack.

'If he is not wise,' says Diogenes in the Trachiniae (411 L.), 'who stands forth to contend with Love, like a boxer at close quarters. It is not difficult to imagine the result of this assumption upon the attitude of the average Athenian citizen. The celebrated ἑπιθυμία of the Corinthian Aphrodite (cf. Pind. frag. 122 and Aristophanes' 'Acharn.').

The celebrated ἐπιθυμία of the Corinthian Aphrodite (cf. Pind. frag. 122 and Aristophanes' 'Acharn.') help to explain the absence of moral reproach directed against the notorious ἐρασις of Athens. Resistance to the onset of Love is no less reprehensible than it is futile (Eur. frag. 349), though excessive indulgence is as much to be deprecated as entire abstinence (Eur. frag. 428). Such self-control as was exhibited by Achilles in refraining, despite the violence of his passion, from accepting the kiss offered by a beautiful Persian boy (Xen. Mem. i. 2, frag. 41), was so rare that the historian felt it to be altogether marvellous.

5. Fidearlity.—The passage last quoted contains a sort of moral law, that love is the love of boys, which has come to be known as 'Greek love,' and has tarnished the whole fabric of Greek morality. There is no trace of this custom to be found in the Homeric poems; for the asceticism of the relations existing between Achilles and Patroclus is not, so far as we can tell, earlier than the Eschylean frag. 136 ("ἔγραφον Γερομον Γερομον Φραγματῶν", Leipzig, 1889, p. 44). But there is no doubt of its antiquity, at any rate, among the Dorian branch of the Greek race. This is established by the evidence of certain Thracian inscriptions (Inscriptions Grécæ insularum maris Ηάρης, ed. F. Hillel von Gaertringen, iii. [1901] 536 f.); by the relation between the καράδες and σῖμπς of Thucydides (3. 113); by the Spartan training (Plut. Lyg. xvi. f.; Fest. Var. Hist. iii. 12); and by the curious custom of the Cretans, according to which a lover carried off his favourite by a show of force. I was more or less seriously reprimanded by my supposed mentor (Strabo, viii. 493, 484). The inconstancy of the latter may be attributed to his long descent from a primitive period when continuous military service involved a scarcity of women (Dethie, in Rhod. Més. i. 438 ff.). Moreover, it is fair to admit that the results of such companionship were by no means invariably bad.

T. Googe has well remarked that 'the sentiment in question appeared in as many, if not more, varieties and gradations, than the love of women at the present day. Here, as elsewhere, a noble state was often grafted upon a savage stock. Devotion, enthusiastic, intense, ideal, was not infrequently the fruit of these attachments, the sensual origin of which was entirely forgotten.' (Greek Thinkers, Eng. tr., London, 1901-12, ii. 299).

Such an elevation of sentiment is the easier to understand if we bear in mind the continually increasing segregation of the sexes to which reference has already been made, and which, owing to the maternal craving for sympathy and affection, left a gap to be filled. Widely spread as the evil undoubtedly was, there were merely—probably an increasing number—who were keenly alive to its disgrace. But sentiment varied among different communities, and, as compared with Athens,

Thbes and Elis were subject to an unequally notorious custom in this respect (Xen. Symp. viii. 34; Plat. symp. 182 D).

6. Philosophic love.—Such was the state of society when the teaching of Socrates began to open a new era in the progress of morality. By putting sexual desires more or less on the level of the other bodily wants (Xen. Mem. iv. v. 9, Symp. iv. 38), Socrates scarcely advanced beyond the prudential standpoint of the ordinary person. But his character, so completely vindicated by Aeschylus in the Symposium (215 A ff.), was free from any suspicion of vice and, though he sometimes ironically pretended to be enamoured of beauty (Xen. Mem. vi. i. 2, Symp. iv. 27), and actually described himself as the lover of his younger companions and pupils (Xen. Symp. viii. 2), yet he energetically repressed the erotic tendencies of his associates (Xen. Mem. i. 2, vii. 3, ii. 8), and required that a spurious love should be converted into a true friendship aiming solely at the moral improvement of the beloved object (Xen. Symp. viii. 27). Plato developed his master's teaching on this subject by connecting it with the innermost core of his philosophical system, and, in the dialogues Symposium and Phaedrus, he expounded with matchless literary skill his doctrine respecting the true nature of love.

The argument in the Phaedrus (250 A) starts from the hypothesis of the immortality and pre-existence of the soul, which in its ante-natal state was associated with the eternal verities of the ideal world. Now, the ideas of Justice and Temperance are scarcely visible in their earthly counterparts, and their apprehension is difficult and seldom attained. But Beauty is always so conspicuous that its phenomenal representation attracts at once the admiration even of those who are strangers to the mysteries of wisdom, and are engrossed in their mortal surroundings. Thus souls from whose the glory of the images once beheld have faded by contact with earthly clogs, so far from being sanctified and inspired by the sight of beautiful forms, are stirred only with delective desire. But it is different with the lover who is also a philosopher, and his progress is described in the lecture of Diotima reported by Sokrat. in the Symposium. B. 200 f. Plato, in contemplating the beauty of the beloved object, is immediately reminded of absolute Beauty itself.

With his personal admiration for his beloved freed from the trammels of bodily letters, he sees even more keenly the beauty of that form of which the outward form is only the reflection. Presently he perceives the common kinship of beauty wherever it is manifested in action or thought, and learns that its complete apprehension is the task of a single science. Lastly, passing entirely from the individual to the universal, his soul is so greatly purified as to become re-united with the idea of Beauty itself, which is the ultimate source of all beautiful persons and things belonging to the phenomenal world. Such is the significance of τοί ὄρασις παθερετεία (Symm. 211 B), or τοί παθερετεία περὶ φιλοσοφίας (Phaedr. 249 A).

Plato's philosophy left its mark upon subsequent critical speculation, but was too much exalted to affect the opinion of the ordinary citizen. Aristotle distinguished perfect friendship between good men based upon character from the spurious friendship of lover and beloved aiming at pleasure or utility (Eth. N. vi. 4, 1157a 1 ff.). Whereas the Epicureans entirely rejected the impulse attended by frenzy and distraction (Epic.

1 J. Burnet has recently undertaken to show that the whole of the doctrine commonly attributed to him was actually propagated by Socrates (Greek Philosophy, l., Thales to Plato, London, 1914, p. 190). It is obviously impossible to discuss the question here.
LOVE (Jewish)

At 173

frag. 483 [Usener], the Stoics followed closely in Plato's footsteps by recommending it to the "wise man" as an attempt to produce friendship with youths who displayed in their beauty a capacity for virtue (Diog. Laert. vii. 129; Stob. Ecl. ii. p. 115, 1 [Wachsmuth]; Cle. Tusc. iv. 39, etc.). Plato's, as might be expected, adopted the rational love in the supranatural and transcendent First Being (Porphyry, Vit. Plotin. xxxii.). On the other hand, Plotarch, whose dialogue entitled epaphreis aimed at reconciling conflicting views by a return to the common-sense point of view, while he was largely influenced by Platonist imagery, vindicated the claim of woman as the proper object of a divinely inspired passion (21, p. 756 E.B.). We even find Plato condemned altogether as unworthy of serious attention by such writers as Dionysius of Halicarnassus (De Admir. et Discov. in Demosth., p. 1027), Athenaeus (508 D), and Heracitus, the author of the Homeric Allegories (76, p. 101, 19).

7. Romantic love.—In the meantime we are able to trace the growth in Greek literature of the romantic love-story in which the hero and heroine, who have fallen in love at first sight, after a series of adventures are at last happily united. The romantic love-story by far the most widespread subjects was undoubtedly one of the causes which contributed to the appearance of the domestic drama known as the New Comedy. Among the stock elements in the plots of Menander and his rivals, the love of the son of a rich citizen with a slave-girl who often proves to have been originally a free-born Athenian exposed by or otherwise lost to her parents; the overreaching of an unscrupulous parent or a rascally pandar by the cunning slave or parasite; and the ultimate reconciliation of all parties, leading to the marriage of the happy lovers. But pathos and sentiment were entirely alien to the cold atmosphere and artificial mechanism of these plays. A new tone—that of sympathy with the fortunes of the lovers—asserted itself for the first time in some of the masterpieces of Alexandrian literature. Whether this was merely the result of the diffusion of the Hellenic spirit outside the confines of the city communities, or the influence of the works which constituted the world, or more specifically, of closer acquaintance with popular Eastern tales such as that of Abrabastes and Panthera in Xenoph. (Cyrop. v. 3, vi. 1, 31 E., iv. 2-1), vii. i. 298 and Aesch. Pers. 1086, 1091; L.P. Malby, Greek Life and Thought, London, 1896, p. 254; E. Rohde, Der griechische Roman, p. 583 f.), it is impossible now to determine. The vigour of Alexandrian love-poetry receives its best illustration in the third book of Apollonius's Argonautica, where the growth of Medea's passion for Jason, the conflicting interests prompting her to struggle against it, and her final submission to the irresistible power are depicted with poetic power of a very high order. There is no doubt that Vergil made Apollonius his chief model when constructing the well-known episode of the lovers of Dido and Aeneas. Another example was the love-story of Acontius and Cydippe depicted in the fragments by Callimachus of the course of a digestion in the Aetia, the conclusion of which has recently been discovered in one of the Oxyrhynche Papyri (no. 1011 [vii. 1910, 15 ff.]). The various features which become common to the writers of these love-narratives are admirably summarized by a Roman poet (A. Conjet, La Poésie alexandrine sous les trois Ptolémées, Paris, 1882, pp. 140-160; J. P. Malhoti, op. cit. p. 256 f.), as follows: (1) the minute portrait of the personal beauty of the lovers: (2) the sudden introduction of the love-god at their first meeting; (3) the record of the misfortunes obstructing the fulfilment of their wishes; (4) the description of the pangs of thwarted love; and (5) the importance attached to the preservation of the virgin purity of the heroine amidst all her trials and dangers until her final reunion with the hero. It is unnecessary to follow in detail the influence exerted by the art of Callimachus and Philetas upon Latin poets; no less than that of Catullus, Propertius, and Ovid; but mention should be made of the Menandres of Aristides, which had an extensive circulation in the Roman era (Ovid, Trist. ii. 415; Lucian, Am. i.). This was a collection of erotic epigrams together in the 2nd. B.C., whose general character may be inferred from Petronius, Apollonius's Metamorphoses, and Lucian's Asinnius. The work of Parthenius dedicated to Cornelius Gallus was different in both scope and purpose: it consisted of excerpts relating to the misfortunes of lovers and drawn from various historians and poets. The characteristic features of the romantic love-story enumerated above were closely followed by the later romance-writers (epaphreis, e.g. art. FICTION [Primitive]) (5), who were the direct inheritors of the Alexandrian tradition and became extremely popular in the Middle Ages (I. Bekker, Anecd. Graece, Berlin, 1814, p. 1082). The best of these novels was the Ethisques of Hector. The 16th. cent. was preceded by Xenophon, the author of the Epikus, and followed by Achilles Tatius (Lescygge and Citophon) and Chariton (Choraeus and Callithec). The Daphnis and Chloe of Longus was constructed on the same lines, but under the influence of the pastoral Idylls of Theocritus. To these names should be added the fictitious love-letters of Alcidphron and Aristaeus, which aimed at restoring the Attic flavour of the New Comedy.

7. LOVE (Jewish).—The dictionaries define love as 'a feeling of strong personal attachment, induced by that which delights or commands admiration,' the subdivisions of this sentiment comprise the impulses of attachment, due to intellectual inclination, or to the mutual affections of man and woman; the impulses which direct the mutual affections of members of one family, parents and children, brothers and other relatives, the affection that springs from sympathetic sentiments, and in the works of the poets, the harmonious character, friendship; and, finally, the various metaphorical usages of the word, as the love for moral and intellectual ideals. To the last class belongs the religious concept of love for God, while the particular Biblical conception of God's love for Israel is closely related to the idea of paternal affection.

1. Sexual love.—Love for woman as an irresistible impulse is most strongly represented in Canticles in the words:

"Love is strong as death; jealousy is cruel as the grave: the flashes thereof are flashes of fire, a very flame of the Lord. Many waters cannot quench love, neither can the floods drown it: if a man would give all the substance of his house for love, he would utterly be compassed." (66)
demonic power of woman over man leads man to ruin. Similar is the case of Shechem (Gen 34), though in his case the love for Dinah is not of the strictly carnal nature which characterizes the relation between Samson and Delilah. The love of both was genuine for who can resist love—a passionate type of the hankering influence of the harem on politics—in the Orient—is given in the Bible (1 K 11) as the cause of the downfall of the wisest of kings. The Rabbinic consistently prove from this story that it is impossible for any man to guard against the influence of woman, and use this fact as support for the theological doctrine that law is unchangeable; for even Solomon, who thought he was wise enough to be safe from having his heart turned the wrong way (Est 1:18), fell a victim to their influence (Ez, Rabbâ, ch. vi., Tanhâmid, Ez., ed. S. Baer, Wilna, 1885, p. 18).

With equal force sexual passion is described in the case of Amnon, raping his step-sister Tamar (2 S 13), while sexual passion, just as the latter without such relationship is degrading, is often referred to both in principle and in illustrative story. The case of Jacob, who was willing to work seven years in order to gain Rachel, and the remark that those seven years passed by like 'a few days' (Gen 29:20), as well as the hope of Leah that the birth of her third son would make Jacob love her (v.24), show that ideal matrimonial relations are to be governed by spiritual affection. This is also the case with Paul (1 Cor 7:36). A further stage to the relation of Jacob and Leah is that of Elkanah and Hannah (1 S 1), where the husband tries to console his wife, longing for the blessing of children, by saying, 'Am I not better to thee than ten sons?' David is spurred by the love of Michal to do great acts of valour (18:29)—a conception of life akin to that of the proverbial times. Even in the story of Esther the king's love for the queen, like that of Jacob, is degrading, in many ways showing characteristics of an Oriental despot, willing to give half of his kingdom away in order to gratify the whim of an odalisque, is presented as an attachment seizing the king with the force of a sudden passion. Such passion is referred to in the case of Jonathan, a captive of war, and the law requiring that she be allowed time to become assimilated to her environment is dictated by a delicate understanding of womanly feelings (Dt 21:10). The placing of duty above personal feeling underlines the law for the conduct of a man who has two wives, one of whom is beloved, and the other hated (v.13-17). It is worthy of note that Rabbinical apologists explain the law as a tribute of piety and hatred as being 'hated by God' (Sîfrâ, ed. M. Friedmann, Vienna, 1891, p. 113). At the same time Rabbinic ethics derive from this law a condemnation of polygamy as leading to domestic trouble (ib.). In a warning against sexual licence the author of Proverbs advises (5:9) devotion to 'the loving kind and the pleasant doe'; and the author of Ecclesiastes gives as a recipe for happiness the advice: 1

1 Love joyfully with the wife whom thou lovest all the days of the life of thy vanity [i.e., for that is thy portion in life] (5:22). It is significant that such advice was put in the mouth of King Solomon. In full harmony with this conception of domestic felicity, as the highest ideal of life, are many Rabbinical statements.

"Of him who loves his wife like himself and honours her more than himself, Scripture (Job 24:4) says: "Thou shalt know that thy test is in peace" (V. Qim'on, 6:25)."

Closely related to this conception of love is the love of children, so often referred to in the OT, and already implied in the love of woman—i.e., the happiness derived from the possession of children (1 P 127:3-6 128:1, 1 P 17) and the misfortune of not having children, as in the case of Rachel, who would rather die than live without them (Gen 30:1), and in the case of Hannah (1 S 1:10). The love of Jacob for Joseph, because 'he was the son of his old age' (Gen 50:24), and the love for Benjamin, who, in addition to being a son of his father's old age, was the only one left of his master (Gen 40:22), are so naturally presented that they show the psychological continuity of human nature. The same feature of truly human life is seen in the story of Jacob and Esau, where the love of Jacob for Esau, the young man of domestic habits (25:28), is brought to light in the passage (v.8-10), where Jacob feels more affection for Jacob, the young man of domestic habits (25:28). Such affection does not rest in the blood, but is often stronger in persons attracted by congenital feelings. There is hardly in the whole world's literature a nobler expression of devotion than the words spoken by Ruth to Naomi (Ru 1:16), and the words of felicitations spoken to Naomi on the birth of Ruth's son, that Ruth's love for her is greater than that of seven sons (4:19), are felt by the reader of the book, and when they were written. A similar feeling of affinity is that of the faithful servant, of which the law takes cognizance in the case of a slave who would rather stay in the house of his master than in the house of his master's master (Dt 15:19), as a case of the slave who would not be separated from his master (Joh 21:18).

3. Friendship and wider love.—The love of friends is naturally presented in comparison with that arising from sexual and blood relationship. David says of Jonathan: 'Thy love to me was as the love of a brother' (1 P 18:4). False friends who fail in the hour of need are often referred to (Ex 24:3-6, 25:9-16, Hos 6:1, 9:2, La 1, Ps 106:14). The happiness that friendship brings in poverty is contrasted with abundance and hatred (1 P 15:7). In correct interpretation of this experience the Rabbi speaks of the natural friendship of the ostracized for each other, naming the proselytes, slaves and the meek (Talm. Poalâkim, 113 a). A specimen of the highest love the Rabbinic gives the case of David and Jonathan (1 S 20:18), and contrast it with that of Amnon and Tamar, showing that the first, because unselfish, lasted, while the second, based on carnal passion, could not last (Joh 16:10).

Love, as not limited to friends, but extended to all mankind, is a principle the priority of which Jewish and Christian theologians have been contesting with one another. On the Jewish side it was claimed that the command, 'Thou shalt love thy neighbour as thyself?' (Lv 19:18), is universal. As proof for this conception it was adduced that the commandment of love in the same chapter is extended to the stranger, 'for you were strangers in the land of Egypt' (v.31), and that, therefore, it expresses implicitly the idea of Hillel (q.v.)—a teacher of the 1st cent. B.C.—What is hateful unto thee do not unto thy neighbour: this is the whole Torah, and all the rest is for interpretation. As to the general case, it is claimed that in the same sense Rabbi Akiba, a teacher of the 2nd cent., said: "Love thy neighbour as thyself is a great principle in the Torah" (Sîfrâ, Qolhâkim, ch. 4; Perhashah, Midrashim, x. 5). Christians, on the other hand, claims that Jesus, in the parable of the Good Samaritan (Lk 10:30-37), was the first to answer the question, Who is my neighbour?, in

1 See also De 10:19. 2 Or the fundamental principle.
the universalistic sense. 1 One might introduce the argument that the Rabbis interpret the commandment, 'Love thy neighbour as thyself,' as teaching a humane method of exaction, evidently implying that even the criminal remains our neighbour (16). The Hillel, however, for friend is also used in the social sense, as in the case of Hiran and David (1 K 5:1 [EV 5:1]).

True love is tested by the sincerity which will not hesitate to rebuke and which will accept rebuke (Pr 29:1), but, on the other hand, loving friendship will overlook faults (1 K 17:12). In the same sense the Talmud reports that Johanan ben Nuri praised his companion Rabbi Agiba for having loved him more each time that their teacher chastised him on the ground of a charge made by Johanan (Artikkah, 16b). For this reason controversy on religious questions between father and son, teacher and disciple, will promote their mutual love (Qiddushin, 36b). At the same time it is commanded to suppress hostile feelings. In Talmudic casuistry the question is asked, What precedes, if a man see at the same time his enemy's and his friend's ox or ass lying under his burden (Ex 23:5)? The answer is given that he must first break the burden in order to redress the subduing passion (Babba Ma'at, 32b). Love is also used in the plain social sense, as when it is said that 'breakfast removes jealousy and brings love' (ib. 107b).

The making of friends is true going and coming and the art of the wayfarer, who can turn his enemy into a friend (Abiboth N. Nathan, ch. 23). Just as true friendship is praised and recommended, so false friendship is condemned. The Rabbis warn man to keep at a distance from high officials, 'for they are as lovers, when they have no use for you, and will not assist you in the time of distress' (Abiboth, ii, 3). The utilitarian point of view in friendship is presented in the case of Canaan who—so the Talmud says—admonished his sons to love one another, but at the same time to love all roles (Pesikta, 113b). On the other hand, it is cited as an expression of true love, when Rabbi Judah han-Nasi, while the spiritual head of the Jewish community, repealed his own decision in a legal case when he heard that Rabbi Jose had decided differently.

4. Metaphorical uses. Love in the metaphorical sense is used very frequently in connexion with wisdom, especially in the introduction to Proverbs (4:75); see also the counterpart of loving folly or hating wisdom (1 K 8:58). As true wisdom is identical with the Torah, we find the love of the Torah (Ps 119:105, 106) and of God's commandments (vv. 67, 129) mentioned repeatedly in the Psalter, where, evidently, is the work of an early Pharisee who anticipates the ideal presented in the sayings of the Fathers:

'Turn it (the Torah) over and turn it over, for every thing is in it, speculate over it, grow old and grey with it, and never depart from it, for there is no higher conception of life than this (Abiboth, v, 29).

This conception is repeated in innumerable times in theory and story. In commenting on the passage, 'This day thou art become the people of the Lord thy God (Dt 27), the Rabbis say:

'Israel had indeed become God's people forty years previously, but Scripture wishes to say that to one who studies the Torah earnestly, it becomes new every day (Babhaith, 6:6). As an example of such devotion Joshua is quoted (Menahoth, 99b), to whom God said, not in the sense of a commandment, but in the sense of a blessing, that the Torah should not depart out of his mouth (Jos 1:8).

The love of instruction—in Hebrew synonymous with reproof (Pr 129) —wisdom (962), purity of heart (292), righteousness (1's 49), and kindness (Misc 89) are characteristic traits of the pious, just as to love 1

their opposites is characteristic of the wicked (1's 52'). The injunction of Micaiah (6') to do justice, to love mercy, and to walk humbly with God is presented by a Rabbi of the 4th cen., as the sum-total of 'the 613 commandments of the Torah' (Abiboth, 24a). R. Abiba: 'Love thy neighbour as thyself, is used in the social sense, as in the case of Hiran and David (1 K 5:1 [EV 5:1]).

True love is tested by the sincerity which will not hesitate to rebuke and which will accept rebuke (Pr 29:1), but, on the other hand, loving friendship will overlook faults (1 K 17:12). In the same sense the Talmud reports that Johanan ben Nuri praised his companion Rabbi Agiba for having loved him more each time that their teacher chastised him on the ground of a charge made by Johanan (Artikkah, 16b). For this reason controversy on religious questions between father and son, teacher and disciple, will promote their mutual love (Qiddushin, 36b). At the same time it is commanded to suppress hostile feelings. In Talmudic casuistry the question is asked, What precedes, if a man see at the same time his enemy's and his friend's ox or ass lying under his burden (Ex 23:5)? The answer is given that he must first break the burden in order to redress the subduing passion (Babba Ma'at, 32b). Love is also used in the plain social sense, as when it is said that 'breakfast removes jealousy and brings love' (ib. 107b).

The making of friends is true going and coming and the art of the wayfarer, who can turn his enemy into a friend (Abiboth N. Nathan, ch. 23). Just as true friendship is praised and recommended, so false friendship is condemned. The Rabbis warn man to keep at a distance from high officials, 'for they are as lovers, when they have no use for you, and will not assist you in the time of distress' (Abiboth, ii, 3). The utilitarian point of view in friendship is presented in the case of Canaan who—so the Talmud says—admonished his sons to love one another, but at the same time to love all roles (Pesikta, 113b). On the other hand, it is cited as an expression of true love, when Rabbi Judah han-Nasi, while the spiritual head of the Jewish community, repealed his own decision in a legal case when he heard that Rabbi Jose had decided differently.

4. Metaphorical uses. Love in the metaphorical sense is used very frequently in connexion with wisdom, especially in the introduction to Proverbs (4:75); see also the counterpart of loving folly or hating wisdom (1 K 8:58). As true wisdom is identical with the Torah, we find the love of the Torah (Ps 119:105, 106) and of God's commandments (vv. 67, 129) mentioned repeatedly in the Psalter, where, evidently, is the work of an early Pharisee who anticipates the ideal presented in the sayings of the Fathers:

'Turn it (the Torah) over and turn it over, for every thing is in it, speculate over it, grow old and grey with it, and never depart from it, for there is no higher conception of life than this (Abiboth, v, 29).

This conception is repeated in innumerable times in theory and story. In commenting on the passage, 'This day thou art become the people of the Lord thy God (Dt 27), the Rabbis say:

'Israel had indeed become God's people forty years previously, but Scripture wishes to say that to one who studies the Torah earnestly, it becomes new every day (Babhaith, 6:6). As an example of such devotion Joshua is quoted (Menahoth, 99b), to whom God said, not in the sense of a commandment, but in the sense of a blessing, that the Torah should not depart out of his mouth (Jos 1:8).

The love of instruction—in Hebrew synonymous with reproof (Pr 129) —wisdom (962), purity of heart (292), righteousness (1's 49), and kindness (Misc 89) are characteristic traits of the pious, just as to love 1

their opposites is characteristic of the wicked (1's 52'). The injunction of Micaiah (6') to do justice, to love mercy, and to walk humbly with God is presented by a Rabbi of the 4th cen., as the sum-total of 'the 613 commandments of the Torah' (Abiboth, 24a). R. Abiba: 'Love thy neighbour as thyself, is used in the social sense, as in the case of Hiran and David (1 K 5:1 [EV 5:1]).
LOVE (Muhammadan)

repeatedly quoted as a token of God’s love, as in the
case of Solomon (2 Ch 12:29). In a satirical sense the
correctional value of suffering is referred to in a
Talmudic story.

R. Hiinnna calls on his friend R. Johanan who is ill, and
asks him whether he loves his sufferings. Johanan answers:
‘Neither the sufferings nor their reward’ (Berakoth, 5b).
The case of king Manasseh (2 Ch 33:22) is quoted as
proof that suffering ought to be received with love
(Sav. h. l., 10b).

As a fundamental doctrine R. Aqiba presents
the principle that God loves mankind, for He created
man in His image; He loved Israel, for He called them His children; and, furthermore, Israel is loved by God, for He gave them a most precious gift, His Torah (Abbaoth, iii. 14). R. Aqiba evidently wishes to grade God’s love as the love for Israel, the pious man’s love for God in particular, and of the law-observing Israelite as the best
beloved. God, according to Rabbinic ethics, loves
especially the humble and peaceful (Berakoth, 17a), and more generally him who is beloved by
his fellow-men (Abbaoth, iii. 10). Modesty is the best
means to gain God’s love.

‘I love you, says God to Israel, because, when I elevate you, you humble your eyes, for Abraham called himself “a dusty
sand and an uncertain clay” (Exod. xiii. 15).’ What
are we? (Ex xvi, 12), and David called himself: “I am a worm, and not esteemed” (Ps 22).’ (Midrash, 57a.)

God loves, says the Talmud in a different passage
(Perushim, 135b), him who is calm, temperate, and
humble, but hates him who is a hypocrite, who
does not offer testimony when he knows something
of the case, and who sees his neighbour commit a
wrong and testifies, although he is the sole witness
(gossip). Most probably in the sense of condemning
luxury in the building of synagogues R. Hisdla,
who lived in Babylonia in the 3rd cent., says,
commenting on Ps 87:

‘Who loves the gates, ornamented with the Habbak play on
words: sipun, “heap of stones,” and Sifdol more than all
synagogues and schools?’ (Berakoth, 56a).

It is inconsistent with this principle that the true
Israelite who is beloved of God is in the sense of
St. Paul (Ro 2:29) the spiritual Israelite, and therefore
the heathen who came to Hillel to be converted,
and desired to be assured that he might become
high priest, was satisfied when he heard that the
stranger comes with his hand and weds him
the same rights as the Israelites who are called
God’s children (Shabbath, 31b). Israel is beloved by
God, for the Sebhithah accompanies them wherever
they are exiled (b. Shabbath, 29a). An
imperceptible peculiarity is found in the statement
of R. Jose, who says: “God loves Israel so that
they need no mediator” (Yoma, 52a), probably an
antithesis to the statement in the Gospel of John
(3:14). Yet the Rabbinic theologians consider
also a miracle a proof of divine love (Haggahoth, 26b;
Tractath, 236).

The correlating term to God’s love for Israel is
Israel’s love for God. It is enjoined as a duty in
 Dt 6, and this section is the principal part of
daily morning and evening devotion, thus prac-
tically enjoining the doctrine of Jesus (Mt 22:37),
which makes this the principal commandment.
The injunction to love God is typical of the
Dentanocratic code (5:17) and often) and
of the Psalm, where the pious are called lovers of
God, of His salvation, or of His righteousness (5:11
312 306 951102b...). To those who love Him
God will do good (Ex 32, Dn 9, Neh 1 12, Mal
19), and therefore Abraham (Ex 11, 2 Ch 29) and
Solomon (1 K 3) are called lovers of God, and
Jeeshashaphat is reproved for loving God’s enemies
(2 Ch 19), whom the pious must hate (Ps 139:21).

An important theological discussion, leading
back to the early days of Christianity, is carried
on in the Talmud between R. Hiinnna and R.

Joshua, whether the pity of Job is to be found in
his love or in his text of God (32b, 27b). The
love of God is characterized in the Talmud by
man’s conduct, which sheds lustre on his religion
(Yoma, 56a). As Zion stands for Israel’s ideal,
the pious are those who love Zion (Ps 122) and
the wicked those who love strange gods, often
represented by the metaphor of the world, Israel
(1 s 57, Jer 25, Ecc 16, Hos 24). From
a practical point of view the Talmudists say that
who one marries his daughter to a Rabbi (Aboth,
111b), or one studies the Torah with no
expectation of gaining glory (Naftalih 52a), loves
God. A special sign of the love of God is submission
to His decrees, as in the case of Hanannah ben
Hezekiah and his school, who wrote down the
scroll of the facts’ (a chronicle of Israel’s mis-
fortunes) believing, with his example, and a
few others dating from the period immediately before
the Prophet’s migration, all the Qur’anic references
to divine love occur in those chapters which were
revealed at Medina. It is likely that his
settlement in a city where he could not fail to
be brought into contact with Christian ideas co-
operated with the happy change in his fortunes
and caused him to emphasize the milder aspects
of Allah in a corresponding degree. Of these refer-
ences, which are explicit (b, 296c), the
brief statements that God loves various classes of
men—e.g., the beneficent, the patient, those
who trust in Him, fight for Him, keep themselves pure,
and so on—and that He does not love various other
classes, such as the transgressors, the proud, and
the unjust, Mohammed denies the claim of the
Jews and Christians to be the children and, in
a peculiar sense, the beloved of Allah (v. 21).

Man’s love of God is mentioned in three passages:

sone men take idols which they love as much as they
love Allah, but the faithful love Allah more than
anything else (ii, 150); those who love God must
follow His Prophet, then God will love and forgive
them (iii. 29); if any of the faithful apostatize,
Allah will fill their places with men whom He
loves and who love Him (v. 59).

Many traditions ascribed to the Prophet on the
subject of divine love go far beyond the somewhat
arid and perfumery allusions in the Qur’an, but
there is no reason to suppose that they are genuine.

They belong to the mystical doctrine which de-
veloped under Christian influence in the 2nd cent.
of Islam, and which in the course of time estab-
lished itself, as a guiding and inspiring principle,
at the centre of Muhammadanism. The following
examples are often cited by Sufi authors:
When God loves a man, his sins hurt him not; and one who repents is the one who is without sin (Ibid. al-Kafi, Cairo, 1310 A.D., ii. 50. 12).

God said: "False are they who pretend to love Me, but when they steal or take what does not belong to them, who have that love to be alone with his beloved?"

"Lo! I am near to those whose love I have heard in their hearts, and I am the one who has knowledge of the meaning of all things." (Ib. ii. 60. 23.)

God said: "My servant draws nigh unto Me by works of deliberation, through whose innermost recesses there lurks a hidden deceit (al-bala'), I am the ear by which he hears and the eye by which he sees" (Ibid. al-Ghazali, Risala, Cairo, 1315 A.D., i. 20. 1; an account of several Sufi traditions).

It is obvious that the doctrine of divine love will assume different forms according to the relative orthodoxy of its exponents. We often find it linked with mysticism of an ascetic or devotional type, or with other religious conceptions, or in a thorough-going pantheism, or occupies various points between those extremes. The subject is exhaustively treated by Ghazali in bk. vi. of his Ihya (Baliq, 1259 A.D., iv. 280-549). Only a brief abstract can be given here, but this will suffice to show the scope and development of the doctrine as it is set forth in the most popular and authoritative encyclopaedia of Muslim ethics.

Love (hubb) is the natural desire for that which gives pleasure: when that desire is intense, it is called passion (fitna). Each of the bodily senses takes pleasure in different objects. Sight, for instance, is the eye; hearing, the ear; taste, the mouth; and each has its own objects of pleasure which are imperceptible to the bodily senses. Ghazali enumerates five chief causes of love:

1. Solomon. God's desire to preserve his life or to make it as perfect as possible. Therefore, men hate death and seek wealth, children, etc. (2). Benevolence. Men love others and indirectly love the persons they love. (3). Dissatisfied love of good. Sometimes a man is loved for his own sake, not for any advantage that may be derived from him. (4). Love of beauty (moral or spiritual), when the whole pleasure which it gives consists in the perception of it. (5). Spiritual love of God. This then proceeds to demonstrate that all these motives have their ultimate source in God, who is the sole object of love, and love of good. Divine love necessarily includes love of the Prophet and the saints. The strongest and rarest motive, he says, is spiritual affinity. Man is called to an act of perfect love in different circumstances, according to the tradition, 'Form yourselves on the moral nature of God.' (Bukhahry ibn-chahlia Al-Ah) He becomes near to God through his acquisition of knowledge, benevolence, compassion, and other virtues. But, underlying this, there exists between God and man a real and intimate relation, of which Ghazali speaks with the utmost caution as an ineffable mystery, which is revealed to theologians. It is indicated by the verse of the Qur'an where God says: "He breathed His spirit into man, by the divine command given to the angels to worship Adam, and by the tradition that God created man in His own image. Every human sense and faculty seeks a particular end, which constitutes its pleasure. The spiritual faculty—it is said by divines, c. h. composers—seeks to know the essence of all things. God is the highest object of knowledge; therefore knowledge of God is the highest pleasure of the soul. Furthermore, Ghazali states that such a man knows and contemplates; and his love increases in the same degree. Both sprang together in his heart when he had purged it of worldly desires and senseless impressions. What he loves for is perfect contemplation and perfect knowledge. The former, though it is not attainable in the world of phenomena, may be enjoyed in the beatific vision hereafter; but perfect knowledge of the Infinite Reality can never be reached either in this or the next. Consequently the gnostic's longing (shahat) is everlasting; even in the bliss of union with God he moves unconsciously towards an unrealizable perfection.

Having defined love as the soul's desire for what gives it pleasure, Ghazali points out that the term is metaphorical in its application to God, who wants nothing and regards nothing except obeisance as His essential attribute. When it is said that God loves certain men, the intended meaning may be expressed as follows: God raises the veil from their hearts; in other words, He conceals them and reveals them to draw nigh unto Him, and has eternally willed that they should draw nigh by means of works of devotion, which are the spiritual means of knowing God and, of the raising of the veil from their hearts, and of their attaining to the rank of the chosen. These are acts of favour, involving a change in the divine perfection, but inwardly transforming the person who is the object of their love. How shall a man know that God loves him? God answers this question by enumerating the signs which characterize the lovers of God, since their love is a divine gift to whomever He delights to love them. The true lover yearns to meet God and therefore desires death, or, if he be unwilling to die, it is because he feels that he is not yet ripe for the other world. The manifold good works of a lover are not for disposition cannot co-exist with perfect love, God loves recollection (shab) of God, and He loves the Qur'an, which is the Word of God, and the Prophet and His fellow Munafiqs all God's creatures, yet he has no joy but in solitary companionship with his beloved, knowing that the more he loves the world the greater will be his bliss in the world to come. Since long for paradise, and they shall enter it, but God will give them himself only to those not ever loving to be alone with his beloved." Lo! I am near to those whose love I have heard in their hearts, and I am the one who has knowledge of the meaning of all things."

In his concluding chapters Ghazali explains the meaning of two terms, one is ri'yd, which denotes love of the wretchedness and the fruition of mystical love. One is the joy of immediate contemplation of the divine beauty without regard to any possibility that the present experience may be transformed into some future time. Such persons flee from intercourse with mankind, and when they appear in the company of others they are really alone. God allows them to address Him familiarly and to use a freedom of speech that would be considered blasphemous in any one less in knowledge of the facts. Ghazali attributes this loving acquiescence in whatever God has ordained. The lover cheerfully accepts tribulation and suffering at the hands of men, because he sees that God is the only real agent, and that all good and evil is divinely decreed. Ghazali shows that prayer is not incompatibly with ri'yd. He also refutes those who see the doctrine of ri'yd as an argument in favour of asceticism.

In more advanced and pantheistic forms of Sufism the term 'love' becomes a symbol for the soul's desire to be absorbed in that of God, to achieve union with God. Especially do the Islamic mystical poets exalt all the resources of erotic imagery in order to describe the subtleties of a passion that is wholly pure and spiritual; though sometimes the same terms are used as an artistic device to be adopted as a mask for other sentiments or as an artistic device. The selflessness associated with the highest types of human love makes it an apt emblem of the ecstasy in which the mystic passes into that union of himself with a transcendent divinity and lives only in the eternal and universal.

The following lines by Hâljâj are often quoted:

'At me He whom I love, and He whom I love is I;
When thou seest me, thou seest Him,
And when thou seest Him, thou seest me both.' (K. Masjûd, Khatat, Paris, 1912, p. 134.)

As the true lover thinks only of his beloved, so the true mystic thinks of nothing but God. Such meditation, however, concentrated it may be, cannot in itself produce love, which is a divine gift rapture beyond the reach of learning; it is the inevitable effect of love, not its cause. By emancipated Sûfis the word 'love' is constantly employed to denote the essential spirit of all religion as contrasted with particular creeds and feelings of adoration, as distinguished from ritual ceremonies and forms of worship. Love is the harmonizing and unifying element that transcends sectarian differences.

The lover that is praised is, in fact, One, in this respect all religions are one religion' (Jâhâl ad-din Râ.; Ameed, ibid., tr. by E. H. Whiffold, p. 159.)

'None of the two and seventy sects with mine Agreement, nor any faith but Love divine.
Saint, sinner, true believer, infidel,
Al all aim at thee: with name and sign.' (Omar Khayyâm, ed. E. H. Whiffold, London, 1901, p. 287 (translated by R. A. Nicholson)).

Thus the value of religious systems, including Islam itself, is only relative, and depends on their power to inspire in the soul that the more he loves God in this world, if love of God stands in sharp antithesis to conventional religion, it is equally opposed to logic, philosophy, and every form of intellectual activity. Real knowledge does not come through the mind; it is a divine gift, and all the hearts of those whom God loves. Possessing "the light of certainty", the lover wants no evidence for...
his faith, and scorns the demonstrative arguments of the theologian.

LOVE (Roman) — Nothing is more significant of the practical character and the prosaic morality of the early Roman than his attitude towards love. In the earliest known period of Roman religion, the so-called 'religion of Numia,' we do not find a single trace of any deity connected with love. And in the life of their representatives in the world of the gods, the conclusion would seem to be inevitable that, while there was, of course, natural affection, there was no pronounced development of sentiment, along with the moral line. Immoral expression was checked by that extraordinary self-restraint which characterized a people who were instinctively conserving all their energies for future conflicts; and expression along moral lines was discouraged by that purely practical view of marriage merely as an institution for the propagation of the race. So far as we are able to tell, therefore, we have in the case of the early Romans a people without any definite theory of love. In the course of Rome's development she was destined to receive a goddess who was eventually to represent in her world all that the Greeks included under the concept of Aphrodite. This goddess was known as Venus, and was, from about the year 260 B.c. onwards, identified with Aphrodite; but she did not exist in Rome before Servius Tullius, for we have absolutely no trace of her in the 'calendar of Numia.' On the other hand, the name Venus seems Latin, and it is certainly Italian and not Greek.1 And the fact that, when the Romans learned of Aphrodite, they called her by this name seems to indicate that she was known to them before Aphrodite was, and that there was sufficient resemblance between her and Aphrodite to make an identification possible. Our first task, therefore, is to find what is known about Venus in the period before Aphrodite arrived. All books on Roman religion, except a few of the most recent ones, are full of information about an Italian, a Latine, or a Venetian, not Roman Venus. It is our duty first to examine these statements.

1. The question of the Italic Venus. — In general the assertion is made that in very early times there was present throughout Italy the cult of a goddess who was called Venus. But a closer examination shows that many of the facts adduced to prove this statement are of very doubtful value. (1) It has been repeatedly said that this goddess of gardens was especially worshipped in Campania, and, in other words, she is the Venus so famous at Pompei, the Venus Pompeiana. But this is false for the Venus Pompeiana is the Venus whom the veterans of Sulla brought to Pompei when they settled there, the goddess of the Colonia Praetoria Cornelia, a combination of Veii, the Aphrodite and Felicitas (see below, § 3). Her cult, therefore, does not antedate the first cent. before Christ. (2) We hear of the worship among the Oscans of a goddess akin to Venus, a certain Herentas, and that the Oscans inscriptions two from Herculaneum [It. von Planta, Gram. dassisch-umbrischen Dialekthe, Strassburg, 1892-97, ii. 510], and one from Corinium [ib. ii. 546]. In one of these inscriptions Herentas has the cognomen herentini, i.e., the Aphrodite of Mount

Eryx in Sicily). This proves, therefore, that the goddess resembled Aphrodite; it tells nothing of Venus, so far as any early Italic cult is concerned.1 (3) We are in a similar position regarding Frutis, for whom we have two passages: Cassius Hemin, quoted by Solinus, ii. 14, who tells us that in the country of the Frutis (see below, §§ 2-4) there was a temple of Aphrodite, which he had brought from Sicily, to 'Mother Venus who is called Frutis' ; and Paulus, in the excerpt from Festus (p. 90), who says that the temple of Venus Frutis was called Frutinal. But these passages show only that an otherwise unknown goddess Frutis2 was identified with Aphrodite, and again nothing is gained for the old Italic Venus. (4) There are, however, traces of a very early Venus cult at Lavinium and Ardea. Strabo (p. 252) tells us that there was a temple of Venus which was the common property of all the Latin cities (i.e. the Latin league), and that it was in charge of priests from Ardea; further, that near Ardea Iseli there was a shrine of Venus, which served as a meeting-place for the Latin cities. These statements must be taken at their full value, in spite of the fact that suspicions readily suggest themselves. It is suspicious, for instance, of Festus, for example (XII ii. 61) and again (ii. 4) refer to a place in this region as Aphroditium — an unfortunate name for an old Latin cult. Following the ordinarily sound principle that on solemn occasions the Romans often made sacrifice at the temple of a mother-city of a Roman cult,3 it is possible to prove (Religion und Kultur der Romer, p. 259) that Ardea was the source of the Venus-cult in Rome, because in 217 B.C. the Decemviri (later Quindecimviri), who had charge of the Sibyl's books, were commanded the Romans to sacrifice to Venus at Ardea (Livy, XXII. i. 19). The Roman cult may well have come from Ardea, but this reference scarcely proves it, for the sacrifice was made under Greek auspices, and the connexion of Ardea and Rome in the Venus-legend was first suggested such an act, merely as one step in the metamorphosis of the Æneas-legend into a State dogma, which was taking place during the 3rd cent. B.C.

2. Traces in Rome of the early worship of Venus. — If a search for evidence that the Italic Venus is not very rewarding, an attempt to discover early traces in Rome itself is still less so. The three old cults of Venus ordinarly quoted are Venus Cloacina, Venus Libitina, and Venus Muricia, all of them very old, not Roman Venus. It is our duty first to examine these statements.

1 On the etymology of the name see Walde, p. 209.

1 On the word see especially A. Walde, Lat. etymologie, Werten, 1910, p. 151 f.
and whose sacred grove on the Esquiline was the headquarters of the undertaking establishments of Rome, had originally no connexion with Venus. Later she was popularly confused with Venus, forming Venus Libitina—a combination which never existed in the actual cult. It is easy to see two or three things which led to this: the presence eventually of a temple of Venus not far from the shrine of Venus Libitina; there is a gross error in the names of Aphrodite's temples with graves, and her cognomen Libitina; lastly, Venus's own cognomen Lucretia, or Libetina, which was readily confused with Libitina.1

(3) Venus Maruca. Maruca was an old Roman goddess, who was popularly confused with Aphrodite, in the classical, Etruscan, and Greek forms. In the Flavian and imperial periods she was kept alive by a combination (socelium) in the valley of the Circus Maximus on the Aventine side. The locality was known as a Venus-Worship, the goddess of the nymphaeum.2 Little thus remains of an old Venus-cult in Rome, except the temple near the shrine of Libitina, which need not be older than the 3rd cent. B.C. We have seen, therefore, that there are very few traces of a pre-Versilian Venus-worship, and still slimmer traces of specifically Roman worship. The existence of the Etruscan name Venus, by which Aphrodite was known at her introduction into Rome, compels us to presuppose some sort of an Etruscan deity with that name, who was known and worshipped before the coming of Aphrodite. There is another possibility, which we venture merely to suggest, namely, that we have in Venus a case which resembles in part the case of the Hellenic and Greek Eleusis and, in part, that of the Roman Minerva. Like Heracles and Castor-Pollux, she may have been originally a Greek deity, who moved up through Italy, and became nationalized into a Latin cult at Ardea, just as Hercules was at Tibur and Castor-Pollux at Tusculum. On the other hand, the name may have been derived, like that of Mercury, from the translation into Latin of an explanatory cognomen. But, whether Venus was from the beginning a Latinized form of Aphrodite or a Hellenic goddess with a similar name, is problematic. Aphrodite, one clue to her character is afforded us in the fact that, when the directly Greek Aphrodite came (and, of course, she came before the Eneas-legend), it was especially her function as a goddess of love which appealed to the Romans. This function, secondary in Greece, seems to have been primary in Rome.3

3. The coming of Aphrodite.—We do not know exactly when or how the Aphrodite-cult came into Rome; probably not before the middle of the 3rd century B.C. On the other hand, the name may have been derived, like that of Mercury, from the translation into Latin of an explanatory cognomen. But, whether Venus was from the beginning a Latinized form of Aphrodite or a Hellenic goddess with a similar name, is problematic. Aphrodite, one clue to her character is afforded us in the fact that, when the directly Greek Aphrodite came (and, of course, she came before the Eneas-legend), it was especially her function as a goddess of love which appealed to the Romans. This function, secondary in Greece, seems to have been primary in Rome.

1 On Libitina cf. Deo, R. v. 15; Plut. Rom. 22; Ascon. i. 40. 34; CIL VI. 10074, 10022.

2 On Merca cf. Varro, de Ling. Lat. v. 151; Livy, i. xxi. 5; Ptol. xvii. 14; Serv. ad Aen. viii. 650.

3 On Aphrodite as the garden-goddess cf. the cognomen 'Aphros (Hesych. s.v.); the garden at Paphos, inscrum (Strab. p. 683); the Urania of Eryx in Athens (Paus. v. 3 x); and the Aphrodite sciascolan at Samos (Paus. iii. 541; Athen. xiii. 572 F). On Venus as garden-goddess in Rome cf. Staubitz, p. 58, where Venus analena, 'vegetables'; Plant. Men. 37, 38; Flan. vii. 86; Val. Max. viii. 12; Pliny, viii. 129; Solin. i. 126. 114 B.C. a temple was erected to this same goddess (Ovid, Fasti, iv. 133 ff.; Ov. xv. 22) as an atonement for a prodigy which showed the anger of the goddess, in the case of the murder of a youth by three Vestal virgins. We do not know where this temple was (Servius, ad Aen. viii. 636, wrongly places it in the valley of the Circus Maximus, confusing it with Maruca). Thus by the end of the 2nd cent. B.C. Rome was equipped with two forms of the worship of the goddess of love—the Venus of Mount Eryx, representing licentious love, and the Venus Verticordia, domestic affection. Finally, during the last century of the Republic, Venus assumed three other forms, all of which, under the leadership of the dictator Sulla, who translated his name Felix into trahi poffjoros and devoted himself especially to the worship of Aphrodite, we have the rise of the cult of Venus Felix, a combination of Venus and Felix, and Venus Genetrix, the goddess of the imperial house, the dedication of which must have influenced Hadrian in the building of his magnificent temple of Venus and Roma (on the site of the present church of S. Francesco, Roma), in A.D. 125.

It is scarcely necessary to add that Amor, Cupid, etc., are merely the Latin translations of the names of Greek gods of love, and that they are confined in Rome entirely to poetry and art, and were never the recipients of an actual cult.

Thus we have seen that, so far as we are able to tell, Rome began life without any deities of love; that her first genuine goddess of love was the Great Mother; and that this temple is not to be confused with the Venus Hortorum Sallustianorum (CIL VI. 129), which R. Lanzoni thought he had located (Bull. arch. com. xvi. 1888) 3 ff.; cf. Huelien, Roma. Mitt. iv. (1899) 276 ff.)
LOVE (Semitic and Egyptian).

—1. Among the primitive Semites. — No written records or oral traditions have come down to us from that remote time when the forefathers of the several branches of the Semitic race dwelt together in the desert of Arabia. Our knowledge of that period is derived solely by the comparative method of research, which assumes that common elements in the life, thought, and language of the later Semites are an inheritance from their early ancestors. The love-songs, the hymns, the Egyptian, Hebrew, and Arabic folklore, and the Semitic Arabic poetry, which are closely related, afford valuable materials in the reconstruction of the winter rains and the drying up of the springs and the pasture. Then the tribes moved away to their distant homes, and the lovers were separated.

The poets tell us how they sought each other, and how, at the tent of the beloved had stood and found it deserted. They called to mind the happy hours that they had once spent there, and shed bitter tears, and cursed the stars. Things like Me'allafa'at begin with this theme, and they show rare beauty and pathos in their treatment.

Love of family and friends also finds frequent expression in the old Arab poetry, particularly in the laments, one of the most numerous and most beautiful products of the lyric art.

This passion, like all strong human emotions, was ascribed to the direct influence of a divinity. Possibly in the earliest times a special daemon presided over love in distinction from the powers that presided over reproduction and birth. Traces remain of an old Arabian god Wadd, i.e. 'love' or 'desire' (see J. Wellhausen, \textit{Heute arab. Religion}, Berlin, 1897, pp. 14-15; \textit{ERE} i. 626). Little is known about his character, but he may be a personification of love similar to other Semitic gods such as Gil, 'joy,' and Psi, 'happy.' His erotic character is evident from a verse of Nāhiyā preserved by Iblī Hibīb and cited by Wellhausen (p. 17):

\begin{quote}
Surewell Wadd, for sparing with women is no longer permitted, since religion is now taken seriously (i.e. since the introduction of Islam).
\end{quote}

However this may be, it is certain that, long before the separation of the Semitic races, the function of inspiring love had been assigned to the great mother-goddess 'Ashtar, the giver of springs and the producer of life in all realms of the organic world. Under the varied forms that this divinity assumed in the Semitic lands she was everywhere the goddess of love. The love that she inspired was not merely sexual, but also maternal, paternal, fraternal, and social. In the ancient Arab poetry she is occasionally mentioned by the titles al-Lāt, 'the goddess,' and al-Uzza, 'the strong,' and the infrequency with which she appears is almost certainly due to Muslim substitution of Allah for al-Lāt. In other Semitic literatures she is constantly described and invoked as the wife of the storm-god, the awakenser of other divinities (see \textit{M. P. T. M.} i. 655, f. 1; \textit{ISHTAR}, vol. vii. p. 430).

This goddess was the chief divinity of the Semites in their primitive patriarchal stage of social organization. She was the analogue of the human matriarch, free in her love, the fat controller of her clan, and its leader in peace and in war.
her supremacy there was a potentiality of monotheism peculiar to the Semites; and, as is well known, a deep importance for the growth of the religion of Israel that its starting-point in primitive Semitic religion was not the delusion of nature, but the delusion of maternal love. In the cult of the mother-goddess there existed in the Prophets that God is most truly revealed in unselfish human love, and the message of the gospel that the supreme revelation of God is the perfect love of Jesus Christ.

2. Among the Hebrew Semites. When the patriarchal form of society gradually gave place to the patriarchal, it was no longer natural to think of the chief deity of the tribe as a mother, but rather as a father. Two things might then happen to the old mother-goddess, Ashtar. (1) She might be degraded to the position of consort of one or more male gods. This was the step taken in Babylonia, Syria, Canaan, and most other parts of the Semitic world. It involved a surrender of the intellectual monotheism that was characteristic of primitive Semitic religion, and an adoption of polytheism. It also involved an over-emphasis of the sexual element in the conception of deity. (2) Ashtar might change her sex and become a man, thus relinquishing the maternal element in the conception of the tribal god. This is what happened in the branch of the Semitic race of the Time of the Judges in Palestine. In S. Arabia, Assyria, and Moab, Ashtar changed her sex and became the masculine 'Ashtur (Ashtar) who retained feminine characteristics (see 2 K. ii. 115; cf. also vii. 429). In Ammon and Edom she became Ashtoreth (Ashtoreth) and had apparently no feminine associate. Jehovah was originally a god of this sort. He was the father of His people, who united maternal characteristics with paternal, and who reigned without a consort. This is a phenomenon of great interest in the development of Hebrew monotheism. By it sexual dualism, the curse of other Semitic religions, was avoided, and at the same time maternal tenderness was retained as an essential element in the conception of the deity.

3. Among the ancient Egyptians. Our knowledge of love and gods of love among the Egyptians is derived partly from the pictures and inscriptions on the monuments, and partly from occasional references in contemporary literature, but mainly from collections of popular love-songs. The chief of these are the London MS, (Harris 500), which dates from about 1400 B.C.; the Turin MS, which dates from about 1200 B.C.; and the Paris fragment, which may be a copy of an original of the Middle Empire. These were first published by C. W. Goodwin, T.B.L. iii. (1874) 359, and G. Maspero, J.A. Sth ser., i. (1883) 5; and in a much more correct edition and translation by W. M. Müller, Die Liebesgeschen der alteren Egyptian. They contain true folk-poetry, free from the artificiulity and artificiality of the conventional Egyptian classes and the state. Thus these love literature is fresh, and in their simplicity and directness they make a strong appeal to modern taste and interest. The poems in these MSS show the same loose arrangement that is seen in the Hebrew Song of Songs. Of the Egyptian, belonged to the Hamitic stock, which was closely related to the Semite; and from the earliest times they were mixed with infusions of Semitic population. It is not surprising, therefore, that their conceptions of love were similar to those of the ancient Semites. In the earliest times they seem to have been organized matriarchally (see A. Erman, Life in Anc. Egypt, Eng. tr., London, 1894, p. 155), and at this time their marriage was a simple adoption of agriculture they passed over to a patriarchal organization and endogamous marriage. In order to retain their small farms in the family, marriage with a sister, or half-sister, became a common practice; the message of the Song of Solomon was that an endogamous marriage with a cousin on the father's side was usual (ib. p. 154). Hence in the poems the regular name for lover is 'brother,' or 'sister,' as in the Song of Songs the 'freshest among women' is called 'sister,' 'brother.'

In spite of the patriarchal endogamous organization of society, the ancient freedom of the matriarchal exogamous organization was still accorded the Egyptian women, as among the pre-monarchical Arameans. The liberty of the Egyptian women was without a parallel in the ancient world, and is rivaled by only a few of the most progressive modern communities. In every respect, legally and socially, they were on an equality with men. In sex references, the word of sexual licence was as great on the part of the women as on that of the men (e.g., Potipher's wife, Gen 39); at the same time an honest, equal love was attained between men and women that has not since been possible until modern times.

An interesting result of this independence was that women wooed men as often as men wooed women. In the love-poems the 'sister' speaks more frequently than the 'brother.' The maiden is sent out by her mother to catch wild fowl in nets, but she confesses that she has been so distracted by the sight of her beloved that she has caught nothing at all (Muller, Liebesgeschen, p. 22). She invites her beloved to walk with her in the park and in the Helipods, and to meet him with her hair decked with flowers and a flower fan in her hand (ib. 29); she invites him to hunt with her in the green marshes that are full of birds and flowers (ib. 20); she takes him bathing with her, and lets him see her charm through a dress of fine diaphanous linen (ib. 41). When he does not respond quickly enough to her advances, she piles him with wine until he becomes more yielding (ib. 39); and, when this means fails, she resorts to love philtres, but she knows that this is punishable by beating with rods (ib. 17). She asks him why he does not take her to cook for him, since she is so lonely without him (ib. 23). When she has won his love, she describes her transports of joy, and tells how she silences his every objection for loitering (ib. 14). She charges her beloved (Ashtar) for disturbing the meeting with her lover by its cooing (ib. 24). When he has left her, she walks in the park, and every flower tells of something about him (ib. 26). The fig offers its shelter to her as a trusty place (ib. 29), the pomegranate threatens to tell her secrets if she promises not to reveal what it has seen (ib. 46). Sometimes, as on other hands, the lover does not come when he is expected; then the maiden mourns for him, and she seeks to console herself by dating with another girl, and hopes that he may make the new love as nonsuitable as he has his love [ib. 17]. She is cast off by her 'brother', then she raises a bitter lament, and prays the gods to restore him to her (ib. 28).

The 'brother' also expresses his emotions, although less often than the 'sister.' Unlike the Semites, the Egyptians did not admire fatness, but preferred a slender, well-developed figure, their beauties had fair complexion, large dark eyes, whose expressiveness was enhanced by painting the edges of the lids with stibium, masses of jet black hair, red lips, white teeth, and quantities of jewellery, particularly earrings, garnets of flowers on the head and around the neck, and, above all, plenty of heavy perfume. The poems dwell more often on fleshly love (ib. 16, 44); her love fills him as honey mixes with water, or as a strong spice penetrates a perfume (ib. 16); he is ensured by her locks, as a wild goose is caught in a net, and he would expect her by love, and cannot be cured until she comes to him (ib. 18). When he goes on a pilgrimage to a temple, he is nothing better to ask of the gods than the meeting with her, and he begs each of them to give her his favourite flower to adorn her for his coming (ib. 18). He longs to see her, is sickened or bitten by her, if only he may be with her (ib. 19), her handmaid, that he may see her lovely form, her shimmering skin, that he may smell the perfume of her ring, that he may be ever on her hand (ib. 45). He swarms a river full of creatures and the sea full of fish while he cries when he sees her (ib. 42). Her kiss intoxicates him like beer (ib. 42).
In connexion with these poems a number of gods, such as Ptah, Sekhmet, Nefer-Atum, and Amon (ib. 18, 23), are invoked to favour one’s suit; but the proper divinity of love was not ‘the sky,’ which would be in keeping with the theme of the songs (Ex 21. 5), but ‘Hathor, the cow,’ and a variety of other local names, was the chief Egyptian goddess. She was conceived either as a celestial cow, whose belly formed the dome of the sky, or as a woman raised up from the embrace of her brother-husband, the earth-god Khnum. Under the form of Hathor, ‘abode of the sun,’ at Denderah she attained the greatest glory, and became one of the chief divinities of the empire. Here she was depicted as a benevolent-faced woman with the eye of a cow, or with a headdress consisting of the horns of a cow enclosing the solar disk (see ERE vii. 439). Since she was originally a sky-goddess, her function as love-goddess must be regarded as secondary, and as due to Semitic influence.

The Semites who settled in Palestine in the earliest period found in her characteristics as mother and as cow the nearest counterpart to their own mother-goddess ‘Ashtar, and accordingly attributed to her all the erotic qualities of the latter, even in the early Egyptian forms of ‘Ashtart, and the two goddesses were regarded as identical both by the Asiatic Semites and by the Egyptians. The Canaanite ‘Ashtart was depicted with the attributes of Hathor, and Hathor with the attributes of Ashtart. During the XIXth dynasty ‘Ashtar received extensive worship in Egypt under her own name, or under the epithet of Kadesh (see ERE iii. 152, 154).

4. Among the Hebrews.—We know that love-poetry was sung, and that music was sung from such incidental allusions as Am 6. 15; 5. 23, &c., but specimens of these compositions have not been excluded from the books of the OT. Only the Song of Songs, thanks probably to an allegorical excess, has found a place in the sacred canon. This is to be regarded as a collection of folk-songs, similar to those found in modern Palestine, which were sung at weddings in the villages round about Jerusalem. As such it is an invaluable source of information in regard to the Hebrew conception of love. The collection as a whole dates from the Persian or Greek period, but its individual songs may have a much greater antiquity. Besides these primary sources, we have numenous incidental references to love in the other books of the Bible.

The earlier writings of the OT show that women enjoyed much of the freedom that existed among the primitive Arabs and the Egyptians. They dared to love and marry before they had been wedded (1 S 18. 18), and they were allowed to express their choice in marriage (Gn 24. 7). In the Song of Songs the woman is fully as ardent as the man.

The same passionate intensity that existed among the Semitic Semites was found also among the Hebrews. The Song of Songs bears a close resemblance to the love-poetry of the ancient Arabs and of the Egyptians. It describes the physical charms of the beloved with the same sensuous detail (e.g. 4. 7, 11, 8. 12), and it praises the joy of love with an ardour that is surpassed by no other literature ancient or modern (e.g. 1. 7, 2, 2. 7, 12. 15. 18. 5. 17). This erotic tendency led the early Israelites into all sorts of sexual excess, Polygamy, concubinage, and prostitution remained unchecked down to a late time, and brought no disgrace to either man or woman. Married women were required to be chaste, but no limits were set to the licence of the men. Love led often to crimes of violence (Gn 34, 2 S 11. 13); but, on the other hand, it also produced beautiful instances of self-sacrificing devotion (Gn 24. 29, 29. Hos 3) and of persistent, though unrequited, love (Gn 29. 5). The OT shows also numerus cases of strong paternal love (Gn 25. 37, 2 S 12. 17-19), and the love of David and Jonathan stands out conspicuously as the most perfect friendship in all literature (1 S 19. 21, 29. 136).

With all these forms of love Jehovah, the God of Israel, was closely connected in the early Hebrew consciousness. There is strong evidence that He was originally the tribal god of the Kenites who dwelt at Mount Hor, and that He first became the God of Israel through the work of Moses. Among the Kenites He can have had no consort, for otherwise she would have been adopted by Israel at the same time when He was accepted; but in the old testaments consisting of the horns of a cow enclosing the solar disk (see ERE vii. 439). Since she was originally a sky-goddess, her function as love-goddess must be regarded as secondary, and as due to Semitic influence.

The Semites who settled in Palestine in the earliest period found in her characteristics as mother and as cow the nearest counterpart to their own mother-goddess ‘Ashtar, and accordingly attributed to her all the erotic qualities of the latter, even in the early Egyptian forms of ‘Ashtart, and the two goddesses were regarded as identical both by the Asiatic Semites and by the Egyptians. The Canaanite ‘Ashtart was depicted with the attributes of Hathor, and Hathor with the attributes of Ashtart. During the XIXth dynasty ‘Ashtar received extensive worship in Egypt under her own name, or under the epithet of Kadesh (see ERE iii. 152, 154).

4. Among the Hebrews.—We know that love-poetry was sung, and that music was sung from such incidental allusions as Am 6. 15; 5. 23, &c., but specimens of these compositions have not been excluded from the books of the OT. Only the Song of Songs, thanks probably to an allegorical excess, has found a place in the sacred canon. This is to be regarded as a collection of folk-songs, similar to those found in modern Palestine, which were sung at weddings in the villages round about Jerusalem. As such it is an invaluable source of information in regard to the Hebrew conception of love. The collection as a whole dates from the Persian or Greek period, but its individual songs may have a much greater antiquity. Besides these primary sources, we have numenous incidental references to love in the other books of the Bible.

The earlier writings of the OT show that women enjoyed much of the freedom that existed among the primitive Arabs and the Egyptians. They dared to love and marry before they had been wedded (1 S 18. 18), and they were allowed to express their choice in marriage (Gn 24. 7). In the Song of Songs the woman is fully as ardent as the man.

The same passionate intensity that existed among the Semitic Semites was found also among the Hebrews. The Song of Songs bears a close resemblance to the love-poetry of the ancient Arabs and of the Egyptians. It describes the physical charms of the beloved with the same sensuous detail (e.g. 4. 7, 11, 8. 12), and it praises the joy of love with an ardour that is surpassed by no other literature ancient or modern (e.g. 1. 7, 2, 2. 7, 12. 15. 18. 5. 17). This erotic tendency led the early Israelites into all sorts of sexual excess, Polygamy, concubinage, and prostitution remained unchecked down to a late time, and brought no disgrace to either man or woman. Married women were required to be chaste, but no limits were set to the licence of the men. Love led often to crimes of violence (Gn 34, 2 S 11. 13); but, on the other hand, it also produced beautiful instances of self-sacrificing devotion (Gn 24. 29, 29. Hos 3) and of persistent, though unrequited, love (Gn 29. 5). The OT
forth the redeeming love of Jahweh in the deliverance from Egypt and in the gift of the land of Canaan became the keynote of the religion of Israel. From his people He demanded exclusive worship and a love for Him like His love for them. As early as the Song of Deborah His worshippers are called His ‘lovers’ (Jg 5:3). It is clear also that from the first Jahweh demanded a kindness to fellow-Israelites similar to that which He had shown when He delivered the nation from bondage. Thus for Israel Jahweh became the God of love in an ethical sense that had not yet appeared in any other Semitic religion.

After the conquest of Canaan Israel was confronted with the problem of the relation of Jahweh to the gods of Canaan. This problem was solved by the identification of Jahweh with the Elohim and other male divinities of the land, so that their sanctuaries and rites became His, and they ceased to exist by being absorbed into Him (EERE ii. 291). With ‘Ashtar’, Anath, and other goddesses the case was different. They could not be identified with Him, and He had no consort with whom they could be combined; consequently they remained His rivals with whom He waged war to the death.

In all the pre-Exilic literature Jahweh is never once said to inspire sexual love, although this was certainly one of His primitive functions, apparently because He regarded the work of His rivals as ‘Ashtar’. Everything connected with the sexual life and with birth rendered one ‘unclean’, that is, ‘tabu’ from participating in the worship of Jahweh, because of the association with the hated mother-goddess. Yet, as with other inconsistencies, Jahweh was still regarded as the giver of children.

In the Prophets from Hosea onwards the moral love of Jahweh that had appeared already in the Mosaic religion received fresh emphasis. In his love for his wife Hosea saw ‘the beginning of Jahweh’s speaking’ unto him (Hos 1:2). When she forsook him for her lovers and plunged into the depths of degradation, he found that he could not give her up, and, when the opportunity came to buy her as a slave and to take her back to his home, he eagerly embraced it (3:5). Through this experience of unselfish love in himself he received his vision of the love of Jahweh for Israel. Jahweh had taken Israel as His bride at the time of the Exodus and had loved her ever since with an unflagging fidelity; she had forsoaken Him for the Baalim of Canaan, yet He could not give her up. He must send her into exile to reform her, yet He would not send her, and, when He repented, He would restore her. This message of Hosea is echoed by all the other pre-Exilic prophets, and finds its noblest expression in the words of Jer 31:3, ‘I have loved thee with an everlasting love.’ It is the recognition that in unselfish human love is the truest revelation of the character of God is found.

In return for His love Jahweh demanded the undivided love of Israel. This teaching found its classical expression in Dt 6, ‘Thou shalt love Jahweh thy God with all thy heart, and with all thy soul, and with all thy might.’ The recognition of Jahweh’s love for Israel carried with it the realization that He required love in the Israelite’s treatment of fellow-Israelites. This teaching was finally enshrined in Dt 10, and is finally summed up by the Holiness Code (e. 600 B.C.) in the words, ‘Thou shalt love thy neighbour (i.e. fellow-Israelite) as thyself’ (Lv 19:18). Even the alien residing in Israel was to be treated kindly (Dt 23:8, Lv 19:5), but the extension of such treatment to the foreigner was not yet imagined (Dt 14:21, 15:2, Lv 25:46). The interpretation of Jahweh’s love in the terms of wedded love reacted also upon the conception of marriage. In the post-Exilic period monogamy became the rule, prostitution was condemned, and men were urged to cleave in fidelity to the wives of their youth (Pr 5:17-21; 31:2). This higher ideal of marriage is nobly expressed in Ca 3:4: ‘Love is as strong as death, Jealousy is as insatiable as Sheol. The flashes thereof are flashes of fire, a very flame of Jahweh.

Many waters cannot quench love, neither can the floods drown it. If a man should give all his possessions in exchange for it, would any man give His Son for Him? Love to God is regarded as more precious than all worldly possessions, and as a flame kindled by Jahweh Himself in the soul. An utterance of such purity and profundity concerning love is not found in the whole range of classical literature. Jesus took up the prophetical conception of the love of God for Israel, and clarified and intensified it by teaching that love was not merely an attribute, but the very essence of the divine nature. The Prophets said, ‘God has love’; Jesus taught, ‘God is love’ (1 Jn 4:8). He also declared the universality of God’s love, which had not yet been grasped by the Prophets (Jn 3:16). He reaffirmed the old commandments, ‘Thou shalt love Jahweh thy God with all thy heart, and ‘Thou shalt love thy neighbour as thyself,’ and gave them new meaning by His juxtaposition of them, through which love to man became the signpost of expression of love to God, and by His new interpretation of ‘neighbour’ as meaning every fellow-man (Mk 12:29, Lk 10:29). He recognized that in Himself God’s love to man and man’s love to God and to man were perfectly manifested, and therefore He proclaimed Himself as the supreme revealer of God and the reconciler between God and man.

See, further, ‘Jewish’ section above.

LOVE-FEAST.—See AGAPE.

LOYALTY.—I. Derivation and definition.—The connexion between the common meaning of this word and its derivation is obscure enough to suggest that a clearer appreciation of its meaning may be gained by considering its probable origin. ‘Loyalty’ is the Anglicized form of the French loyauté; its base is loi, and corresponds to the English ‘law’ and the Latin lex (stem leg). French has also légalité and English ‘legality,’ the late Latin abstract term being adopted without change either of meaning or of form.

Now loi in French, and more particularly in the derivative loyal, means in respect of its denotation much more than ‘law’ in the limited sense of a definite written code. It is a generic term, and stands for that which ought to be obeyed; its source may be the will of an acknowledged ruler or ruling class, or it may be popular consent, or it may be personal or national prudence, or it may be by voluntary allegiance. It stands, moreover, for the law of nature and the dictates of reason and conscience, more especially and imperfectly if these are conceived in terms of religion as manifestations of that authority which the ancient Hebraic of the last few centuries before our era meant this last, and, in so far as it evoked his sentiment of loyalty, it meant little else. To every man the object of his loyalty is loi, or ‘law,’ in the sense of our inquiry.—the authority
loyalty was neither of these. English adopts the French *loyal* to mean 'law-fulfilling' in the sense of the Sernaon of the *Morte Arthure*, and distinguishes it from 'lawful', or *legal*, which means allowable, and from 'law-abiding', which connotes submissiveness to the law, the passive quality of the orderly citizen. German translates by specializations of the word *einswerth* signifying something which is lawful, or legal, as Unterwurfsverpflichtung (fidelity in a subordinate) and Paterlandstreue (fidelity to the Fatherland); the quality, of course, exists in many diverse applications, and, though fidelity or fealty is not identical with loyalty, the one characteristic is apt to be accompanied by the other. Loyalty connotes a certain specialization of good faith and faithfulness towards the person, principle, ideal, or covenant in respect of which it is expressed; it lays stress on this obligation of specialized fealty rather than on any wider duty of humane comradeship and general goodwill. Nevertheless, there is close affinity between those qualities, the deeper motives of which so widely overlap. The good and the noble desire to be a loyal man, to serve, to do what is accorded, to bear the burden of duty, to take up his responsibilities with settled mind and faithfully sustains them is apt for loyal service wherever his allegiance is given. This is often understood to be given when it is not as a fact, in which case we have either the sturdy rebel or the disloyal man.

The giving of allegiance is in effect a vow to serve; the standard case of loyalty coincides, therefore, with the standard case of fealty in which a pledge of service is the very essence of the oath of allegiance to a king, by marriage vows between two persons, or by acclamation—and vote—in tribal assemblies, when law was promulgated and accepted there. The standard cases are the same, but in the development of thought the ideas differ. Loyalty specializes in respect of the object of service, fealty in respect of faith in the pledge. Of these the latter is the more necessary and virtuous character, and so it has been judged by the common sense of mankind, as the testimony of language shows. So long as men were either free or under strict rule, they were simply required either to keep their covenants in the former case or to do what was expected of them; faith and obedience were their primal social virtues. The conception of religion, for instance, as consisting in a covenant with the god, was a distinct advance on its conception as a slave service by which man was to be governed, the last; faith and obedience were their primal social virtues. The conception of religion, for instance, as consisting in a covenant with the god, was a distinct advance on its conception as a slave service by which man was to be governed, the last; faith and obedience were their primal social virtues. The conception of religion, for instance, as consisting in a covenant with the god, was a distinct advance on its conception as a slave service by which man was to be governed, the last; faith and obedience were their primal social virtues. 3. Personal honour expressed in devotion to social ends.—The free development of loyalty by self-discipline to social ends, and of loyalty as a particular case, may be studied in the literature of chivalry and romance. The practice of knightly vows, however, is much older and pre-Christian; so far as records go, it was specially characteristic of the people and the social conditions reflected in the Celtic hero lore. The champion of the Gaelic stories is essentially a free man, free of feudal and—except for the spirit that binds him—free of trite bonds. Social affection binds him too, but honour is his only law. The young hero from his
LOYALTY

185

childhood is educated carefully in all many accomplishments, and in all social courtesies, including respect for women, children, and grey hairs. He emerges from his tutelage free, comradelike, and courteous, a strong individual. But this is not all. Not the least in his education is the contribution which he makes to the formation of his character by laying bonds or obligations (in the Gaelic gèid) on himself that he will or will not do certain things. The obligation never to make this assistance is akin. He is made to feel that the sin frequently occurs, and may supply occasion for the turning-point of the story. Others are of the nature of obligations to a king, a leader, or comrade, or to all the members of a band. King Arthur and his Round Table are to mind, or for those who knew Gaelic story, Fionn and the band of heroes whose story has been a fund of moral instruction for western Irish children to this day. Some stories turn on a conflict of two loyalties, each claiming diffusion; other cases of voluntary allegiance, and so, as the feudal system was established throughout Europe, it availed itself instinctively of this free man's social virtue by the institution of the oath of fealty from the feudal subordinate to his over-lord. At this point loyalty evoked, as it were, and placed in front of authority maintained by each other and are fused. Fealty, however, is not exhausted in the compound. It remains as the quality of faith to the pledge once given, the central virtue of the self-respecting hero who cannot be false to his word. Carried to the point of fulfillmellt in spirit, rather than merely in letter, this implies not being false to the reasonable expectations involved in mutual understandings between his fellows and himself. The ideal of the honourable man signifies fealty. Such a thing as fealty to his country is the backbone of the composite characteristic. If so, it is important that in the education of each person sufficient demand be made on the leading trait to evoke it strongly, and sufficient social opportunity given to direct it in practical expression in terms of the other—the faithful soul realizing itself in service to others, the loyal spirit fulfilling its service by self-reliant intelligence and steadfast faith.

4. Political loyalty and its object in feudal and modern times.—Loyalty connotes attachment to some definite authority which has a right to be served. The growth of the feudal system in Europe was favorable to the special personal turn which its application took. The political problem was the organization of many small groups into one large inclusive group, or nation, especially for purposes of defence against some common foe. The moral strength of such a national organism consisted largely in the series of loyalties from man to man, each primary group being sufficiently small, and grouped round a leader sufficiently well known, to bring out men's normal instincts to follow their chief, to cleave to him truly, to give him allegiance, acclaim him lord, and be his men. This is loyalty of the most picturesque and primitive type, steeped, as part of his education but the least there is religious enthusiasm is akin. What the man was to the lord, the lord was to his over-lord, and so the national system was linked up by unit into larger units all under the supreme over-lordship of the king. The system of loyalties, as signified by this actual system of political allegiances, would in the perfect State have likewise been linked up, all loyalty centering in the king. When the kings of France succeeded in making all the under-feudatories take the oath of fealty, they established themselves as the centre beyond all doubt. Under absolute personal government the king stands for le loai; his will—bound more or less by his coronation oath—is the standard and subject-matter of service due; his under-lords are known as commissioned to use their subordinates as his servants in so far as he may require.

The reality, to be sure, was never so systematic, and bred many other qualities, bad and good, besides its modicum of high-toned loyalty. It is, however, certain that such a system would profit by encouragement given to so useful a quality. Thus the situation was favourable to much praise of loyalty as a virtue, in the upper classes and, for this and other better reasons, in the mouths of their dependents—poets and men of letters generally, lawyers and all who had to do with the executive government, whether on the national or on the local scale.

As feudalism declined, or was broken up, the source of authority gradually itself anew as duplex in form: (1) the king administering the realm in accordance with the law, and (2) Parliament, i.e. the executive of the king, wielding power by joint action with the king to change the law. The Lords were, in the first instance, the true peers of the king—the displaced feudal lords—and the old sentiment of feudal loyalty continued for long to be exerted more or less by them and conceded less or more. As local magnates of one sort or another, they have in this country had a prolonged and honourable reign. In France they disappeared from view politically, as the aristocracy that once wielded so much power was done away with, did the pseudo-king or emperor in 1870. England is still in process of change as regards the sentiment of the rural masses towards the aristocratic classes; but certainly it is no longer necessary to consider loyalty as a characteristic of the people, or to study the relations between ordinary people and the parliamentary peers who are lords of the soil. No historic sentiment of the kind attaches personally to the elect of the people in the House of Commons. Each commands the loyalty of his own supporters in his own constituency, so long as he and they are in general agreement on political issues. But he is not in any sense le loai to them, except in so far as he adopts, and with sufficient ability expounds, those principles of national policy which are common to them and him. Their feeling to him is rather that of fealty—not the maximum of fealty—than of loyalty: they support him so long as he continues to support that policy with which they continue to agree. Personal loyalties, of course, emerge, but they are not in the nature of the case. There is a very real loyalty, however, to 'the party' as a whole—either party—and to the leader of the party, also, more especially when he is an outstanding figure satisfactory to the moral sense, arresting to the imagination, strong and of a good courage.

But for the civilized world of Europe in general little importance in the first instance attached to
LOYALTY

Parliament in any form as an object of loyalty. The king and the law emerge from the feudal system as claimants by moral right on the service of men. The sphere of service to which loyalty properly applies lies beyond and includes the sphere of duties and restrictions enforced under the tenure of a personal service for the king included, as of course, loyal obedience to the law; but loyalty, no doubt, was more consciously directed to the king and fused with a sentiment rising to passionate personal devotion. The Bourgeoisie in France and the landlords in England assumed themselves to be the kings by Divine right after the manner of the Roman emperors—in effect, claimed all loyalty, and from many obtained it, as due to the king. The revolt in England took its stand on the law as binding on the will of kings, and claimed restitution of the people's rights as guaranteed by ancient charter. The English Revolution of the 17th cent. was, in effect, not a revolution but a restoration of the ancient constitution, cleared, however, of feudal complications, the great Whig families standing with the common people, and the Royalists, who more especially esteemed themselves as loyalists, with the defeated dynasty. In due course there emerged from the welter of pitiful plots and gallant endeavors, on each hand, and conflicting interests around the court de facto on the other, the British Constitution—or rather its first edition—with all its 20th cent. characteristics latent, and sure to develop in it.

Here it is, a sufficiently complex object of loyal regard:

1. The law of the land as the one authority which all must obey; and all commands by persons in office must be in accordance with it.
2. King, Lords, and Commons making one Parliament; and the struggle by each to change that law, order, or decree the appropriation of the revenue to the uses of the Executive Government.
3. The king and his ministers, whose advice all his decrees are made, whom he appoints by the established custom of the constitution from the leaders of the political party which commands a majority in the House of Commons; the maintenance of this custom is guaranteed by the Commons' hold on the Power of the Purse.

So there emerged slowly in England the modern State, which has emerged elsewhere more suddenly and with less of the attractive complexity of detail which links it with its own historic past. This is what stands for law to the modern Englishman. As an object of loyalty it has advantages over some other examples of the 'Mixed State.' Not only is the British Constitution built as it is in order to preserve intact the ancient liberties of the people, but it has been built, bit after bit, by the very act of maintaining them. It is as, therefore, to excite a high degree of enthusiasm in the minds of all those who care about history, all those who lay store by the liberties of the people and the powers of the House of Commons. To them the members of that House, and especially the two front benches, whatever party is in power, constitute the political aristocracy, in the fine Platonic sense. If they are loyal citizens, they will be loyal in their own front bench, and law-abiding to the other front bench if it happens to be in power. In stormy times, when great principles, on one or other or both sides, are at stake, the adherents of the party likely to be defeated steadily their minds to bear the shock by a very real loyalty, pitched finely in the more abstract key of devotion to the Crown and Constitution, whatever betide. This sentiment is effect-

1 Since the battle of the Constitution had been fought to a large extent on the people's claim to be taxed only by their own consent, given by a majority of their elected representatives in the House of Commons, it was inevitable that the Power of the Purse should be held independently by the House of Commons; and from this it followed, by the logic of events, that no ministry could remain in power that did not command the confidence of the Lower House.
these conditions may fail to be possible in whole or part; in that case the loyal temper still shows itself by putting the best face upon the matter and keeping silence.

It is in military and naval services more particularly that the idea of service, as to the king direct, counts for most. Here we are back to primitive requirements. The soldier is under bond to risk his life at the word of command. Respect for this word is vital to his character—respect without limits—and in this, the last resort, is self-devotion unto death. The good soldier's loyalty, no doubt, is often fealty pure and simple, as, e.g., it certainly is when he has naturally no sentimental tie to the service in which he finds himself. Normally, however, we may take it to be a compound mixed in various proportions, into which enter loyal attachments to his sovereign, his country, his leader, his comrades, and the flag he follows, the last being a symbol of all these things and of his own self-respect as bound to stand or fall by them.

7. Problems arising from the complexity of the modern State.—Causal reference has been made above to non-political loyalty as between friends, lovers, kindred, and the members of a voluntary group or a natural social order. Clearly this is not the primary application of the word, but the tendency to use it in this, rather than in the more approved use, is increasing. This is due, no doubt, to that confusion of ideas as to the political object of loyalty consequent on the complexity of the modern State. Angry politicians are apt to use the word 'disloyal' rashly to discredit the opposite. Such difficulties in right balance of power in the State and the focus, consequently, of right loyalty. Thus claims have sometimes been made in the name of loyalty to right of attack on the lawfully constituted State, as, e.g., in the case of constitutional reform to which a minority strongly objects. This implies confusion of ideas between the State in some special sense—e.g., apart from the principle of development which it contains—and the State as it is, including its provision of a sovereign authority empowered by law and precedent to make changes in all things, including itself. A somewhat wilful confusion of ideas to the opposite effect is also possible both in respect to the political and policy of the ministry of the day, which is the real motive-force that sways the political pendulum, and disloyalty to the sovereign Parliament which happens to be led by that ministry, and the noble which takes responsibility for its doings. The complex character of the service of the State lends itself to such confusion of feeling in times of stress and change. Every attempt at large reform divides the citizens into two camps, each vowing loyalty to its own of the State in some particular. This is party loyalty, which is quite consistent, as the inner circles fully understand, with perfect loyalty to the actual State as by law established—that self-conserving, self-developing organization of Lords, and Commons with which we are all familiar. An attractive focus for the loyal sentiment of the simple or careless citizen, who makes no attempt to join issue in the political diaplectic, is provided by the political 'sense of the betterment in his uplifted place, holding his supreme veto to be used only on the side of the majority in the House of Commons, subject to the delaying powers of the House of Lords. The number of persons in Britain whose sole effective loyalty centres in attachment to the Crown is probably large; it counts doubtless for much also in the British colonies.

8. The focus of loyalty in republican nations.

In republican States this focus is supplied—so far as it is supplied at all—by a more vivid consciousness of the organized nation as a self-governing whole, the ark of whose covenant is the Constitution. The ideal of the republican is in this the pole-star of loyal sentiment is highly developed in France. The French mind has perhaps a natural genius for the concrete ideal, as indeed is perhaps implied by its turn of speech in favour of thought—eloquent thought—by means of generic terms that fire the imagination. In the United States of America loyal affection is rather to the composite nation in reference to all its interests, each more or less on its own—a wonderful 'Union' of diverse elements, run by a carefully planned political system which would do its work much better if all the citizens in every section were more enthusiastic in serving it according to their lights. The ideal of the Republic as an organization of free citizens for purposes of self-government seems to have lost for a time something of its pristine freshness and attractive force. At any rate, it is of the United States rather than of the United States Republic that many Americans think as the focus of their political loyalty. This much may be said in their defence. The good of the nation is, of course, in all cases the ultimate end of the political act, and the final object, therefore, of that sentiment which reveres as its proximate end the national interest in the classical sense.

9. The ideal of loyalty.—To be loyal is to be much more than law-abiding. Whether the object be a person to whom we owe duty or affection, the community of persons to which we belong, the institutions whose welfare we believe it to which we are pledged, or the law—human or divine—by which we ought to regulate our conduct, the loyal man is distinguished from the law-abiding man as one who serves with his whole heart and mind, making of himself a veritable organ of expression for the purpose, or the master, or the mandate, under which he serves. No voluntary sins of commission, omission, or ignorance does he permit himself. We realize him at his time of special effort in a passion of service, every faculty awake and urgent to achieve his end. And in the intervals of passivity his mind is clear and steady—stayed, as it were, on his whole nature as a rock. Self-training to this effect in any school a soldier must work like a leaven on character as a whole. Even under questionableness of conditions of service it goes far, as all experience of public service shows, to make a man. But it must be remembered that, without either a nice and sympathetic leadership, the loyal sentiment which is the motive of self-training is not adequately evoked.

History and literature abound in examples. Three lines of thought, independent of each other and contrasted, may be distinguished in their logical order here.

(a) The heroic romance of Western Europe, developing through the centuries from its classical sources in Classic, Celtic, and Norse or Germanic lore, deals largely in loyalties within the smaller social sphere, intimate, personal, and glorified by affection. Patriotic loyalty in this dawn of the civilized world has little to do with government, but is steeped in a vivid idealism; the race-life and the home-land are seen as of infinite value, objects in effect of religious faith, worthy of devotion through all suffering unto death. These are the primitive loyalties—to kindred, friendship, race, and land. Nor is the spirit which forms them dead; it does not die so long as a race either vaguely or clearly believes in itself as having a part of some kind in the fulfilment of human
thought, attains to the vision of the 'liberty of the sons of God' (Ro 8:21). Thus the eye of reason on the highest as on all lower planes is complete, final, true, relative to civil institutions, and for the fundamental theory of the State even as we know it to-day, we go back to the Greeks, and specially to Plato in The Republic and The Law. It is his conception of the individual soul in relation to the State that concerns us here. The ideal of the State, as he teaches, should be built up within the soul. Thus—wielding his thought to our inquiry—we may say that the soul of the loyal citizen is trained, or trained itself, to so act in accordance with the ideals realized in the constitution of the State. Thus he exceeds the law-abiding, and is the loyal, man. Further, it is implied in Plato's thought that of those who have political power the loyal ones are they who cultivate their philosophic aptitude to perfect the ideal of the State in the soul, in order that they may labour to develop the organization of the real State and bring it into harmony with the ideal.

This is obviously what the sincere modern statesman does, or thinks he is doing. It is a necessary part of his loyalty that he should spare no pains to do it. Moreover, in the modern self-governing State, every enfanchised citizen shares the part.

(c) Finally, we find in post-Exile Judaism the supreme example of a people held together by allegiance to the law—the law embodied in a written code that he who runs may read. The Divine Law, which they had come to hold, was the supreme priest held the office as chief ruler in the little theocratic State. But from the time that Ezra had read in the ears of the people all the words of the book of the law which he had brought from Babylon, "the Jew who was faithful and pious felt that the law was above the priesthood and that he was to obey it and understand it for himself. Externally the Jewish people had many masters after this; internally, in his own mind, each pious Jew spent all his loyal sentiment on the law of his God. This was no short commandment, but the whole law, dealing with conduct in all social relations and with ceremonial ordinances in the tabernacle detail. He who obeyed the law was, in quiet times—except taxation—to all intents and purposes a free man. The ideal of his State in its essentials was built up in the mind of the properly instructed Jew; if he profaning, he obeyed, and, rather grudgingly, willingly, or, if obeyed, with his whole heart, seeking to understand and to obey more perfectly. In that perfect inward obedience his freedom was real, though it was not his quest. The Psalms and the Prophets abound in expressions of this loyalist spirit applied to the Supreme Law:

1. Teach me, O Lord, the way of thy statutes; And I will keep it unto the end, Give me understanding, and I shall keep thy law; Yea, I shall observe it with my whole heart' (Ps 119:9, 10).

So runs the Psalmist's typical prayer, and it continues in the same strain, asking for help to go in the path, to incline his heart aright, to turn away his heart from vanity, to establish God's word unto His servant. In NT times, when the elaborated legalism of the latter-day Harisees prevailed, the great Master Teacher set over against it the traditions of loyalty observance, the fulfillment of the law by being the kind of person who expresses its purpose naturally in all his acts. 'I am not come to destroy, but to fulfil' (Mt 5:17).

'A good man out of the good treasure of his heart bringeth forth that which is good' (Lk 6:45).

And later, St. Paul, following the same line of

1. 'The law of the God which is in thine hand' it is called in the decrees of the great king Antiochus (Ezr 7:9).

LITERATURE.—Little of note appears to have been written dealing directly with this subject. (1) It enters into the history of the development of the State, and serves as a serviceable motive-force in the medieval growth of the feudal system; see Cambridge Medieval History, i. [1913], ch. xiv. Foundations of Society (Origins of Feudalism), trs. Warre Cornish, Chalmers, London, 1901: Essays on Romance and Chivalry, do. 1910, containing reprints from Dean and Sir Walter Scott, are also interesting. (2) The primitive ideal of heroic character to which the political virtues of heroism correspond may be studied in Celaeno in Beowulf and in their later developments, and (3) under the influence of medieval chivalry, and (4) in recent years. Sufficient exemplification will be found in Fabelage Saga and Grettir the Strong, tr. E. Magnusson and W. Morris, Three Northern Love Stories, London, 1897; E. Hul, Cuchulain, the Hound of Ulster, do. 1911; T. W. Rolleston, The High Deeds of Finn, do. 1910; T. Malory, Morte d'Arthur, ed. do., 1894, and its primitive prototype, the Welsh Morganllyd, tr. Lady Charlotte Guest, do. 1877.

S. BRYANT.

LOYOLA.—St. Ignatius Loyola, the founder of the Jesuits (q.v.), was the youngest of the eight sons of Don Beltrán Yáñez de Oñez y Loyola. The name Lopez de Rioalde, by which Ignatius is often designated (so, e.g., in AS and in the British Museum Catalogue), is a simple allusion originally to the carelessness of a notary. He was born in the house, or casa, of Loyola near Azpeitia in the Basque province of Guipuzcoa. The year of his birth is disputed. Astrain [Hist. de la Con. Jesu, i. 180], the Jesuit authority, assigns it to 1491, but others have thought 1495 more probable (cf. Tacchi Venturi, in Civitá Cattolica, 21st July 1900). The name Ignatius, by which Loyola is now generally known, was that which he himself used in his own lifetime, and not the one (not, however, Iñigo, as Astrain prints it) which his invariable signature, but he then began to use sometimes Ignacio, sometimes Iñigo, and after 1542 Iñigo hardly occurs at all. It seems certain, though, early biographers intent on edification have glossed over the fact, that the future ascetic passed an unbridled youth, following the course which was then almost inevitable for all who adopted the career of arms (Astrain, i. 15–18). His first war which he saw in Pamphelus, 1521 was dangerously wounded by a cannon-ball, and in a long convalescence which followed he gave himself up to reading the lives of Christ and the Saints, with the result that, after many inward conflicts, he was able to make a complete change in his own way of living. As soon as he was able to travel, he journeyed to the monastery of Monserrat, made a very devout confession, and, after a sort of vigil of arms, divested himself of his knightly attire and went forth to beg his bread. He then took refuge for nearly a year in a cavern near Manresa. The life that he led in this retreat was one of terrible self-maceration, marked by tempestuous inward trials of which he has left a relatively full account in the auto-biography. It was during his stay at Manresa that he drew out at least the broad outlines of that manual of ascetical discipline so widely famed under the name of the Book of the Spiritual Exercises. There seems no reason to doubt its reality for this system of spiritual training as to exclude the influence of earlier ascetical writers like García de Cisneros of Monserrat (see J. M. Besse, in Revue des questions historiques, i. [Paris, 1897] 22–51) and especially Giovani Battista Cappelletto and Johannes Mundinus, Brothers of the Common Life; but, as Watrigant has shown, the combination of these materials into one instrument employed for a clearly recognized and uniformly consistent purpose is entirely the work of Ignatius,
and bears the imprint of his eminently practical mind.

It must always be remembered that the Spiritual Exercises is not a book intended merely for reading and reflection, but a manual of training to be put into practice in virtue of this instruction. A proper guide, with a work & a keenness's Institution of Christ, and it was always to be vain to expect literary graces in the Exercises as in a proposition of Enchil. After some preliminary considerations on the end of man, the Exercitant is directed, during a week or ten of days and always under the advice of a competent spiritual guide, to occupy his mind with the recollection of his past sins and of the punishment which they have deserved, and to cultivate a sense of shame and sorrow, bringing external adjuncts to bear to deepen the impression—e.g., by depriving himself of light, warmth, unnecessary food, and all intercourse with his fellows. After this preliminary discipline, he is introduced to the study of the life of Jesus Christ, who is set before him in two powerful and parables as a chiefitan appealing for volunteers to aid Him in the task of reconquering the world from the dominion of sin and the devil. It is easy to see that Loyola's thought had been powerfully influenced by his high ideals, a vivid conception of the struggle to rescue the soul of Spain from the yoke of the infidel. The meditations of this 'second week' of the Exercises are estimated to occupy another ten days. By this time it is assumed that the well-disciplined Exercitant will be directed to the point of resolving to leave all things and follow Christ if God should make it plain that He was calling him to a life of humiliation and self-sacrifice. A formal election of a state of life is introduced, accompanied by this stage two remaining 'weeks' of the Exercises are intended to confirm the choice so made. In the third week the Exercitant is bidden to use much bodily penance and to meditate upon the Passion of Christ; in the fourth he is directed to allow the body its need of rest and refreshment, while the mind is occupied with consoling thoughts derived from the consideration of the Resurrection of our Saviour and the remembrance of the joys of heaven.

It was natural that one who laid so much stress upon the study of our Lord's life upon earth should feel the need of coming as closely as possible into contact with the scenes of those events with which his mind was filled. Accordingly, in Feb. 1525 Ignatius made a pilgrimage to the places of the Passion. He passed through Rome and Venice, and thence sailed to the Holy Land, so that almost a year elapsed before he found himself back in Barcelona. Then he was specially called to labour 'for the greater glory of God' had by this time become a deep conviction, but the precise manner in which he was to further the work of Christ on earth does not seem to have been made clear to him until many years later (see F. Van Ortnoy, 'Marche et les origines de la Compagnie de Jesus,' in Annotela Hollandiana, xxvii. [1908]:303–418). Still, he seems to have realized, at least vaguely, that to become an effective instrument for God he required a better education than he then possessed. Thus we find him at the age of 33 learning the rudiments of Latin with the school-children of Barcelona (1524–25), and thence proceeding to the Universities of Alcala, Logroño (1525–28). A personality like that of Loyola was bound to influence men wherever he went, and it is not altogether surprising that he fell under the suspicion of the Inquisition, on account of the disciples who gathered round him and who imitated in some measure his own austerity of life. At first he seems to have been careless of what men said of him, conscious of his own integrity; but later he found that these suspicions hampered his influence for good, and he went out of his way to court and even to insist upon a judicial inquiry. The proceedings before the Inquisition, so far as they have been preserved, are printed in the Scripta de Sancto Ignatio, i. 595–629. Partly on account of the hindrance that was put in the way of souls which these suspicions encumbered, partly, it would seem, in the hope of finding companions more in harmony with his ideals than any whom he had yet met (see Fouquereau, Histoires, i. 71.), Ignatius, in Feb. 1528, made his way to the University of Paris. There at the Collège de Montaigu and afterwards at that of Sainte-Barbe he pursued his studies for the priesthood. At Sainte-Barbe he must, at least occasionally, have encountered Calvin, who had studied there himself and still visited it in 1538. For his support Ignatius, owing in part to his unselfish generosity to his countrymen, had to depend upon alms, and during the beginning expeditions made in the violence season to that end he visited London, Bruges, and Antwerp. Contradictions and persecutions in abundance were also still his portion, but in Paris he found at last what his heart had always craved—a group of companions capable of sympathizing in his high ideals, and of the strength to rescue the soul of Spain from the yoke of the infidel. The story of his conquest of Francis Xavier by the constant repetition of the words 'What doth it profit a man if he gain the whole world and suffer the loss of his own soul.' The former recruit was the apostle of the missions in the Council of Trent. Laynez was also to be Loyola's successor as second General of the Society. But even in 1534, when on 15th Aug. these friends met together in the chapel of St. Denis at Montmirail, and at the mass of Le Fèvre, who was so far the only priest amongst them, took vows of poverty and chastity (Astrain, i. 79), there seems to have been as yet no clear design of founding a religious Order. The third vow, which they added to the other two, pledged them only to make the attempt to undertake apostolic work in the Holy Land; but if after a year's waiting, it was found impossible to obtain passage thither, in that case they were to place themselves immediately at the disposal of any work for which he might assign them. This it was that actually happened. In the middle of 1537 war broke out between the Sultan Sulaiman and the Venetian Republic. There was no longer any possibility of obtaining a mission to the Holy Land. The little band of companions waited the prescribed year, and meanwhile Ignatius himself was ordained priest at Venice (23th June 1537), and he and his companions spent the interval in serving in the hospitals and in apostolic work in many different Italian towns. Eventually it was decided that they ought to address themselves to the pope, Paul III., and, in spite of contradictions, they had a visit from the pope himself. It was at or about this time that the desirability of organization as a formally recognized religious society living under obedience seemed to take shape in their minds. It was characteristic of Ignatius that he was always attached to a particularrry, to his own inward spirit than to the written letter. Even after he had recognized the fact that in order to perpetuate their work they must be bound together in some regular institute, he was reluctant to provide written constitutions. But the various stages in the development of the Order, now followed rapidly. Already in 1537 the companions had found it necessary to give themselves a collective
name, and they agreed that, if interrogated, they should describe themselves as belonging to the 'Company of Jesus' (Astrain, i. 89). When they arrived in Paris, with Ignatius and a group of Spirituali- de, a religious institute (fratrum instituti) was founded, and approved in the bull Regimini militantis ecclesiae, 27th Sept. 1540. On 4th April 1541, Ignatius, in spite of his own reluctance, was elected superior, and from that date until 1556 and 1557, he was busily at work in Rome in compiling constitutions. The spread of the Society was extraordinary rapid, and, as the two volumes of his correspondence attests, the business connected with his office of General steadily increased day by day until his death on 31st July 1556. Ignatius was interested, and he considered it the duty of his subjects to be interested, in every form of religious work which would advance the greater glory of God. Although the Society of Jesus was the backbone of the Counter-Reformation movement, it would be a mistake to regard the Order as having been instituted with the conscious design of counteracting the religious teaching of Luther and Calvin. The society was planned, and its constitution was drawn up, in numberless passages of the Constitutions, and which may be taken as the dominant conception of the whole Ignatian spirituality, was the desire and anxiety to carry on the work of asceticism and sanctification for the Church. Christ had come on earth. Loyola was not in any way a man of brilliant intellectual gifts, but he possessed clear judgment and indomitable energy; and, contrary to the idea so often formed of his religious descendant, he was a man of the time, and he did not hesitate to take a man who was absolutely fearless and straightforward in all his relations with others. He was beatoed in 1699 and canonized in 1622.

LITERATURE.—The first place among the sources for the life of Ignatius, given to the so-called "Autobiography," dictated by the Saint to Luis González de Camara. A Latin version is printed in AS, 31st July, vii., but a more accurate version in the original, partly Spanish and partly Italian, has been provided in the Monumenta Ignatiana, Scripta de S. Ignatio (s. 31-59), which form part of the great collaboration of Monumenta Historiae Societatis Jesu (Madrid, 1894 ff.), edited by the Spanish Jesuit. In fact, the whole contents of the Monumenta Ignatiana, which include a critical ed., is an outline, of Loyola's own letters and official documents, are of first-rate importance. An Eng. tr. of the Autobiography (by E. M. Ellis) with notes by J. H. Kilpatrick under the title The Testimonies of Ignatius Loyola, London, 1900. See also J. Susta, "Ignatius von Loyola"s Selbstbiographie," in Mittheilungen des Inst. für ältere Geschichte in Spanien, xxv. (1905) 41-106. A vast number of papers and letters which bear upon the history of Ignatius and the formation of the Society may be found in the other volumes of the Monumenta Historiae Societatis Jesu. The biography of Ignatius by Pedro Ribadeneyra, which appeared originally in more than the General's lifetime, is also re-edited in AS, loc. cit. A young disciple of the saint, who knew him and lived with him, Ribadeneyra is an important authority. Translations of this life have been published in French and in many other languages. Of the 17th cent. biographies of Loyola by far the most valuable is that of D. Bartoli, who had important original materials at his command. The best available ed. is in French, with supplementary notes, by L. Michel (Histoire de S. Ignace de Loyola, 2 vols., Life, 1823. Other lives the best are G. Ceruti, Das Leben des heil. Ignace von Loyola, Innsbruck, 1419, Eng. tr., London, 1884; "Stewart Rose," Life of S. Ignatius Loyola, London, 1893; F. Thompson, "Life of S. Ignatius," do. 1910. An excellent short account of the life of Loyola, by H. Duhr, Paris, 1904, Eng. tr., London, 1890. But by far the most trustworthy picture of the life of Ignatius and of Loyola in the whole of modern works is to be found in A. Astrain, Historia y vida de la Compania de Jesus, i. Madrid, 1897, this volume being entirely devoted to the period of the life and activities of Ignatius. It may be supplemented by F. Pouquet, Histoire de la Compagnie de Jésus en France, 4 vols., Paris, 1910, and for those of Italy by P. Tacchi Venturi, Storia della Compagnia di Gesu in Italia, i. Rome, 1889. See also J. Creissell, San Ignacio en Barcelona, Barcelona, 1906.

The works which were studied the life of Loyola from an anti-Franco or Protestant standpoint seem to have been taken to this trouble to acquaint themselves accurately even with the facts of his life. In this connection, perhaps, E. Goethin, Ignatius von Loyola und die Gelehrtenwelt, Halle, 1895, but on this see also Annette Brillant, sv. [1896] 494-484. Even more fascinating is H. Muller, Lebensgeschichte der Companie de Jesus, Paris, 1856, on which cf. The Month, xcv. [1859] 516-526. Some scholars write that the life of Ignatius is the first of its kind, and that he never mentions the Stoics or the Servite Schools, although sometimes alluding to their doctrines, "quod quadum tempus" (l. 371; cf. 698, 1893, ii. 167-176). He dedicated the work very hostile in tone, of the ex-Jesuit M. M. Mir, Historia intera documentata de la Compania de Jesus, Madrid, 1813. Other points of criticism are dealt with in the same work, on which cf. Fabella, Freiburg i. B., 1904; H. Stoeckel, Forschungen zur Lebensordnung der Gesellschaft Jesu im 17. Jahrhundert, Munich, 1910 ff.

The only works of St. Ignatius besides his letters are the Spiritual Exercises and the Constitutions of the Society. A facsimile of the "autograph" of the Spanish original of the Exercitaciones Espirituales was published in Rome in 1898; innumerable other editions, including several English translations, have been published in every language. The most illuminating discussion of the genesis of the Exercitaciones is in J. H. R. Wattrigant, Le Genese des Exercices de S. Ignace, Anvers, 1897. As to the Constitutions, a facsimile of the original Spanish text has appeared, Constituciones de la Compania de Jesus, reproduction fototipica, Rome, 1898, with valuable illustrative material. HERBERT THURSTON.
to Memmius, the patron of Catullus, who was praetor in 55 B.C., and at that time an opponent of Cesar. He addresses Memmius as an equal; the Lucertii belong to a genus distinguished in the early annals of Rome, and the cognomen Carus is said to be attested by an inscription. The author's purpose in writing a philosophical treatise in verse is clearly explained (l. 54 ff., esp. 108-115, 922-956). It is genuinely scientific—10 to gain our honest consent to any propositions concerning the atomic theory (bk's i. and ii.) and its applications to the relations of mind and body (bk. iii.), the wraths or images when the poet adumbrates the popular belief in the future life (bk. iv.), the origin of our world, of civilization, and of language (bk. v.), and the phenomena of sky or earth which are supposed to come from the vengeance of the gods, such as thunder, tempests, earthquakes, and volcanoes (bk. vi.). It asserts that the system which he advocates is unpopular (iv. 18 ff.), and fears that Memmius will some day fall away (l. 102 ff.). He therefore provides an antidote. Poetry is the honey at the edge of the cup which shall make palatable the nauseating taste of truth. It is no less obvious that the sympathy evoked in the reader, the effect upon his imagination, is bound up with the poet's soaring frenzy ("furor ardens"); Staturis,Sit. i. II. 52. It is ill-adapted for hexameter verse, but the mental power and perseverance displayed in so arduous an undertaking call for unstinted admiration. The difficulties of his task spur the poet on, and to overcome them so far as may be is at once his merit and his delight. His grasp of his subject with all its perplexities and problems bespeaks a logical mind, and he is eminently successful in discovering and marshalling whole groups of particular facts which lead up to the great system. (l. 150-214, 265-328, ii. 332-380, 581-690), in the use of analogies, and in vividly picturing the consequences of hypotheses (l. 215-254, 985 ff., 988-995). It has been conjectured that the poet followed the larger epitome of Epicurean doctrine mentioned by Diogenes Laertius (x. 39 f., 73 [Gissani, i. 10]). Whether this is so or his choice and arrangement of topics are dictated by his own immediate purpose must remain an open question. In any case the ideas in the discipline of collision. See some study of the master's writings (iii. 10) afford a reasonable certainty that he introduced no innovations in substance, although the exposition, with its flights of imagination, its flashes of feeling, and its insight, is far from what is customary to those parts of the system only where Lucretius fills a gap in the scanty outlines left by Epicurus himself or gives a fuller treatment of particular doctrines (see Epicureans).

2. Atomic theory.—Lucretius begins by advancing the two propositions (1) that nothing can arise out of nothing, and (2) that nothing can be annihilated, which he proves separately from the order and regularity of the processes of nature, as especially of his species of organic life. The obvious objection that we cannot see the particles dispersed when a thing is destroyed is met with a series of analogies from the potent invisible agencies at work in the microcosm. The existence of empty space (vacuum or void) is then proved from the impossibility of otherwise accounting for motion, which all the facts of experience confirm. The opposite view, that the world is a plenum, is next refuted mainly by the consideration that condensation and expansion no less than motion imply the existence of a vacuum. Next, the existence of any tertium quid other than body and empty space is denied. All other nameable things, even time itself, must be regarded as the qualities (whether essential properties or transient accidents) of these two forms of reality. Body is then divided into simple and composite, according as it is or is not composed with void. The composite are what we call things (res genita), the simple bodies are atoms (materici, corpora genitatica, semina rerum, principia, elementa, or simply corpora). To postulate the existence of atoms is to deny the infinite divisibility of matter and has been again Lucretius employs his favourite negative procedure, following out the consequences of infinite divisibility to absolute annihilation, which he has proved impossible. Infinite divisibility would be incompatible with the natural laws (fide natura) which regulate the production of things and the permanence of organic species; for, unless the constituent atoms of things are unchangeable, there will be no uniformity of nature, and it will be uncertain what can and what cannot arise.

Summing up these arguments and collecting what is said elsewhere in the poem, we arrive at the following conception: an atom is a little hard kernel of matter, quite solid and therefore imutable and indestructible (since heat, cold, and moisture, the destroyers of the composite things about us, cannot enter where no void exists). Each atom is a distinct individual ("solida pollentia simpliciitate"); it is perfectly elastic; it has minimal parts of which they have no independent existence: hence it has size, shape, and weight, but no secondary qualities, no colour or temperature, no sound, flavour, or smell, no sentence, the different qualities of composite things being in the very nature of things, the shapes, which, though very great, is not infinite. After refuting the divergent views of Heraclitus, Empedocles, and Anaxagoras (l. 635-920), Lucretius proves by a variety of arguments that both matter and space are general principles (i. 150-214, 985 ff., 988-995). It has been conjectured that the poet followed the larger epitome of Epicurean doctrine mentioned by Diogenes Laertius (x. 39 f., 73 [Gissani, i. 10]). Whether this is so or his choice and arrangement of topics are dictated by his own immediate purpose must remain an open question. In any case the ideas in the discipline of collision. See some study of the master's writings (iii. 10) afford a reasonable certainty that he introduced no innovations in substance, although the exposition, with its flights of imagination, its flashes of feeling, and its insight, is far from what is customary to those parts of the system only where Lucretius fills a gap in the scanty outlines left by Epicurus himself or gives a fuller treatment of particular doctrines (see Epicureans).

3. Cinemun or swerving.—Atoms are in constant motion. They move through space (1) by their own inherent motion, and (2) in consequence of collisions. See some study of the master's writings (iii. 10) afford a reasonable certainty that he introduced no innovations in substance, although the exposition, with its flights of imagination, its flashes of feeling, and its insight, is far from what is customary to those parts of the system only where Lucretius fills a gap in the scanty outlines left by Epicurus himself or gives a fuller treatment of particular doctrines (see Epicureans).

The first motion of atoms, always through empty space, is in one direction, the idea being that all things tend to the centre of the universe and the assumption of antipodes which it involves. He subsequently deduces from infinite space and infinite matter an infinite number of worlds, which come into being, grow to maturity, and ultimately perish (ii. 1023-1174).

It will help us to understand the relation between these internal atomic movements and the motion of the group of atoms as a whole, if we take Gissani's admirable illustration (i. 111 ff.): as a swarm of insects moves slowly through the air in one direction, the individual insects of which it is composed are executing all manner of far more rapid movements, some of them in divergent or even opposite directions. The first motion of atoms, always through empty space, is in one direction, the idea being that all things tend to the centre of the universe and the assumption of antipodes which it involves. He subsequently deduces from infinite space and infinite matter an infinite number of worlds, which come into being, grow to maturity, and ultimately perish (ii. 1023-1174).
light atoms fall with equal velocity, so that the heavier would not overtake the lighter. There is a further proof of this in the consciousness of spontaneity of each living creature goes forward whither the will leads, the something which struggles and resists when we move involuntarily under compulsion (ii. 216-233). Our spontaneous movements originate in sole atoms, and their existence at all can be explained only by assuming a certain indeterminism or contingency in the movements of such sole atoms. Thus the mind does not feel an internal necessity in all its actions, nor is all motion linked together in a needling chain of cause and effect (as the Stoics maintained), but atoms initiate motion, breaking through the decrees of fate. It will be seen that the postulate of uniformity—the decrees of nature which govern the birth and growth of organic species—to which appeal is so often made in the poem, is subject to certain limitations of which our information is imperfect. This being the case, it is not altogether strange that, while M. J. Gury deduces from the coniunen universal contingency in the Epicurean scheme of nature, T. Comperz and Esener incline to regard it as no more than a consistent determinism in opposition to Stoic fatalism (Iussani, i. 125-167).

4. Isonomy.—The atomic motions which go on now as they have always been and always will be. What they have produced they will again produce; for, the sum of matter being constant, there can be no complete change of conditions and no change in the order of nature. The universe is a chain of which the parts tend to foster birth and growth and those which tend to destroy, whether the aggregate formed be inanimate or an organism. The forces of production and destruction alternately prevail (ii. 1105-1110), but are so evenly balanced that, if we look to that whole universe, the result is equilibrium, as in an indecisive battle (ii. 593-590, v. 350-415). This principle of equal distribution is best known from Cicero, de Nat. Doct. i. xix. 50, but undoubtedly it was familiar to Lucretius. Combined with the infinity of atoms of every shape, it guarantees that fixity and perpetuation of species to which he so often appeals as a fact. That in an infinite universe the possible is also the real is the premise underlying some of the astronomical portions of the poem (cf. v. 526-533).

5. Psychology.—The poet undertakes to prove that the soul is as much an actual part of a man as the hand or foot, and has therefore to refute the theory last represented by Aristo- tocrnas (iii. 139-132) that it is a harmony or immaterial relation subsisting between corporeal elements or parts of the body. Though a single nature, it consists of two parts, mind (anima, ment) and vital principle (anima, viva), the seat of feeling, the former lodged in the breast, the latter diffused all over the frame. The single nature which mind and feeling unite to form is, like everything else, material, an aggregate formed of the very finest atoms of (1) wind, (2) heat, (3) air, and (4) a nameless something in which sensation begins. The preponderance of one or other element in the single substance compounded of here, the same as the body, are the variety of the emotional states in animals and men. Soul and body, like mind and vital principle, form one whole, so constituted that neither can exist without the other (iii. 94-116), and this is enforced by twenty-eight arguments against the immortality of the soul (iii. 417-529), whence it follows that man's fear of death is unreasonable. The impassioned discourse on death in which these conclusions are driven home (iii. 831-1094), while sharing the defect of all attempts to 'make fear dig its own false tomb,' is yet by its moral earnestness and depth of feeling one of the most impressive passages in literature.

The atomist theory of perception is developed at great length in bk. iv. Images or film (coro) are continually parting from the surface of things and streaming off in all directions, but we see them only when and where we turn our eyes to them. An image pushes before it the air in the same way as the eye. This air sweeps through the pupil and thus enables us to judge the distance of the object seen. This takes place almost instantaneously; we do not see the images singly, but there is a continuous stream of them which are seen (iv. 239-258). The theory of images is applied to those cases where the senses seem to be mistaken. The square tower at a distance looks round, because the images are blunted in their long journey through the air. In this and similar instances the eyes are not deceived. What they see they rightly see; it is the mind that errs in the inference which it draws. The error lies in the opinion which the mind superinduces upon what the senses really perceive. The sense of sight is an instrument.

For how does he know that nothing can be known? By what criterion does he distinguish knowing from not knowing? The senses are true, all equally true, for each has a distinct power and faculty of its own which the others cannot always been and always will be. What they have produced they will again produce; for, the sum of matter being constant, there can be no complete change of conditions and no change in the order of nature. The universe is a chain of which the parts tend to foster birth and growth and those which tend to destroy, whether the aggregate formed be inanimate or an organism. The forces of production and destruction alternately prevail (ii. 1105-1110), but are so evenly balanced that, if we look to that whole universe, the result is equilibrium, as in an indecisive battle (ii. 593-590, v. 350-415). This principle of equal distribution is best known from Cicero, de Nat. Doct. i. xix. 50, but undoubtedly it was familiar to Lucretius. Combined with the infinity of atoms of every shape, it guarantees that fixity and perpetuation of species to which he so often appeals as a fact. That in an infinite universe the possible is also the real is the premise underlying some of the astronomical portions of the poem (cf. v. 526-533).

6. Cosmogony.—The working of the causes which produce, build up, and ultimately destroy worlds such as ours is described in outline as a corollary to the doctrine of the infinity of matter and space (i. 1025-1174). The details are filled up in bk. v. The world is not eternal, as some philosophers hold. Lucretius starts by proving that it is mortal, i.e. had a beginning and will have an end (v. 91-109, 235-415). It must be dissoluble, for it is neither impenetrable like the atom nor intangible like space, nor, like the sum of realities, can it be shown to have nothing outside it into which it could pass and out of which destructive forces may come. Our world began with a chaotic jumble of discordant atoms. By the escape of the lighter atoms from the heavier this vast jumbled mass grew together at the top over air, air over the other two elements, water and earth, the sea being nothing but the moisture squeezed out as the earth condensed. In the infancy of the earth and of the world, vegetation began with herbs and bushes and then tall trees shot up; animal life followed, first birds, then quadrupeds, last of all man, all sprung from the earth—not from the sea—and nourished by Mother Earth. The existing species are a survival of a far greater number which the earth first tried to
produce. The monstrous births perished because they could not grow up and continue their kind. Many species must have died out, because they lacked natural weapons of defence or could not be utilized and protected by man. But the union of two incompatible natures in the fabled creations—centaurs, chimæras, mermaid—could not be impossible. At no time, however, can it be established (v. 987-942). This account mainly follows Democritus, but in the prævalent monsters the influence of Empedocles is discernible.

7. Anthropology.—Civilized society is the product of a long course of development. The sketch of man's gradual advancement from primitive savagery (v. 925-1457) is not without interest and value even in the present day when so much fresh material has been accumulated and is continually enlarged. Men at first were hairier and more like the brutes than now. Knowing nothing of tillage, they lived on acorns or berries, without fire, clothes, or houses, without law, government, or marriage. Their feet were the beasts, from whose fury they suffered. Civilization began with the use of hats and skins and the ties of family life. Then came compacts with neighbours for friendship and alliance; and then speech, a natural impulse quickened by need, not due to any single inventor. The next step was the discovery of the division of labour; the friction of branches. Further improvements led to the building of cities, the allotment of lands, and the discovery of gold. With the origin of political life is linked the origin of religion. Another step in the long scale was the introduction of metals, especially iron and copper, which were accidentally discovered when the burning of woods caused the ore to run. Hence came improvements in warfare, the extension of agriculture, and the invention of weaving, the art of dress, and the art of art. When a knowledge of all the useful crafts had thus been attained, progress was complete.

8. Religion.—The popular faith, with its whole apparatus of prayers, vows, offerings, and divination, had been rejected not only by Epicurus, but by almost all philosophers since the feud between poetry and philosophy began with Xenophanes and Heraclitus. Epicurus is bitterly hostile; his indignation at the evil wrought by religion glows throughout the poem as fiercely as in the famous description of the sacrifice of Iphigenia (I. 80-101). But it is not merely popular superstition that he condemns; he is equally opposed to the philosophic monotheism or pantheism of Plato and the Stoics, and to the theism whatever be the term put by the theologian 'natural theology.' The negative propositions which he maintains are all-important. (1) There is no purpose in nature; the argument from design is discredited in advance; adaptation is the product of experience.

*Nil idea quoniam naturam in corpore ut uti possamus; sed quod naturam, id procer usum* (v. 534 f.). The bodily organs were not given in order to be used. On the contrary, the eye preceded seeing, and man had a tongue before he could speak. Thus the activity of the senses is explained on mechanical principles without assuming final causes, and a similar explanation holds for all other activities, nourishment by food, and growth, walking and locomotion generally, sleep and dreams. Hence (2) there is no divine providence. The course of nature is not sustained by a divine power working for the good of mankind. The flaws in the world (v. 107-138, 'tanta stat praedita culpa') at once and for ever (v. 245-251, 'sunt tantae') are the result of such defects (v. 232 f.). Hence, too, (3) the world is not divine. So far is it from being conscious and intelligent that it is the most fitting example of what we mean by insensible and inanimate (v. 110-145). (4) The world was not created by the gods. What could induce them to take such trouble inconsistent with their majesty? Or, supposing them willing to create; whence came their notion of preconception (propeco) of man before he existed (v. 181-186)? On the contrary, the world and all that is therein was gradually formed by mere natural causes through the fortuitous concourse of some part of an infinity of atoms in some part of infinite space (ii. 991 f.).

But negative criticism is not all. On the positive side the existence of gods is proved by the agreement of all nations, although the names and legends vary with their uses (ii. 990 f.) must not be neglected. The gods are blessed and immortal. They are nothing of mankind, bestow no favours, take no vengeance (ii. 646-652). Their abodes, which in fineness of structure correspond to the impenetrable nature of the divine body, too delicate for our sense to perceive, are in the internunia (a word not used by the poet), or hid inter spaces between the worlds. They touch nothing that is tangible for us, since that cannot touch which cannot admit of being touched in turn (v. 148-152). There is a significant reference (iii. 819-823) to the conditions under which alone immortality is possible, namely the absence of destructive forces or their being kept at bay, or being held in equilibrium by conserving forces (see v. 1075 ff.). At any rate, by proclaiming the true doctrine, Epicurus goes on to explain how the false arose. The belief in gods arose from the images seen by the mind in waking hours and still more in sleep. The shapes thus become naturalized to the sight by force of habit. As these shapes were ever present, and as their sight appeared so great, men deemed them to be immortal and blessed, and placed their abodes in the heavens because the unexplained and the wonderous of the world. Thus all things were handed over to the gods, and the course of nature was supposed to be governed by their nod. This fatal error sprang from the instinctive fear which associates with divine vengeance the calamity and ruin brought by storms and earthquakes (v. 1161-1240). Epicurus more than once exults at the overthrow of this delusion (i. 62-69, ii. 1099-1104, iii. 14-30). On the other hand, it is obvious that he has gone too far in his concessions to anthropomorphism. The criticism which he successfully applies to the incongruous creations of legend, centaurs, and chimæras would, on his own grounds, be just as valid against the blessed immortals. The superhuman beings whom him from whom the Socratic divinities purified, refined, and rationalized.

9. Ethics.—In a poem professedly dealing with physics we hardly expect to find a systematic treatment of ethics, yet there are enough short notices or digressions in which the subject appears (ii. 16-61, 172 ff., iii. 14-16, 459 ff., 975-1029, v. 9-51, vi. 9-41) to establish the author's complete agreement with the teaching of Epicurus. The end is pleasure—in other words, to secure that pain held aloof from the body and that the mind, exempt from cares and fears, feel its own true joy (ii. 16-19). Whoever has been born must want to continue in life so long as fond pleasure shall keep him (v. 177 f.). Gratification of desires which, though natural, are not necessary affords no true happiness. The tortures of conscience make a hell upon earth. Tantalus and Sisyphus and the like are types of men tormented in this life by various lusts and passions. The range of remorse are emphasized here as well as in the Iliad (165-181). Moreover, the wrong-doer has hitherto eluded gods and men, he cannot keep his secret for ever (v. 1156 f.). Epicurus is exalted as the saviour who, seeing the miserable condition of mankind, partly from ignorance, and partly from mistaken fear of the gods and of death, proclaimed those truths which
alone can bring salvation; that death is nothing to us, that the gods do not interfere with the course of natural events, that there is no divine or temporary concourse of atoms, and man himself a still more ephemeral combination in that world. These are the doctrines which, he thinks, will redeem mankind. But, while master and disciple and apologist are agreed in making the acceptance of these propositions, there is a marked difference in the spirit of their teaching. Starting with the proposition 'There is no joy but calm,' Epicurus deduces his ideal of a simple, almost ascetic life of intellectual and spiritual enlightenment, a life of the most congenial friends. By a life thus regulated according to circumstances he sought to attain the maximum of pleasure. Lucretius, too, advocates an austere hedonism; the pleasure which is the universal law and condition of existence is not indulgence, but peace and a pure heart (v. 18). From all who would live worthily he demands fortitude, renunciation, and answering loyalty to truth. No ancient writer was more profoundly impressed with the mystery of existence, and the ills that death is heir to. He assailed the foundations of belief with fanatical zeal which rises, one might almost say, to the intensity of religion. Under this aspect, his earnestness has its counterpart in Lucretianism in ancient thought.

LULLISTS.—Among the figures of the 13th cent. none is more picturesque, none more representative of the great forces, spiritual and mental, of the age than Raymond Lull, 'The Illuminated Doctor,' logician, philosopher, scientist, poet, missionary, and martyr. He was born at Palma, in Majorca, in 1215, when the first spiritual enthusiasm against the heresies was dying away. During his boyhood the spiritual Franciscans were making desperate, but vain, efforts to maintain the simplicity of the original vow of poverty which had been the joy of their founder. Human nature was, however, immutable, so that an Order should possess property. Another deviation from the singleness of mind of St. Francis was, happily, inevitable also. During his life a brother was not allowed to possess a book, and learning scattered as the wind. Lull's inspiration cannot be permanently content without the writing of the truths of the universe.

Thus we find in the lives of Roger Bacon and Raymond Lull, members of Franciscan Orders of the next generation, an enthusiasm for learning linked with an enthusiasm for Christ as intense as that of Brother Giles and Sister Clare. These are the figures who were the forerunners of the epochal achievements of the great Palace of Science, blackened by the suspicion of the narrow-minded orthodox, strenuously maintaining the nobility of the offering of science, knowledge, and thought at the foot of the Cross, and who were forced to believe that Christ who stood at the parting of the ways of Scholasticism, still recognizing and using its words and its processes, but adding the facts and inferences of a knowing science of Nature. Their lives were enlarged by the electric Lullism of the command: 'Thus shalt love the Lord thy God with all thy heart.'

Lull was seneschal of the household of James II. of Majorca, and till the age of thirty he lived the ordinary life of a libertine noble. Suddenly the seclusion was aroused, and in his chamber, as he was writing love poems, he beheld the vision of Christ on the Cross, and heard Him say, 'Oh Raymond, follow me henceforth.' Then came the agony of conviction and the determination to forsake the world and follow Christ entirely. Two years at once filled his life—to gain martyrdom, and to convert to Christianity the Saracens around. He would use no carnal weapons; he would go to the Holy Father and charm the kind of his desire to devolve upon them to endow colleges for the learning of the languages of the unbelievers. For himself he would write a book so irrefragable as to ensure the conversion of Saracen, Jew, and heretic to the Catholic faith. A sermon on the remuneration of St. Francis of Asissi completed his resolution; he left wife and children with sufficient for the necessities of life, sold all else, and went forth in coastwise attire to the new life. He kept a cell for himself in the convent of Mount Rambal. In the thirty years he sought to fit himself for his work. By the advice of his friends he chose this solitary study in preference to the University of Paris, the centre of the intellectual life of Europe. He learned Arabic from a Saracen whom he bought as a slave, and narrowly escaped being murdered when this inured Muslim realized the object of his study. The crown of his long preparation came when eight days of profound meditation were succeeded by an illumination which filled his whole being with a direct divine inspiration. Under this impulse he wrote the Ars Magna, the first of the great works associated with his name. By its methods he felt sure that the truths of Christianity could be so unerringly and powerfully stated as to make them impossible to refuse acceptance of them. Nothing is more striking in the subsequent history of the philosopher and his followers than the absolute conviction, which they all shared, of the direct divine origin of the mode of reasoning here initiated. The assertion is crystallized in the title 'The Illuminated Doctor' by which he is always known among succeeding generations of Lullists. The woodcuts adorning the great folios in which Salzinger has issued his work allude to the divine beam of light shining down upon him. Enthusiastic disciples confidently appeal to the logical power of the processes as more than possible to unaided human intellect. The unbiased judgment of our own day fails to discover the same immense value or power.

It may be briefly characterized as a neo-logical method by which all possible subjects may be subjected to all manner of questions, and thus a complete category of statements may be obtained. The apparatus in its most original form comprises concentric circles divided into compartments denoted by letters of the alphabet. The circle system of concentric circles divided into compartments denoted by letters of the alphabet is subdivided into three different circles of different kinds, and the names of the three lead to special kinds of conclusions. Thus we have in one nine subjects: God, Angel, Heaven, Man, the Imaginative, the Sensible, the Negative, the Elementary, the Instrumental. In another we have nine predicates: Goodness, Magnitude, Duration, Power, Wisdom, Will, Virtue, Truth, Glory. In another we
have nine questions? Whether? What? Whence? Who? How large? Of what kind? Where? Where? How? One of these circles is fixed, the others rotate, and we thus obtain a complete series of configurations, first of lines and then of statements. The precise form of the mechanism varies; in some works we have triangles of various colours intersecting each other; in others we have a tree with roots, trunks, branches, twigs, each labelled with some term contriving from the universal apparatus. In every case the general idea is the coiling of every possible statement on all subjects. The method, invented by the philosopher's Christian apologist, was speedily found to be as applicable to other subjects, and among the numerous works assigned to Lull are many in which the Aris is applied to Medicin, Chemistry, Mathematics, Physics, and Astronomy.

Lull commenced at once to use his new weapon with all the enthusiasm of the direct emissary of God. He gave a series of lectures on its application at the Universities of Montpellier and Paris and in the monasteries of France, Italy, and Spain. The failure of his persuasions to induce monarchs or pontiffs to develop fresh enterprise for the conversion of the Saracen led Lull himself, at the age of fifty-six, to land as a missionary in Tunis, there confidently expecting to win all to Christianity through his reasoning. Imprisonment and expulsion did not check his zeal; we find him ardently continuing his work wherever there were Muslims or heretics. His own islands, Cyprus, and Armenia were early claimed as fields of death and, though it did not prevent his returning twice to Africa, the assertions of his much wider travel need further proof.

Lull's scheme for colleges for the study of mathematics, physics, and rhetoric found its foundation by his own king in 1276, of a college for Arabic at Miramar in Majorca, but it was not until the Council of Vienne, in 1311, that papal authority was given for schools for Hebrew, Greek, Arabic, and Chaldee in the Roman Curia, Oxford, Bologna, Salamanca, and so on, and thus to realize that in Lull's enthusiasm we have the germ of the Hebrew professorships at our English Universities, as well as the broader ideals of missionary education which he and Roger Bacon alike impressed upon the Church. The same instinct which sent Lull to talk to Saracens in Arable led him to overlook the limits of tradition and to write many of his works, both devotional and logical, in his native Catalan. He was a pioneer in that movement which, by entrusting to vernacular languages thoughts hitherto imprisoned in the Latin of the learned, gave a new dignity to national speech and a new impetus to the development of the common and popular. The great religious romance Blanquerna was written in Catalan; his ecstatic hymn entitled Hours of the Virgin, with many others of his works, in Catalan alone.

Round Raymond Lull there has gathered a mystic halo of romance and unorthodoxy through his incursions into the world of alchemy. His Franciscan supporters are eager to free him from this charge, which has repeatedly brought him within danger of the censures of the Church. It is stated to have been learnt from Arnauld of Villeneuve the secret of the philosopher's stone. There is a tradition, exceedingly doubtful but not entirely discreditied, of a visit to England to make gold for Edward 3r in return for his help against the Moors. Certain it is that a number of works on alchemy are assigned to his name which were obviously not written by him. It is proved that on Lull has been fixed the discredit of certain works on magic by the school of his immediate followers, a ragged crowd of converted Jews, which were condemned by Pope Gregory xi. But we must remember that alchemy was the beginning of natural science, that the early alchemists were religious men who commenced their works in the name of the Trinity, and that the man who believed that he had discovered a universal transmuter of the elements of thought might not unnaturally aim at a universal transmuter of the elements of reality, and that he did not expect impossibilities from it. We can well believe that he wrote as well as thought on the subject. Indeed, Roger Bacon (de Speculandis Scientiis, bk. ii.) refers to the fact of such writing.

The last period of Lull's life revealed a love within the Church against which he fought unceasingly. Round the name of Averroes (Ibn Rushd; see AVERROES, AVERROISM), the Arab interpreter of Aristotl, had been gathering the thoughts and theories of Muslim, Jewish, and Scholastic successors, diverging gradually into the banishment of the Deity beyond the reach of prayer or care for the individual, the denial of individual immortality, and ultimately even asserting the identity of the soul of all men. Averroism thus, while using the name of a single devout Muslim, was really the composite deposit of a century or more of less sceptical thought; through Maimonides (q.e.) and Michael Scot it gained the ear of section of Scholasticism and won over many valiant men. In the University of Paris, the intellectual focus of the world, in attempting to save its orthodoxy it asserted that what might be true in faith might also be false in philosophy. This was the special heresy against which Lull and his followers, the authorities at Paris eagerly sought his assistance in combating the heresy which threatened to capture the whole University. The contest was also keen that Lull himself was obliged repeatedly to obtain certificates of orthodoxy, and thus to realize that in Lull's enthusiasm we have the germ of the Hebrew professorships at our English Universities, as well as the broader ideals of missionary education which he and Roger Bacon alike impressed upon the Church. The same instinct which sent Lull to talk to Saracens in Arable led him to overlook the limits of tradition and to write many of his works, both devotional and logical, in his native Catalan. He was a pioneer in that movement which, by entrusting to vernacular languages thoughts hitherto imprisoned in the Latin of the learned, gave a new dignity to national speech and a new impetus to the development of the common and popular. The great religious romance Blanquerna was written in Catalan; his ecstatic hymn entitled Hours of the Virgin, with many others of his works, in Catalan alone.

Round Raymond Lull there has gathered a mystic halo of romance and unorthodoxy through his incursions into the world of alchemy. His Franciscan supporters are eager to free him from this charge, which has repeatedly brought him within danger of the censures of the Church. It is stated to have been learnt from Arnauld of Villeneuve the secret of the philosopher's stone. There is a tradition, exceedingly doubtful but not entirely discreditied, of a visit to England to make gold for Edward 3r in return for his help against the Moors. Certain it is that a number of works on alchemy are assigned to his name which were obviously not written by him. It is proved that on Lull has been fixed the discredit of certain works on magic by the school of his immediate followers, a ragged crowd of converted Jews, which were condemned by Pope Gregory xi. But we must remember that alchemy was the beginning of natural science, that the early alchemists were religious men who commenced their works in the name of the Trinity, and that the man who believed that he had discovered a universal transmuter of the elements of thought might not unnaturally aim at a universal transmuter of the elements of reality, and that he did not expect impossibilities from it. We can well believe that he wrote as well as thought on the subject. Indeed, Roger Bacon (de Speculandis Scientiis, bk. ii.) refers to the fact of such writing.

The last period of Lull's life revealed a love within the Church against which he fought unceasingly. Round the name of Averroes (Ibn Rushd; see AVERROES, AVERROISM), the Arab interpreter of Aristotl, had been gathering the thoughts and theories of Muslim, Jewish, and Scholastic successors, diverging gradually into the banishment of the Deity beyond the reach of prayer or care for the individual, the denial of individual immortality, and ultimately even asserting the identity of the soul of all men. Averroism thus, while using the name of a single devout Muslim, was really the composite deposit of a century or more of less sceptical thought; through Maimonides (q.e.) and Michael Scot it gained the ear of section of Scholasticism and won over many valiant men. In the University of Paris, the intellectual focus of the world, in attempting to save its orthodoxy it asserted that what might be true in faith might also be false in philosophy. This was the special heresy against which Lull and his followers, the authorities at Paris eagerly sought his assistance in combating the heresy which threatened to capture the whole University. The contest was also keen that Lull himself was obliged repeatedly to obtain certificates of orthodoxy, and thus to realize that in Lull's enthusiasm we have the germ of the Hebrew professorships at our English Universities, as well as the broader ideals of missionary education which he and Roger Bacon alike impressed upon the Church. The same instinct which sent Lull to talk to Saracens in Arable led him to overlook the limits of tradition and to write many of his works, both devotional and logical, in his native Catalan. He was a pioneer in that movement which, by entrusting to vernacular languages thoughts hitherto imprisoned in the Latin of the learned, gave a new dignity to national speech and a new impetus to the development of the common and popular. The great religious romance Blanquerna was written in Catalan; his ecstatic hymn entitled Hours of the Virgin, with many others of his works, in Catalan alone.

When nearly eighty years of age, Lull set off on another missionary journey to Africa; his fervent exhortation roused the fury of the Muslim mob, and he was stoned to death at Bugia on June 30, 1315, thus gaining the coveted crown of martyrdom. The body was carried to Palma and was there interred amidst the hails of the populace. The immense mental activity of Lull left a vast number of works, many of which have never been printed. Salzinger in his great (incomplete) edition (1721-48) gives a list of 265 treatises as undoubtedly, besides 93 others more or less probably assigned to his name. Perroquet (1697) names 488, and states that several authors of weight assign no fewer than 4000 to his pen. A large number of enthusiastic pupils gathered from the Ketzer Lulls of Paris and of the Franciscan monasteries, continued and applied his methods, and in many places Lullist schools grew up side by side with the older-established Thomists and Scotists. The aim of the Lulls was simply that of seeking the proof of doctrines of the faith, to fight Averroism, and to fit men for missionary work. Enthusiasm for his methods was the special characteristic of the followers of the great enthusiast. This enthusiasm was finally met by a bitter opposition. It is almost certain that Lull had been a member of the third Order of St. Francis, Rivalry between the great religious Orders, however, belittled his growing fame. The Dominican Fray Ascutor (in Aragon (1529-30), initiated the campaign by an accusation of
LUMBINI

heresy in 500 passages taken from Lull's works. Historians assert that Eynemie was a disbeliever in the doctrine of the Immaculate Conception, which was the special enthusiasm of the University of Paris and was warmly advocated by Lullists, and that this was the seed plot of Eynemie's opposition to the Inquisition. The Inquisition asserted that 293 Lullist errors had been condemned by Gregory XI. in 1376. This bull has never been found, though the papal archives have again and again been searched, and N. de Pac (1519) and L. Wadding (1657), the analysts of the Franciscans, have made out their case that Eynemie invented it, or forged it, or confused it deliberately or accidentally with the condemnation of the works of Raymond of Tarrega, already referred to (most conveniently accessible in An. June, vii. 618-623). Eynemie was degraded and subsequently sent by King John of Aragon into exile; Lullism was declared sane and wholesome in 1386 by the Inquisitor Emergundus at Barcelona.

In 1493 Ferdinand the Catholic founded the University of Majorca, with a 'studium generale' for the study of Lull's method. Naturally it is the native island of the founder that has been most devoted to the propagation of his philosophy and has longed for the rising son. But its fortunes have varied elsewhere. In the University of Paris at times students were officially warned against its study, but about the year 1515 it attained great glory there under the inspiring teaching of Richard de Lavagna. Its success was again and again assailed as unorthodox, and as earnestly defended. A favourable sentence was obtained from the Council of Trent and from the Inquisition at Madrid. But its fees procured the financial work of Lull's school. They were finally removed from the Index in 1594. The hold of Lullism on the University of Palma continued into the 18th century. In 1635 Urban VIII. ordered that its scholars during their last two years of study should daily hear lectures on the Ars. In 1673 Maria Anna of Austria issued an edict assigning precedence to Lullists even over scholars senior to themselves. Objections, insufficient to prevent Lull's books from being considered forbidden, have obstructed his canonization, though the process reconceiving the miracles at his tomb was presented by the bishop of Majorca in 1612. The principal charges were due to unguarded utterances that seem to ignore the necessity of a prior subject and to bring into play within the powers of human reason. Others considered the processes of the Ars mere word-working. Later apologists like Perrouet confess that scholastics made it their boast that by this method they could speak on any subject, to any length, at a moment's notice, and Perrouet laments the undeserved obloquy which such charlatans have brought on their master (Fie, p. 118 f.). The specimens given of the method explain why it has now passed away. Perrouet and Wadding are expounded by Perrouet as samples. We find a careful analysis of the subjects and predicators of each verse, and an exhaustive statement of their combination - the whole producing a somewhat commonplace expository commentary. Lull has become the national saint of the Balearic Isles. Here the enthusiasm never died, but the philosophic method gradually merged itself in an enthusiasm for the memory of the saint and a national pride in collecting and publishing the imaginative works on which Lull's fame will finally rest. The Lullists of to-day are a number of patriotic and cultured men who are proud of their national literature and its great exponent.

LUMBINI.—A pleasance, or small wood, mentioned in Pali records as the birthplace of the Buddha. It is now occupied by the shrine of Rummimde in Nepal, approximately in 23° 20' E. long., 27° 29' N. lat., about four miles north of the frontier between the British possessions and the Nepalese Tarai, and half a mile west of the river Tiliar. The references to it so far traced in the N. Indian Pali books are only three. One is in an old ballad, containing the prophecy of the aged Asita about the infant Buddha, this Asita story being the Buddhist counterpart of the Christian story of Simeon. The ballad is certainly one of the very oldest extant Buddhist documents, and must be earlier than the 4th century B.C. It is included in the anthology called the Sutta Nipata, and it states at verse 683 that the child was born in the village of Lumbini (Lumbinycye gamé). The other two references are in the Katha Vatthu, composed in the 3rd century B.C., by Tissan son of Mogali. In that work (ed. A. C. Taylor for PTS, London, 1894-97, pp. 97 and 559) it is stated that 'the Exalted One' was born at Lumbini (Lumbinitth jato).

Our next information is the inscription found on a pillar in Dec. 1806. The pillar had been known for years to be standing at the foot of the small hill on which the tiny shrine is situated, but the fact that the graffiti on the exposed part of it were medieval and unimportant, combined with the difficulties resulting from its being in foreign territory, caused it to be neglected until 1896. When it was then uncovered, the top of an inscription was discovered three feet beneath the soil. The inscription is in a dialect which the present writer would call Kosali—a dialect so nearly allied to the literary Pali of the canon that other scholars prefer to call it Pali. The translation is as follows:—

'the beloved of the inhabitants of King Prasada (that is, Aodha), who have come in person and paid reverence; and to celebrate the fact that the Buddha, the Sakyas sage, was born here, has laid a stone horse (f) made and put up on a stone pillar; and because the Honourable One was born here has resented the tax of one-eighth on Lumbini village (that is, parish).'

There are slight differences in the translations by various other scholars, but not as to the double insistence on the fact that the Buddha was born at the spot where the pillar was erected. The letters are beautifully clear, each being nearly an inch in height. When they are examined by a copy of them in 1900, though they had then been three years exposed to the light, they seemed almost as if freshly cut. In the dim light of the cell above, containing the shrine, can be discerned a base-relief representing the birth-scene. But the Brahman who claims the right to the petty income arising from the pence of the peasantries refuses any proper examination of it. So far as a cursory inspection permits of a decision, it seems to be much later than the temple poems.

A legend in the Divyapadeśa² purports to give

1 See V. A. Smith, in JRAIS, 1902, p. 143.
the conversation between Aśoka and his guide Upagupta, as he ascended the great northern hill. This version of the story is not mentioned in the inscription. Perhaps the tradition that Upagupta, very possibly another name of the author of the Kāthaka Patthāṇa, accompanied him is historical. The work in question is in Buddhist Sanskrit; and, therefore, Upagupta is undated, the text being five centuries later than Aśoka, who spoke, of course, the language of his inscription, and would not have understood the words here put into his mouth.

Still later are certain references in the Pali commentaries written at Kāñchipuram or Amarāvati. In order to explain how the birth took place in a grove, they say that the mother, on the way to be delivered among her own people, was taken with the pains of delivery halfway between Kapilavatthu, her husband's home, and Devadaha, her father's home. This is quite probable; but, on the other hand, it may have been suggested by the meagre facts recorded in the ancient books. Whether the Buddhist Sanskrit writers nor the Pāli commentators could have understood the long-haried inscription, even had they known of its existence.

It is very interesting to see that this spot, so deeply revered by all Buddhists, should have retained its original name through so many centuries of neglect and desertion. Watters says that 'according to some accounts' it had been named Lumbini after a great Koliyan lady who had dedicated the spot to the Buddha. The name is quite probable. There are other instances of a similar kind; but, unfortunately, Watters gives neither name nor date of any of the Chinese books to which he refers. We know that both Sīkiyas and Koliyas found difficulty in pronouncing the trilled r. Perhaps this was true of all Kosala. The inscription at Lumbini, for instance, has lōja for re; and Lumbini itself is often written in Pāli MSS with a dotted L, which, may represent an untrilled r. Thus Kumunidī stands for Lumbini Devī, the goddess of Lumbini. But that goddess was not really a goddess at all, nor even Lumbini, but only the mother of the Buddha. We have no evidence as to when or how the transformation took place. And in face of the stubborn opposition of the Nepālese Government, and of the Brahman who has taken possession of the shrine, there is very little hope of any further excavation at the site to throw light on this question, or to explain the diversity of views of Chinese writers as to what they saw at the spot.  

LITERATURE.—See the sources cited in the article, and cf. also SEE RÁJAYÁTÍ. T. W. Rhys Davids.

LUNACY.—See INSANITY.

LUSHAI.—The Lushais are a composite community, consisting of those groups which were absorbed and reduced to more or less complete unity by the skill and sagacity of the Thangurs, chiefs of the Lushai clan in the last century. They practise jhumming, a form of cultivation which involves constant moves from one site to another. In this fashion they live a roving life for some at least of their peculiar characteristics.

Each village is a separate State ruled by its own chief, who usually belongs to the Sainu clan, whose talent for government has made them the masters of most of the area now known as the Lushai Hills. The sons, as they reached maturity, were provided with a wife and followers, and were sent forth to found new villages. The youngest son was the heir apparent. Public assembly was held in the village administration, and each village possesses, in addition to the council of elders, officers to settle where the jhumis are to be made, a village crier, a blacksmith, and a wise man, or pathian. But the Lushai village consists of members of different clans and tribes brought under the unifying influence of their subordination to the Thangur chiefs. Their religion, therefore, exhibits traces of a mixed origin; there are features in it which recall some of the more notable characteristics of the systems of their congeners, east as well as in the more distant north, all of whom speak cognate dialects.

The Creator is a spirit called Pathian, beneficent, but with little concern in the affairs of men. Subordinate to Pathian is a spirit Khunavang, whose appearance to men causes illness. He is also spoken of as a personal genius—an idea which is still further elaborated in the belief in the miveguntu, the watchers of men. Each man has two souls, thāran, the one wise and the other foolish. One miveguntu is good and the other evil. The khaivu are demons inhabiting water and land, are all bad, and are the causes of bad results. The bhāsi are wild animals, whom they control; the spirits of the dead need constant propitiation and receive offerings of firstfruits. Each clan has a spirit, or clan deity, sakhia, for whom a special chant is addressed by the pathian (who must be a member of the clan), and identity of chants and ritual is a sure proof of membership of the clan.

The rites performed for the purpose of address to some definite spirit may be separated from the rites which seem to be efficacious without the intervention or mediacy of any definite spiritual being. The sakhia chants recorded by Shakespeare are accompanied by sacrifices of a sow. The sacrifices to khaivu, supposed to frequent houses and villages, are various, now a pig, now a cock, and sometimes a goat being offered. Three sacrifices should be performed after marriage. Dreams afford an indication of the necessity for the performance of one of these rites. Temporary talismans, closely akin to those so common in the Naga area, are part of the necessary liturgy. The ritual for appeasing the khaivu of the woods and waters is not dissimilar, but some of the most efficacious rites are the patent of certain clans, they being brought on their gates on the occasion of an epidemic of cholera, so as to exclude all visitors from the infected area, and frighten away the demon causing the sickness by erecting a rough gate across the road leading to the distressed villages, which they man with straw figures of armed men; they suspend from the gateway the portions of the dog sacrificed in these emergencies, which are reserved for the demon—as a rule, the extremities of the heart, liver, and entrails. Sangum is the birth-rite addressed to khaivu, while others are seemingly of almost automatic efficacy. In the second category of rites are those which are performed to bring luck to a straying soul (for more than one of their souls) to produce children, to afford protection against sickness, to secure good hunting and to ascertain the luck of the intended chase, to benefit the crops, to obtain power over the spirits of the field. It has been seen that the whole of this work is done with the idea of securing freedom from the ghost of the slaughtered enemy. The series of five feasts which affect the future life in important ways are religious rites of a specially interesting nature. Most of the rites are accompanied by a regulation requiring that the social group concerned, be it a household or a whole village, shall abstain from all but the most
necessary work, and shall not leave the prescribed area. The blacksmith's forge possesses sanctity, and is a place where persons who have accidentally come into contact with any noxious influence may take sanctuary and be purified. The priesthood consists of the pusthörm and the members of special class. Any one can acquire by purchase the hla songs or charms which form the stock-in-trade of the pusthörm, whose success must depend largely on luck and on short memories of his failures.

The first man, Papiawla, or the ancestor Pawla, possibly in revenge for his death, stands armed with bow and pellets at the entrance to the spirit world. Except the thänghýxhauth, i.e. those who have performed the series of live rites (fasts, as they are sometimes called) in this world, none can escape his aim. Yet he spares still-born children or those who die young, for he needs their plea that, had they lived, they too might have performed the due ritual and so been free to enter with the thänghýxhauth into Pielrain, where all is pleasant. Those whom Pawla wounds go to Mitti kha. Their wounds swell painfully for three years, and for a like period the scar remains. Then after they die again, are born as butterflies, and then die again, to reappear as dew on the ground; as dew they enter the loins of a man, and are born as human children. In addition to the personal advantages of the thänghýxhauth rites, the wife of a common man is a special privilege of his wife. with his wife, there is no return to reincarnation, and he may wear certain special clothes, build a verandah at the back of his house, enjoy a window in his house, and put an additional shelf near his bed.

The Loconic people to-day are slothful, and believe firmly in witchcraft, nor very long ago, to test the efficacy of the belief that the victim of witchcraft would surely recover if he could but taste the liver of the wizard, they killed three whole families who wore thought to be bewitching an aged chieftainess, cut the livers of the wizards out, and carried them back, only to find that the old lady had died in their absence. Naturally le koon xamel is an expert at the black art, but their neighbours return the compliment to them in full.

Certain persons, especially women, can put themselves into a trance (zuri) and commune with Khunavang, from whom they acquire information as to the future sacrifice in the family. The process of divination employed on these occasions requires the use of an egg and a shallow basket of rice, in which appears (the footprint of the animal to be sacrificed). Possession by the spirit of a wild animal (Blaverung) is contagious and hereditary, and takes the form of passing from the hostess to another woman, who speaks with the voice of the original hostess. The belief of the men of power to assume the form of a tiger is common.

T. C. HODSON.

LUSTRATION.—See PURIFICATION.

LUTHER. —I. Life.—The career of Martin Luther naturally divides into three periods—the first, of preparation (1483-1517); the second, of protest (1517-21); the third, of construction (1521-45).

He was born at Eisleben in Saxony on 10th Nov. 1483. His birthplace was only the temporary home of his parents. They had come thither from Moeln, the real home of the family, several years before the birth of Martin, an elder son, had share in the paternal estate, and was, therefore, in strained circumstances, until, by his daily labour in the copper mines, and by economy and thrift, he became proprietor of mines and furnaces, and an influential member of the community. Both as a child in his home and in his early school days, Luther struggled with poverty meant. As he advanced, his father was at last able to provide him with the means for a liberal education. Both his father, John Luther, and his mother, Margaretha Ziegler of Eisenach, were deeply religious, and subjected him to a discipline, continued in the schools to which he was first sent, that was legalistic rather than evangelical. His childhood was spent at Mansfield. His elementary training was received chiefly at Eisenach, through his religious relatives, and his University course at Erfurt, an institution which, at his entrance in 1501, was over 100 years old, and the most numerous attended of the German Universities. Intended by his father for the legal profession, he devoted his first years at Erfurt to classical literature and philosophy. While he read with absorbing interest the Latin classics, and derived from them the benefit of a wider horizon and a deeper acquaintance with human nature, it is a great exaggeration to affirm that students, who were the subject of some recent satire, who had done, that they made him more of a humanist than a theologian; for he read them with a critical eye, and reacted against the excessive devotion to the purely formal that dominated the humanists of his time. His teachers in philosophy were many rationalists, who introduced him to Occam, Bied, and Gerson, and instilled a critical disposition towards the current scholasticism. Attaining A.B. in 1502, and A.M. in 1505, he reluctantly began the study of Law as to which he had little taste. His dissatisfaction with the calling into which his father was forcing him was intensified by spiritual conflicts, brought to a crisis by the sudden death of a friend by his side—whether by a bolt of lightning or by assassination can scarcely be determined—and by his own narrow escape in the storm that is said to have destroyed his friend. In obedience to a vow made in the moment of peril, he turned his back upon the world two weeks later, and entered the cloister of the Augustinian hermits at Erfurt (17th July 1505).

Purity of life, deep moral earnestness, devotion to the study of the Holy Scriptures, and ability as preachers distinguished the Saxan Augustinian; but it is incorrect to infer from their name any special approach to the austere and ascetic aspect of sin and grace. With all the intensity of his nature the young novice devoted himself to the scrupulous observance of every detail of the requirements of the Order, and rose rapidly in the esteem of his bretheren and superiors. He found calling spiritual advisers in an aged monk whose name has not been preserved, and especially in John Staufitz, his Vicar General. Some of his modern critics accuse him of morbid conscientiousness and useless scrupulosity in his conceptions of truth and duty. The rules of the Order came to him with all the claims of divine commands, which he could not decline to observe in all their strictness without, in his belief, sinning against God. Nor could he be satisfied with anything less than certainty with respect to his relations to God. It matters little that, as has been recently urged, in some of his earlier discourses, composed while he was still a monk, as, e.g., in the lately discovered lectures on the Book of Romans, some of his statements can be found foreshadowing his future position. For it is no uncommon circumstance for writers advancing towards a conclusion, amid many vacillations, not fully to grasp the meaning of their own words. In 1527 he was conducted to the
priesthood, and his father, with a large remite of prayers for his benefit, in the celebration of the Mass; but that, even then, the breach between father and son was not completely healed appeared at the meal which followed, when the former in his blunt way reminded the clergy that as they had granted without any dispensation could be given, and that what they esteemed a appeal from God might be nothing more than a delusion of Satan. Selected by Staupitz in Nov. 1508 as instructor in Philosophy in the University of Wittenberg, founded only six years earlier, Luther was delighted, when, four months later, as a Bachelor of Theology, it was his privi-lege to lecture also on the Holy Scriptures. Recalled the succeeding autumn to Erfurt, he was assigned the task of lecturing on the Sentences of Peter Lombard. Two years later (1511) he was sent to Rome to represent Staupitz in regard to certain business affairs of the Order. This visit was of the highest moment to Luther's subsequent career. His most recent Roman Catholic biographer, Grisar, candidly says that the Rome which he visited was the Rome of the then ruling Julius II. and his predecessor, Alexander VI. — Rome glorified by art, but the deeply degenerate fumes of the latter Renaissance. He was grieved by the many abuses forced on his attention; and, notwithstanding the credulity with which, as he afterwards acknowledged, he accepted much of what there he saw and heard, the name and authority which had upon him was greatly weakened. The story of his experience on Pilate's Staircase rests solely on the testimony published after his death by his son Paul. Rapid promotion followed, as a testamential record to the advancement which the new Doctor of Theology at the age of twenty-nine (1512), he accepted it as a special call “to explain the Scriptures to all the world,” and broke the traditional modes of instruction by his method of lecturing. Although he retains the “four-fold sense” of Scripture, he lays the chief stress upon finding allusions to Christ in all the prophecies of the OT, and interprets the Psalter by the gospel of the NT. From the OT books he turned to the NT, treating successively Romans, Galatians, and Hebrews. From the nominalists, Oecum and Gerson, he had turned to Augustine, and from Augustine more and more to Paul. The mystical writer, John Tauler, and the author of the Summa Theologiae, had a decided formative influence. His time, how- ever, was largely absorbed by administrative duties. In 1515 he was appointed Vicar, with the oversight of eleven monasteries. It was in the midst of these duties that he became involved in the controversy concerning indulgences (q.v.). The doctrine of indulgences was rooted in the denial of the completeness of the satisfaction for sins made by Christ. This satisfaction, it was thought, had value for original sin, and, beyond it, was made for actual sins only by commuting the penalty from one that was infinite, and beyond man’s power to afford, to one that is finite and within his limitations, either in this world or in that which is to come. Penitence, it was further taught, consisted of contrition, confession, and satisfaction, made by the penitent. Such satisfactions could be made only for such sins as were recognized by the sinner. But, as in this life the knowledge of many sins escapes the notice of even the most faithful, purgatory was provided, where satisfactions could be rendered for sins unrepented of at death. Relief from such satisfactions would be found, however, in the fund of the super- luous merits of the saints acquired by their works of supererogation—a fund upon which the Church, through its power, could grant indulgence by the payment of an equivalent. Hereofere, no more had been claimed for a letter of indulgence than an abbreviation of the pains of purgatory for those who had already departed. As the granting of a letter of indulgence brought revenue, abuses constantly grew. It was the most convenient and effective way of raising funds for Church purposes, with percentage allotted to the agents who collected them. The luxurious habits of Leo X. and especially the completion of St. Peter’s church at Rome rendered this expedient very serviceable at this time. Albrecht of Branden- burg, Archbishop and Margrave, had contracted to collect fees from this source, with the stipula- tion that he retain one half. He commissioned as one of his agents John Tetzel, a Dominican monk and emotional preacher, who, by his appeals to the terror of his hearts, created great popular commotion wherever he appeared, and urged them to purchase his wares. It would not be difficult to accumulate from Roman Catholic writers abundant course of the career of Tetzel. For more than a year Luther, entirely ignorant of the connexion which both Albrecht and the pope himself had with Tetzel’s transaction of the indulgence, was at a distance; but, as Tetzel drew nearer Wittenberg, the revelations made to Luther as a spiritual guide in the confessional compelled him first to appeal repeatedly to his ecclesiastical superiors, and, finally, when the answers were such as were to be expected and which would neither nullify the very root of the abuse, he is evidently still feeling his way, and has not entirely freed himself from some positions that were afterwards very forcibly repudiated. There were formal answers the next year by John Eck and Silvester Prierias, which called forth responses, with characteristic vigour, from Luther. There was a barren conference with Cardinal Cajetan at Augsburg (Sept. 1518), and another with Müllitz at Altenburg (Jan. 1519), followed by the Leipzig Disputation (beginning 23rd June), in which, after Eck and Carlstadt had argued for days, Luther’s debate with Eck began (4th July) on Church authority, significant because of the advance shown since then. The latter, he had previously declared, in the maintenance of the fallibility of Councils, and the censure of the Council of Constance for condemning Hus. The aid offered from the camps of humanism and Luther not only declined, but repelled, as he wished to make it clear that his protest rested upon entirely different grounds from theirs. The year 1520 is noted for three monumental treatises, two polemical, one irenic and constructive. Of the former, the first was his famous Appeal to the Christian Nobility, which might appropriately bear the title, ‘The Responsibility and Duty of the Laity in Spiritual Affairs,’ and the second, ‘The Babylonian Captivity,’ a scathing criticism of the sacramental system of the Roman Church. The latter, ‘The Liberty of the Christian Man,’ has evoked the following tribute from one of his most prominent modern critics:—

*One cannot help asking how the preachers who delighted to shatter as with a sledge-hammer all that had hitherto been held sacred and venerable, could also touch so tenderly the chord of divine love.* (Jansenius, Gesch. des deutschen Volkes, Eng. tr., iii. 239.)

The bull of excommunication promulgated by the pope on 156 June 1520 did not reach Witten-berg until four months later, and was formally turned by Luther before the student of the
University (10th Dec. 1520). On 16th and 17th April 1521 Luther appeared before the Emperor, Charles V., at the Diet of Worms, and declared that no reluctant political involvements enabled the Emperor to act promptly against him, and before such action could be taken the Elector of Saxony, as a precaution, had Luther arrested, while returning from the Diet, and carried to the Wartburg, overlooking Eisenach, where he remained in retirement until the following spring.

The isolation of those ten months afforded opportunity to review his work at a distance from the sources of which had received his spiritual nourishment: the close and uninterrupted study of Scripture, to form some plans for the future, and to begin his most important work, the translation of the Bible into German. The NT was translated from the second edition of the Greek Testament of Erasmus, within three months from the time when it was begun. The translation was brought with him when he returned to Wittenberg from his exile (6th March 1522), and appeared the succeeding September. The translation of the OT was a much more difficult undertaking, in which he had the assistance of Melanchthon, Aurogallus, Roerer, Foerster, and others, and was published in parts, until in 1532 the entire Bible appeared complete, followed by a second edition two years later.

On his return to Wittenberg the character of his labours was much changed. He had at once to meet with decision the radical reaction against Rome, which had resorted in some cases to revolutionary means to precipitate measures. Three days after his return he began a series of eight sermons, preaching daily, into which he threw all his energy to check their excesses and, against them, to define the principles for which he had been arrested. The reaction in districts no longer under the dominion of the old Church now became necessary, to prevent them from being misled by the confusion that had been introduced, and in order, by a re-organization, to build them upon solid evangelical foundations. Henceforth, while the polemic against Rome did not cease, and almost equal energy was directed against the opposite extreme, he was occupied largely with constructive work—the visitation of churches, the re-organization of schools, the revision of the liturgy, the writing of catechisms, the composition of hymns, and the publishing of popular sermons, not only for private edification, but especially as a means of making the people prepare for the re-organization of schools, and the revision of the liturgy, the writing of catechisms, the composition of hymns, and the publishing of popular sermons, not only for private edification, but especially for use in public worship. He also prepared preachers, besides his lectures to his choristers and incessant correspondence and conferences—until, from sheer exhaustion, he fell a victim to disease, while acting as a mediator between the counts of Mansfeld, and died in his native town of Eisleben (16th Feb. 1546).

Among the more important events of this later period of his life is his marriage with Catherine von Bora (1525); the Marburg colloquy with Zwingli (Oct. 1529); his second period of isolation, at the castle of Coburg, during the Diet of Augsburg (1530); his conferences in 1535 with representatives of the English Church, which had an important influence on the English Reformation and its literary monuments: the Wittenberg Concord of 1536 with Bucer and other representatives of the Reformed Church, and the Schmalkald Articles of 1537. Probably the point that has occasioned most heated discussion has been his relation to the Hymn of Philip of Hesse in 1510 (see W. W. Kellogg, 'Der Pfeiffersche Landsdichter Philipp von Hessen', Marburg, 1894).

2. Appreciation.—The greatness of Luther lies largely in the versatility of his gifts and the readiness with which he could call them into service. Intensity, concentration, earnestness, directness, and action are constantly present. Beneath his efforts there is always some important practical end. His school was too many-sided to allow of learning. He availed himself of the weapons of humanism, so far as he could use them, without being in any sense a humanist. He had lectured for years on philosophy, only to repudiate both the Greeks and the scholastics. His writings abounded in numerous historical allusions, without suggesting that he ever could be rated as a historical investigator. It is rather his experience as a Christian that is ever leading him the more deeply into the study of the Holy Scripture, to find therein the solution of the problems of human life.

As a professor he was neither a scientific exegete nor a systematic theologian. He cut loose from all scholastic formalism and methods. While he could not entirely escape from the influence of medievalism, he was in constant antagonism to its authority. Even in the class-room he was a great preacher, stimulating the thought and life of his pupils, instead of retailing stereotyped definitions. His lectures were almost entirely confined to particular books of the Bible, which he expounded with great freedom of manner.

As an author, he is in his form rather than his matter that he reflects the present moment. Eminently conservative and slow-moving when once he has reached it he writes in an intense glow of feeling; words crowd one upon the other with great rapidity of thought, and with wealth of illustration often of the most homely character. He never has difficulty in making his meaning intelligible. He can write with equal ease as a scholar or for the plainest of the people. He loves paradoxes. He concentrates his attention so intensely on the particular form of the subject before him as to make it impossible for him to make any possible correct inferences or misrepresentations. The whole, real Luther can be read only by placing side by side his declarations under varying circumstances, and against opponents that widely differ. Few writers, therefore, can be so readily perverted by partisans. His language is not infrequently rough, and his allusions such as were in keeping with the rude age in which he lived.

He was master of the art of translation. Not verbal exactness constituted the chief aim of the very shade of meaning of the original in the language of the simplest people of a later age, was his aim. His German Bible is a modern book, which at last fixed the form and became the standard of modern German. His by-published versions of Scripture, or free renderings of the old Latin hymns of the Church. His sermons are most frequently expositions of long passages of Scripture, and grow naturally out of the text, as applied to contemporary circumstances and conditions; and he generally reflect that with which his attention at the time was chiefly occupied. They have come to us mostly as taken down in shorthand by some of his hearers, and not in finished form from his own pen.

His contributions to the re-organization of the Church are embodied not only in documents that bear his name, but also in those of his co-laborers, Melanchthon, Bugenhagen, and others, who applied the principles which he laid down, and acted with his constant co-operation and advice. He was the advocate of liberal culture, the study of the Greek and Latin classics, the education of women, and free public libraries. So far was he from precipitate and revolutionary methods of reform that he proceeded with the greatest caution, and had been fixed and approved by long usage, until a break with the past was no longer avoidable, but, when the critical moment came, always acting with promptness and decision. His aim was not
even a restoration of Scriptural models, but the continuance of whatever life, worship, and organization was not contrary to Scripture. External union was approved only as it was the expression of a preceding inner unity. Agreement as to the faith of the gospel was the condition of all attempts at which he esteemed the very valuable only as the servant of faith; hence the faith was never to be adjusted to the supposed expediencies of union.

As a theologian, his chief effort, on the negative side, was to free theology from its bondage to philosophy, and to return to the simplicity of Scripture. He was dissatisfied with technical theological terms, because of their inadequacy, even when the elements of truth which they contained restrained him from abandoning them. He was not without a historical sense and a reverence for antiquity, provided that it was subjected to the tests of Holy Scripture. Scripture was not to be interpreted by the Fathers, but the Fathers were to be judged by their agreement or disagreement with Scripture. It was his especial privilege to have entered into the spirit of St. Paul as none before him, not even Augustine. Luther's theology is Pauline theology, in the language of modern times, and his fundamental end with the revelation of God in Jesus Christ. Christology is the key to all knowledge of the nature and attributes of God and the doctrine of the Trinity. Christ is the interpreter of Scripture. All doctrines are to be considered in relation to Christ. With Augustine, he taught the organic union of all men in Adam, and the organic union of all sins in original sin. Original sin is emphasized rather than the corrupt state resulting from the Fall than as the act itself which proceeds—a state of spiritual death, from which man can neither of himself escape nor contribute towards his deliverance. The Incarnation presupposes man's sin. God became man in order, by His sufferings and death, to provide redemption. In the personal union, as the result of incarnation, the integrity of both natures is preserved, the divine inseparably pervading and energizing the human; the human bringing the possibility of suffering, and the divine sustaining and imparting to the human its infinite efficacy. The humiliation (kenosis [g.r.]) is not of the divine nature, but of the divine person in His human nature. Hence humiliation is not synonymous with incarnation, but is only a determination of the human nature, glorified from the very first moment of its union with the divine. Redemption is made for all men and all sins, although not received and realized by all. The doctrine of predestination, he insists, should always be treated as a supplement to Christology, since what God has predetermined concerning our salvation from eternity. He has revealed in the gospel, and, therefore, the gospel itself exhibits the contents of God's eternal decree concerning salvation. The blessings of salvation, to be enjoyed, are appropriates by faith; but this faith is God's gift. Man cannot believe in Christ, or come to Him, by his own reason or strength. It is the office of the Holy Spirit alone to bring man to Christ and to man to call, enlighten, and regenerate. If man is saved, it is entirely by the work of the Holy Spirit in applying redemption through Christ; if he is lost, it is entirely by his own persistent resistance of the offers of divine grace. There are no degrees in justification; it is perfect and united. But whenever we add the faith that apprehends it, since the righteousness which it imparts is the perfect righteousness of Christ. If regarded as forgiveness, where the least sin is forgiven, all are forgiven, and where the least sin is unforgiven, none are forgiven. But justification is more even than forgiveness.
LUTHERANISM

Probably with only one exception in all history, no one has been so much praised or so bitterly and insulted as Martin Luther. The discussion of his life and deeds is constantly renewed with all the interest of almost contemporaneous occurrences. His voluminous works, many of them reaching us through the notes of others instead of from the pen of the author himself, form a long series of memories and commentaries of friends who jotted down from memory fragments of his conversations in the bosom of his family, his most confidential letters to his most intimate associates, humorous and satirical as well as serious, are all that can be possible for students of successive generations. Researches in archives heretofore closed and in libraries where they have lain unnoticed are bringing to light MSS of decided historical importance. Thus, in the last year of last century, his lectures on the Epistle to the Romans, for which scholars have long been looking, were found in so public a place as the Berlin Library, shortly after a student's notes of the same lectures had been discovered in the Vatican, and only by a little over ten years the discovery of lectures on the Psalms, belonging also to his formative period. New biographies from both friends and opponents, as well as from those who profess to apply with rigid impartiality the higher laws of history and criticism, succeed each other with a frequency that is remarkable when it is remembered that he has been dead for over three centuries and a half, showing clearly that the last word has not been said on many questions that are still awaiting an answer without a thorough study of his own presentations.

LITERATURE.—(a) of the more recent Roman Catholic critics of Luther and his work, the following may be mentioned: J. Janseen, Geschichte des deutschen Volkes von dem Ausgang des Mittelalters, 8 vols., Freiburg im Br., 1879-84, Eng. tr., 10 vols., London, 1890-1911; H. S. Denifle, Luther und Lutherwelt, 2 vols., Mains, 1908; H. Grisar, Luther, 3 vols., Freiburg im Br., 1911-12.

(c) The collected works of Luther have been comprised in several editions of varying excellence and completeness: the more Wittenberg (1529-55); the Jena (1626-58); the Altenburg (1851-64); the Leipzig (1739-49); J. W. Hay, the English edition; 1882-85, with 2 supplements; London, 1887-90. A thoroughly revised print: the Erlangen (beginning in 1850); the Weimar, the fullest and edited with greatest critical accuracy, under the patronage of the German Emperor. It was begun in 1858, and is still far from completion. For details concerning these editions see P.K.E., art. 'Luther.' A very convenient edition of select works, edited with critical care and with introductions, is that of G. Bornkalo, G. Kawerau, J. Kostin, M. Rade, and E. Schubert, in 14 vols. and a supplementary vol., 3rd ed., Berlin, 1900. Of greater scientific value is O. Clemen, Luther's Werke im Kritischen Gesamtband, 4 vols., Bonn, 1925-26.

(d) Of the list of biographies begins with that of Melanchthon, published the year after Luther's death, in the introduction to the second Latin volume of the Wittenberg edition of Luther's works. Mention may be made of the following: M. Meurer, Leipzig, 1843, 1857; J. Kostin, ed. G. Kawerau, Berlin, 1893; T. Koehler, Regensurg, 1911; M. Rade, Neustadt, 1897; H. Haasth, Berlin, 1904; and the English biographies of C. B. Smith, New York, 1898; H. Jacobs, New York, 1911; T. C. Lindsay, Edinburgh, 1908, and esp. in his History of the Reformation, 1, do. 1907; H. Preserved Smith, London, 1911; A. C. Mclaglen, do. 1911. A very condensed, but most excellent and suggestive, classification of biographers and other writers on Luther, according to schools, is the work of

1 Critically edited and published, with historical introductions, by J. Ficker, Luther's Vorlesungen über den Römerversuch, 2 vols., Leipzig, 1904.
or Church body. Where the doctrines of the Confessions are held and confessed, even though the Confessions themselves be not subscribed, or even known, by the Church, yet the doctrine taught by the Church is thereby established; while, on the other hand, where the contents of the Confessions are not cordially received, as a matter of faith, i.e., as derived from God's Word, and there is no subscription to such Confessions with qualifications expressed or understood, the test is not met. A real Confession of Faith is not so much a law as the joyful declaration of Christian freemen of the liberty that they have attained in Christ, and of the limits within which liberty is to be found and exercised (cf. art. CONFESSIONS, vol. iii. p. 845).

What are known historically as the Lutheran Confessions are not attempts to summarize the doctrines of the Holy Scriptures, as are various other Confessions in Christendom that are, in reality, systems of doctrine. The confessional development of Lutheranism has proceeded on the principle that Holy Scripture is its own interpreter, and needs no formal explanation by Church authority, unless the meaning of Scripture be involved in serious controversies that greatly agitate the Church and call for the careful guarding of the purity of the gospel from those who would pervert it. The Church, therefore, frequently involved that body of Scriptural interpretation and exposition which preceded the controversy and which preceded controversy points have been treated. Hence the Augsburg Confession closes with the words: 'If anything further be desired, we are ready, God willing, to present fuller information according to the Scriptures.'

The Lutheran Confessions have thus been determined by certain practical ends in view at several crises in the experience of the churches that call themselves Lutheran.

Of these Confessions, the two Catechisms (cf. art. CATECHISMS [Lutheran], vol. iii. p. 253 ff.), both written by Luther in 1529, are handbooks of elementary religious instruction rather than theological documents. The four theological Confessions, the Augsburg Confession, the Apology of the Augsburg Confession, the Schmalkald Articles, and the Formula of Concord. The first of these chronologically, as well as by general recognition, the Augsburg Confession, was prepared by the Diet of Augsburg in 1530. It is an ironic document, emphasizing the points of agreement with the Roman Church, in the hope that some way might yet be found to avoid a break in the Western Church. The term 'unaltered' is used to distinguish the Confession presented at Augsburg from unauthorized revisions made by Melanchthon personally in 1540 and 1542, in the interests of a nearer approach to the Reformed. The fact that the term 'unaltered' may not strictly belong to even the best text—since the original copies placed in the hands of the Emperor Charles V. have both been lost, and Melanchthon was compelled to reproduce the Confession from the very full notes of himself and his colleagues for publication the succeeding spring—does not justify the rejection of the distinction historically fixed between the two types of the Confession. The Apology of the Augsburg Confession (1531) is a ful and learned defence, also written by Melanchthon, and formed the basis for the Formula of Concord (1537), prepared by Luther, with a long Appendix by Melanchthon, mark a stage in the controversy with Rome when the differences were no longer reconcilable. The Formula of Concord (1577) gives a decision concerning the Lutheran Confessions had treated those which had assailed them from without (see, further, art. CONFESSIONS, § 13).

Differences between Luther and Melanchthon were intensified among their followers. These differences, due primarily to differences of temperament, training, and religious experience, caused no personal rupture between them. Melanchthon, gentle, timid, and sensitive, loved the retirement and occupations of the study, and shrank from conflict. Far more of a humanist than Luther, he was swept by the force of events, and, much to his regret, from classical studies into the current of theological discussions. He had passed through no such inner spiritual conflicts as faced Luther. Accordingly, he excelled in the sphere of the formal rather than of the material. No one could give such accurate and graceful literary expression to Luther's thoughts. But, when Luther's influence was removed, he was not only vacillating, but dominated by two principles, viz. a much higher regard than Luther for patristic authority, and a greater concern for the external peace and the impressiveness of the Church's government. He was not willing to make concessions which might impair Church politics, which compromised his position, and brought into prominence his great contrast with Luther in this particular. Notwithstanding his sharp arrangement of scholastic methods in the first edition of his Catechism, he had manifested a bent towards the principles which he had repudiated, placed undue importance upon the philosophy of Aristotle, and became the founder of Lutheran scholasticism. The perpetuation of these two types of thought has caused not only differences in regard to the attitude of their adherents to individual Confessions, but also a stricter or laxer standard of Confessional subscription. The Formula of Concord is a formal repudiation of Melanchthonism in its divergence from Luther.

Of the two principles of Protestantism, the formal and the material, it has often been observed that Lutheranism lays greater stress upon the material—'Justification by Faith alone'—than upon the Former Articles of the Augsburg Confession and the Holy Scriptures. While, in fact, the two are never separated, the Scriptures are regarded as the absolute norm of revealed truth rather than as a magazine or receptacle in which the truth is stored. For it is said that the gospel itself was proclaimed orally before it was committed to writing, and was no less the power of God unto salvation where thus preached, or where taught by those who had heard it from the first ear-witnesses, than when read on the printed page. Nor can the Scriptures be correctly apprehended except as in regeneration a new spiritual sense is imparted.

When even the most able and learned men upon earth read or hear the Gospel of the Son of God, and the promise of eternal salvation, they cannot, from their own powers, perceive, apprehend, understand or believe and regard it true, but the more diligence and earnestness they employ to comprehend with their reason those spiritual things, the less they understand or believe, and before they become acquainted with the care andadresse of the Holy Ghost, they regard this only as foolishness or fiction, 1 Cor. 2. 14 (Formula of Concord, pt. ii. ch. III § 9,Eng. tr., H. E.Jacobs, Book of Concord, p. 563).

The true interpretation of Scripture is to be found only as the relation of each part to Christ as the centre is correctly apprehended, and this is possible only by the regenerative process.

While protesting against all ecclesiastical authority that arrays itself against Holy Scripture, Lutheranism lays great stress upon the continuous witness to the truth of the gospel, given through
the Holy Spirit, as this truth is applied and developed from age to age in believing personalities. Such believers, according to its teaching, constitute the inner spiritual organism of the Church. In this respect its doctrine is in contrast with that of Judaism. Here the one in which much lay so much importance upon the decisions of the externally organized Church, and that of the Reformed, on the other, which is apt to isolate the individual from his historical relations and the mediation of those through whom the Word and Sacraments are given.

The same principle obtains in its conception of the relation of the Holy Spirit to Word and Sacraments, since, besides being a source of revealed truth, it regards the Word as a real means of grace through which alone the Spirit can be manifested, regenerate, sanctify, and the Sacraments as efficacious instrumentalities by which the promise of the gospel concerning the forgiveness of sins and the grace of God is individualized.

Like all ideals, those of Lutheranism suffer various modifications as embodied in a concrete form in external organizations. The union of Church and State in European lands has not only prevented the principles of Lutheranism from realizing itself entirely in practice, but has also often interjected adjustments of theory and policy foreign to both its spirit and its teaching. As in the time of the Reformation, so at all times since, there have been those whose intense consciousness of the doctrine has shown that the raising, or whose greater freedom of that of a Reformation, tendency. Indulgence, Unionism, Mysticism, and Rationalism have had their learned advocates among those claiming the Lutheran name, and who organize themselves just as the Christian Church has much within it for which Christianity is not responsible.

HENRY E. JACOBS.

LUXURY.—I. Historical aspects of luxury.—One of the incentives towards social progress is the desire to remove a surplus after the needs of a mere physical existence have been met, where within the limits of this surplus is that portion of it which constitutes expenditure upon luxuries. What exactly is to be termed luxury depends, to a large extent on the situation and conditions of community, and, in a somewhat lesser degree, upon its standard of life.

Once a tribe managed to procure a sufficient food supply to maintain itself, any increase rendered possible an unpicturesque consumption of the excess in the form of fees, tributes, or fines, was passed in or of these circumstances a rule form of luxury would have been evolved. Thus a primitive type of luxury must have come into existence in prehistoric times. In the early civilizations luxury made its appearance in well-defined and striking forms. In Egypt, Nineveh, and Babylon, and at Tyre and Sidon, the living demon of luxury appears to have shown itself in relation to religious observances, and, closely connected with this, there was the pomp of the royal family, where, as in Egypt, it claimed divine authority. But the example of the supreme ruler extended sooner or later to the governing classes, and in this way luxurious expenditure by individuals manifested itself. The chief gratifications sought were the pleasures of the table in eating and drinking, of personal adornment (both in dress and by the use of costly perfumes), of buildings and monuments (such as the Pyramids), or of dwellings and their furnishings (as, for instance, the hanging gardens of Babylon). Among the Greeks there were traces of luxury in the heroic age, such as rich armour and dresses, and artistic ivory work, but it was at Athens after the defeat of the Persians (450-480 B.C.) and in the time of Vindex (429 B.C.) that sumptuous expenditure became a charm to practice, but it has also often interjected adjustments of theory and policy foreign to both its spirit and its teaching. As in the time of the Reformation, so at all times since, there have been those whose intense consciousness of the doctrine has shown that the raising, or whose greater freedom of that of a Reformation, tendency. Indulgence, Unionism, Mysticism, and Rationalism have had their learned advocates among those claiming the Lutheran name, and who organize themselves just as the Christian Church has much within it for which Christianity is not responsible.

HENRY E. JACOBS.
days, when three were permitted. In 1652 a further act was passed against outrageous and excessive forms of expenditure, which was a much more detailed sumptuary law. The Inof the precious metals to Europe after the discovery of America, followed by the extension of foreign trade, increased the stock of several classes of goods which purchases of a luxurious and costly nature became relatively less expensive. The improved organization of industry facilitated production, so that Adam Smith was able to point out the fact that the most conspicuous example of the accumulation exceeded that of many an African king, the absolute master of the lives and liberties of ten thousand naked savages (Wealth of Nations, bk. i. ch. i.). Sumptuary legislation in England may be said to have ended with the Tudors. Mercantilism, in its encouragement of manufactures, tended to permit the production of luxuries for exportation. The growth of foreign trade enabled seafaring nations to participate in it and in the re-exporting of rare and costly goods. Accordingly, though there remained a sturdy body of opinion against luxuries generally, and more especially against those luxuries brought from foreign countries, sumptuary legislation ceased to be observed in England. In 1661 Scots Parliament prohibited the importation of a long list of foreign commodities which were held to be 'superfluous.' The industrial revolution followed by the acceptance of the doctrine of laissez-faire (pace); made the State less disposed to interfere with private expenditure unless upon moral or social grounds, as, for instance, in the regulation of wines and spirits. In the 18th cent. the principle of the taxation of luxuries came to be more and more recognized, partly on the ground of restraining the consumer from a species of consumption which was hurtful to himself (e.g., taxation of spirits), partly as raising revenue from what were admitted to be superfluities, and thereby collecting revenue from classes who would not pay taxes otherwise (e.g., tea and sugar taxes). A few taxes may be regarded as having a sumptuary element, such as the tax on armorial bearings or those on male servants and on motor cars.

The immediate cause of the existence of luxury.—Social observers who approach the problem of luxury from the historical side are inclined to urge against it that it has been the cause of the fall of great empires. Frequently, if not always, luxury is recognized as a symptom of decadence, but a closer analysis tends to show that the moral weakness had already shown itself, and, as it increased, it manifested itself in public and private extravagance, which extravagance again gave fresh impetus to the forces of political and social disintegration. In these cases it is clear that the evil lay in the abuse of luxury.

Some of the most powerful economic motives are to be found in the desire of men to realize an idea or scheme of life recognized partly on the ground of the desires which are called luxuries. This, however, is not strictly accurate. In a great number of occupations the worker who is able to satisfy the former wants only would not be efficient. Therefore one must extend the meaning of the term 'necessary' so as to include in it all those things which are required for efficiency (e.g., what is consumed beyond that point may well be described as consisting of luxuries. It follows that the term 'luxury' must be understood in relation to time, place, and the general circumstances. It is easy to determine whether any specific commodity is a luxury to a given individual in regard to whom the necessary data are known; the problem becomes much more difficult in the case of a whole community. Certain forms of expenditure were a natural result of the efficiency, and there can usually be classed under the head of luxuriously outlay; certain others, again, are usually incurred with the object of distorting the expenditure, and where such can be isolated, they tend to be costly. In the last resort, all that is possible is to note with care what happens in the majority of cases in order to ascertain whether a certain type of expenditure is necessary or a luxury.

In the case of retail and individual expenditure, luxury can arise only where there is a surplus beyond physical needs. If that expenditure is so directed as to cut into the margin required for efficiency, then inroads are being made into future income-earning power. But, after full provision has been made for efficiency, there is yet another claim on the surplus—namely, that for the accumulation of capital. It is this claim that has led many economists to condemn luxury. Expenditure on luxury repays or restores the capital which was temporarily locked up in the commodities consumed as luxuries. Therefore such expenditure cannot leave production much larger than it had been before the goods were purchased.

Wealth which becomes capital is also come as likely as the head of consumption; it becomes an instrument for further production. Thus that part of the surplus which is used as capital is more fruitful as regards production than the other portion which, in the phraseology of J. S. Mill (Principles of Political Economy, Lond., 1886, bk. i. ch. iii.), is consumed unproductively.

Consumption of luxuries has other consequences which are partly economic, but which are also of considerable social and ethical importance. Expenditure on superfluities has a tendency to increase the relaxation of concentrated effort. In extreme cases it weakens the moral fibre and opens the way to dangerous excesses. It not only tends to injure the person whose life is luxurious, but reacts on others by the force of example. Thus there is a contest in the fixing of the prevailing standard of living between luxury and a wise and discriminating frugality. Even in periods of national and individual prosperity there were always moralists who pleaded for the simple life, and it is by the degree of support which either class of precepts attracts that fixes whether a particular age or a particular class can be described as luxurious or not.

In the view of luxury that has been adopted the central point is a symptom of the expenditure which is required for full efficiency. As society progresses and as further resources become available, it becomes possible for a community to increase their enjoyment which are largely immaterial. The enjoyment of art is a case in point. If progress is conceived in a wide sense, the highest culture becomes an element in national efficiency. Accordingly, in a wealthy nation, where the inequalities of incomes are not too great, a condition is possible where the division between luxuries and the necessities for efficiency is drawn at a much higher point than in another community which is less fortunately situated. And the higher standard of living can become a step towards further advance in civilization. But, at the same time, there is a somewhat insidious danger—namely, that consumption which was begun as conducive to efficiency may be continued much beyond that point. By becoming luxurious, it reacts on efficiency, and in the end results in a check instead of an increase in progress.

1 The matter is stated this way to allow for the possibility that the producer of the luxury may save a portion of the profit which he has realized from its sale. Such savings would be available for new production.
LYCANTHROPY

W. R. SCOTT.

LYCANTHROPY.—The word 'lycanthropy' is used in two senses. (1) It may indicate merely a form of madness in which the patient imagines that he is an animal, especially a wolf, and acts as such. This disease was common in antiquity, and especially in the Middle Ages, doubtless as a result of the wide spread belief that transformation into animal form was possible (§ 3). (2) It indicates the popular belief that on occasion a human being can actually transform himself, or be transformed, into a wolf or some other animal. In this form he may transform himself, but, if wounded while in the wolf form, it is found that a corresponding wound exists on the human body from which the transformation has taken place. When wounded or killed, the werewolf's human form is restored. While the wolf transformation is that which is or was most common in Europe, it is by no means the only one. For this superstition is practically world-wide, and everywhere it is generally the fiercest and most dreaded animals whose shapes were ascribed to the wolf transformation has been most usual in all parts of Europe and in N. Asia from early times, but in the North of Europe the bear form is also general, and in modern Greece the bear. In Abyssinia and E. Africa the hyena form is taken in other parts of Africa the hyena, leopard, lion, and sometimes the shark, crocodile, or even the elephant. In India and other parts of Western Asia the tiger form is usual; in Borneo and Siam the tiger or leopard; in China and Japan the tiger, fox, etc. In N. America the wolf form is most usual; in S. America the jaguar. But, while in regions where such wild animals have become extinct the old tales are still told, new other less harmful animal forms are believed to be taken by werewolves or werewomen, e.g., those of a cat, hare, etc.—and in these animal shapes considerable mischief is supposed to be done, while the idea of the wound being continuous in the animal and human shapes ('repercussion', see § 5) also prevails.

1. Lycanthropy is derived from Adonis, 'wolf;' and lycos, 'man,' the gr. term being λυκόσαυρος (cf. λυκόσαραξ, 'man-wolf'). The common English name is 'werewolf,' lit. 'man-wolf.' The genitive, lycos, 'wolf,' is not used. Herowering, norman noun in causer (cf. o. or fr. 'fur, lat. vier, and cf. 'welgild'). The French name for werewolf is loup-garou. In this case parent has been thought to be a corruption of wer-animal, but this is uncertain. Old French romances contain the forms worsel, wvaros, vvaros, vvar/os, vvaros. Baudrillard for lycos-galos (loup-garou) chose the form vvaros, which is absurdly incorrect. The Slavic name are O. Ch. Slav, vikolodol, Slovenian vikolak, Bulgarian vikolak, Polish vikolak, White Rus. vikolak, Rus. volen, b taxis, etc. The Serbian vikolak, however, means 'vampire,' hence, probably, modern gr. ἱπποπάνθη, ἵπποπάνθης, which occasionally occurs with occasionally the意味 'wolf.' The Slavic form means literally 'wolf-haired,' or 'wolf-skinned.'

It is interesting to note that the term has never been regarded with superstitions awe. An old belief in Europe is to the effect that, if a wolf sees a man before being seen by him, the man is deprived of sight or hearing. This is the modern (f.) of lycos, HN viii. 2; Verg., Aen. ix. 53; Tiber. Id. liv. 22; J. C, Lawson, Modern Greek Folklore, Cambridge, 1910, p. 10; J. Landau de Sadi-Cobelle, Lyon, 1854 (in a note to p. 36, say that there is continuous the eye of a wierdman or traitor to man, by which the breath is stopped, and consequently the death. In Europe, folklore the wolf is usually created a devil of the devil, the wolf shape of Ahriman; see 0. OEHRAK, NAWATEN: EINE SAMMLUNG . . . Fabeln und Legenden, I., Berlin, 1907, p. 146 f.)

It is obvious that lycanthropy, in so far as it involves an actual belief in shape-shifting, is connected with the wider belief in transformation into animal form, which is of universal occurrence. Men, especially medicine-men, or clay or are believed to possess this power, as well as that of transforming others; it is also ascribed to the gods, spirits, demons, and ghosts of the dead, as well as to animals, which sometimes assume human form, as some of the following paragraphs will show (see Metamorphosis). But the actual origins of the belief are probably to be sought elsewhere (see § 3).

1. Extent of the superstition.—In one form or another the werewolf superstition is world-wide. It was known to the ancient Greeks. In—keep the thief who pretends to be a wolf says that he has awned three times he will become a wolf. Circe changed men to wolves, etc., by means of drugs. The superstition is also found embodied in the myths pertaining to the cult of Zeus Lycaeus, the Wolf Zeus. Lycaon, king of Arcadia, was said to have been changed into a wolf when he sacrificed a child on the altar of Zeus Lycaeus. In other versions of the myth Zeus came disguised as a labourer, and the sons of Lycaon slew a child and mixed its flesh with the sacrificial food set before the guest. Zeus then changed them to wolves, or slew them and transformed their father. These myths probably arose from werewolf stories current in Arcadia, a district where wolves abounded. The stories look

In one it was said that at the yearly sacrifice on Mt. Lycaeus he who at the sacrificial feast ate the flesh of the human victim mixed with that of animal victims became a wolf for ten years—a fate which is said to have befallen Demeter, who afterwards became a victor in the Olympic games. If he abstained during that period from human flesh, he regained his human form. In another version lots were drawn by the members of a certain family, and he on whom the lot fell was led to a lake, where he stripped and, hanging his clothes on an oak, plunged in and swam across. Emerging on the other side, he became a wolf and bred with wolves for nine years. In this case also, if he did not eat human flesh he regained his own form at the end of that time.

Perhaps such stories, based on an existing werewolf belief, may have been connected with the ritual of the cult of the wolf-god, if the priests wore a wolf-skin and ate part of a human victim. This ritual was connected with a worship of the cult of Apollo Saranus on Mt. Soracte, where the god of worshippers, the Hippo Sarani, or 'wolves of Saranus,' apparently wore skins of wolves and acted as wolves. Possibly the cult was totemic in origin, and the Hippo were members of a wolf clan.

In modern Greece the old belief in lycanthropy still exists, either as such or in other forms. The name ἱπποπάνθη is applied to Thessaly and Epirus to those who fall into a trance or entangle, while their souls enter wolves and raven for blood, or who in a state of somnambulism bite and tear man and beast. Stories exist of the ἱπποπάνθη being wounded, while next day a man is found with a similar wound, and a long, but this is rare. Stories of the ἱπποπάνθη being a vampire in Greece. In Southern Greece the name ἱπποπάνθης is applied to men known in other parts as Kasama who, more usually, Kalidakti.
LYCANTHROPY

zari. The Kalikkantzari are beings of monstrous
form, like thirty, and carry no off
women, and sometimes make a meal of their
prey.1 Lawson considers that the Kalikkantzari
represent the ancient Centaurs, whom he regards as
a Pelasgic tribe of Centauri credited by the Ancient
Greeks, with some connects. Some also exists between them and the number of
the Dionysia who represented the satyrs and Sileni.
They appear and are feared from Christmas to
Epiphany—the period of the Kalends when such
mummering took place. In some cases, the Kalikkantzari are equivalent to werewolves,
and are regarded as men transformed into mon-
strous shapes, or seized with recurrent bestial
madness at this period. This is attributed, e.g., to
the mountaineers of E. Enloe. This madness may be
congenital—e.g., children born from Christians
and Twelfth Night are supposed to have a taste
for human flesh. Lawson regards this as a modi-
fication of the original Kalikkantzari belief caused
by the werewolf superstition or by actual form
of insanity.2 The name λαυκκαντζαρσ is given to
the Kalikkantzari in Messenia and Crete, and in
Macedonia they are called λεικον. To escape these
beings the house must be carefully closed at all
openings. A brave man may bind them with a
straw rope. Various apotropaic and propitiatory
rites are also in use to keep off these dreaded beings,
who are ‘a species of werewolves, akin to the
Wild Boar and the Vrykolakas.’3 Wicked Turk-
generally work to drive wild boars before death, and
rush their heads on the land on all fours, attacking
wayfarers or trying to get into houses. After
forty days such a being goes to the mountains, remain-
ing there as a wild beast, but still wearing on its
fours the ring which the man were on his hand (cf.
the Abyssinian bade, below).4 The Bulgarians have
a similar belief, but with them the transformation of the Turk takes place after death.5 In
Albania the bologat is a dead Turk with huge horns,
wandering in his shroud, devouring what he finds,
and strangling men.6 Here the vampire supersti-
tion is approached (§ 4). In the Cycloades witches
are thought to turn into birds at will. They are
called epyxan, and are akin to the Harpies.7
The Romans also knew of lycanthropy, and
called those who changed their form versipelles,
turn-skins.8 Vergil describes how by magic
herbs Morris became a wolf, and Propertius speaks
of spells which have the same effect.6 But the most
detailed account that is found in Petronius.
Necros tells how his soldier friend stripped off his clothes
and addressed himself to the stars. Then he ‘crescimmenvix vestinund,8 and all a once became a wolf, which ran bowling
into the woods. Necros next heard from a widow whom
he visited that a wolf had been worrying her cattle, and had been wounded in the neck. On his return home he found his friend
bleeding at the neck, and knew then that he was a versipelle.9
This is a typical and early version of the werewolf story.

In more modern times the superstition survives
in Italy. Straparola tells how Portunio received from
a wolf the power of changing to wolf form, and
the superstition is also referred to by Basile.
At the present day in Naples the wolf, who is a
man cursed by Christmas night, is known by having long nails, and runs on all
fours, but retains the human form, and tries to
bite. If blood is drawn from him, his madness

cases. This is a case of lycanthropy in its medical sense.1 More akin to the true werewolf super-
tition is the general belief that witches can turn
into black cats and do much harm, especially to
children. In one case a woman caught such a cat
and clipped its hair, whereupon it turned into the
witch.2

Among the Scuaites lycanthropy was not un-
known, but recorded instances of the belief are
few. Among the Seafar in Hadramaut part of the
tribe could change into ravening werewolves in
time of drought, or during seasons of illness.

The Arabs also regarded some men as having the
nature of a hyena, and said that, if a thousand
men were shut up with one of these and a hyena
came, it would go at once to him.4

The belief analogous to the true werewolf illustrated by a story
given by Giraldus Cambrensis.

An Irish priest was met by a wolf in Meath and desired to
see and come his dyke wolf. They were natives of Ossory,
whose people had been cursed for their wickedness by St.
Natalis, and were compelled to take two by two a wolf-shape
for seven years, regarded as ‘turnskins.’5

A citation in the Book of Beldenise (1490) says that the ‘descendants of the wolf’ in Ossory had
the power of changing themselves and going forth
to devour people. St. Patrick is also said to have
caused a certain ‘race’ in Ireland so that they and
their descendants are wolves at a certain time
every seventh year, or for seven years on end.6

These may be explanatory legends about older
totem-clan, late accursed of lycanthropy—
an already current superstition—when totemism
was requiring an explanation, as is the case of the wolf-clan in Arcadia. To the same category may be
referred the statements of early English travellers
in Ireland to the effect that the Irish took wolves
as godfathers, prayed to them, and used their
tooth as amulets. Lycanthropy ran in
families, and here also it may point to an older
totem clan. Laighneach Feachad and his family could
take a wolf-shape at will and kill the herbs, and
Laighneach was called Fialach because he was the
first of them to go as a wolf.7

In Irish and Welsh Marchen transformation to wolf-form of children
by a stepmother or of a husband by a wife is not
uncommon.8 Giraldus already refers to the belief
that hags in Wales, Ireland, and Scotland change to hares and suck cattle for their milk,
but, with St. Augustine, regards this supposed
change as a delusion of the senses.9 This belief
is thus contemporary with that in lycanthropy,
but long survived it. Later Celtic, Welsh, Manx,
Scots—usually turn into hares or cats, less often into dogs, weasels, ravens, por-
poises, whales, etc., for the purpose of doing mis-
chief. In Donegal the change is said to be effected
by a hair rope made of a stallion’s mane and
the recital of charms. In some cases the trans-
formation is confined to certain families. Such
witch animals can be shot only with a silver bullet.
When followed up, the woman has resumed her
true form and is found to have a corresponding
wound. A miller in Cork who saw a number of

cats attacking his fowl threw his knife at them and cut off the leg of one. Next morning he found his daughter with her hand cut off, and concluded that the wold-skin was a witch. Haras are usually thought to be unlucky, and are suspected of being witches in disguise. The ancient Welsh laws already speak of their magical character, regarding them as companions of witches, who often assumed their shape. 1

The Slavic werewolf belief is referred to under DEMONS AND SPIRITS (Slavie), vol. iv., p. 624. Possibly the Neuri, mentioned by Herodotus (iv. 105), were a Slavic people (cf. E. H. Minns, Scythians and Huns, London, 1835, p. 102.). The Scythians and Greeks said that every year each Neurian became a wolf for a few days and was then restored to human shape. Among the Magyars witches and wizards assume the form of horses, cats, etc. If the former are caught and shot or the latter injured, they are found next morning in human form with iron shoes on hands and feet or seriously wounded. 2 Hertz notes the sinister character of the belief through its connexion with that in Russia and the Ukraine, the names for both being interchangeably.

The Serbians think that the vukodlak have annual gatherings, when they hang their wolf-skins on trees. Should such a skin be taken and burnt, the devil who resides within will find no place to lay his, and so the wolf will he driven out. 3

If the skin is nailed across a threshold by a witch in a house where a wedding is taking place, all who step over it will become wolves. In three years' time, if the witch covers them with skins with the hair turned to her face, they return in their human form. Another version of this is a Polish belief. In White Russia the werewolf is sometimes a man transformed by the devil, and, contrary to the usual belief, he is harmless, but is driven to wander from place to place. 4

In Finnish folklore a girl at a merry-making carried her off to the forest. Years after, one of the peasants meets his long-lost brother, who confesses that he was the wolf changed by sorcery, that he had carried off the girl, who had died of grief, and that then he was consumed with rage at all men and killed as many as he could. He had come to see his home once more, but must resume his wolf-form immediately, which he did. 5 In another case a peasant, released from his wolf-skin, returned home to find his wife married again. He cried, "Why am I no longer a wolf that I might punish this woman?" Immediately he was re-transformed, and killed his wife. The neighbours hailed him and slew the wolf, when the body was seen to be that of a man. 6

Olaus Magnus says that at Christmas many werewolves appear and try to enter houses to drink in the cellars. Between Livonia, Samogitia, and Livonia is the wall of an old castle whither thousands of werewolves come to try their skill at leaping. The unsuccessful one is beaten by one of the captives or by the devil. The method of the transformation was to drink to one in a cup of ale and mumble certain words. Then he could assume or lay aside the wolf form when he pleased. The Livonian werewolves collected at Christmas, and crossed a river which had the power of changing them to wolves, like the lake in Arcadia. They resumed their human shape at the end of twelve days. In Livonia a servant whose power as a werewolf was disputed went to the cellar and soon after appeared as a wolf. The dogs bit one out of its eyes, and next day the man appeared with one eye.

Lycanthropy

The poet Ari has a curious tale of two 'skin-changers,' Dubaduck and Storwell. The former took the form of a bull, the latter of a bear. They fought, and next day were found in bed badly bruised.

Modern collections of Scandinavian and German mythology tell us many werewolf tales.

In one Swedish tale a cogteller was transformed by a Vargamor or Wolf Cross (Troll-wife), because he had not crossed himself when he went to mass. Three years after he appeared at his house, and recovered his true form when his wife gave him food.1 In a Danish tale a man, when in his wife's company, noticed that the time of the accustomed change was near. He had his strike with her upon anything which came to her. Soon after a wolf attacked her; she struck at it, and the wolf bit a piece of the arm and disappeared. Presently the man came carrying the piece, and explained that now he was free from the curse. The woman took a razor and neighbours got him with a strap and became a wolf.2 In another woman told her husband to throw his hat at any wolf beast which came. When she saw a dog as a wolf among the hay-makers, a boy stabbed her with a pitchfork. The wolf changed back to the woman, who was found to be dead.3 A Dutch story tells how a man shot with an arrow a wolf which was attacking a girl, and that the arrow stuck in the wound. Next day he heard that a strange serving-man was dying from an arrow sticking in his side. He went to see him, and found his own arrow, whereupon the man confessed that he was a werewolf.4 In a Spanish tale a shepherd received a wolf-skin from the devil, by which he became a wolf at night. If the skin was burned, he was sufferer as if his own skin were burned, but would not freed from this curse.5 In the sequel the master succeeded in releasing him in this way.6

In many modern tales and also in medieval witchcraft collections transformation of the witch was usually into a cat, dog, hare, or duck (the bird of Freya, great mother of the witches), and these, when wounded, became woman with a similar wound in her body. Spina says that such cat-women ate the brains of the witch, and rubbed themselves with the flesh of a newly-born child which had been offered to Satan.? In England and Scotland werewolf stories are scanty, but there are traces of the superstition in each country. The word werewolf in the sense of 'rober' occurs in the Laws of Canute, and it is also found in later ballads and poems. Gervase of Tilbury refers to the existence of men called gawweroulfe, werewolf. In England, when change their form at the change of the moon. William of Malmesbury also alludes to the superstition.

A well-known Old English poem, translated from a 12th-century French poem, is that of Willorn and the Werewolfe, in which the king of Sicily's son, his stepmother the rein of the king's child, whom his uncle wishes to murder, and how the wolf cared for the boy, his further adventures, and the eventual re-transformation of the wolf to his human form.8 Drayton, in his Menevne (i. 104), tells of a man who found that by gathering certain herbs at a certain hour with appropriate spells, and eating it, he would become a wolf, and that a human could commit no murder, nor weigh on the devil. When he attacked an ass in which was a man so transformed, the latter assumed his rightful shape and drove away the lycanthrope.

If tales of werewolves are scanty, there are innumerable tales and traditions of witches changing to hares, cats, dogs, and the like in order to do harm. No charge is more common in the 16th and 17th century, witch trials, and frequently the belief is found, as in the case of the werewolf, that such a vor-animal can be hurt only by a silver bullet. In some instances wounding causes the witch to assume her true shape, when she is found with a cross-reminiscent wound.9

In France the earliest literary version of the belief is found in the Leu du Bisclouvet de Marie de France (13th cent.). A knight went from time to time to the forest, where he found the horde of many werewolves, undressed, and became a wolf. He told his wife the secret, and she obtained his clothes on one of these occasions, after which he had to remain in wolf form. As he held to his human wisdom, and he would be bound by the king's command, his clothes and consequently his own form were restored to him, but not before he had revenged himself on his unfaithful wife.

This story is found in other literary versions—e.g., the Roman de Renart of the Clerk of Troies (14th cent.), in the Leu de Melon (ed. F. Michel, Paris, 1832), in the story of Arthur (see below), and elsewhere. These are all literary versions of the folk-tale.10 The legend of St. Roman in medieval Brittany told how he had taken the form of a werewolf and had eaten children.

Gervase of Tilbury, in his Hist Imperialis, tells of a certain Pontie de Capitolo, who out of despair became a werewolf in Auvergne, ate children, and wounded old people. A carver blasted one of his feet, and at once he resumed his human form, and acknowledged that the loss of his foot was his salvation.

The belief survived in modern times. In Normandy the werewolf was a godless man or one under a curse, who for four or seven years must nightly assume wolf-shape and submit to castigation by the devil. In Freny, those who lay with the devil, at the cross-roads, at midnight, become loups-garous can be wounded only by a ball which has been blessed or has had the Lord's Prayer or Ave Maria said over it five times. In the end, they take human form again and the spell which attached them to Satan is broken.11 In Brittany, towards the end of the 18th century, sorcerers were supposed to take the form of wolves or clothe themselves with a wolf's skin when going to the Sabbath.12 In many parts of France every fétuèr is supposed to lead wolves, himself sometimes changed into a wolf, whereby he is placed beyond the power of shot. He directs the wolves where to go and hunt,13 and is afterwards found in bed with the hairy ones. Who has a part with the devil, at the cross-roads, at midnight, by fétuèr. The belief is found in modern times. In these stories, the malevolent magic establishment a link between skin and owner, so that whatever was done to the skin happened to him. A fire was lit in the oven, and the oven had been self to begin to leap about, crying, 'I burn, I burn.'14

In Portugal a seventh son, where there were no girls, was thought to belong to the devil and to become a werewolf—a belief found also in the Azores.15

Cervantes, in his Persiles y Sigismunda (ch. 5), relates how an enchantress made advances to Rulillo, who repelled her. She turned into a wolf. He stuck his knife into her breast, and as she fell her human form came back to her.

Passing now to Asia, clear evidence of the belief is found in Armenia. Sinful women are sometimes terrored by a spirit to don a wolf-skin and become wolves for seven years. Soon the wolf nature 1

1 For Arthur and Gorlan seen PL xv. [1904] 506. Gorlan seen changed to a wolf by being struck with the thine end of a sapling which grew up on the night of his birth. For the folk-tale see 'Prince Wolf'—a Danish version—FæLIII. [1889] 2251, and a Norse version in Dace, no. 36. In both the husband remains a wolf or bear through the wife breaking a tabus, and has originally been transformed by a stepmother.

lycanthropy

grows in them. They devour their children, then those of relatives, then children of strangers. Doors and locks fly open before them by night. In the morning the skin is flaked. If the skin is flaked over, then the woman suffers fearful agony and vanishes in smoke.\(^1\) In Asia Minor generally werewolves are feared especially at Christmas and in Holy Week.

In India, where the tiger is the fiercest creature known, its form is said to be adopted. Already in the Satapatha Brāhmaṇa the monomaniac is said to be consecrated to the man-tiger.\(^2\) In most instances the Hindus attribute the power of shape-shifting to the aboriginal tribes. Numerous stories are prevalent among men with the power of becoming wer-tigers—e.g., among the Khonds (with whom, by the aid of a god, one of a man's four souls becomes a meliya tiger), the Lushais, Kukis, etc.\(^3\)

Dalton describes how a Kol, tried for murder, maintained that his victim was a wer-tiger, which he had followed to the man's house after it had killed his wife. The relatives of the victim had admitted that they had suspected him of such power and had handed him over to the prisoner, who slew him.

Sometimes the eating of a root is believed to produce the change.\(^4\) Occasionally the witch assumes the form of a flogger and carries off children. Witches also ride about on tigers or in the water on crocodiles, dishevelled, with glaring eyes, and bare blood-red teeth. Wizards also have tigers as familiars, or, as a Thana belief has it, mediums are possessed by a tiger-spirit. The souls of those slain by tigers are believed to pass into tigers to slay and devour in their turn, or to sit on the heads of tigers and direct them to their prey, calling out in a human voice so as to attract the invury.\(^5\)

In Indonesia the tiger-spirit is very commonly believed in among the Malays, Dayaks, etc. Sometimes the power of transformation is thought to be confined to one tribe, as in Sumatra to the Korinchi Malays. There are many tales of men leaving their garments in a thicket, whence a tiger has presently emerged, or in human form vomiting feathers of fowls eaten when in their tiger form. A wer-tiger was said to have gold-plating in its teeth, as the man who assumed tiger form had. The Lavs of Burma are also regarded as wer-tigers. While the wer-tiger is generally very dangerous, in Java it is believed to guard plantations and gardens, and to make the pigs, and the change is effected by spells, charms, fasting, etc. In Malaysia the medicine-man is sometimes possessed by a tiger-spirit, and acts as a tiger when exorcising a spirit from a sick man.\(^6\)

A gruesome Malay story of a Semang who became a tiger (Si Ribah, "He of the hairy face"—a euphemism), and sucked blood rather than ate flesh, is told by H. Clifford. The tiger burst into a hut where several people were collected. One of them was able to reach a shelf near the roof, and from there he saw how the tiger killed them all and drank deep draughts of blood. One girl he first played with as a cat with a mouse, and all night he tossed the bodies about and tore them, disappearing at dawn. Another story tells how the transformation was seen taking place. A bird saw her Korinchi husband returning home as a tiger, whereupon he shot at the entrance ladder. "It palpitated and changed, and the face of the husband came up through the face of the beast." Later this wer-tiger was caught in a trap, but escaped, when it was tracked to the house. There the man was said to be sick, and soon after he and his son disappeared. The story was reported to the District officer, and such a transformation is "to the native mind a fact, not a mere belief."\(^7\)

The tiger familiar spirit is also possessed by certain men, and after their death they are transformed into tigers, or the medicine-man subject to him an actual tiger which is immortal (Benna of Johore).\(^8\) The soul of a dead wizard enters the body of a tiger, and the corpse is left in the forest for seven days until the change is effected.\(^9\) A curious Malay belief concerns the half in which tigers possessed of human souls are penned. Periodical attacks of fierceness come on them, when they break bounds and go after their prey. Passing through one door, they become men, and on returning through another door they become tigers again. Their chief is always in human form, and enters the bodies of sorcerers when they invoke the tiger spirit.\(^\ast\) The transformation into tiger form is effected in different ways: by sympathetic magic—e.g., donning a serong (yellow with black stripes) and repeating charms—by offerings to evil spirits, by charms, or by a mysterious poison which is supposed to affect the soul; or the power is conceived as hereditary. Among the Senangs the medicine-man lights incense and invokes a spirit. Presently far and a tail appear on him, as he himself believes, and he goes about for twelve days destroying cattle. Then he returns home and is sick, vomiting bones. During the time his wife must always keep the fire burning and burn incense, else he would disappear. Such a wer-tiger cannot be shot, as it disappears so quickly.\(^5\) Various beliefs are held regarding the transformation among the Malays—the whole body takes part in it, or merely the soul substance, the body remaining at home.

Among the wild Malays of the Patani States there is a belief in bodli, or mischief, which remains by a body after death and devours the semangot or, sometimes, the liver of passers-by. Birds and beasts also have bodli or, in the case of tigers, leopards, and jangle-cats, pgrum or begrob; and, if a man is affected by this, he goes mad, and either imitates the actions of the creature or is subject to an abnormal growth resembling one natural to it.\(^1\)

In Lombok the crocodile form is assumed by certain men in order to destroy their enemies, and many strange stories are told of them. This form is also taken among the Klemantans, one group of whom claim the crocodile as a relative. One man found his skin become rough, his feet like a crocodile's, and a tail forming, until he was completely transformed. He made his relatives swear that they would never kill a crocodile. Many people saw him in his crocodile form.\(^2\)

In China there are various wer-animals—tiger, wolf, dog, fox, etc. The change is usually a bodily one, but an ethereal human double may pass into an animal either before or after death. There are many literary notices of such transformations. An early instance is mentioned in a document of the 2nd cent. B.C., in which, after the crisis of an illness, a man changed to a rat above the top rung of the entrance ladder. Towards midnight the head of the husband came up through the face of the beast. Then this wer-tiger was caught in a trap, but escaped, when it was tracked to the house. There the man was said to be sick, and

2. SEE A. 1900.) 414.
and actual belief in the power of shape-shifting. Sometimes the transformation is ascribed to a community of spirits, and is effected by magical means. In other cases the cause may be the divine displeasure because of the neglect of religious duties. Here the victim goes mad and turns into a tiger. In one such instance he is covered with a spotted skin by the god, as in European cases, where a wolf-skin is used. Stories of transformation by wearing a tiger-skin are said to abound in China.

A 14th cent. writer tells how he saw a man slowly becoming covered with hair like a tiger, his body adorned with spots and stripes. During the night he ate a tiger.

Other cases of this kind are of frequent occurrence. Wer-tigers and wer-tigresses are sometimes favourably disposed and give presents. This is especially the case with wer-tigresses on behalf of those who excite their love.

The wolf transformation is also known.

An old woman finds her body being covered with hair and a tail, and she calls, "Black Wolf," and escapes, though sometimes she returns to see her family. In another instance a man weds a woman who is really a wolf, as also her parents, and her whole family is devoured by her. In a 4th cent. wolf all wolves are said to be transformed to men after the five-hundredth year of their age.

Other wer-animals are also known—e.g., the dog, though here, as in the case of the fox, perhaps it is the animal that takes human form. In one instance men who are beaten become dogs; and a dog-man who was stabbed changed to a dog when coming home.

In China the fox superstition is a kind of inverted werewolf belief, especially in N. China. The wer-foxes dwell in the debatable land between earth and Hades, and can take human form at will—most frequently that of a rambunctious pretty girl—but they may be detected by the possession of tails. Spirits of the dead may occupy the bodies of such foxes and revenge injuries on the living. Some legends show that the fox lives in graves and becomes the body of a corpse by insinuating into himself the soul-substance. Wer-foxes can eat either good or ill to men, but are grateful to those who are kind to them. Foxes in male form live with women, in female form with men; in either case a more perfect state is possible, resembling that caused by the medieval incubi and succubi. When killed in human form, all that remains is the body of a fox. Their animal form also appears spontaneously in sleep, or when they are overcome by wine, of which they are very fond. Sometimes they enter and occupy a house invisibly, acting exactly like the Poltergeist.

It is also believed that witches can take the form of the fox, cat, or hare. The tiger ghost is also believed in.

When he wishes to eat, people he puts off his clothes and is changed into a striped tiger. He then advances with a great roar, and the traveller is instantly torn to pieces. Tigers are said to make slaves of the souls of men devoured by them. These souls go before them to point out traps or to act as beaters, as in the similar Indian belief.

The wer-fox superstition is found in Japan, but was not introduced there until the 11th century. There are different stories of these foxes. The Ninko fox, Nogitsune, can take any form, or become invisible, but its reflexion in water is always that of a fox. The Ninko fox can also take various forms, especially that of a pretty girl, in which shape it will even marry a man. 1 These foxes also possess men, or live in their houses, bringing luck if well treated, but they are dangerous if ill-treated. Some Samurai families are believed to own foxes, which steal for them or torment their enemies. Foxes to whom some kindness has been shown, either in their own or in human form, reward the doer of it with money, etc., part of which turns to grass. Often the house in which the fox lives is illusory and cannot be found again (see Fairy, vol. v, p. 679). Men possessed by foxes ran about yelling and eating only what foxes eat, but the possessing goblin-fox may be exorcised.

The same belief exists among the Ainus, and with them the fox has both good and evil powers, and can cause death and cannibalism, as well as human superstition. The Ainus take the form of men or animals, and feed on dead bodies, or kill and eat living men.

More akin to the werewolf superstition is the belief that twin children go out at night as cats, their bodies meanwhile remaining at home as if dead. If they are beaten by any one, they tell this to their parents next day.

The Berbers witness that they have seen girls, when born, change into cresses, who throw themselves on a man until they are strangled. Among the Abyssinians there is mad belief in the budus, who change into hyenas and kill and devour. They are distinguished from ordinary hyenas by greater malice. The budus are sorcerers; and black-smiths, found mainly among the Falashas and Abyssinian aborigines, who appear as men or animals, and eat on dead bodies, or kill and eat living men. Other akin to the werewolf superstition is the belief that twin children go out at night as cats, their bodies meanwhile remaining at home as if dead. If they are beaten by any one, they tell this to their parents next day.

The Eskimos and some American Indian tribes also possess the fox spirit, as well as the wolf spirit.

The wer-animal superstition is found in Africa in conjunction with a variety of savage beasts. All over N. Africa it is believed that the jinn can take animal forms—wolf, jackal, lion, serpent, scorpion. This is also true of the ghala, the cat-woman, who appears as men or animals, and feed on dead bodies, or kill and eat living men. More akin to the werewolf superstition is the belief that twin children go out at night as cats, their bodies meanwhile remaining at home as if dead. If they are beaten by any one, they tell this to their parents next day.

the buda sprinkled ashes over his shoulders, and the change began. Besides killing men and drinking their blood, the buda takes possession of his victim, entering his body by a look, or when he is eaten, or in illness. The victim becomes more or less insane, laughing like a hyena, then falling into a trance, when the buda speaks through him, often telling who he is and why he thus possesses the patient. Sometimes the victim tries to get into the forest, where it is supposed to devour him. The buda is kept off by the wearing of amulets, by which also he can be exorcised. He can also transform his victims into animals, and sometimes digs up corpses to eat them. This is also done by actual hyenas.1

The belief in the wer-hyena occurs from the Sudan to Tanganyika, and is perhaps strengthened by the fact that wizards at their meetings howl and eaper like hyenas, eat horrible food, and commit the crimes that the wer-hyena is supposed to do. Even in the daytime their glance causes a deadly sickness. Certain tribes in the Sudan are supposed to possess this power of transformation, but it is dangerous to shoot them, for one who was shot was seen to enter the hut of a wizard, who died soon after. The man who shot him soon followed him to the grave.2 Generally among the black races the usual animals, besides the hyena, are the leopards, and usually men or women who are the leopards are called hyenas, and are believed to enter the bodies of these animals by night.3 In the Sudan the hyena shape is supposed to be assumed at an ant's nest. The Aweomba wizards receive power to become wild beasts from spirits called vibanda.4 The Wanyamwezi of E. Africa think that sorcerers can transform themselves into animals in order to injure their enemies.5 In E. Central Africa witches kill men, and in the form of hyenas try to get at the graves of their victims in order to eat their flesh.6 The Akikuyu tell of a man, who, after his marriage, went to the wilds and lived like a hyena on dead bodies. Returning home, he ate his child. His brothers killed him, but the woman's second husband also became a hyena and ate her and his child.7 In British Central Africa the bewitcher (ufiti) can turn himself into a hyena, leopard, crocodile, etc. He then digs up dead bodies and eats them. Sometimes the witch takes the place of a creature kills people, some method of appeasing it is adopted. The wer-hyena is thought by the Makanga to have a wife at night who opens the door of the kraal to admit him and then runs off with him to feast. In one case, when a goat was carried off, tracks of a hyena and of human feet were seen together.8 Among the Tumbaka of Central Africa certain women wander about smeared with white clay, and are believed to have the power of changing into lions.9 In W. Africa the Yoruba think that the wer-hyenas assume their animal shape at night to prey on cattle and sheep, and, if possible, on human beings, who are sometimes compelled to go out to them when they utter certain howls.10 In Loanda the belief existed that the chief could change himself to a lion, kill some one, and then resume his own form.2

The Baso believe that a man's spirit can leave his body and enter into an animal. They called isha anu, 'to turn animal,' and it is done by means of a drug. If the animal is killed, the man dies; if wounded, his body is covered with boils.3 Wilson says of sorcerers in Guinea that they can turn into leopards and change their enemies into elephants, in which form they kill them.4 In Senegal a sorcerer who changes to an evil animal is kept off by means of salt; or, when transformed, he leaves his skin behind him. If it is turned, it suffers, and comes to beg that the grins of salt be removed.5 In W. Africa generally the power of certain persons to change into leopards or to send their souls into leopards, which are then guided by the human possessor to kill such persons as are obnoxious to them, is very commonly believed in. The person so changed is called weneye, and cannot be killed.6 Many persons actually believe that they have thus metamorphosed themselves and gone harm. Others believe the belief itself is harmful. One of them who was shot was seen to enter the hut of a wizard, who died soon after. The man who shot him soon followed him to the grave.7 Generally among the black races the usual animals, besides the hyena, are the leopards, and usually men or women who are the leopards are called hyenas, and are believed to enter the bodies of these animals by night.8 In the Sudan the hyena shape is supposed to be assumed at an ant's nest. Returning home, he ate his child. His brothers killed him, but the woman's second husband also became a hyena and ate her and his child.7 In British Central Africa the bewitcher (ufiti) can turn himself into a hyena, leopard, crocodile, etc. He then digs up dead bodies and eats them. Sometimes the witch takes the place of a creature kills people, some method of appeasing it is adopted. The wer-hyena is thought by the Makanga to have a wife at night who opens the door of the kraal to admit him and then runs off with him to feast. In one case, when a goat was carried off, tracks of a hyena and of human feet were seen together.8 Among the Tumbaka of Central Africa certain women wander about smeared with white clay, and are believed to have the power of changing into lions.9 In W. Africa the Yoruba think that the wer-hyenas assume their animal shape at night to prey on cattle and sheep, and, if possible, on human beings, who are sometimes compelled to go out to them when
both living and dead, with power to change to an animal—hyena, lion, serpent, or alligator—and to do harm to men or cattle.1 Among the Baronga, a secret society exists the members of which send out their spirit-bodies or go out bodily at night to devour human flesh. They leave their shadow, or the appearance of themselves, behind, but this is in reality the animal with which the person has been chosen to identify himself. If this appearance is stabbed, a hyena rushes howling from the hut, and the real man falls through the roof with a similar wound. Such persons enter huts, take the true self of the occupant, and eat him. Only his shadow is left, and he dies next morning. Some think that such wizards are not aware of their night work.

Those who have long practised it, however, are aware. Perhaps the basis of the whole idea is to be found in the dream-conceptions of hysteric subjects.2 The Basuto also believe in wer-animals, mahlithomunes, men who turn temporarily into animals and kill and eat human beings. They have the tradition of the introduction of this terror through a queen who could call troops of wolves, monkeys, etc., to her nocturnal gatherings—a belief not unlike that of the wolf-leader in France.3

The Hottentots believe in the power of changing to lion shape and killing men or animals. This is illustrated by a story bearing some resemblance to European werewolf tales. A Hottentot and a Bushman travelling saw some horses. But the Bushman browsed a lion and killed one, as he knew her to possess this power. Hair appeared on her neck, her nails became claws, her features altered, and she bounded off as a lion, the two in turn climbing a tree until she reassumed her human form.4

The Bushmen believed that sorcerers could assume the form of jackals, etc., and, conversely, that the lion could take human form.5

Similar beliefs exist among the Negroes of America, carried thence by their forefathers from Africa. In Missouri the Negroes think some cats are devils, i.e., witches in disguise.6 The village is to be credited with the power of changing to a black wolf, dog, cat, owl, or bat at night. To stop this, the human or animal skin must be found and salted. This assumes a real change of skin.7

With all the N. American Indian tribes it was believed that wizards and witches could take the form of wolves, bears, bears, owls, bats, or snakes—a belief which was probably strengthened by the wizardry the skins of animals and initiating them.8

The Nishinma had a legend of a medicine-man who was seized with a spasm and went on all fours. His nails grew long and his hair on him, hair covered his body, and he became a bear. This transformation lasted until the spasm passed.9

A belief similar to that of the Chinese fox superstition exists, as with the Narraganset, and the Thaxcalans believed in a wer-dog. The Musquakies have curious tales about trees which appear as human beings, carrying each of the marks of injuries done to the other, and of an old man who, denying that he was a bear, is proved to have taken that form by the fact that his tracks and those of the bear both have traces of grease. He is therefore killed because he has ‘a devil in his nose.’10

Lilatian
tells of wizards who, having taken the form of birds and been wounded, are found to have identical wounds, while the magical bullets with which the birds were shot are found in their bodies. The Chippewa sorcerer for a fee will turn into an animal and inflict injuries on the person described to him.1

In a Chipewa story a boy left by his father in charge of his elder brother and sister is neglected and eats the leavings of wolves. They pity him, and he follows them. The brother one day heard a child’s voice crying: ‘I am turned into a wolf, followed by a bow. Then he saw the boy half turned into a wolf. As he watched, the change became complete, and with the words, ‘I am a wolf,’ the werewolf disappeared.2

Among the higher American Indian peoples similar beliefs prevailed. Maya sorcerers could turn into dogs, pigs, etc., and their glance was death to a victim; and in Guatemala a spell was derived from the fact that they could take animal forms. In Yucatan sorcerers claimed to have such powers, and one in dying confessed to a priest that he had often transformed himself.3

Among the Tonkinese in what is now Mexico, if a sorcerer sees a bear, he will beg an Indian not to shoot it, as it is he, or, if an owl sereches, he will say, ‘It is I who am calling.’ 4

The European belief in the transformation of witches into wolves was carried to America.4

Following the belief into S. America, we find that the Abipone keebet, or priest, was believed to turn himself into an invisible tiger which could not be killed. When he had transformed himself and began to roar like a tiger, the onlookers fled, believing that the change was actually taking place.6

The people of Guiana believe in the kenauna, a being who can send forth his spirit to injure or cause wasting diseases, or personally enter in the body of any animal—jaguar, serpent, bird, or insect—which follows up the victim and slays him. His spirit may also enter a man in the form of a caterpillar, and cause disease. Such a caterpillar is often with a small bird which is much feared as a kenaunir-bird; this is shot and every scrap of it carefully burned, so that there may be one enemy the less. Certain peaimen are thought to have the power of sending their spirit into an animal. The wer-jaguar is believed in by many of the tribes.

A Tucuman story tells how a man saw his brother take three grains of soil, spread a jaguar-skin on the ground, and dance round it, when he became a jaguar. Much horrified, he later obtained the skin and burned it. Returning home, he found his brother dying, but was asked by him to procure a piece of the skin. He did so, and the dying man threw it over his shoulders, and became a jaguar, which fled into the forest. In this case beliefs merely re-founded from the wer-animal. In a Paraguayan story the man becomes a man-eating jaguar by falling prone, and is transformed by reversing the process.

Once he was wounded by a youth, who followed him up and killed him in his den, which was filled with human bones. In another tale from the Paraguayan Chaco two men who visited a village when the men were absent dreamt when they heard from the women that they would soon return. When the men returned, they said that the visitors were cowards and came to deceive and destroy them, and they had seen the marks

LYCANTHROPY

of their claws near the village. They were then pursued and killed.1

Among the Melanesians in Banks Islands the nearest analogy to the werewolf is the Tanamamu, the soul of a person which leaves the body to eat a corpse. A woman threatened to do this. Watch was kept, and, when a noise was heard near the corpse, the woman threw a stone and hit something. Next day the woman was found to have a mouth on her arm caused by the stone which hit her soul.2 In Lepers' Island wizards transform themselves into blow-flies and cause sickness to their victim, or into a shark and eat enemies. And two may beget the form of sharks, owls, and eagles.3 A story from this island illustrates the belief.

Tarkeke devoured men by turning into a fish, or entering a fish or a kind of mimic image of a fish. His son found this image and got into it, when he went out to sea. Tarkeke then went after the boy and punished him.4

In the examples quoted it is interesting to note in how many ways the change is thought to be effected. In many instances—Scandinavian, German, Slavic, French, Chinese, and the Teneumans of S. America—it is by donning an animal skin or girdle (see GREDÉ), presumably after removing the clothing, as this is a necessary preliminary in other methods. Eating a drug or root or rubbing the body with a salve or oil is found in ancient Italy, the Netherlands, England, Indonesia (where also a poison infecting the soul is thought to be the cause of the change), and in Africa, and in many cases tried judicially in Europe. Charms, spells, and other magical methods also effected the change in Celtic Britain, Chinese, Indonesian, Cambodian, and other instances, and no doubt the use of spells accompanied the other means referred to. The power might be given by the devil (Russian), or by spirits (Australians), or the change might be caused in a man by a witch. It might represent the effect of a divine or saintly punishment or other curse (ancient Greece, China, Cells of Ireland, Normandy); or it might be the result of eating human flesh (ancient Greece), or of making use of some particular action—swimming (ancient Greece, Perigord), falling prone (Paraguay), yawning (ancient Greece); or it might be the natural gift of a seventh son (Portugal), or of one born on Christmas night (Naples) or between Christmas and Twelfth-night (Greece).

In some cases the power is ascribed to a special tribe or to a people living in a special district—Arcadians, Korinchi Malays, aboriginal tribes in China, Selar of Jadramaut. This has perhaps an explanation in the appearance of epidemics of lycanthropy in certain places, so common in the Middle Ages and later.

Very often it is said that, when the wer-animal is wounded or killed, the human form comes back spontaneously. This is found in many European instances, and also inversely in that of the fox and dog superstition in China.

In general, where the animal skin may be separated from the man, there is still a sympathetic relation between it and him. Thus, if it is burned (Flemish, Breton, American, S. American instances), or rubbed with salt or pepper (Sengambia, Cilaor, Negroes of America), he suffers terribly and may die, as in the case of the lumbago in Celebes (below, p. 218 f.). On the other hand, this may release him from being a werewolf, as in the case of other men under enchantment who lose their beast nature when the skin is burned. Conversely, the seal or mermaid wife recovers it when she shaves her skin.5

While in Europe the man who is a werewolf is known by his eyebrows, growing together over his nose, or by a small wolf's tail growing between his shoulder-blades, in Indonesia the man lacks heels or the furrow of the upper lip, or is marked by twisted feet or by peculiar actions.1

There are various methods of curing or ending the transformation. Burning the skin and wounding have already been mentioned. Another method was for the witch to cover the werewolf with a skin with hair turned outwards (Serbia). In the case of wounding, some special methods are referred to—the werewolf had to be scratched above the nose so as to extract three drops of blood (Brittany), and in Germany stabbed on the brow three times with a knife or pitchfork. The emission of blood as a cure here corresponds to the drawing of blood from a witch as a well-known means of destroying her power. Naming the werewolf by his captivinal name and reproaching him were also effective.2 In one story cited above the wife shaves her apron at her husband and so restores him. In Cambodia the werewolf is deprived of his power if struck with a hook on the shoulder.3

2. Lycanthropy as a theological doctrine.—Throughout the Middle Ages, but more emphatically in the 16th and 17th centuries, theologians turned their attention to lycanthropy as a branch of sorcery. They held that the help of Satan sorcerers could transform themselves into noxious animals, particularly wolves, for purposes inimical to others. Innumerable theologians expressed these views, and many treatises were written on the subject, while it was freely discussed in general works on the evils of sorcery. Of these theologians J. Bodin is one of the best examples; in his De Magorum Démonomania (Frankfort, 1603) he maintains the reality and certainty of the transformation. Theological opinion thus coincided with popular superstition, and many of the instances cited as proofs are little better than the popular tales referred to above—e.g., where a wolf is wounded and a human being is found with a similar wound soon after. The severest measures were therefore taken against lycanthropes, especially on the part of the inquisition, and this authoritative announcement of the reality of the transformation added to the popular terror. People easily imagined the truth of the charges brought against those charged with them, or came forward as witnesses of the alleged facts. Indeed, the prisoners themselves often maintained their truth, showing that insanity and hallucinations had much to do with the peculiar heinous aspect of the crime is seen in this: H. Boguet, a judge who tried many cases and who wrote many works against sorcery, drew up a code in 1601 in which he stated that, while sorcerers should be first strangled and then burned, the loup-garou should be burned alive.4 The belief in sorcery as well as the theological animus against it often led to epidemics of sorcery; the people in a district, e.g., became terrorized by the idea that all around them were sorcerers, or many persons, half crazy, maintained this regarding themselves. At the beginning of the 16th cent. in Lombardy, during such an epidemic, witches were freely accused of having changed into cats and fled into houses to suck the blood of children.5 Reports of many trials of reputed lycanthropes are still extant, and afford sad evidence of human credulity.

5 Bourquelot, p. 216.
In 1521 Pierre Burqot and Michel Verdon were tried by the parish priest and the Mayor of the town of Besançon. The former alleged that years before, when his cattle had strayed, a black herald had brought them together; after he had sold them to a merchant, he got him to return them to his master, the devil. Later Verdom taught him at the Sabbath how to become a werewolf by rubbing himself with a certain ointment. Then he went himself with four paws and his body covered with hair, while he was able to run like the wind. Verdon also transformed himself in the same way. The ointment had been obtained from his demon master. In the form of wolves they killed several children, sucked their blood, and ate part of their flesh, finding it excellent. Burqot also said that he had sexual relations with wolves. Both men were burned alive at Besançon.3

In the same year before a court, three sorcerers were accused for the same crime. One of them had been wounded as a wolf by a hunter, who, following the trail, came to a hut, where he found three women dressed by their wife. These lycanthropes are represented in a painting in the chapel of the Dominicans.2 A curious case is that of Gilles Garnier, a hermit of Lyons, who, finding his solitude irksome, had taken a female companion. They had several children and lived in great misery. In 1572 a wolf terrorized the district, and the bodies of several children were found half devoured. A boy was attacked by the wolf, but his cries attracted attention. Garnier was found near the body, and at his trial before the Parlement of Dôle he avowed that he was the wolf, that he had sold himself to the devil, and had obtained the power of transformation by the use of an ointment. He had killed and eaten the children, the woman also sharing in the ghastly meal. He also was burned alive.4

In Auvergne in 1588 the wife of a gentleman was burned as a wolf. Her husband had asked a hunter to bring him some game. The hunter was attacked by a wolf, and cut off one of its paws. On his return to the chateau he drove the paws into a fire. It was seen to be the hand of a woman with a ring on the finger which the gentleman recognized as his wife. Suspecting her, he went in search of her, and found that she had lost a hand. On her confession that she was the wolf, she was condemned.4

Henri Boguet, grand judge of the ecclesiastical court of St. Chilian (1605-1610), was most active against sorcerers, and, according to Voltaire, boasted of having put to death more than 600 lycanthropes. His Discours extérieur des sorciers (Lyons, 1602) contains many instances of alleged lycanthropy, with the confession of those accused. He believed firmly in the possibility of the transformation, whether by rubbing with an ointment or otherwise, some chapters of his work dealing specially with this subject. It is remarkable also, as showing the state of feeling at the time, that on 3rd Dec. 1573 the Parlement of Franche-Comté gave a ruling for the pursuit of loups-garous.5

Towards the end of the 16th cent. Pierre Stand was executed at Bâle, in the diocese of Cologne, on his own confession of having lived with a succuba, who gave him a girdle by which he could become a wolf, not only in his own sight, but in that of others. He had killed and eaten fifteen children in his wolf form, and had tried to eat two of his daughters-in-law.6

The beginning of the 17th cent. was marked by numerous epidemics of lycanthropy, and hundreds of executions took place. In 1603 Jean Grenier, a boy of 14, alleged before the judge of Roche-Chalans that he was a werewolf, as a result of a demonical gift, and that he had eaten nine children. He also accused his father of being a werewolf and possessing a wolf's skin, and another man, Pierre Is Thilloures, of having his skin and ointment. The conduct of the boy in court showed that he was insane, and he was detained in a convent. Nevertheless the charge was continued against the two men. The youth was visited in his convent by De Lancre in 1610, who found that he could run on all fours with ease, and that his method of eating was disgusting. He still persisted in his delusion of being a werewolf. In 1604 at Lausanne five persons were burned as werewolves. A peasant of Crusat had curbed his child and, as a result, five sorceresses in the form of wolves had carried him off to the devil's abode. The sorceresses gave then cut him in a cauldron, and made an ointment of his flesh.8

These will suffice as examples of the trials and executions for alleged lycanthropy which were so numerous at that period. The most noteworthy fact in the whole sordid business is that some of the writers on the subject show the most extraordinary credulity regarding the cases. Petrus Maruornius, in his De Sortificatis, manifested that he had seen the change of men into wolves in Savoy.1 Bourdin, procureur général of the king, assured Bodin that there had been sent from Belgium the proofs, signed by judge and witnesses, regarding a wolf who was pierced with an arrow. Soon after a man was found in bed with the arrow in a wound, and, when it was drawn out, it was recognized for his own by the person who had shot the wolf.2 Other cases are related in which a man, strongly suspected of being a werewolf, was found in bed with several wounds, and they were at once believed to be the marks of the devil in question.3 While the whole was generally attributed to diabolic influence, there were different ways of accounting for it: some writers thought that there was a real transformation,4 or that the devil clothed the men with an actual wolf'skin s or with one condensed out of air,4 Others, however, thought that the devil was begotten by fancy or by means of ungents on him or on the onlookers, so that they imagined that the man or woman was an animal, while he or she was similarly deluded.5 Others, again, suggested that the devil caused the person to imagine himself a wolf, and that he actually did the deeds of which he dreamed.6 This is akin to the theory of St. Augustine, who refused to believe that the demons could actually change man's corporal substance. In sleep or trance, 'fantasms' went from him and might appear to others in corporeal, animal form, while to the unconscious man himself it might then appear that he was in such a form and acting in accordance.7 The effect of such drugs as opium and hallucinations of riding through the air and of transformation, such as witches confessed to, and this may have been the food given by women to others in Italy so that they believed themselves beasts of burden. Such a drug might be responsible for lycanthropic hallucinations. Still others, more rational, regarded lycanthropes as lunatics who imagined themselves wolves. The fact is probably the true solution of the whole matter.

3. Lycanthropy as a form of mental aberration.
—Both in earlier times and even in the period when severe sentences were being passed against alleged werewolves, the existence of a much mental condition in which the patient imagined himself to be an animal—a form of melancholia with delirium—was clearly recognized by some. The popular belief in werewolves was not accepted by scientific writers in antiquity. Herodotus (iv. 104) would not be persuaded of the alleged transformation of the Neurians. Pausanias, admitting the transformation of Lycaon as a divine punishment, refused to believe in the recurrent transformations in Arcadia. Pliny (HN viii. 34) was equally incredulous. Medieval writers regarded lycanthropy as a form of mental derangement. Of these, Marcellus of Sidra wrote a poem in which he treats lycanthropy in this fashion. The poem has not survived, but a prose version, abridged, by Ætius exists.

LYCANTHROPY

According to Marcellus, those afflicted by the lupine or canine madness go out at night in February, imitating wolves or dogs, and kill men. He gives this opinion because he saw a man who was so transformed that he was known—pale face, tearless eyes, dry tongue, burning thirst, etc. He also suggests various remedies for this disease, which he believes is a form of sudden physical illness. According to him, those who believed themselves wolves were really troubled in their minds by the devil, so that in sleep they imagined that they had actually perpetrated the actions of which they accused themselves. He also cites the passage of Marcellus just referred to. Je de Nynault, a doctor who wrote on lycanthropy, thought that the lycanthropes were deluded by the devil, or that he actually gave them stains, liquids, or powders, by which their sense impressions were affected. There were, however, natural lycanthropes, persons afflicted with folie louvier. He denies any actual transformation, such as was insisted on by Bodin.

The possibility of persons, more or less imbecile, living in a state in which they were not, and even forming among wild animals, such as wolves, was also suggested by some later writers. Modern alienists take the view that lycanthropy was a form of insanity. Now such melancholia with delirium is rare, because this belief hardly survives in Europe. Sporadic cases, however, are still known; in one instance the patient imagined that he was a wolf, and ate raw meat. Some of the instances cited in the previous sections may be best explained as cases of insanity of the type described. Of the Greek pseudeides and the human Kallikantzari, the Malay instances of men with boii, several Chinese examples, the Japanese belief in fox-possession, the Ainu belief in possession by various animals, the Byzantian belief in a rapina, by a tigre, the Nishtham men possessed by a bear, as well as various European instances. In all these the imprisonment of the possessing animal is noticeable, and the additional accounts of the growth of hair, claws, etc., may be interpreted as a product of an abnormal growth of hair or nails in cases of such insanity (cf. Nebuchadrezzar) or of hypertrichosis in general. The instances of medicine-men pretending to become animals, and of the witnesses actually believing that they saw hair and claws growing on them, are perhaps exploitations of this diseased condition.

Further examples of possession from all stages of culture are worth citing.

4. De Nynault, ch. 1. For other writers who took the view that madness was the cause of lycanthropy see Bouquet, p. 184. See also, G. P. de Lassalle, La vie et les doctes des auteur de lycanthrope, who wandered among the tombs, as lycanthropes, who also had that habit (Essai sur les miracles, in journey, Paris, 1828, x. 89) (29). De Nynault, Jardine, vol. 1, p. 110.

According to Marcellus, those afflicted by the lupine or canine madness go out at night in January, imitating wolves or dogs, and kill men. He gives this opinion because he saw a man who was so transformed that he was known—pale face, tearless eyes, dry tongue, burning thirst, etc. He also suggests various remedies for this disease, which he believes is a form of sudden physical illness. P. de Lassalle, La vie et les doctes des auteur de lycanthrope, who wandered among the tombs, as lycanthropes, who also had that habit (Essai sur les miracles, in journey, Paris, 1828, x. 89) (29). De Nynault, Jardine, vol. 1, p. 110.
about, hiding, and also bowing like a dog. In another instance, treated by Morel in the asylum at Marville, the patient had the delusion that he was a wolf, and ate raw meat.

It is obvious that in facts like these lies one explanation of the origin of lycanthropy. The unfortunate victims of melancholia with such delusions, imitating in their frenzy the cries and actions of various animals, must have suggested, both in primitive and in later times, certain aspects of the shape-shifting dogmen, especially that of the werewolf. And, where the people believed in the possibility of such transformation, it was easy for them to think that such persons, when actually seen imitating the actions of an animal, were really in that animal's shape. Examples of this hallucination have already been given from among the Abipones and the Abyssinians. The frightful prevalence of this mania during the later Middle Ages and in the eighteenth and nineteenth centuries may be explained by the miserable conditions under which thousands of the peasantry lived, constantly on the verge of starvation, by their pre-conceived ideas, and by the terrorism to which so many were reduced by the widespread demonology, with its sinister shapes of fear and horror as well as its peculiarly vile conceptions of both cruelty and sensuality. Nor is it impossible that half-insane persons, suffering constantly from hunger, may have killed and eaten human victoms, whether under the delusion that they were wolves or not.

Necrophagy is not unknown in the annals of mental science, and no crime was more commonly attributed both to werewolves and to witches at the same period. But the belief by them, than the eating of human flesh. This crime was doubtless largely hallucinatory, but it may have had a foundation in fact. Such persons may have actually consented themselves with a wolf-skin in order to terrify their victims more completely. Among savages, sorcerers and medicine-men have traded on the existing delusion or dementia, and have claimed the power of transformation, as many of the above instances show. This is the case with Abipone sorcerers, and another instance is found among the Chippewa and other American Indian tribes, with whom sorcerers dress in the skin of an animal, and imitate its howls and gestures so exactly that credulity would aid the deception, and, as the sorcerer pulled off the skin, he would be thought to have resumed his human form. Medieval and later sorcerers doubtless also exploited the current delusion in these and other ways. This would account for such cases of the change being witnessed as have already been cited.

The constantly recurring idea that the animal change is for a certain period or years, and the statement that the person knows when the change is about to come, are also strongly suggestive of periodical or recurrent attacks of insanity.

In several of the above instances, where the change occurs through the denning of an animal's skin, there may be a trace of the fact that insane persons with lycanthropic delusions did actually brighten the delusion by wearing a skin, as perhaps in the case of the werewolves in the Irish instances mentioned by Giraldus, the human body is visible underneath the skin. As far as the popular belief was concerned, in many cases the clothing was first removed. This kind of delusion occurred before the animal skin was put on. But it may be the rule of an older belief that the clothing was first removed; cf. the Voodoo instance (above, § 1, p. 219).

Perhaps the werewolf belief was also aided by such phenomena as imbecile children, brutalized, and having animal appearance. The folk-tales of boys 'were often believed to have been stolen by animals—the bear, the wolf—and to have been brought up and suckled by them. While many stories about such children are not authentic, there are some cases in which boys were actually found in the dens of wolves in India. They could not stand upright, went on all fours, ate raw meat, and tore clothes into shreds. Various theories have been suggested to explain their having been thus brought up, but, if some cases are authentic in wolf-haunted districts in India, there may have been instances from time to time in similar districts in Europe. This would in part explain the numerous folk-stories about children suckled by animals, e.g., that of Romulus and Remus. The case of a child of the kind described as 'idiocy by deprivation,' and, if such children survived, they would hardly differ from the insane persons who imagined they were wolves, went on all fours, and ate raw flesh.

The case is parallel to that of women carried off by baboons or orang-outangs, which has doubtless some foundation in fact (see G.F., p. 257).

4. Werewolf and vampire.—While both werewolf and vampire have a liking for human flesh and blood, there is a marked difference between them. The werewolf is a living person assuming animal form for the sake of gratifying his desire. The vampire, on the other hand, is a resuscitated corpse, which rises from the grave to prey on the living, the reasons for the resuscitation being of various kinds (see Vampire). But here and there links of connexion exist. Thus in Germany, Serbia, and modern Greece it is thought that the man who was a werewolf in life becomes a vampire after death. Hence the werewolf was born, not buried, lest he should do mischief. Again, the dead sometimes appear in reality of the transformation. Nikolaouman sorcerers were much feared for their supposed power of assuming animal forms. To strengthen this belief, they disguised themselves in the skins of animals.

In the instances of exact imitation of the animal's howls or movements was gone through, credulity would aid the deception, and, as the sorcerer pulled off the skin, he would be thought to have resumed his human form. Medieval and later sorcerers doubtless also exploited the current delusion in these and other ways. This would account for such cases of the change being witnessed as have already been cited.

The constantly recurring idea that the animal change is for a certain period or years, and the statement that the person knows when the change is about to come, are also strongly suggestive of periodical or recurrent attacks of insanity.

In several of the above instances, where the change occurs through the denning of an animal's skin, there may be a trace of the fact that insane persons with lycanthropic delusions did actually brighten the delusion by wearing a skin, as perhaps in the case of the werewolves in the Irish instances mentioned by Giraldus, the human body is visible underneath the skin. As far as the popular belief was concerned, in many cases the clothing was first removed. This kind of delusion occurred before the animal skin was put on. But it may be the rule of an older belief that the clothing was first removed; cf. the Voodoo instance (above, § 1, p. 219).

Perhaps the werewolf belief was also aided by such phenomena as imbecile children, brutalized, and having animal appearance. The folk-tales of boys 'were often believed to have been stolen by animals—the bear, the wolf—and to have been brought up and suckled by them. While many stories about such children are not authentic, there are some cases in which boys were actually found in the dens of wolves in India. They could not stand upright, went on all fours, ate raw meat, and tore clothes into shreds. Various theories have been suggested to explain their having been thus brought up, but, if some cases are authentic in wolf-haunted districts in India, there may have been instances from time to time in similar districts in Europe. This would in part explain the numerous folk-stories about children suckled by animals, e.g., that of Romulus and Remus. The case of a child of the kind described as 'idiocy by deprivation,' and, if such children survived, they would hardly differ from the insane persons who imagined they were wolves, went on all fours, and ate raw flesh.

The case is parallel to that of women carried off by baboons or orang-outangs, which has doubtless some foundation in fact (see G.F., p. 257).

4. Werewolf and vampire.—While both werewolf and vampire have a liking for human flesh and blood, there is a marked difference between them. The werewolf is a living person assuming animal form for the sake of gratifying his desire. The vampire, on the other hand, is a resuscitated corpse, which rises from the grave to prey on the living, the reasons for the resuscitation being of various kinds (see Vampire). But here and there links of connexion exist. Thus in Germany, Serbia, and modern Greece it is thought that the man who was a werewolf in life becomes a vampire after death. Hence the werewolf was born, not buried, lest he should do mischief. Again, the dead sometimes appear in reality of the transformation. Nikolaouman sorcerers were much feared for their supposed power of assuming animal forms. To strengthen this belief, they disguised themselves in the skins of animals. In the instances of exact imitation of the animal's howls or movements was gone through, credulity would aid the deception, and, as the sorcerer pulled off the skin, he would be thought to have resumed his human form. Medieval and later sorcerers doubtless also exploited the current delusion in these and other ways. This would account for such cases of the change being witnessed as have already been cited.
spirits of all kinds frequently take animal forms and act as the werewolf or vampire. Thus the French lobin was a spirit in the form of a wolf, while it is said that the iorim of Java comes in the shape of a crocodile. In Ethiopia lives the king of the devils riding on a fire-breathing wolf and is followed by fiends in the form of wolves, while in Morocco the wicked are thought to be visited by evil spirits as wolves, jackals, etc. 2

5. The ‘sending.’—A phenomenon analogous to that of the werewolf is that of the ‘sending’—a thing or animal, sometimes even a person, created by the sorcerer, or some part of the sorcerer himself (his soul, etc.) and sent out by him to annoy or injure people. Examples occur over a wide-spread area and at various levels of civilization. The ‘sending’ is a kind of familiar of the wizard. In S.E. Australia the lizard is such a wizard familiar and is sent out to do injury. 2 Among the Roro-speaking tribes of British New Guinea snakes and crocodiles are sent out by sorcerers to kill. A fragment of the victim’s garment is put beside the snake in a pot; then heat is applied to the pot, and the snake strikes at the fragment. Then it is let loose near where the victim passes, and attacks him because it smells the smell of the fragment on him. More magical is the method of the Battle Bay sorcerers, a ‘sending’ from whose body causes death. It leads a separate life from her after her death, or may pass to her daughter. At Gelaaria this ‘sending’ is called lubon, and resembles a shadow. It leaves the woman’s body when she is asleep, and causes disease by inserting bone or stone in the victim. Should any one see it, it turns into an animal, and then again takes its human form. Among the Congowood Bay the ‘sending’ is called farum, and is like a limbless old woman. It turns to a mosquito and sucks the victim’s blood, resuming human form at dawn. 4 In Banks Island, if any one eats a piece of a corpse, its ghost will go forth to harm a victim at the will of the eater. Here also and in the New Hebrides the moro, or sea-snake, acts as the familiar spirit of those who profess to have had intercourse with it. 6 Among the Malays and in Java insects and even horned devils are ‘sendings’ and are believed to be sent by sorcerers. They are sent as a ‘sending,’ and should be caught by the person whom it is intended to destroy, and its claws and wings broken, a similar injury is done to the sorcerer’s limbs. 7 In the Carolinian islands centipedes, lizards, elephant, gorilla, etc., as a friend, and the animal is then supposed to harm his enemies by stealth. But, if the animal dies or is slain, the man dies. Hence such animals are usually not hunted by fellow-tribesmen. 8 Matebele wizards dig up corpses, transform them into hyenas, and use them as messengers or steeds. A wounded hyena escaping into a krool is thought to show that this is the dwelling of a wizard. 9 Baronga wizards send forth crocodiles, lions, snakes, etc., to kill or wound. 10 In Calabar each wizard has two owl messengers, or sends forth insects—stinging ants, beetles, etc.—into the house where he is to find his victim. Then he sends his ikim—a gourd—to examine the house. Insects and ikim report whether there is any dangerous injur, or medicine, in it. 11

Baviol sorcerers will leopards and crocodiles to go and destroy, having obtained this power through a medicine rubbed into their eyes. Then the animal becomes visible to them, and they know that it is at their service. 8 In British Central Africa, wizards can create lions, or sometimes inspire existing lions, to go forth and destroy. 9 Among the Boudi ‘dolls’ of Indian corn are animated by the sorcerer, and go forth to suck the blood of a victim, who turns sick and dies. 4 Zulu wizards send out owls and other animals, and Basutos crocodiles, to injure their victims. These are called their amunxix, ‘attendants.’ 5 The Eskimo angnikok sends a tynuk— a seal made by him. Should the victim kill it, he loses all strength and becomes a cripple. This seal is made of bones of various animals, covered with turf and blood, and charmed into life by a magic song. 6 A Siberian shaman will send out a ye-keola, or witch-animal, to light that of another shaman. The shaman whose ye-keola is worsted shares its fate. Lapland wizards sent flies and darts against their enemies, and also a kind of ball. The last was fatal to the victim as well as to any one who came in its way. 7 Witch-doctors send toads, scorpions, wells, and centipedes to eat a man’s heart instead of himself. 8 The Wanafs explain sickness as caused by an evil animal sent by a sorcerer to eat away the patient’s life. 9 In ancient Scandinavia it was believed that sorcerers could raise up a ghost or a corpse by their magic power and send it to do harm to an enemy. 10 The Indian, Benna, and Japanese examples of the animal familiar, cited above (§ 1), should also be noted.

Danish witches were believed to make a hare out of some wooden pegs and an old stocking, and send it to steal milk from cattle. 12 The Esthonians believed in magic jackets made by wizards and sent forth to do all kinds of mischief—e.g., to transform the victim. 13 Among the Celts the druids had the power to change the Yoruba sorcerers use the owl as a ‘sending,’ and, should it be caught by the person whom it is intended to destroy, and its claws and wings broken, a similar injury is done to the sorcerer’s limbs. 7 In the Carolinian islands centipedes, lizards, elephant, gorilla, etc., as a friend, and the animal is then supposed to harm his enemies by stealth. But, if the animal dies or is slain, the man dies. Hence such animals are usually not hunted by fellow-tribesmen. 8 Matebele wizards dig up corpses, transform them into hyenas, and use them as messengers or steeds. A wounded hyena escaping into a krool is thought to show that this is the dwelling of a wizard. 9 Baronga wizards send forth crocodiles, lions, snakes, etc., to kill or wound. 10 In Calabar each wizard has two owl messengers, or sends forth insects—stinging ants, beetles, etc.—into the house where he is to find his victim. Then he sends his ikim—a gourd—to examine the house. Insects and ikim report whether there is any dangerous injur, or medicine, in it. 11

he dies. Elsewhere in Celebes a man is thought to have three souls. One of these, the tamamun, leaves him in sleep and acts as a werewolf, but, if it is long and grafted from the body, it kills the owner. The wer-man in human shape arranged for a rendezvous with a woman. Her husband overheard, and followed the wer-man, who he saw when he was about to bite her. He struck the homempe otoroome, which turned into a tree. He threw it into his bamboo tobacco box. Then, carrying it to the place where the man was present, he placed it at the man's head. The owner begged him not to do this, but he still kept it in his fire, whereupon the man fell dead.

In some cases, the power of sending forth the soul as a natural gift, in others it is the result of contagion from another wer-man, or from anything with which he has been in contact. This contagion can be made to leave such a person in the form of snakes or worms by means of sorcery. The wer-man is known by his long tongue and uneven eyes, which are of a green colour. A wer-man, when discovered, is punished by death. In these instances the spirit is lost little different from the sending of the familiar spirit. In some cases, however, it is thought that there is an actual bodily transformation, and here, if the animal is wounded, the man who has thus changed his form is similarly hurt when discovered, or else he must not neglect it, as he would not himself.

This likeness may be further extended to the kindred powers of the Bush soul and the magaul, both of which bear some resemblance to the ‘sending’ and to the homempe otoroome. In Calabar the bush soul is one of four souls possessed by every man. It lives in a pig, leopard, etc., unseen by itself, and it is not the soul of the owner. The leopard’s soul is a cat, herself remaining insensible. Should it be injured in any way, she bears a similar wound.

This likeness may be further extended to the kindred powers of the bush soul and the magaul, both of which bear some resemblance to the 'sending' and to the homempe otoroome. In Calabar the bush soul is one of four souls possessed by every man. It lives in a pig, leopard, etc., unseen by itself, and it is not the soul of the owner. The leopard's soul is a cat, herself remaining insensible. Should it be injured in any way, she bears a similar wound.

A chief's son who had a hippopotamus for his bush-soul had been paying a visit to another chief, but soul away his cause. Asked how he crossed the river, he replied, 'You will see.' He took the leaf of a coco-yam, placed it on the water, sat on it, and at once disappeared below the surface. Then he was seen to cross the river as a hippopotamus, and on the other side he became a man.

It should be observed also that a man's human soul, residing in himself, may leave his body through a medicine and take the souls of things that he desires out of his house. Then he can perform any magic or transformation.

In Northern Nigeria among the Angas a man is

held to have a kavow which enters him at birth, and another, its counterpart, which enters the animal. The death of the one is the death of the other. The whole belief in the bush-soul is not unlike the Roman belief in the genius. A man's health depended on that of his genius, which often resided in a snake. If that was killed, the man whose genius it was was killed.

The magaul belief is found in Central America. In this case a youth obtained his magaul by dreaming of an animal after a period of fasting and fasting. The monster-animal is closely bound up with the man henceforward. When it dies, the man dies; when it is sick, he is sick. He has also the power of appearing as his magaul. Any wound caused by the animal form is then on the man.

This resembles the belief of the Motu, Melanesia. A lizard, snake, or stone, etc., is selected as a man's tamaain. His life is bound up with it. If it dies, or gets broken, or lost, the owner dies. As already seen, the tamamun may be the soul, and, if it is wounded, the body is found to have a similar wound. In an Eskimo story the spirit of a witch who has made a young man ill is wounded in the heel. At the same moment the witch dies in the next house.

Between the werewolf superstition and the various beliefs cited in this section there are certain similarities. Of these that which recurs constantly is the belief in repercussion.

Injury to the 'sending' entails injury to the sorcerer (Verash, Estoks, Sikka); injury to the animal friend entails injury to the owner (Cameron); injury to the bush-soul, magaul, tamamun, wer-soul, entails injury to the owner (Celebes, Cameroon). It is otherwise, however, in the case of the Orans and Guinea; injury to the soul which takes the form of an animal entails injury to the owner; injury to the soul which contains an animal temporarily entails injury to the owner; injury to the soul absent from the body for some mischievous purpose entails injury to the owner (Estok, Orans, Cameroon); injury to the werewolf or other wer-soul entails injury to the man in his human form.

The real point of connexion between all the beliefs is that something belonging to the man, some part of the man, or the man himself in another form is injured. The injury then, because of the vital connexion between the part and the whole, or thing owned and owner (sympathetic magic), is seen on the man himself. But it is not clear that, as Frazer supposes, the wide-spread belief in wer-animals may 'be found to resolve itself into a belief in the external soul.' The wer-animal is, save in a very few instances (Khonds, Orons, Malays, Chinese, and others), wholly human. The animal was supposed to transform, not his soul. And, even when the owner of bush-soul or magaul is supposed to change himself into the animal containing it, or an animal of the kind, the transformation is a bodily one. The external soul, injury to which causes injury to the owner, is one thing: the wer-animal, which is really the man himself transformed, is another.

But the same theory or belief in repercussion is applicable to both. It is not by any means certain that the instance on which Frazer bases his theory of the wer-animal and the external soul can support it. There is no evidence that, when the Nndua novice is supposed to die and come to life again, any resemblance to the animal soul which he used to possess is supposed to return to him.
again before becoming a member of the wolf-society, he has exchanged souls with a wolf, so that both man and wolf are werewolves, or that there is anything here akin to the bush-soul. 1

again, W. W. Thomas maintains, 2 that lycanthropy is connected with negaimatism rather than with transformation, or that the wer-animal was originally the familiar of the medicine-man. The comparatively few instances of the spirit-giving and similar wer-animal cults suggest that we are here on the track of a different kind analogus-stition to that of lycanthropy with its supposed bodily transformation. Again, the familiar is hardly a form of the man himself, as the werewolf is, but rather something of part of the man, or it is his messenger, which the werewolf does not seem to be.

There may, however, be a connecting link if we regard the phenomena of lycanthropy as based on the hallucinatory dreams of insane persons, preoccupied with ideas of transformation. Where a medicine-man is supposed to send forth his spirit either in its own shape or in that of an animal, while he remains quiescent at home, this may also be suggested by a hallucinatory dream.

It seems better, therefore, to regard lycanthrophy with its bodily transformation as distinct from the transformation of the outgoing spirit, and also from the 'seducing,' messenger, or familiar. They are analogous beliefs, to which similar conception—namely that of a transformation—have attached themselves. But they are in origin different. In the same way, though there is much in the fairy, demon, or witch superstitions which is common to all (see FAIRY), these are really distinct in origin.

The wide diffusion of the werewolf superstition forms an excellent example of a universal belief being worked up into a superstition or story bearing a common likeness in different regions. Without the belief in shape-shifting the werewolf superstition could not have existed, if this being granted, persons of diseased mind in all stages of civilization easily conceived themselves to be ferocious animals preying upon other human beings. The belief itself was easily exploited by interested persons—medicine-men, soothsayers, etc. or some of these might themselves be half-crazed, as medicine-men often are through their austerities (see AUSTERTIES). In certain cases—e.g., that of the Norse berserker—the insane man was heightened by the animal-skins; or, in other cases of totemism, in its later stages, may have helped the form of the superstition, as in the Arcadian and some Irish Celtic examples.

LYING.—The English word 'lie' with its congers and derivatives represents a concept which, if hard to define, is yet unique and irreplaceable into our idiom, and little less than the undefinable 'conscience'. With little doubt the word is comprised either (a) that all persons are agreed as to what precisely constitutes a lie or lying, or (b) that anything like the same ethical significance has at all times and in all communities been attached to the practice generally to be denoted by the Teutonic word and by the words commonly regarded as its equivalents in other languages, yet in English at any rate this term, and in a somewhat less degree any word or periphrasis which is thought to be merely a covert alternative for it, is viewed and, by those to whom it is applied, as involving a covert re-phant of, or at least an opinion, generally different from any other. It would probably be conceded that nowhere has antipathy to lying and sensitiveness to the imputation of it reached a higher intensity than among ourselves; and a study of the import of the term in our own language may therefore be taken as in a manner typical and representative.

1. Sources of modern conception.—Historically the English lie has, if we may so speak, a fourfold pedigree: Saxon, Jewish, Graeco-Latin, and Christian. It signifies, that is, a vice or vicious act, which derives its peculiar reputation partly from the language and sentiment of our pagan forefathers, partly from conceptions that find expression in the Hebrew Scriptures of the OT, partly from Greek and Roman thought and literature, and, as we shall contend, partly from the specific teachings of Christianity. If it be alleged against this analysis that our sensitive regard for veracity is rather of feudal origin, the objection, even if well-founded, is of no moment, that feature of feudal ethics being itself derived from some or all of the four sources enumerated.

2. Sin.—The presence of the word 'lie' in all the Teutonic languages of a substantially identical word of like meaning attests the perennial importance of the thing meant. 'To lie' is to say that which is not. And we cannot doubt that the tribesman who had the skill, and the heart, on occasion to do this unhonestly was held in different esteem from the man who could not or would not; whether in higher or in lower esteem, we cannot in the absence of adequate evidence be sure; that might perhaps depend on, and change with, the varying circumstances of the community.

3. Jewish.—When at length on British soil the Anglo-Saxon invaders were gradually led to profess the Christian faith, that faith brought with it a moral code derived in unequal degrees from the three other sources named above, of which the most ancient and explicit was the Hebrew. Although the Decalogue contains no precept 'Thou shalt not lie,' the prohibition of 'false witness' reposes the most frequent emphasis upon lying. Prophecy and instructors enlarged the prohibition. 'The voice of the Lord crieth unto the city,' says Micah (6), 'for the inhabitants thereof have spoken lies, and their tongue is deceitful in their mouth' (6); cf. Jer. 9:20, 23, Ps. 62:6, 191; Jer. 23:3. Lying lips are an abomination unto the Lord (Ps. 129:4); a righteous man hateth lying (13); cf. Ps. 119. Especially guilty are 'false prophets' who in the name of the Lord 'prophesy lies ... a lying vision ... a thing of nought, and the deceit of their own heart' (Jer. 13:7); cf. Prov. 13:11. Finally, philosophically pronounced falsehood intrinsically vicious. Plato (Rep. i. 331 B; and Sophocles proclaimed the ugliness of falsehood:

"Liable (see lies)," he claims to be "liable (see lies)," though when the truth brings a man dire destruction, 'is praiseworthy to say even what is not honorable' (frag. 323).

Finally, philosophically pronounced falsehood intrinsically vicious. Plato (Rep. ii. 382 A, 389 B-D), while permitting his 'guardians' to use it, now and again, and medicinally and officially 'for the benefit of the State,' bids them punish it rigorously in private individuals as a 'practice pernicious and injurious to the soul' (cf. "Lies.") Anyhow, a deliberate perversion and subversion of truth, both in words and in the heart, is deemed the most heinous of all crimes, and punishible as such whether by stealth or by open professions of falsehood. Indeed the "lying under the circumstances," which is taken by the Teutonic races to be an excuse for falsehood, is by the later Christian ethicists held to be more heinous than falsehood itself.
of the commonwealth,' and in his latest work (Laws, 759 B. F.) extols truth as 'foremost of all good things'; for the truthful man is 'trustworthy, whereas he who loves wilful falsehood is untrustworthy, and his involution in falsehood is foolish.' Aristotle (Eth. Nic. iv. 7. 6) deems 'lying' (φάσσαντα) essentially 'mean (φασίαν) and blameworthy.' The 'truth-lover' (φιλότρόπος) stands in notable contrast with him who rejoices in falsehood (τῷ ψεύδοντι ἄφθαρτῳ γαῖαν), a type of character distinct from him who lies for the sake of gain or glory (ib. § 12). In Stoicism the viciousness of falsehood, although not expressly affirmed, is tacitly assumed. Thus ideal good is in effect defined by Seneca (Ep. 99. 1) as 'a mind set on truth.' To the consistent Stoic acceptance of unverified 'opinion' as a substitute for truth or real knowledge would be equivalent to inveracity. Altogether, Greek philosophy had energetically discommodified the art of lying, and, when Latinized, had found an ally in old-fashioned Roman prejudice against willful untruth.

(4) Christian.—The NT endorsed and deepened the injunctions of Jewish theology and Gentile ethic. 'Lie not one to another,' writes St. Paul to the Colossians (3): the Christian is to forgo all 'lying,' and this for the new and characteristically Christian reason that 'we are members one another' (Eph 4). And with this Pauline monition the warnings of the Acts of Peter in the heavenly city no 'liar' may enter (Rev 21); each person that loveth and maketh a lie (22), where nothing is lost to the ethics of truth if by 'lie' be meant idol or counterfeit god; that in this, the whole, the falsifying man's conception of the divine attributes and therewith the standard of truth. In the Synoptic Gospels 'hypocrisy' (Mt 23, Lk 12) would appear to express what in St. John is called simply 'lying' (πρᾶξη), of which the 'deceit' (Jn 8) is first cause. Thus for Christianity the spirit of lying is opposed to the spirit of truth as darkness to light. It is antagonistic to God and incompatible with fellowship in the Church of Christ. And this abhorrence of lying as deadly sin, though too often grievously violated in nominal Christendom, has endured throughout the centuries, permeates our finest literature, and is reflected in the life and conduct of many a plain, honest man to-whoever.

2. Philosophical theories. — Theology and custom-morality apart, moral philosophers of different schools condemn lying on different grounds; the intuitionist as intrinsically repugnant to 'right reason'; the moral sentimentist as endangering or perverting the end of affection; the utilitarian because the action undermines the ends of self-government, the utilitarian because, on the whole, if not in every Instance, it would tend to the diminution of the sum-total of pleasure experienced. Whether the utilitarian sanction is well-founded in fact may be questioned. It is arguable that the wide acceptance of utilitarian ethics has been attended by an increased indifference to truth. Whereas lying is demonstrably contrary to other ideals—universal benevolence, perfection, and the beautiful—there is no guarantee that truth-seeking will bring either to the individual or to the community a surplus of pleasure, or that more pleasure may not be secured by an admixture of well-timed falsehood. But, even if the utilitarian theory could demonstrate the all but universal inexpediency of lying, such calculative disapproval of it as hedonistically impolitic is not the same thing as hating the lie for its own sake. It is this that would seem to be ethically distinct, and therefore, distinguishing man from man—the presence or absence of a deep aversion to lying as such. Of less real importance is the much debated question, too complex to summarize here, of exceptional contingencies in which, notwithstanding that lying is avowedly impermissible, it may yet or should be looked on as right. We may consider whether lies can be classified, and attempt a more exact determination of the essential constituents of lying.

3. Analysis and classification of lying.—The aim of a lie is to misrepresent facts, or purpose, or feeling. To be a liar is to do this habitually and wilfully. Of each particular lie the motive is normally some gain foreseen or conjectured as attainable by deceiving somebody as to (1) what has happened, (2) what one purposes, or (3) how one feels. In popular usage the term 'lie' is apt to be limited to the first kind. But I lie no less really, if (2) I promise what I have no intention of doing, or if (3), being glad, I feign sorrow. This is sometimes overlooked or even denied. With regard to declarations of purpose, it is rightly urged that unforeseen circumstances after cases, and to promise what one may eventually see reason not to perform is no falsehood. But it is lying, if at the time of speaking I have not the intention professed; or if I deliberately, but insincerely, protest that in no circumstances will change my mind; or if, having changed it, I allow those concerned to go on believing my purposes agree with my act, it is a very common form of falsehood. Similarly, as regards feeling, many people who would be ashamed to state that they had seen what they had not seen, make no scruple about pretending good will towards persons for whom they have not whether they have sometimes of getting general credit for a kindness of heart which is not theirs, sometimes of misleading the victims of their dissimulation.

Not all deceit, however, is lying. For, although the essence of lying is intent to deceive, there must be also, to constitute a lie, either (a) untrue words, or (b) such recticence as in the context of (speech or action) amounts to false statement—eg., if I say 'He gave me twenty pounds,' when in fact he gave me fifty (cf. Ac 5), or if I adopt and publish as my own an essay largely written by another man. To lie is, as Kant well says, 'to communicate one's thoughts to another through words which (intentionally) contain the opposite of that which the speaker thinks.' It matters not whether the false belief is created by positive affirmation or by omission of words necessary to the establishment of a true belief.

Allegory is not falsehood, provided it is designed and adapted to embody truth. It was because early Greek mythology did not in Plato's judgment fulfill this condition that he regarded allegorizing interpretations of it as in no way bettering the case for Homer and Hesiod (Rep. ii. 379 D). As with allegory, so with all fiction. Stage-plays and novels exhibit in the form of 'stories' events that are not history, present or past, and yet mislead nobody. A 'story' is a lie, then, only when it falsely disowns its fictitious origin. Even pseudonymous authorship does not necessarily involve falsehood. Not all illusion is deception. Daniel is dramatically as legitimate as Hames or Coriolanus. But the pope who, to intimidate a Frankish king and practising on his credulity, sent him a private letter purporting to come from St. Peter was no dramatist, but a forger; and forgery is falsehood. It is doubtful whether equivocation, where a statement is equally susceptible of two meanings, one false and one true, should, because calculated to deceive, be accounted as main cause. As a thing we probably should not. But the man who habitually
equivocates is an untruthful man. Under the head of equivocation may fairly be brought many of those partially deceptive utterances which are sometimes, but unconvincingly, treated as mere social conventions, with the customary phraseology of address and other common forms of speech generally understood. 1 If, e.g., in declining an unwelcome invitation I express regret at being unable to accept it, this declares that this is a usual and well-understood way of notifying my intention, while disguising the motive, is inadequate. But, supposing I do regret the disappointment which my refusal may cause or the circumstances which render the invitation unacceptable, the phrase employed is equivocal rather than actually false. If, instead of declining, I profess 'pleasure in accepting' the invitation, the pleasure need not be wholly fictitious; for it is in my power by an effort of goodwill (a) to feel pleasure in accepting, and not refusing, the civility offered, and (b) to find altruistic pleasure in a visit not naturally attractive. By thus choosing to be pleasant, a man determines on the side of truth what would have been equivocation. Even where there is an actual element of falsehood, we recognize degrees of insincerity. A statement which in the main reveals the speaker's purpose, feeling, or knowledge of fact, but disguises some detail, is not in the same degree vicious as an entirely misleading utterance, unless, of course, there is some principle involved in which case the saying may be exemplified that the 'worst lies are half truths.' Yet we cannot altogether reject the widely spread view of 'common sense,' that a direct lie stands on a different footing from any indirect device whereby of hiding the truth (supressio veri) or of creating a false impression (nugatio falsi). There is a common understanding that, when we speak, we do not state what we know to be untrue. Socially regarded, therefore, a direct lie is a graver breach of faith, and a worse blow to mutual confidence, than any statement, however evasive, which does not actually violate this understanding.

4. Conclusion.—On the whole, the main difference between ancient and modern views on inveracity is that in the latter censure is directed primarily on discrepancy between statement and thought rather than on the divergence from reality of a spoken, or unuttered, proposition. 'Modern' inveracity tends to be severe upon misstatements, apparent willful, of particular facts, but is strangely lenient wherever 'ignorance' can be pleaded—as if ignorance was not often willful, or reckless, indifference to truth. Many persons will have difficulty in accepting as false anything which they do not positively know to be untrue, and, when con-

MA'ARRI.

1 Life.—Abu'-Ali' Ahmad ibn 'Abdallah ibn Sulayman al-

Ma'arrat, the celebrated Muslim poet and man of letters, was born in A.D. 927 at Ma'arrat (Ma'arrat al-Numan), a prosperous Syrian town situated about 20 miles south of Aleppo, the same region to which the later poet and writer Ahmad ibn 'Umar was to return in the wake of a disastrous defeat in consequence of an attack of smallpox, but so extraordinary was his power of memory that this misfortune did not seriously interfere with the literary studies to which he afterwards devoted himself. It would seem that at first he intended to make his name as a physician. The lines which the poet wrote in the early years of his career have been lost. But in the latter part of the first collection of his poems entitled Sufi al-adwān ('Sparks from the Tinder'), in which the influence of Mutanabbi is apparent, with the object of seeking a wider field for his talents, he left Ma'arrat in A.D. 950 and journeyed to Baghdad, where he was well received by the poet and scholar 'Abd al-Hasan, and was appointed to the latter's place as the latter's place. As he had planned, he departed after a stay of eighteen months, and, on returning home, announced his intention of returin
to quit the capital, there seems to be little doubt that he took this step on an account of indignity which he suffered at the hands of his rivals who were so imprudent as to offend. The remainder of his life was passed in teaching and writing. His picture of himself as a missionary relapse counsels a false impression returned with a reputation that not only made him the first man in his native town, but also a great disciplant, the beliefs in all parts to hear his words in course on Arabic philology and literature. He had many friends, and his letters to them show a kindly interest both in men and things. (Abd Allah, ed. Margoliouth, Introd. p. xxx). He complains of his poverty, but the Persian poet Nasiri Khurasani, who visited Ma'arri in A.D. 794, describes him as very rich (Safarnameh, ed. C. Schefer, Paris, 1851, p. 104—
p. 36 of the Fr. tr.). Ma'arri died in A.D. 1058.

2. The character of the man already mentioned, Ma'arri is the author of another and far more remarkable volume of poetic, entitled Luzum i&A mp;datt, in reference to a tenor of his rhyme, and generally known as the Luzumiyat. These poems, written after his visit to Baghdad, contain religious, moral, and philosophical reflections and deal with a great variety of topics. The prevailing tone is pensive and sceptical, but many passages occur in which Ma'arri speaks as an orthodox Muslim. The Riadat al-Abihrin (described and partially translated by the present writer in J.L.S., 1900, pp. 627-670, and 1902, pp. 76-103, 257-203, 533-841, ed. Cairo, 1907) takes the form of an epistle addressed to Abu i Specification of Apo, who is better known by the name of Abu al-Qur'an. In this lucid work the al-Qur'an is imagined to have entered paradise, where he holds a series of conversations with pre-Islamic poets, and the author discusses the opinions of the leading Muhammadan freethinkers(madhyn). His Letters, composed in an elaborately artificial and abstruse style, have been partly but not exhaustively translated by B. D. Margoliouth. The list of his minor works, of which only a few are extant, includes a supposed imitation of the Qur'an, entitled Al-Jazf alaI i&datt, completed in the capital, Leyden, 1592-600. But this appears to be an invention. What he attempted was probably a parody of Qur'an style rather than a deliberate challenge to the dogma of of, which claims for the Qur'an a miraculous and immutable perfection.

3. The Doctrine. — It is difficult to give a clear account of Ma'arri's religious and philosophical beliefs. Not only are they, to a large extent, negative in character, but the evidence derived from some passages in his writings is counter-balanced by others which, if they stand alone, would lead us to the opposite conclusion. These contradictions are most strikingly exemplified in his attitude towards Islam. Any one who wished to prove him orthodox might quote from the Luzumiyat numerous instances in which the poet unequivocally accepts nearly all the chief Muhammadan doctrines, yet his pages are full of denials, doubts, and criticisms which, though cautiously expressed, show a strong anti-Islamic tendency, and would even convince that the charge of heresy brought against him by certain of his contemporaries was unjustified. Several explanations of the inconsistency have been offered. The question is important, since we can little estimate a man whom we do not fully understand. Can it be assumed that he is equally sincere when he writes as a pious Muslim and when he preaches the gospel of rationalism? That seems incredible, except on the hypothesis that Ma'arri, while doubting the divine origin of Islam, also distrusted the human intellect, and hesitated to cut himself loose from the faith in which he was bred. Such an explanation, however, does not accord with his confident and emphatic appeal to reason as the highest authority. The following quotations from the Cairo ed. of the Luzumiyat (A.D. 1891) illustrate his views on this point.

"Traditions have come down to us which, if they be genuine, possess great importance; but they are weakly attested. Custom may have changed, men's minds may have altered, the world is the best adviser in the world" (p. 280, s.f.). "Be guided by Reason and do whatever it seems good" (p. 264, s.f.). "My Reason is my guide that she may lead in order to follow Shafii Maliki" (p. 150, s.f.). "O Reason, is' that thou speakest the truth? For it is well that inventions or expediencies are left to thee" (p. 196, s.f.).

Those who hold that Ma'arri's orthodox utterances do not express what he wholly or partly believed, but were designed to mask his real convictions and to serve as a defence against any dangerous attack, are attributing to him a cause of action that he himself openly proclaims: "Society compels me to play the hypocrite" (ii. 139, s.f.). "I raise my voice to pronounce absurdities, but I only whisper the truth" (iii. 30, 139). "Conceal thy thoughts even from the friend at thy side" (i. 272, s.f.).

His opinions were of a sort that could not be communicated without some disguise; and this necessity, which he disliked (cf. i. 34, 2), is the source of many superficial contradictions in his writings. The suggestion that he was peculiarly dictated and controlled by the complex form of rhyme which he uses throughout the Luzumiyat is inadequate as a general explanation of the facts, although it may cover part of them. Something also should be allowed for the influence of an Islamic atmosphere and tradition upon the language of the poems, an influence to which, perhaps, their author at times consciously surrendered himself.

While Ma'arri adopted certain ascetic practices and held certain religious and moral beliefs, his genius was essentially critical, sceptical, more apt to destroy than to construct. He could think for himself, but lacked the power of sustained and combining his speculations. Unable to find in any religious or philosophical system, he fell into a fatalistic pessimism tempered, as not seldom happens in such cases, by a good deal of active benevolence. He claims to unif with his reader the secret thoughts of mankind (i. 294, 15), and it is true that his poems reveal the innermost spirit of contemporary Muhammadan culture in its many-sided aspects. We are here concerned only with his main points of view and with the opinions and beliefs to which he was led by his criticisms on the problems of life. For the sake of convenience the subject may be classified under a few general heads.

(a) Scepticism. — In several passages of the Luzumiyat Ma'arri discusses the origin and nature of religion. He ignores, although he does not formally deny, the theory of divine revelation. Religion, as he sees it, is a matter of inheritance and habit. "They live as their fathers lived before them, and bequeath their religion mechanically, just as they found it" {ii. 248, 13}. In all the affairs they are satisfied with blind conformity, even when they sayest, "God is One" (i. 252, 2). He disapproves of conformity (taglid), not because it is opposed to genuine faith, but on the ground that it is irrational. "It is not reason that makes men religious; they are taught religion by their next of kin" (ii. 149, 13); cf. the celebrated verses (ii. 298, 7 ff.): "The Muslims are mistaken and the Christians are on the wrong road. And the Jews are all astray and the Magians are in error. Mankind fall into two classes—the intelligent! Without religion, and the religious without intelligence.

The whole fabric of popular religion is raised on fear, fraud, and greed (i. 251, last line, 65, 9, ii. 106, 5). The poet characterizes the great religious systems as a mass of forged traditions and doctrines which not only are repugnant to reason but have undergone vital alteration at the hands of their own adherents (ii. 20, 15, 196, 3, 404, 2, 409, 9). All of them are tainted with falsehood; no community possesses the truth (haddi) entire (ii. 177, 10). Ma'arri does not shrink from applying this principle to Islam, though here, as has been remarked above, he speaks with two voices and avoids positive dogmas. In the case of other principles his criticism is less restrained; thus, referring to the Crucifixion, he says (ii. 409, 7 ff.):

"If what they [the Christians] say concerning Jesus is true, where was His Father? How did He abandon His son to His enemies? Or do they suppose that they defeated Him?"

He disbeliefes in miracles (ii. 252, 11), augurs
while castigating his neighbours and contemporaries, Ma’arrì does not spare himself (i. 48. 7).
His pessimism extends to the future:
'If this age is bad, the next will be worse' (i. 171. 17).
(c) Asceticism.—He earnestly desired to withdraw
from a society of knaves and hypocrites
and a world of bitter illusions.
'Would that I were a savage in the desert, little smelling
the spring flowers!' (i. 28. 14). 'Be a hermit as far as possible,
for one who speaks the truth is a bore to his friends' (i. 68. 1).
The happiest man in the world is an ascetic who dies childless (ii. 312. 3).
But the value of asceticism depends on the motives
by which it is inspired; the humble father of a
family is superior to the ostentatious pietist (i. 208. 17 ff.).
Ma’arrì seems to have learned at Bagdad,
if not during his earlier travels, some peculiar
doctrines and practices of Indian origin, connected
more particularly with the Jain. He thinks it
wrong to kill animals for food or to hurt them in
any way, and therefore excludes from his diet not
only meat, but also eggs, milk, and honey (i. 232.
9 ff., ii. 169. 9, 210. 13, 264. 13, 378. 9; cf. JIIS,
1902, p. 313 ff.). In his opinion there is greater
virtue in letting go a captured fia than in giving
alms to a beggar (i. 212. 9). He praises the Indian
custom of burning the dead instead of burying them,
and adds practical arguments in favour of cremation
(i. 235. 5 ff., 240. 11 ff.).
The religious enthusiasm of the Indian ascetics
who throw themselves alive into the flames fills him
with admiration (i. 260. 6 ff., ii. 253. 5 ff.).
Characteristically enough, he alleges as a reason
for abstaining from wine the fact that the forbidden
beverage is destructive to the intellect (ii. 312. 14,
361. 11).
(d) Religion and ethics.—Though Ma’arrì be-
lieved the whole conception of religion as a super-
natural revelation of divine truth, he was nevertheless
a firm monotheist (i. 47. 12, 279. 12, 281. 4 ff.).
Reason, he says, assures us of the existence of an
eternal Creator (i. 240. 9), whom he seems to have
identified with an omnipotent, all-encompassing
God. Whether his idea of God is truly expressed
by the orthodox phrases which he employs may be
left an open question. At all events, his religious
beliefs were based on intellectual conviction, not
on traditional authority (i. 128. 8, 129. last line,
338. 15).
'Truth is not to be found in the Pentateuch: follow thy
reason and do what it deems good' (i. 304. 8 ff.).
Religion, as he defines it, is, first God, renunciat-
ion of pleasures, and avoidance of sin (i. 315. 12,
361. 17, ii. 298. 12, 329. 12), but also embraces
the obligation of dealing justly with everyone (i. 103.
11). He asserts that all acts and forms of worship
are useless without obedience to the unwritten
moral law which is prescribed by reason and
conscience. It is evident that he regarded this law
as supreme and self-sufficient, for he never made
the pilgrimage to Mecca nor did he take part in
the public prayers (i. 100. 8). Virtue consists not
in fasting and praying and wearing ascetic garb,
but in abandoning wickedness and purging the
breast of malice and envy (i. 285. 13 ff.). That
man is ignorant of true piety who, when he has an
opportunity of satisfying his appetite, abstains
(i. 150. 13 ff.). A trivial wrong to one’s
neighbour will be more severely punished hereafter than
to neglect to fast or pray (i. 294. 9). Ma’arrì
had no sympathy with religions or sectarian
prejudice.
He observes that, 'when a reli<ion is established, its ad-
herents contend and revile all other creeds' (ii. 405. last line),
but his own opinion is that a hierarchy is more good than a Muslim
preacher (i. 50. 7). 'Were it not for the radical hatred implanted
in human nature, churches and mosques would have risen side by side' (ii. 82. 4).
Worldly ambition causes theologians to write
controversial books full of vain words and endless
analogies (i. 249. 5 ff.).
Macedonianism

1. Introduction. — In the closing years of the 4th and the first half of the 5th cent. the Arians, Eunomians, and Macedonians were regarded as the most important heretical groups deriving their origin from the Arian controversies. Three laws of Theodosius, dating from A.D. 383 and 384 (Cod. Theod. XVI v. 11—15), are in the main directed against them, and the latest of these speaks of the three heretical designations as "three sects whose religious officials pro sua erroris famosus nominabur." About three years afterwards Jerome (in Eph. ii. [on 4th], ed. D. Valla, Venice, 1766—72, vii. i. p. 610 C = PL xxvi. 328) and, as far down as 456, Nestorius (Liber Heredilita, tr. F. Nau, Paris, 1910, p. 148) link together the names of Arians, Macedonians, and Eunomians in a similar way. Didymus of Alexandria, in his de Trinitate —a work which is not distinctly named in Jerome's Catalogue of Authors (ed. 1909), and which, therefore, cannot have been written long before A.D. 392, and may even be of later date—regards the Arians, Eunomians, and Macedonians, whom he sometimes conjoins (ii. 11 [PG xxxix. 661 B], ii. 12 [iv. 673 B and 588 B]), as the most outstanding adversaries of orthodoxy. Augustine (c. 402) brings them before us as the non-Catholics of the East (collections. 1. iii. 6 [PL xlii. 395]); in 415 Jerome describes them in similar terms (Ep. xcvii., ad Caesariop. [Vall. ii. 2; p. 100]), and Sozocrates (c. 440) recognizes them as the heretical sects of his time (HE ii. 1, v. xx. 1). As regards the heresy of the Eunomians, ισότων Αρμονοιών, καθώς των Άρμονων, ισότων Εξεδωμάτων (Council of Constantinople in 381), J. D. Mansi, Scriptores conciliorum . . . collectio, Venice, 1759—89, iii. 560), we are so well informed that in dealing with them we can start from their date of origin. In the case of the Macedonians, however, the position is less favourable. It will therefore be advisable, first of all, to determine the characteristic standpoint of the Macedonians who, towards the close of the 4th and in the first half of the 5th cent., formed a definite sect distinct from the orthodox Church.

2. Sources for the history of the Macedonians from c. 383 to 450. — As sources for our inquiry we have, besides the historians of the 5th cent., the following works: (a) the Dialogi de Trinitate of c. 325—541 from A. Mai's editio princeps (Ueternum scriptorum nova collectio, Rome, 1858—59, ii. 209 ff.). Of these four sources, the Sermones Arianorum, which seem to have been composed c. 409, or some years later, in the Latin-speaking part of the Balkan peninsula, are of little service for our purpose; but what they say regarding the teaching of the Macedonians rests, to some extent at least, on what Sophranes (of whom otherwise we know nothing), principal among the Dialogists, Didymus, de Trinitate, and the two sets of dialogues enumerated above, the present writer, in a recent paper ("Zwei macedonische Diäologie, in Sitzungsberichte der Königlich Preussischen Akademie der Wissenschaften, 1914, pp. 363—518), seeks to show (1) that in Did. de Trin. we find no fewer than thirty-one fragments (printed and numbered loc. cit. pp. 326—534) of a learned dialogue of Macedonian origin, written between c. 381 and the date of Didymus's work; (2) that this dialogue was known to and used by the author of the third of the five Dialogi de Trinitate, who wrote, as it would seem, in the period between the date of Did. de Trin. (c. 392) and the Nestorian controversy (c. 430), and that many sections of this third dialogue have probably been taken—verbatim, more or less—from the said Macedonian dialogue; (3) that the first of the two Dialogi contra Macedonios is of prior date to Did. de Trin., and that its preliminary distinctions—especially those regarding the three theses of Eunomius,enable us to reconstruct a second dialogue of Macedonian origin, considerably shorter than that mentioned in (1) above, and written between A.D. 381 and c. 390 (printed as no. 32 in Loofs, Zwei maced. Diäologie, p. 530 f.). With these data at our disposal we are in a position to sketch the teaching of the Macedonians to a great extent from their own writings, and, in order to bring out this point clearly, we shall in the following paragraphs, when quoting from the two Macedonian dialogues in question, give the number of the relevant fragment as found in the present writer's paper cited above.

3. Doctrine of the Macedonians in the same period. — The leading doctrine of the Macedonians is found in the thesis characterized by their opponents as "Pneumatomachian," viz. that the Holy Spirit is not to be designated Οσιός [frag. 32, lines 1—8, Dial. c. Maced. i, 1 p. 1129 A]; frag. 29, Dial. de Trin. iii. xxxvi. [p. 1396 A]. The development of this negative side seems to have been conditioned among the Macedonians by the antithetic positions of the Macedonite Creed; the Macedonians disputed the κοινωνία του Τεκμερίου of the Holy Spirit (frag. 32, ii. 8—12, Dial. c. Maced. i. 3 [p. 1298 B]), His ἄμοιον (frag. 16, Dial. de Trin. ii. 3 [p. 573 A]),
and His ἡμέρας εἰναι (frag. 32, ll. 13-33, Dial. c. Maced. i. 4 [p. 1263 C, D]; frag. 12, Dial. de Trin. ii. vi. 18 [p. 543 B, C]; frag. 22, ilb. ii. x. [p. 641 B]).

Only τὸ σῶμα τὸ μετανοητὸν ἐναρμονίζεται [see the commentaries to Dial. c. Maced. i. 23 (p. 1279 C)] on the positive side it was urged that in I 3 St. Paul does not mention the Holy Spirit as συνάγων δόθη τῷ ἕλεγξαν (frag. 14, Dial. de Trin. ii. vi. 19 [p. 548 B, C]; cf. frag. 18, ilb. ii. vii. 8 [p. 581 D]; καταγγέλλατε . . . τῷ Ἀγίῳ Πνεύματι εἰς ἑλέγξαν φῶς); the angels, too, are ἄγιοι καὶ πνεύματα τοῦ θεοῦ (frag. 4, ilb. ii. iv. [p. 481 B]).

The Holy Spirit, however, was not regarded as merely one of the angels; He was described as Θεός ὁ πάντων σιῶν φῶς, μέλλοντων ἔρχεσθαι τοῖς φύσιν καὶ τὰ ἔλεγχα (frag. 17, ilb. ii. viii. 3 [p. 550 B]). Nor is it only orthodox writers who on grounds ascribed to the Macedonians the doctrine that the Holy Spirit is a created being, for we find it stated also in the Sermones Arianorum that 'Macedonians Spiritum Sanctum in Patris per Filium creatum defendunt, et nonuntium et ministrum Patris cum esse proiectum, sicut et nos' (PL xiii. 611 A).

In their interpretation of the Scripture texts on which the orthodox writers based their doctrine of the Spirit, the Macedonians proceeded partly on grounds of purely grammatical exegesis—e.g., frag. 32, ll. 12, Dial. c. Maced. i. 3 (p. 1263 B): τοῦ τοῦ Κρίου λέγει [sc. Paul, in 2 Co 3'7] ὅ ἐστιν τῷ Ἰησοῦ; and partly on arguments of textual criticism—e.g., that in Ro 8 we should read δα τοῦ ἐμετατοπίστον, κλή, in the hands of the orthodox had been tampered with (frag. 25, Dial. de Trin. ii. xi. [p. 664 C]; cf. Dial, de Trin. iii. 29 [p. 1233 B, C], while in IV 2 the correct reading was πένθους (frag. 25, Dial. de Trin. ii. vi. 11 [p. 627 B]). In the MSS of the New Testament, some of them are δα τοῦ ἐμετατοπίστον, κλή, in the hands of the orthodox had been tampered with (frag. 25, Dial. de Trin. ii. xi. [p. 664 C]; cf. Dial, de Trin. iii. 29 [p. 1233 B, C], while in IV 2 the correct reading was πένθους (frag. 25, Dial. de Trin. ii. vi. 11 [p. 627 B]).

A view held by the learned, and supposed—wrongly, as the present writer thinks—to have the support of Augustine (PL xiii. 39), viz. that certain Macedonians regarded the Spirit as ἐν δεοσεων ἀντίστασι (cf. J. A. Mangarelli’s note [53] on Dial. de Trin. i. xviii. = PG xxixix. 337, n. 83), cannot be verified directly from Macedonian sources. It appears to lack probability, and seems to point to the illustrations being taken casually and for the purpose of the more common and general arguments against the Macedonians' exposition of the spiritual nature of the Spirit. It is the narrower sense, it need only be observed that, according to the Dial. de Maced. ii. (pp. 1239 C, 1336 C), the Macedonians, like the Arians, denied
that the Θέος ορθεύεται, or Θεός ἐνέργειαν, had a human soul.

The relation between these Macedonians and the Homoioussians of the 4th century.—What we know of the teachings of the Macedonians in the period between A.D. c. 351 and c. 430 (cf. § 3) would make it necessary to assume (even if we had no direct information on the point) that the sect was semi-Arian or briefly connected with the Homoioussian or semi-Arian party. In point of fact, however—even apart from Rufinus, Sozomen, and Socrates, whom meanwhile we leave out of account (cf. § 5)—the Macedonians, at least as those of Durm and Schlüter, were closely

Further, auxentius of dorostorum writes (c. A.D. 383) of Ulfilas as follows:

By c. 350, however, the Macedonian dogma, embraced also the pneumatian heresy. The "Homoios, figoioi Pneumatoi, and Macedonians, who were condemned by the Synod of Constantinople (381) and in the famous twenty-four anathemas of Danasus (A.D. 359), given by Theodoret (HE i. 11 [ed. L. Parmentier, Leipzig, 1911, p. 399; in Latin, PL Xll. 359 A; cf. Parmentier, p. 3xxi]), all that is said of the Macedonism is:

Moreover, auxentius does not mention the Macedonian doctrine of the Spirit by the Arians, Eunomians, and Macedonians.

And the reason that Auxentius does not mention the Macedonian doctrine of the Spirit is that, like Ulfilas, he had nothing to criticize in the so-called Pneumatomachian ideas. For, like Origen, all the theologians who in the Arian controversy rejected the Homousia of the Son affirmed by the Nicene Creed—Enbrians, Arians, Homoioussians, and Eunomians—regarded the Spirit as a κτίσμα subordinate to the Son. Even the Nicene Creed itself did not prescribe that view; all that it says concerning the Spirit is: καὶ παστορεύεται εἰς τὸ Ἀγίον Πνεῦμα.

Moreover, their partsians were at first concerned to assail only the Logos-doctrine of their opponents. At the earliest it was in the Epitikes to Socrates vii. 35 (PG 57, 560), written by Athanasius during his exile from 9th Feb. 356 to 21st Feb. 362, that that theologian contended also for the Homousia of the Spirit. The opponents of whom Sargon had informed him, among which the Epitikes was itself interdicted (per EXTREMOS et τῶν Ἀρμενίων διὰ τὴν κατ' τὸν θρόνον τῶν Φιλοσοφῶν, φρονοῦντες δι' ἐκ τοῦ Ἀγίου Πνεύματος καὶ Μνημόσυνος αὐτὴ μὴ ἔχειν κτίσμα, ἀλλὰ καὶ τῶν λεγομένων πνευ-

1 The words "contra Pneumatomachos" in Auxentius, 1st ed. (Kaufmann, p. 72) rest upon a false reading and a false conjecture; cf. K. Müller, Ufius Ender, Leipzig, 1914, p. 85 ff.

2 This is shown by the demonstrable similarity between the Dialogus of Didymus and the Epitikes of Sargon in many respects, although the former is, doubt, dependent upon the latter (cf., e.g., ad Sarcoph. i. 10 [pp. 556 C and 557 A] with Did de Trin, ii. vi. 19 [p. 545 B, C]). Not only do the opponents of Athanasius as well as those of the Macedonians, and especially the "dictum probans" (Ep. ad Sarcoph. i. 10; Did. loc. cit.; cf. also Basilius, de Spiri, Sancto, xiii. 29 [PG xxxii. 117 C])—here Didymus may well have borrowed from Athanasius—but we find also that Am 400 (steter το θεσμόν) together with the other "dicta probans" (cf. § 3) are appealed to by the opponents of Athanasius (Ep. i. 9 [p. 555 B, C], i. 11 [p. 555 B, C]) as well as by the Macedonians of the 5th cent. (Did. de Trin, iii. 26 [p. 124 B, C], and 25 [p. 1257 C]). Moreover, we have that the mockery poured by Athanasius upon the "promis" recognized by his adversaries (Ep. i. 7 [p. 545 B])—whom he stigmatizes as τραπεζικοί (ib. 21 [p. 589 11], 52 [p. 605 A])—recalls that Macedonian practice of resorting to σπουδαίον, σπουδαῖον, etc., to which Didymus draws attention.

3 It is surprising, however, that Athanasius here makes no mention of Macedonians: as a matter of fact, he names no exponent of the doctrine which he criticizes. Nor even later does it seem that the attitude assumed by Athanasius, of the anathema uttered by the Alexandrian Synod of A.D. 362 against all who regarded the Holy Spirit as a κτίσμα (Ath. ad Ant. iii. [PG xxvi. 809 A]), and his acceptance of that doctrine by Melito of Antioch at an Antiochian Synod of A.D. 363 (Mansi, iii. 366 f.), many have become interested in the Pneumatomachian question, do we hear anything, to begin with, about Macedonians himself. Neither Basil of Caesarea, who in 372 went definitely over to the anti-Pneumatomachian side, and for that as for other reasons quarrelled with his friend Eustathius of Sebaste in the following year, nor who composed his de Spiritu Sancto (PG xxxii. 67-218) in 375, nor Epiphanios, who, writing in 376, inserts the Pneumatozyxy in his catalogue of heretics (Ath. xxii.), mentions Macedonians by name. Epiphanios, without giving any name at all, is content to characterize the Pneumatomachians as κατὰ τὴν Πνευματικὴν καὶ ὑποθετικὴν; Basil, in his de Spiritu Sancto, likewise gives no name; but two years later (377) he states that Eustathius is the προστάτης τῶν Πνευματουχῶν ἄνδρων (Ep. cel. xii. 2 [p. 802 B]). But that attitude of Eustathius towards the doctrine of the Spirit is a created being (cf. Soc. HE ii. xlv. 6). In view of these facts, we must ask what was the connexion between the Macedonians and their nominal head.

5 Macedonians and the Macedonians.—This question leads us to a consideration of the life of Macedonians. It will not be necessary to discuss here the difficulties regarding the date and circumstances of his elevation to the episcopal throne of Constantinople (on these matters the present writer may perhaps refer to his art. "Macedonians," in P.F.F., and to E. Schwartz, "Zur Geschichte des Athanasius," ix., in GEO, hist.-phil. Klasse, 1911, p. 478 ff.). Here we need merely state that

1 The bishops Acacius of Cesarea and Patrophilus of Skythopolis, to whom he alludes in Ep. ad Sarcoph. iv. 7 [p. 638 B], were Athana Homologoi.

2 Although V. Schultz (Attestation, Stede und Landschaften: I. Konstantinopel, Leipzig, 1913, p. 45, note) regards the present writer's labour on this subject as inferior to what was done nearly twenty years earlier by Franz Fischer ("De patriarcham Constantinopolitanorum catalogis et chronologis ecce principalibus," in Zeitschr. f. d. h. vaterl. deutsche Ges. v. Gesch. und Altert. iv. 181 [1894], p. 283-305), yet the present writer cannot with draw his objections in principle to what he regards as an unscientific mode of using Socrates and Sozomen (P.F.F. ii. 43; cf. xviii. 480), and to Schultze and Fischer's over-evaluation of their merits.
MACEDONIANISM

According to Socrates (II. vi.), had as an aged deacon (την άθενηκα γονα) contested the see of Constantine with Paul upon the death of Alexander (installed, in all likelihood, while Constantine was still reigning), found himself in secure possession of the see (Hist. Eccl. ii. 3), after (cf. Euseb. p. 294) regards as the final deposition of Paul in 342. He had been raised to the dignity by the anti-Nicene party, and, as regards his theological position, must have belonged to it, although, as the presbyter of Paul, he must have been in ecclesiastical communion with the latter (Athen. Hist. Arv. vii. [PG xxv. 701 A]). This does not necessarily imply that he had been an 'Arian'; for the later Homoiouians also belonged, till A.D. 358, to the 'Eusébian' group of the opposition, and even at the event which ushered in the rise of the Homoiouians, Macedonians, as documentary evidence, is found in that group: the Epistle of George of Laodicea, written in 358, and preserved by Sozomen (iv. xvi. 21), names him first among the persons addressed. Epiphanius (Hær. lxxiii. 23 and 27 [ed. D. Pateras, Paris, 1627, 870 D and 874 C = PG xliii. 445 A, 436 B]) recognizes him as one of the Homoiouian party which was (339) in the enumeration of the Macedonians, just as his presbyter, Marathonius, subsequently 1 bishop of Nicomedia, and Eusebius, whom he made bishop of Cyzicus (Soz. ii. xxxvii. 4; Soz. iv. xxv. 2), were partisans of Basil of Ancyra and Eusebius.2 At the deposition of Seleucus (359) he was associated with Eusebius and the other Homoiouians in supporting Basil against the Arian (Soz. iv. xxvii. 7, and, like Basil, Eusebius, Eleuthius, and other Homoiouians—several of the most prominent of them all—he was deposed by the Arians at the end of the year 359 or in January 360 (Jer. Chron. ad annum, 359 [ed. Helm, p. 214]). Philostorg. v. 1 [ed. Bidez, p. 68; cf. p. 227]; Soc. ii. xix. 3; Soz. iv. xxiv. 5). He then retired, according to Sozomen (iv. xxvii. 1), to a place in the vicinity of Constantinople, and died there. He cannot have very long survived his deposition, as he does not appear in the important movements of his party after 354. In the interval between his deposition and his death, according to Socrates (II. xiv. 1–3) and Sozomen (iv. xxvii. 1, 2),3 he founded a new party. Socrates states that (by letter? [see below] he called upon his associates Sophronius (of Pompeii) and Theodorus (of Cyzicus) to prepare for the future to the Antiochian formula recognized at Seleucia, i.e., the Confession of Lucian (cf. C. V. Caspari, Alte und neue Quellen, 1879, p. 42 f.). Sozomen (iv. xxvii. 1) is more explicit:

'επερείσαν τὴν Βυζαντίαν, κατὰ τὸ διὰ τῆς ἀναγέννησιν τῶν αὐτὸν καθ' ἅμιαντα ἀρχόντων, διὰ τοὺς ως ἑνήμερον καὶ κατὰ πολλὰ τῶν ἀρχαίων ἀναμνηστικῶν τοιούτων.

Rufinus (HE i. 25 [ed. T. Mommsen, Leipzig, 1908, p. 990]) somewhat earlier makes a similar statement. The tradition is nevertheless untenable. It refers in reality to the earliest public appearance of the Homoiouians, not of the Macedonians, and it displays even less knowledge of the actual beginnings of the Homoiouian party some two years previously than does Philostorgius (iv. 9 [p. 62]). Then, in the further course of the narrative of Socrates and Sozomen, the term 'Macedonians' becomes, in conformity with that report, the regular designation of the Homoiouians generally. Thus the 'Macedonians', in the reign of Valens, draw closer to the orthodox party; they accept the ἄμφοτερον; they come to an understanding with Pope Liberius, and, especially in Constantine, live in religious communion with the orthodox (cf. esp. Soz. vii. 5, 3), until at length (cf. ib. 3, 4) they, more stand forth as a party by themselves. But, had the Homoiouians been in reality universally designated Macedonians, as Socrates and Sozomen assume, we should certainly have found some evidence of the fact in Athanasius and the Cappadocians. One is prompted to ask, nevertheless, whether the statement of Sozomen (v. xiv. 1), viz. that during Julian's reign ἀμφοτερον ἑπερείσαν τὴν Βυζαντίαν, Καὶ ἐν τῷ Ἐλευσικῷ καὶ Ἐλευσίας ὅπως ἔτη ἔδωκαν ἔφοιτον, can possibly be based upon mere error. We are compelled to assume that, just as in Antioch, after the installation of Eusebius, the loyal adherents of Meletus came to be called 'Meletians,' so in Constantinople the followers of the deposed Macedonians who did not attach themselves to the church of Eudoxius, his successor (Soz. iv. xxvii. 7, VIII. i. 7), were presently designated 'Macedonians.' The connexion between Macedonians and the later 'Macedonians' would otherwise have better gained accessions from the Homoiouian circles of which the adherents of Macedonius, as dwellers in the metropolis, formed the best-known group in the Balkan Peninsula. This solution of the historical and doctrinal problem of the Homoiouian—latter signification of the name 'Macedonians'—is certainly a possible one. For it was in the neighbourhood of Constantinople—on the Hellespont, in Bithynia, and in Thrace—that the 'Macedonians' were most numerous, and they certainly were deposed by the Arians at the end of the year 359 or in January 360 (Jer. Chron. ad annum, 359 [ed. Helm, p. 214]); Philostorg. v. 1 [ed. Bidez, p. 68; cf. p. 227]; Soc. ii. xix. 3; Soz. iv. xxiv. 5). He then retired, according to Sozomen (iv. xxvii. 1), to a place in the vicinity of Constantinople, and died there. He cannot have very long survived his deposition, as he does not appear in the important movements of his party after 354. In the interval between his deposition and his death, according to Socrates (II. xiv. 1–3) and Sozomen (iv. xxvii. 1, 2), he founded a new party. Socrates states that (by letter? [see below] he called upon his associates Sophronius (of Pompeii) and Theodorus (of Cyzicus) to prepare for the future to the Antiochian formula recognized at Seleucia, i.e., the Confession of Lucian (cf. C. V. Caspari, Alte und neue Quellen, 1879, p. 42 f.). Sozomen (iv. xxvii. 1) is more explicit:

1 Cf. Tillemont, Mémoires, Venice ed. vi. 307, 770.
3 It may be remarked that these two Church historians differ noticeably in their judgment of Macedonius; for, while Sozomen simply disparages him, Sozomen betrays a certain admiration of the homoeotensive ideas which he shared with Marabonius (cf. Soz. iv. xxv. 3).
MACEDONIANISM

Arians, but was previously a deacon of the orthodox church, supplements that given in ii. x. only by the latter—and, indeed, correct (cf. Soc. ii. vi. 3)—statement. Nor is it inconceivable that Didymus obtained the name ‘Macedonians’ and his information regarding Macedonius from the Macedonian dialogue used by him. Yet the correspondence between what that dialogue tells us regarding the Macedonian and that reaching our ears from Didymus have known when he wrote his Epistles to Serapion is striking. Can it have been the case that the above-mentioned summons of Macedonius to Eusebius and Sophronius, referred to by Socrates (ii. xlv. 2), was contained in a letter which the latter had come to Serapion’s hands? This would explain how the Alexandrians had obtained information regarding the Macedonians at a relatively early stage; it would explain the information possessed by Didymus regarding the αἱματομαχο- τηθέν Macedonia, and also the account given by Socrates (and Sozomen) of the origin of the Homoioans. The hypothesis is not impossible; for the first letter of Athanasius to Serapion may quite well have been written as late as A.D. 361. The point, however, cannot be decided in the present state of our knowledge.

6. The persistence or recrudescence of Homoiou- sanism. The Macedonians. This is, however, another question to be considered. Athanasius was aware that those who were known to Serapion as opposed to the Deity of the Holy Spirit felt themselves repelled by the Arrian ‘blasphemy’ against the Son (En. ad Soc., i. 1 [p. 529 f.]), and that they were detested by the Arians (ib. i. 32 [p. 605 B]; this fits in remarkably well with the situation from the beginning of A.D. 360. Some later the Homoiou- sanians (‘Macedonians’), as a result of negotiations with Liberius at a synod held at Tyana in 367, passed completely over to the side of the Nicene Creed (Basil, Ep. cxxv. 5 [PG xxxii. 917 D]; Soz. vii. xii. 21; cf. Sabinus, ap. Soc. iv. xiv. 11). Thereafter, as we read (Soc. v. iv. 1; Soz. vii. ii. 2), the ‘Macedonians,’ who at that time had neither a church nor a bishop in Constantinople (Soz. iv. xxvii. 6, viii. i. 7), maintained ecclesiastical communion with the Homoiou- sanians. Thus the question arises how it came about that the later Macedonians were Homoiou- sanians. Basil (Ep. cxxv. 9 [PG xxxii. 924 B]) tells us that, at a synod held at Cyzicus in A.D. 376—otherwise unknown to us (Loebs, Eustathius, p. 171 f.)—Eustathius of Sebasthe, the πρωτοπάτωρ τῆς τῆς Ἔλληνος ἰσαρχίας αἰχμαλώτου, formula which, together with Pneumatomachian clauses, contained statements pointing away from the Nicene Creed to the Homoiou- sanion (τὸ θεοφράστηρ κατστασίας τὸ κατὰ ὄντα ὤν τῷ ἑιδῆ, and that from 375 he had drawn closer, ecclesiastically, to the Homoiou- sanian court-bishops (Basil, Ep. cxxv. 7 [p. 921 A, B]; cf. 5 [p. 920 A], codd. 3 [p. 936 B]; cf. Loebs, Eustathius, p. 762 ff.); Basil is of opinion that the fundamental Ariant tendency of Eustathius to the Homoiou- sanion—an act that (as he merely suppresses, without overtly rejecting, the Homoiou- sanion) did not as such altogether exclude recognition of the Nicene Creed—a decisive factor in the later position of the Macedonians? Our sources do not enable us to answer the question. But to the present writer it seems beyond doubt that what is here said of Eustathius lends support to an otherwise plausible point given by Sozomen (vii. ii. 3), and less fully by Socrates (v. iv. 21 f.), regarding a synod held at Antioch in Caia (378). These historians record that, when, after the death of Valens (9th Aug. 378), the Emperor Gratian enacted a law (not now extant) conferring freedom of worship upon all religious parties except the Manicheans, the Phytians, and the Eunomians (Soz. v. ii. 1; Soz. v. ii. 3), the Macedonians received again from the Homoiou- sanians, with whom they had lithererto been in communion, abandoning the Nicene Creed and maintaining their adherence for the ἐπισκοπή as against the ἐπισκοπή. From that time a section of the Macedonians (Homoiou- sanians) had continued to exist as a distinct party (Cf. another, breaking away from the latter, had previously held themselves more closely to the Homoiou- sanians. These statements are not altogether free from difficulties. The present writer would not lay stress upon the fact that the notice in Soc. iv. xxvii. 6 (cf. the words οὐκ ἐπιστευσαμεν κ. α.). Here, indeed, Sozomen seems to have wrongly interpreted the statement of his authority (Sabines), which he records verbatim in viii. i. 7, 2). May it not be the case, however, that in Soc. vii. xii. 4 we have a doublet of vii. i. 3, clearly derived from Sabines, and providing free license, while we read of a synod in the Caian Antioch, where, in opposition to the Homoiou- sanion, the Confession of Lucian was made the standard; this synod, however, was held subsequently to the synod of Tyana (367), 3 (p. 528 f.), and the Homoiou- sanian party who had gone over to the Homoiou- sanion. The present writer must admit that he finds this ‘doubling’—if it is a doubling—a disturbing element. Still, it is possible that, as H. H. G. Vincent (Aegean Churches) suggests, there were two Homoiou- sanian synods at Antioch in Caia (A.D. 368 and 378); and, if, in fact, the bishop of that city was an insurgent Homoiou- sanian, there is much to be said for the theory. If we accept it, we must regard it as probable that the second of these synods likewise gave its adherence to the Confession of Lucian, which, as we have seen, was so highly esteemed by the Macedonians. It is in the period succeeding that date that we find the later Macedonians were Homoiou- sanians, in which, as we have seen, the Homoiou- sanism, which is a sequel to the doctrine of the Spirit, broke away from the Homoiou- sanians adhering to the Nicene Creed. The fact that Epiphanius also had heard of certain Pneumatomachians (ib.), subscribed not only to their Christology (see above) proves nothing to the contrary, since that author wrote at a time prior to the synod of Antioch; nor is our statement refuted by the fact that Gregory of Nazianzus, in a Whitsuntide sermon of the year 381, addressed the Pneumatomachians as πόλεμος ἀντὶ ὧν ἐπισκοπής (Or. xlii. 8 [PG xxxvii. 440 B]). Gregory had as valid grounds for this friendly judgment as had the orthodox when, shortly afterwards, at the synod of 381, they repelled the thirty-six Pneumatomachians who attended under the leadership of Eleusius of their negotiations with Liberius (Soz. v. viii. 7; Soz. vii. viii. 4).

The breach which had been started by the rupture between Eustathius and Basil, and by the synods of Cyzicus and Antioch in Caia, was rendered absolute by the Council of 381. The Pneumatomachians withdrew from the Council, and were condemned by it (cf. § 4). The amicable overtures—nearly so far as to fold the breach to the Arians, Eunomians, and Macedonians at

1 Cf. Loebs, Eustathius, p. 78, with note 2, where, however, the definition of Eustathius from the Nicene Creed is not sufficiently recognized.
2 ἐπισκοπῆς ἀντὶ ἄγιον. If the source here is referring mainly to the time of Valens, this would point to Gratian's reign.
Constantineople in 383—Eulcubin being once more the representative of the last-named group (Soc. v. x. xx. 4; see above, § 1), still remained a distinct group apart from the Church, but how far beyond A.D. 450, if they maintained their position (the present writer cannot say).

F. Loofs.

MADAGASCAR.—The religion of the Malagasy is extremely simple. They believe in one god, named Zanaka, ‘creator of all things’; but this god, being essentially good and, consequently, incapable of doing evil, is more or less neglected. His attributes are vague, and there is, properly speaking, no cult connected with him. Yet, with the exception of sorcerers, there are in Madagascar no individuals or classes of individuals connected officially with any religion or cult.

1. Ancestor-worship.—The shades of ancestors, however—for all the Malagasy believe in a future life—are the objects of profound veneration, and inspire their worshippers with extraordinary awe. They are credited with all power of good and evil over the living, whom they visit from time to time. A dead man is, e.g., will not return, pay a visit to his widow, and in this case the birth of posthumous children is considered perfectly legitimate. Offerings are made to ancestors, generally of a small piece of ox-flesh and a few drops of rum, which are taken to the grave of the ancestor whose favours are sought.

2. Sorcery and fetishism.—The Malagasy do not believe in death from natural causes, except in the very rare case of extreme old age. Their idea is that one is always then the victim of evil spells cast by sorcerers, and they are, therefore, careful to collect all hair-cuttings, nail-pittings, etc., in case a sorcerer should find them and use them to work evil on their owner. The Sakalava kings were always accompanied by a servant whose sole charge was to gather up the earth upon which they had spat.

Diviners or sorcerers play a very important part in the life of the Malagasy. The natives believe that they are in communication with the spirits of the dead and can cure disease, foretell the future, discern whether the outcome of any enterprise will be favourable and what is the most suitable moment for undertaking it, indicate lucky and unlucky days, and war against what is forbidden (fady). The Malagasy never embark upon any important undertaking without first consulting the sorcerer, who makes use of sigilica—ceremonies in which a handful of seed is spread out on a cloth, according to well-defined rules and figures, which are then interpreted with the aid of a code. The sigilica, which was introduced, or at least very frequently employed, by the Antimborano, has been in general use throughout the island for a long time.

The sorcerers, who are called upanenagy, ouamara, marina, etc., according to the different provinces, have often been successful in winning the sect back to the Church. The Macedonians, undisturbed by the laws against heretics passed in 383 and 384 (cf. Soc. v. xx. 4: see above, § 1), still remained a distinct group apart from the Church, but how far beyond A.D. 450, if they maintained their position (the present writer cannot say).

The result is supposed to be that the wearer is successful in all his undertakings, fortunate in love, immune from gun-shots or crocodile bites, and so on. The natives have the implicit faith in these orly.

The Merina introduced the worship of national fetishes, which were very similar to the foregoing. These fetishes were regarded as royal personages, and had a special residence with official servants. The oldest and most famous of them was Kellumaza.

3. Fady.—In almost every case there is some fudy connected with these amuletts—fetishes—i.e., it is forbidden to do certain things, and certain fetishes, ‘the holy fetishes,’ as they are rigidly respected, the orly loses all its virtue and is useless. The fudy, which occurs throughout the whole of Madagascar, is extremely curious, and recalls the talm of the Oceanians. There are some places which are regarded as fudy for every one, while others are fudy only for certain families or even for certain individuals. There are fudy days, when no one should begin anything new or start on a journey. If a child is born on one of these unlucky days, it is killed—or, rather it was until quite recently, especially in the southern parts of the island—because it is supposed to bring evil upon its family. There are also fudy words, i.e., words which must not be pronounced; naturally, these are fast disappearing from the language.

As an example of this we have the words which went to make up the names of the Sakalava kings, the use of which was prohibited after their death. These fudy are really of a religious nature; their aim is to appease the wrath of spirits and otherwise gain their favour.

4. Human sacrifice.—Human sacrifice has now been abolished in Madagascar, but it is not very long since it was the custom, when a Sakalava king was dying or was about to embark upon this important operation in the blood of some famous old chief killed for the occasion. This ceremony was still in vogue when the king of Menaile, Toma, who met his death in the attack on the village of Ambakily by the French troops in 1897, reached the age of manhood. Not many years ago, in accordance with an ancient custom practised in S. and W. Madagascar, the favourite wife of a great Makatany chief was killed on his grave, that he might be able to live in the other world. Four of his servants were also put to death and their bodies laid under those of the chief and his wife, so that they might not touch the ground.

5. Crimes and punishments.—The Malagasy have no moral code. Their religion seems to authorize anything and everything, and the only recognized sin is failure to observe the external formalities of worship; such a sin of omission may be absolved by the penitent’s making a small offering to the god as to form with the divine officer the code of Mala-
Justice was meted out by the king or the village chief, and in certain tribes—e.g., the Betiseo—by an old man of the tribe. The incident in the life of man; others, again, bury their dead by the side of the high road or right in the midst of human habitations. Their home, when they feared death and everything connected with it, are mainly found among the coast tribes, except in the south-east, where the people are of Arab origin. The latter, who like to live within sight of their last resting-place, belong to the centre of the island, and consist chiefly of the Merina, Betiseo, and other tribes civilized by the Malays.

The eastern tribes put the dead body in the hollowed-out trunk of a tree, closed with a badly-fitting lid in which a piece of stone is embedded, or an improvised coffin they lay either on the ground or on a small platform in the middle of a passageway roofed over with branches and leaves.

The Antankarana make their cemeteries in the natural grottos or rock-caves found in the numerous small islands along the coast or in the limestone mountains of the north, and here again the coffins, with beautifully carved lids, are simply laid on the ground. Some Betiseo and Bara families follow the same custom, and bury their dead in the hollows and coves which abound on the higher reaches of their mountains.

The other natives of the island bury their dead beneath the ground. The western and southern tribes—the Sakalava, the Mahafaly, and the Bara, and most of the Bara—cover their graves with a heap of loose stones in the form of a long parallelepiped, while some Sakalava families surround their tombs with posts carved in different shapes (human figures, crocodiles, etc.), which recall certain cemeteries of Oceanica.

The Merina custom is to hollow out a mortuary chamber, above which they usually build a small house for those of noble birth, and for the Hova, or freemen, a small rectangular building. When the dead have gathered together stones and blocks or fragments of quartz, with a raised stone at one end. The head is generally turned to the east.

All the Malagasy have the same idea of the impurity of a dead body and its power to communicate uncleanness to others. A funeral procession must never pass in front of the king or anywhere near his residence, and it must also avoid the neighbourhood of sacred stones. Those who have taken any part of this ceremony must cleanse themselves before going home.

As may be gathered from the prevalence of ancestor-worship, all the Malagasy without exception stand in awe of the dead, and desire above all things to be buried in the family vault, where the number of such graves is so large that it is difficult to believe. Malagasy (in particular a Merina) dies away from home, his urgent wish is that his relatives should come, no matter how long after his death it may be, and carry his bones back to his native land. This desire is respected in almost all cases, and even to-day in no rare thing to meet little processions of Hova carrying back the mortal remains of a member of their family wrapped in a white cloth hung on a long bamboo pole. In many cases they go as far as fifteen or twenty weeks' journey from Tananarivo. When the body cannot be recovered, the pillow or mattress of the deceased is buried in his stead, or a stone or a post is erected to his memory at the side of the road or near his native village.

In Madagascar mourners cut their hair short and keep it dishevelled; they wear coarse dirty clothes, and are not allowed to wash or look in a mirror, even if they possess one—they must appear unkempt as possible so as to let their grief be seen at a distance. On the death of a person, the phrase goes in Madagascar, where ordinary everyday words would never be used in connexion with such high and exalted personages as kings—on the departure, of a sovereign, a number of summimentary
laws came into force which had to be strictly obeyed, if one did not wish to run the risk of being considered responsible for the death of the king and of being subjected to capital punishment as a punishment; but mutilating his body was one of the restrictions enforced on the death of Radama I. (1810-25): all the inhabitants of the kingdom, with the exception of the heir to the throne, had to shave their heads, sleep on the ground instead of in beds, use neither chairs nor tables, pass each other without greeting in the street, neither play any musical instrument nor sing, have no fire or light at night, do no work except in the fields, refuse to be carried in a palanquin, use no mirror, go about barefooted, make no fire, and, in the case of women, keep the shoulders bare. As in the East, white, not black as in Europe, is the colour of mourning.

Several Malagasy tribes—e.g., the Betsileo and the Antankarana—have the peculiar and repugnant custom of not burying their dead immediately after death; frequently they even wait till decomposition has set in; and in many cases the putrid liquid is collected and set apart. Their funeral was formerly very solemn, and the corpse was cremated, and, if the corpse cannot be able to live at all in the midst of the nauseating odours, the relatives and friends of the dead man drink all the time and burn quantities of incense, suet, and even leather. This custom, which is less common in the last century, comes from the desire now to bury any putrescent or impure matter along with the bones. Even the tribes which do not have this practice generally have two burial ceremonies—one consisting in simply burying the dead, and the other in killing some cows immediately after the funeral. If a man dies without the skeleton remains, and when the body is finally placed in the family tomb. Sometimes, as in Imerina, the body is put into the family vault at once, but it is wrapped round with several silk blankets and is not placed in a coffin. Later, at a certain specified time, the ceremony of the manadiky takes place. This consists in changing the soiled blankets, and the Merina say then that they turn the bodies on their other side so that they may not get tired of lying in one position.

Funerals in Madagascar are always the occasion of feasts in honour of the dead. The richer the man is and the more cattle he possesses, the more brilliant are the orgies that are indulged in. Shots and knives are thrown, and two or three are killed at the funeral feast, and the head and horns being placed with great ceremony on the tomb of the deceased. Rum flows like water, and as long as there is anything left to eat or drink the feast continues: the funeral festivities of great and noble personages have been known to last for months.

MADHVAS, MADHVACHARIS.—The Madhvas or Madhvacarins are an Indian sect, one of the four svampradayaś,1 or churches, of the Vaishnava Bhakti-marga (see art. BHAKTI-MARGA, vol. ii. p. 515). It has usually been stated that this sect represents an attempt to reconcile the promise or alliance between Saivás and Vaishnavas,1 but an examination of the authoritative documents of the faith shows that this is far from the truth. It is therefore advisable to include in this article an account of the life of the founder of the religion, and of the legends connected with his coming.

The authorities on which the following account is based are: (1) the Manavacharitā (quoted as Mn.), which deals with the religion from its very origin down to the birth of Madhva, the founder of the sect; (2) the Madhavacaritā (Mr.), which deals with the life of Madhva himself; both these works are in Sanskrit, and are written by one Narâyana, who was the son of Trivikrama, an actual disciple of Madhva; (3) the Vayuprakāśa of the above Trivikrama; and (4) C. N. Krishnaswami Aiyer's Śrī Madhva and Madhavanism (K.), which includes a summary in English of (1) and (2).

1. Accounts of the founder.—The basis of the Madhva religion is direct, that Viṣṇu is the Brahma of the Upaniṣads; and, secondly, that, whenever he becomes incarnate, he always has his son, Vāyu, the air-god, as his friend and helper. Accordingly, the first four sūtras, or chapters, of Mr., after characterizing the order of the desire not to be born, give detailed accounts of the Rāma and Kṛṣṇa incarnations, Rāma's great friend and ally being Hanumān, the son of Vāyu, and Kṛṣṇa's ally being, not Arjuna, as we might expect, but Bhima (cf. Mr. i. 41), one of the five heroes of the Mahābhārata. When nothing is left but the skeleton remains, and when the body is finally placed in the family tomb. Sometimes, as in Imerina, the body is put into the family vault at once, but it is wrapped round with several silk blankets and is not placed in a coffin. Later, at a certain specified time, the ceremony of the manadiky takes place. This consists in changing the soiled blankets, and the Merina say then that they turn the bodies on their other side so that they may not get tired of lying in one position.

Funerals in Madagascar are always the occasion of feasts in honour of the dead. The richer the man is and the more cattle he possesses, the more brilliant are the orgies that are indulged in. Shots and knives are thrown, and two or three are killed at the funeral feast, and the head and horns being placed with great ceremony on the tomb of the deceased. Rum flows like water, and as long as there is anything left to eat or drink the feast continues: the funeral festivities of great and noble personages have been known to last for months.

1 It is called the Brahmana-svamprapāya because it is said to have been first communicated by Vishnu to Brahman, who spread it throughout the world with the help of his brother. See below.

2 e.g., by Wilson, Religions Sects of the Hindus, p. 189.

3 The Madhva sect is sometimes called the Kaśikā sect, from Śrī Kaśika, the name of the founder of the sect. The object is plain. Śrī Kaśika means...
brought up in great poverty, and as a slip at the monastic subsequently taught by him) it is related that in his boyhood he could not eat at a time, never being able to eat a second (M. p. 10). He is taken to Saurashtra, where, under the patronage of Rana, he quickly mastered Sanskrit (14). He then goes from teacher to teacher, but is turned off by them for his heretical views. He invents his doctrine, described as Śūnyatā, and is hailed by the demons as their saviour (21). On their advice he joins the Buddhists and teaches Buddhism under cover of Vedanta. He becomes the Vedanta without non-attached, with nothingness (Vākpati) (26). He becomes a Sākta, and messenger of Bhairavnath, but is quickly expelled (17).

The 7th sarga describes further disgraceful events in Sāukara's life. He seduces the wife of his Brahmana host (17). He makes common use of the sacred art. He falls sick and dies. His last words are instructions to his disciples to uproot the learned Śātyaprajā, the last of the great teachers of the true Vedic doctrine.

In the 8th sarga we have the doings of Sāukara's followers. They persecute their opponents, burning down monasteries, destroying castles, and by magic arts killing women and children (2). They forcibly convert one of their chief opponents, Prakriti and composed his disciples to adopt the Šāmī-system (6). These, however, still secretly adhere to the true religion, and, after consulting Śātyaprajā, determine to cause one disciple to become thoroughly learned in the Šāmī-system, who should start a line of disciples, outwardly Mahāyāna, but really devoted to Hara (i.e. Viṣṇu). In this line of disciples came, in due course, Acyuta-prakṛța. In his time the Lord, i.e. Viṣṇu, became incarnate as Madhava, in the person of Madhyageha and Śākyānti (37). The book ends with a brief account of Madhava's work, specially mentioning that he composed the Vedānta Sūtras utterly destroyed by that made by the three Śrīmaṭa-Saṅkarāīa.

It thus appears that Madhava, like Bhima, was an incarnation of Viṣṇu, who came to the earth to destroy the followers of Sāukara and all their teaching, that the true religion was delivered to the present age by Kṛṣṇa and Śaṅkara, that it was upheld by Kumbāra in the Puruṣ-Śrīmānas, and that it was revived by Madhava. Sāukara's śāmī-system was declared to be only Buddhist in disguise (prathecchākara-Buddhā) (M. p. 51). There is no way of reconcile the Saiva teaching of Sāukara with Viṣṇavism. Here also must be mentioned one other doctrine of Madhīva not referred to above, but of considerable importance—that salvation can be obtained only through Viṣṇu. This doctrine was adopted in the Vedānta Sūtras utterly destroyed by Madhāva's teaching.

In M. the first sarga sums up briefly the contents of M., special stress being again laid on the Maniṣmat story (i. 39), and on Bhumibā's chaste end. The account of the political history of Viṣṇu is plainly stated in ii. 24. The rest of the work is a prolix account of Madhava's life, too long to analyze here. The main facts are as follows: Madhyageha Bhaṭṭa, Madhava's father (M. p. 9), ascended the seat of Jajnāṭa (6), close to the modern Hardwar, a town on the sea-coast of the present district of S. Kanara, and about 40 miles due west of Śrīnagara, then, and still, the head-quarters of the Śrīmānas of Sāukara-Śrīmāna. The ancient name of the country now comprising the Districts of Dhārwar and N. and S. Kanara, together with the western portion of the State of Mysore, was Tuluva, the modern Tulu, and it is here that the Madhāvas have always been strongest. No census figures are available for their number, but a very rough estimate of the materials available leads us to put it at something like 70,000. Elsewhere they are very few. After the usual module the boy was named Viṣṇu-deva, but in later years he was known as Madhava. The most probable date of his birth is the Śaka year 1119 (=A.D. 1197), but some authorities assign the birth to the 14th century. He was a 'suspicious, but śākara 'misbegotten' or 'unchaste.' The word śākara is a family libel on the founder of the system which it opposes.

1 Probably identical with the ancient town and still existing village of Šrīmāna, the seat of the Śrīmāna school.

2 Evidently a misprint for the famous libel on the founder of the system which it opposes.

3 Previously identified with the ancient town and still existing village of Viṣṇudvīpa, the seat of the Śrīmāna school.

4 A list of the thirty-seven works attributed to him is given in Bhandarkar's Report on the Search for Saṅkara MSS in the Bombay Presidency for 1852-53, Bombay, 1854, p. 207.

2. Doctrines of the sect. —Madhva rejects not only the monotheistic monism but also the Vedic doctrine of one universal soul, of Känämunk (see art. BHARATI-MÁRGA, vol. ii. p. 545). Its followers call themselves Sud-Vaisnavas to distinguish themselves from the Súri-Vaisnava followers of the latter. The basis of the Śrāvaka system is denied. This by none means mean the dualism of spirit and matter, or that of good and evil, but the distinction between the independent Supreme Being (Paramatman) and the dependent principle of life (jīvātmán). There are five real and eternal distinctions: (a) between God and the individual soul, (b) between God and matter, (c) between the soul and matter, (d) between one soul and another, and (e) between one particle of matter and another. The account of the order of creation given in Mah. i. 2.30 closely follows the well-known Sūkhyā-Sūtra system, as modified by the Parāsars, and need not detain us. Vigna, Nárayana, or Paró Bhagavan, not Brahman, is the name given to the Supreme Being. He is endowed with all the various qualities (guna), and has a consort, Lakṣmi, distinct from, but dependent on, him. By her he has two sons, Brahmān, the Creator, and the Vigna mentioned above, who is the Saviour of mankind. Moksa, or salvation, consists in the escape from the wheel of birth and death, and in the abode of Nārayana. Souls (jīvas) are innumerable, and each is eternal, has a separate existence, and is subject to transmigration. They fall into three groups, viz. (a) the lesser gods, the prásadas, and a seventh, to each of which a wheel of birth and death is assigned; these are destined to salvation; (b) those who are neither sufficiently good to belong to the first class nor sufficiently bad for the third; these are destined to perpetual transmigration (preternatural); and (c) sinners, especially followers of the Yajñaveda doctrine and other heretics who reject Vajña; these are destined to eternal hell. Again, it must be noted that there is no salvation, except through Vajña, i.e., in the present age, through Mahdva. It is also noteworthy that in this religion the idea of eternal bliss, or moksa, is balanced by the idea of an eternal hell—a logical symmetry that is missing in the other religions of Madhva's time.

The inner soul is characterized by ignorance (avidyā), and this ignorance is dispelled, and salvation is obtained, by right knowledge of God. This knowledge is obtainable by souls of the first class, and eighteen methods are described as necessary for it. Such are listed by the writer (vįrāngya), equanimity (kṣame), attendance on a gurum, or religious teacher, bhakti directed to God, due performance of rites and ceremonies (cf. the Purāṇa-Màrnāṇa, reproduction of false doctrines, worship (pāramāṇa), and so on.)

Service to Vigna (i.e. to God) is expressed in three ways: (a) by stigmatization, or branding (nimkäma) the body with the symbols of Vigna; (b) by giving his names to sons and others (nimkāravat); and (c) by worship (bhakti) with word, act, and thought. Worship with word consists in (1) vərity, (2) usefulness, (3) kindness, (4) sacred study; with act, in (5) almsgiving, (6) defence, (7) protection; with thought, in (8) mercy, (9) longing, and (10) faith. Worship is the dedication to Viṣṇu (i.e. God) of each of these as it is realized.²

The custom of branding symbols of Viṣṇu on the shoulders and breast is not peculiar to the followers of Madhva, but is adopted by the Śrī-Vaisnava; but the Madhva, in his view, instead of being occasional, is universal, and is declared to be necessary according to the bhástras. All classes, whether monks or lay, are branded. The chief of each math, or

³ Sáraśástram Mahārāma, tr. p. 31.
a passing notice. Thus, before Madhva appeared on earth, at a festive gathering at the temple at Udupi the spirit of Amantavāra (Viṣṇu) came upon a Brahman and made him a messenger of good news that the king of heaven was at hand (K. p. 13). After the child had been presented in the temple at Udupi, as his parents were taking him through a forest, a grūtha, or evil spirit, opposed their way, but departed on being rebuked by the divine child (K. p. 16; Mr. iii. 324). When the child was five years old, his parents missed him, and after an anxious search of three days found him at Udupi, in the temple of Amantavāra, teaching gods and men to worship Viṣṇu according to the Vedas (Mr. iii. 1 ff.). On his southern tour Madhva multiplied food in a wilderness, to meet the needs of his followers (K. p. 27; Mr. v. 32).

On one of his northern tours he walked across water 'without wetting his clothes' (K. p. 53 or Mr. x. 27), and on another occasion he stills an angry sea by his look (K. p. 48; Mr. xvi. 11). The substitution at sacrifices of a lamb of rice for a lamb of flesh and blood also offers a striking analogy, but, as K. p. 68 points out, it may with equal probability be an expression of the same spirit. And, in the circum-
stances, the fact that Madhva was born and brought up in the neighbourhood of Christians and that the doctrine of bhākiti is common to all forms of Vaishnavism and to Christianity, therefore, probability that at least some of these legends grew up under Christian influence. Still more striking, however, is the central article of Madhva belief that Vāyū is the son of the Supreme God, Viṣṇu, and that salvation can be obtained only by the aid of bhākiti, an idea borrowed from Christianity, quite possibly promulged as a rival to the central doctrine of that faith.

4. Traces of Manichaeism.—In the two papers already quoted, Burnell points out that Persian immigrants were welcomed in this part of India long after the time of Cosmas, and that before the beginning of the 9th cent., A.D. they had acquired sovereign rights over their original settlement of Manigrama, by a grant from the personal, or local chief. Burnell goes on to suggest that these Persians were Manicheans, and that the name of their settlement meant 'Manes (Mama) town,' not 'Jewel-town,' as the compound would otherwise mean (above, p. 329). This is attacked in the same journal and, according to Garbe (p. 152), completely controverted by J. Collins. To the present writer it seems that, in the discussion, Collins failed in his main point—the identification of Mani' in Manigrama—and that Burnell's suggestion, though certainly not proved, may possibly contain more elements of truth than Garbe prepared to admit.1 It seems that Burnell's suggestion that Mani refers to Manes receives some confirmation from the Manichæan theory of the Madhvas. It is intelligible that Bhīma should be selected as the hero, but it is unintelligible why the altogether unimportant Mani- mat of the epic should be selected as the origin of the arch-heretic Bhīma. Bhīma killed many a much more noteworthy demones, who would have served Madhva's purpose better; but so small a part does Manim, the demon from beyond the Himalaya, play in the epic2 that Madhva had, according to the legend, actually to get Vyāsa's permission to rewrite the story, so as to make it complete. It must, on the other hand, be admitted

that there is little resemblance between Manichaeism and Śaṅkarā's theology. The former is dualist and the latter is monist. But Mani's dualism caught the essence of the ideas of the Mikaelian (foreigners), may have become acquainted with Manicheism, and may have adopted it in this way with Śaṅkarā's theory of mūḍa. The question deserves more investigation than has hitherto been given to it.

5. Literature.—The Nyāgāraṇyakā and the Madhyayācaya have been already mentioned. Several editions of these have been published in India. A useful summary of Madhva doctrines will be found on p. 168 of the Sākohilc, viṣṇuyata-vatānagaha, an anonymous work published in the Asiatic Society Series in 1907. A fuller account will be found in Padmanābhaśā, Madhyamikābhāṣya, Bombay, 1905, quoted by Bhagavatār, p. 53. Finally, there is Madhyavīchārya, Sārmād-vatānagaha, of which many editions have been published in India. Of this there is an Eng. tr. by E. E. Cowell and A. E. Gough (2nd ed., London, 1894). The system of Parṇapāṇa, K. Madhva, will be found in ch. v. p. 57 ff. of the translation.

As for works in English or other languages, the Madhvas is contained in 'Account of the Marks Goorooes, collected while Major Mackenzie was at Hurriyang, 1841,' translated on p. 223 ff. of the 'Characters' in the Asiatic Annual Register for 1804 (London, 1806). We next have H. Wilson, Sketch of the Religious Sects of the Himalaya, or the 9th and xvii. of Asiatic Researches, London, 1831, i. 125 ff. A useful little book is C. K. Krishnanand Aiyer, Sri Madhukar and Madhyamikas, Madras, no date. This is the only work utilized in the foregoing pages. See also the following: R. G. Bhagisvarākar, Vaiṣṇavism, Sārmād and Buddhist Systems (=GIAI iii. 6). Strassburg, 1913, p. 57 ff.; id., vol. xviii, 'Dharmav., Bombay, 1894, p. 58 ff. (full account of the history, religion, and customs of the Madhvas of the present day); and G. Venkoba Rao, 'A Sketch of the History of the Madhvas,' beginning in L. Ali, (1914) 232 (refers to C. P. Madhavāchārya, Life of Madhyamikas). For an authentic account of Madhva's doctrines see S. Saitha Rana, The Vedanta-śāstra, with an especially, by Sri Madhuvācaya, a complete Translation, Madras, 1901, The Bhāvanādīdāna, Translation and Commentaries in English according to Sri Madhyavīchārya's Bhākshaka, do. 1906. Both of these are in English. The preface of the latter contains a life of Madhva from the orthodox point of view; cf. also P. Ramachandra Rao, The Brahmin Sūtras; Conceived Literally according to the Commentary of Sri Madhavēchārya (Samākrit text), Kumalakomu, 1902. G. A. GRIEBEN.

MADHYAMAKA, MADHYAMIKAS.—Madhyamakas is the name of a system of Buddhist philosophy, 'the system of the middle way,' the system of the Abhidharma, the adherents of this system are called Madhyamikas.

1. Nāgarjuna.—The work upon which the Madhyamaka philosophy is based, the Mādhyamakakārikā, still survives, and tradition is agreed in ascribing it to Nāgarjuna. Various commentaries have been written upon it: Nāgarjuna's own, the Akṣavādaya; those of Buddhālāpa and Candrakirti, which seem to have a faithful rendering of the author's meaning; and that of Bhāvaviveka, which transmits his personal views. These are two branches of Madhyamaka, but the difference between them has not been studied, and seems to consist in a mere divergence in the method of demonstration.

All this literature is, or will soon be, accessible in the editions of the originals or in translations.1 The Mādhyamakakārikā is probably the authentic work of Nāgarjuna, who flourished about the middle of the 2nd cent., A.D. We know that this mysterious and miraculous person was attached to the household of the Great Vehicle, or Mahāyāna (q.v.), and, in particular, the revelator of the sūtras of the Pañcasādhyāya, the teaching of which is akin to that of the Madhyamakas. It is even possible that several sūtras of the Great Vehicle were first written for the sole purpose of stating the theories of the Madhyamaka philosophy under the guise of words of

1 See literature at end of article.
the Buddha.’ It is difficult to determine what part of the gñāna texts in the translation of the śūtras, but respect for tradition would lead us to believe that his share was a large one. In any case, the Madhyamaka school must be held responsible for a considerable proportion of the Great Vehicle. All this is possible, probably, to the early centuries of the Christian era, from the first onwards.

2. The Madhyamaka system and its antecedents.

—It is not difficult to show the place occupied by the Madhyamaka in the development of Buddhist philosophy from its beginning, and such a historical sketch is indispensable to a definition of the system itself.

The Buddha had given his revelation as a ‘path,’ or a ‘way’ (avaguna, patha-gata), and had qualified this path by ‘middle’ (madhyama = madhyama), doubtless, as has been often said, because he repudiated two ‘extremes’ (anata)—an exaggerated asceticism (tapasa), and an easy secular life (sukhaloka). But he had also condemned other ‘extremes,’ viz. contradictory theories, such as: ‘Everything exists,’ ‘nothing exists,’ ‘The person who feels is the same as sensation,’ ‘The person who feels is a different thing from sensation.’ The Buddha exists after death, but the Buddha is not after death; and some texts—few, but explicit—prove that, at the time of the redaction of the Pali Nikayas, ‘middle way’ meant a ‘way between certain negations and affirmations. This way is simply the philosophy of the dharmas, and of the negation of the individuals (pudgala, ‘sir’), which is almost exactly the philosophy of the Canon, and finds, from the very first, clear and skilful expression in the theory of dependent origination (patichchedasamuppada, pratityasamutpada).

The Canon teaches that there is no individual (pudgata), one and permanent, of whom we can say that he is identical with sensation or different from it, or that he survives or fails to survive the destruction of the body. The individual does not exist in himself (pudgala-nairatmya); he is merely a mass of dharmas following one another in unbroken succession, cause and effect.

What is meant by dharma? This word, as Madhyamaka thinkers say, is easy to understand. Man is a collection, a series of dharmas; everyone, every volition, every sensation, is a dharma. His body is composed of material dharmas. Sound, colour, smell, whatever can be defined as a physical or a mental dharma. The organs of sense and intellect (manas, indriyas) are dharmas of subtle matter. Consciousness, hatred, and delusion are mental dharmas, ‘co-ordinated with thought.’

The dharmas are ‘realities’—things which actually exist, and nothing exists but these elementary realities, which are all doomed to destruction; some, e.g., the mental dharmas and the dharmas forming the successive instants of the existence of a dharma, are nonexistent by moment, while others sometimes last for a long time.

Just as a wagggon is nothing but the collection of the parts of a wagggon, so man is simply the collection of the elementary realities, material and spiritual, which constitute his pseudo-individuality. Apart from dharmas, man and wagggon have only an idea—existence of designation (prajñātāt), as the Buddhists say.

It will be observed that none of these elementary realties exists in isolation, but that every dharma combines with other dharmas to form a more or less solid complex. The four chief elements (maha-bhākata) combine in the formation of every material thing. Anger as a pre-supposed, besides delusion, an elaborate complex of intellectual dharmas—contact, sensation, ideas, and intellecctions; and this intellectual complex presupposes, at least as a rule, a physical complex—body, sense-organs, heat, vital organ, not to mention former actions to be rewarded, which are sometimes regarded as subtle matter.

All dharmas are intimately bound up with its causes and effect; and its essential nature is to be an effect and to be a cause; it is a moment in continuous time. Every thought has as determining causes (prajñāya) a great number of dharmas more or less exterior to itself (object of vision, visual organ, etc.). But its cause, properly so called (ātma), is the thought immediately preceding it—just as every moment of the duration of a flame depends of, course, upon the oil, the wick, etc., yet is, as a matter of fact, the continuation of the preceding moment of the flame. The Buddhists were quick to see that flame and thought are made up of ‘instants’ of flame and thought succeeding each other moment by moment. Extending this observation, they formulated the general theory that ‘the dharmas perish the very moment they are born.’ They perish without any other cause of destruction than their very birth or their nature; they are not merely ‘transitory’ (anatman), as the Buddha said; they are ‘momentary’ (kārya) (cf. art. INDREX). Consequently, the distinction between a stone and a human being: they are both collections, more or less complex, of dharmas, which do not last. The collections last by constituting series, because the dharmas renew themselves—always the same in the case of the stone, often very different in the case of the living being. In the course of an existence our vital organs, sense-organs, etc., renew themselves without any essential modification; volition, on the contrary, creates dharmas—reality, which are different from volition itself. Volition is controlled by judgment; and, when judgment is illumined by the law of the Buddha (yoni maanaśkāra), ‘supranormal actions (lokottara) actions become possible, and these destroy passions, desire, action, and retribution, and make for the realization of nirvāṇa, that is to say, the collection of mental dharmas begins to become impoverished and finally disappears; desire is no longer present to give life to it. Such is the dharma, and it can be summed up in two words: pudgala-nairatmya, the unreality of the individual, and dharmasthitya or dharmakāya-loka, the transitory or momentary character of the dharma.

This phrasism of material dharmas, both long and short, but it did not satisfy the Madhyamaka school, who put a more rigorous interpretation upon the word ‘voni,’ so often applied to the Buddha to everything in general, and held that this philosophy is in its nature not free from the two ‘extremes’ of perpetual duration and annihilation (śaśvata, techohecha), seeing that it inevitably regards nirvāṇa as the annihilation of a series of thoughts. The Madhyamaka school claims to find the true ‘middle’ in denying, not only the unreality of the individual (pudgala-nairatmya), but also the unreality of the dharmas themselves; it denies the existence not only of the being who suffers, but also of pain.

‘Everything is void.’

Nagarjuna and his school seem to hesitate between two positions.

1. Everything takes place as if things and living beings were composed of substantial dharmas, and yet, as if they arrive at nirvāṇa, the hurt caused by the ancients must be followed: eliminate the dharmas which generate new dharmas because they are associated with desire; and insert, in the complex series that constitutes our being, the dharmas of the knowledge that destroys desire, and so arrest the renewal of the dharmas. Yet we do not put
an end to existence by this method, for existence is void of reality in itself, since the dharmas do not exist substantially: we put an end to a processus of‘void’(śūnya) dharmas which renew themselves in‘void’dharma. It is important to observe the nullity of the cause that can arrest the renewal of unreal dharmas in knowledge of their radical and fundamental unreality.

The ancients saw that the essential nature (dharmatā) of things (dharma) is to be produced by concurrent causes (pratītyasamutpāda), independently originated. The Madhyamaka school observes that 'what is produced by causes is not produced in itself, does not exist in itself.' The essential nature of things consists in not being produced in themselves, in being void of all substantial reality—i.e., in 'vacuity' (śūnyatā). This term 'vacuity' has been variously understood. For some it is 'nothingness'; for others it is a permanent principle, transcendent and undelineable, immanent in transient and illusory things. It would be a long and difficult task to explain the mystical significance that it has in certain Buddhist books; we know that it ends by being confused with the term 'vijñata', thunder-bolt, diamond, mythological thing—something intermediate between the Madhyamaka, 'vacuity' is neither nothingness nor a transcendent-immmanent principle, but the very nature of what exists: 'things are not void because of vacuity' (śūnyatā)—conceived as something intermediate—nor because they are void; and they are 'void' because they are produced by causes. 'Vacuity' means 'production by causes', and is only an abstraction, a mere word; 'void means 'produced by causes'.

Therefore, there is a complex processus of dharmas which have no reason in themselves for existing and which cannot exist substantially by reason of their causes, i.e., former dharmas which do not exist by themselves. The following formula explains this clearly: dharmas resembling delusions of magic or reflexions in a mirror (māyopanm, prabhūtābhaya)—we might say 'consequent' dharmas—give birth to dharmas that are equally illusory. Like begets like.

The objection of the realist against the Madhyamaka is, therefore, fruitless: 'If everything is void, then existence and nirvāṇa, impurity and purity, ignorance and wisdom, are the same thing; and the path of salvation does not exist.'

Existence is the continuous production of phenomena not substantial but actually existent, because they are existent by the only existence that there is—void existence, or existence produced by causes. Negativity in the end of the production of these phenomena. Impurity is attachment to phenomena conceived as pleasant; purity is complete detachment from phenomena. Ignorance is clinging to the substantiality of phenomena, which induces attachment and answers it. Existence is the continuous production of phenomena not substantial but actually existent, because they are existent by the only existence that there is—void existence, or existence produced by causes. Negativity in the end of the production of these phenomena. Impurity is attachment to phenomena conceived as pleasant; purity is complete detachment from phenomena. Ignorance is clinging to the substantiality of phenomena, which induces attachment and answers it. Existence is the continuous production of phenomena not substantial but actually existent, because they are existent by the only existence that there is—void existence, or existence produced by causes. Negativity in the end of the production of these phenomena. Impurity is attachment to phenomena conceived as pleasant; purity is complete detachment from phenomena. Ignorance is clinging to the substantiality of phenomena, which induces attachment and answers it.

The main cause of this increase in the Christian population is the movement among the out-castes of Hindu society towards Christianity that has been in progress in S. India for the last sixty years. Conversions to Christianity from the higher castes of Hindus or from the Musalmans have been comparatively rare. But on the other hand, the out-castes are being gathered into the Christian Church in the village districts in increasingly large numbers, especially among the Telugus in the northern part of the Presidency. The causes that have led to this great movement are mainly social. The out-castes are the hereditary slave or serf of Hindu masters, and have been kept for many generations in a state of abject poverty and utter ignorance. They have seen in the Christian Church the hope and possibility of new life, and for the last half century have been crowding into it in thousands. The great force behind the movement, therefore, is a natural human craving for life...
and freedom. At the same time, there is also a strong spiritual element in the movement. In almost every district where it is in progress it has owed either its origin or its power to a few men and the observance of true spirituality, and the fact that a large number of the converts have to endure a very bitter persecution when they first join the Christian Church is in itself an indication that the movement is bound to have a very striking influence in the future, not only upon the Christian Church itself, but also upon the religious life and thought of India as a whole. A great Christian Church is steadily and rapidly growing up in India from the lowest stratum of Hindu society. The conscience of educated Hindus is becoming awakened to the injustice and the social evils inherent in the caste system. Slowly and surely the work of the Christian Church is preparing the way for a great economic, social, and religious revolution throughout the length and breadth of India.

2. Hinduism.—Hinduism in the Madras Presidency does not differ greatly as regards either its doctrines and its customs from Hinduism in other parts of India. One striking difference observable between the Hinduism of S. India and that of N. India is the predominance of the Brahmans in the South, but this difference is social and political rather than religious. The Hindu philosopher and the monist of Saunara are more widely held in the South than in the North, mainly owing to the fact that Muhammadanism, with its clear teaching on the unity and transcendence of God, has had a far greater influence there than in N. India. The stern and eloquent worship of Siva, the Destroyer, which has absorbed into itself many elements of the old animistic cults, is the predomi-

nent form of Hinduism; but the worship of Visnu, the Preserver, in all his manifold incarnations, has a large number of devotees, and has a special attraction for the lower castes of Saunara whom it has admitted more freely to its temples than the rival cult of Siva.

3. Animism.—The prevalence of animism in the Madras Presidency is very inadequately represented by the small number of people (683,466) classed as animists in the Government Census. The large majority of the Hindus in the villages, with the exception of the Brahmans, even when they are described as Vishnu and Siva, are not truly Vishnuists or Sivaists, in the same sense that the village deities, the Grama-Devata, are not truly Vishnu or Siva, in the same sense that the village deities, the Grama-Devata, as they are called in the vernacular, and a host of spirits, good, bad, and indifferent. The worship of these village deities forms an important part of the conglomerate of religious beliefs, customs, and ceremonies which are often classed together under the term Hinduism. In almost every village and town of S. India may be seen a shrine or symbol of the Grama-Devata, who is periodically worshipped and propitiated. As a rule, the shrine of the village deity is far less imposing than the Brahm-
nical temples in the neighborhood; very often it is nothing more than a small enclosure with a few rough stones in the centre, and often there is no shrine at all; but still, when calamity overtakes the village, when pestilence, famine, or cattle
disease makes its appearance, it is to the village deity that the whole body of the villagers turn for protection. Siva and Visnu may be more dignified titles, but the village deity is a more present help in trouble, and is more intimately concerned with the happiness and prosperity of the villagers. In the animal sacrifices offered to these deities the treatment of the blood, which is sometimes drunk by the worshippers, sometimes sprinkled upon their bodies, sometimes sprinkled on the houses or the gate way of the village, and sometimes mixed with boiled rice and sprinkled all round the village site, and also the sacrificial feast upon the flesh of the victim, connect the sacrifices to the Grama-Devata in India very closely with the animistic sacrifice as it is found all over the world. Traces of human sacrifice, too, are often found in connexion with these cults. In Mysore the present writer came across a ceremony called 'the human sacrifice ceremony,' in which the man who represents the victim, instead of being killed, is simply touched with a bunch of coconut flowers. Lewis Rice states that similar traces of human sacrifice are found among the Coorgs in the hill country to the west of the Mysore State, whose religion is one or two other elements and consists of the worship of ancestors and demons. With reference to the worship of Grana-Devata among them, he says that, as among other Dravidian mountain tribes, so also in Coorg, the tradition relates that human sacrifices were offered in former times to secure the favour of their Grana-Devata, who are supposed to protect the villages from all evil influences. At the present day a he-goat or a cock is often sacrificed instead of a man.

The special features which broadly distinguish the worship of the village deities in S. India from that of Siva and Visnu are three. (1) The fact that the village deities, with very few exceptions, are female: in South India there are almost all the village goddesses have male attend-
ant, who are supposed to guard the shrine and to carry out the commands of the goddesses; and one male deity, Iyayar, has a shrine to himself, and is regarded as the night companion of the village. In the Telugu country there is a being called Potu-Razi, who figures sometimes as the brother and sometimes as the husband of village goddesses, and sometimes as an attendant. But, with the exception of Iyayar and one other deity, all the male deities are so distinctly subordinate to the goddesses that they do not con-
travene the general principle that village deities are female and not male. (2) The fact that the village deities are almost universally worshipped with animal sacrifices. Bullfles, sheep, goats, pigs, and fowls are freely offered to them, some-
times in thousands. In the Tamil country this custom is modified by the influence of Brahmamism, which has induced the villagers to select the best and the most holy and irreligious animal sacrifices are regarded, therefore, as offered to the male attendants of the goddess and not to the goddess herself. (3) The fact that the Pujaris, i.e. the men who perform the worship and officiate as priests, are not Brahmans, but are drawn from the Saunara castes or sometimes from the out-castes. On the other hand, in the temples of Siva and Visnu, the officiating priests are Brahmans, no animal sacrifices are ever offered, and the principal deities are male and not female. The origin of these cults is lost in antiquity; they are certainly pre-Aryan, but have been more or less modified in various parts of S. India by Brahmanical influence. Some details of the ceremonies used in them are to point back to a totemistic stage of religion; some of the deities are obviously agricultural, others are the spirits of women who have died in childbirth or of men or women who have died by violent deaths, others are connected with specially cholera and smallpox; many of the deities are of quite recent origin, and it is easy to observe a deity in the making even at the present day.

Snake-worship and tree-worship are also widely prevalent throughout S. India, and have become incorporated in popular Hinduism. Almost every village has its sacred pipal tree, representing a
female, and a marapoo tree, representing a male, plant, are often worshipped together. These two trees are married with the same ceremonies as human beings.

In every house of one section of the Brâhmanas (called Madhvas [p.r.] or Raojis) there is a talwâri plant (sacred to Visnû). The snake is closely connected with Mahîshas and Siva. A cobra forms the bhrumâ (sacred vehicle) on which Visnû rides, and Siva is always represented with a cobra in his hand. At the entrance of almost every village of S. India there are figures of the cobra carved on stone in bas-relief erected on raised platforms for the adornment of the public. Brâhmanas and Sûdras alike make offerings at these shrines. The living serpent is very generally worshipped, and few Hindus will consent to kill one. If a cobra takes up its abode in the thatched roof of the house or in one of the walls of the compound, it is not only left undisturbed, but is fed with milk. A woman is often the priest in the worship both of trees and of serpents, and women are the chief worshippers, mainly for the purpose of obtaining offspring.

On the W. Coast in Malabar snake-worship is especially prevalent. Some families are supposed to be consecrated to the snake deity, and to exercise a singular freedom over the devils by cobra which are reputed to swarm in their houses and crawl in and out among the members of the family without ever doing them any injury.

Demonolatry is very prevalent, especially in the Southern part of the Tamil country, and devil-dancing, performed by a class of men who are supposed to have supernatural powers over the devils, forms a weird feature of the religion of the Tamil villagers. Some diseases, especially nervous maladies, are supposed to be possessed by these devils and are often put to terrible tortures by the exorcist. Red-hot iron needles are sometimes stuck all over their bodies, or they are bound hand and foot, and then beaten with sticks.

The innumerable superstitions connected with popular Hinduism are excellently described by Edgar Thurston in his Omens and Superstitions of Southern India.

H. WHITEHEAD.

MADURA.—Madura is the name of an important District in S. India—260 to 300 miles south of the town of Mâduras. Its capital, Madura, had a population of 134,130 in 1911, and is situated 10° N. lat. by 78° E. longitude. It is a prosperous town, and as with all other busy ports and market towns, it is a stopping place for many of the numerous weavers who are found in the state. The city is about 50,000 weavers. Yet, apart from government and railway works and the Scottish spinning mill, there is hardly one horse power of steam used in the whole community—by which it may very be known that modern prosperity in the East is not necessarily connected with the use of most modern industrial appliances and forces.

Madura is a town of considerable antiquity. It was known to Ptolemy (vii. 6. 89, viii. xxvi. 17) as the capital of the Parsea, and as the centre of the ancient Pándya kingdom whose fame spread westward through the Greeks and Romans even before the advent of the Christian era. Even to-day ancient coins are occasionally discovered in the town and surrounding regions.

Madura has long been designated the Athens of S. India; the ancient and famed Madura College was the source and inspiration of Tamil classical literature for centuries. Many of its most popular legends gather round its poet-saints, the narrative of whose struggles and conflicts is a perennial source of delight to the people.

But it is its great shrine and its vast temple that is the source of its pride and the centre of its life. The town is built around its sacred precincts, all the main streets running parallel to the four walls of the temple. This temple has a past which runs far beyond the history into the misty realm of legend and myth.

The first historical reference is to its partial destruction by Malik Kafür, the famous general of the Mughal emperor, Ahmad Din, in 1510. He destroyed its outer wall and numerous high towers, and left little but the inner shrines, which were saved only by an opportune dissension among the vandals.

Perhaps all that now exists of this architectural pride of S. India (except the inner shrines and contiguous courts) is not older than the 16th cent., and is largely the gift of kings of the Nayakan dynasty, by far the most prominent of whom was Tirumala Naik (1520-39).

S. Indian temples are among the most spacious in the world. The Madura shrine is the third in size, but is the first in architectural excellence, best in its upkeep, and most thoroughly devoted to its religious purposes. Its outer walls, which are 25 ft. high, form almost a square (82 ft. by 780 ft.), and enclose an area of about 14 acres. Each wall is surmounted at its centre by a richly embellished gopura, or tower, which is about 150 ft. high. These towers are the landmarks of the country around.

Granite is almost exclusively the material used in the temple, even the roof being of granite slabs. Its monolithic pillars are legion, and nearly all of them are elaborately carved, some displaying marvellous patience and skill. The 'Hall of a Thousand Pillars' (correctly speaking, its pillars are only 985 in number) is the culmination of its architectural claims. Of this, J. Ferguson writes:

"Its sculptures surpass those of any other hall of its class, and are associated with but not by any number but their marvelous elaboration that makes it wonder of the place (Hist. of India and Eastern Arch.)".

This hall is eclipsed, perhaps, by only one other, the so-called Choultry, or Puthu Manipalan, which is outside and to the east of the temple proper and is the most imposing of all sacred edifices in S. India. It was erected by Tirumala Naik about 250 years ago, is 330 ft. by 105 ft., and is supported by 124 richly sculptured pillars 20 ft. high. It is a worthy granite monument to one of the great kings of S. India. The whole temple is distinctly Hindu in its architecture—a style in which the arch is entirely absent and densely pillared halls predominate. Its many gateways are pyramidal in form, and are a striking development of the ancient adhar, or pagoda, of Madura.

The temple is one of the most distinguished faneis of Saivism, representing that type of the Brahmanic cult which first appealed to and was adopted by the Dravidian people of S. India. Because this is the more austere form of Hinduism, it is more closely allied than the mild Vaisnavism to the cruel demonolatry of the aboriginal people of that region. This temple and its worship admirably illustrate the habit of the Brahmanic-propaganda, which never antagonized a new and contiguous faith, but rather fraternized with it, then adopted its lending features, and finally absorbed it entirely. Siva's representative in this shrine is Sukkalingam or Sundaresvara. The first name is Dravidian, revealing the non-Brahmanic or non-Aryan origin of the god who was adopted
from the pantheon of the Dravidian cult to that of the Aryan. Later, this S. India manifestation of Siva popularized the northern faith among the people of Madura by marrying the most dreaded demoness of that region—Muns. Muns, doubtless, was an ancient queen who was slain in war, and was soon exalted to the highest place in the Dravidian pantheon. By this marriage the Aryan cult of the north was wedded to the supreme faith of the south, and the great annual marriage-festival of the temple celebrates and perpetuates the union of the two diverse cults in that region. In that most popular festival there is another interesting feature; Minâkâ is said to be the sister of Alâna, a famous Dravidian deity a few miles from Madura, and this brother comes to attend the wedding ceremonies of his sister at Madura; but, unfortunately, he arrives a day late, and is so incensed by the fact that he will not enter the city or temple; his idol is thus kept for three days on the outskirts of the town, during which period all the people, both Saivites and Vaishnavite, fraternize together and bring their offerings to the aggrieved god. Thus, upon this occasion, we find this fragment of that region's Dravidian and demonolatry, most strikingly brought together.

In many ways the worship of this famous Hindu temple reveals a fact which outsiders can understand only with much difficulty. In a certain way, all Dravidian peoples form, and are loyal to that faith. But it is a Hinduisn which is completely impregnated with Dravidian and animistic ideas. The worship of the Aryan deities in S. India is a pious pastime; but the people are still obsessed by their myriad demons, and find their chief religious concern in appeasing them in the many demon shrines which are found in every town and village. Even Kâlî, the chief consort of Siva, who also finds a prominent place in this temple, is so Dravidianized and demonized with a bloodthirsty passion that no one can separate her from the many Dravidian ammanâs, or demonesses, who haunt that region and terrorize the whole community.

It is thus that we learn what the amorphous thing called Hinduisn is in S. India. In outward form it poses as an Aryan cult, but in its inner spirit it reveals the pervasive animistic genius which has characterized the Dravidian mind and heart from time immemorial. The General is given to the religion its outer form and éclat; but the Dravidian has retained and conveyed into it all the animism which his ancestors entertained and practised. It is largely the spirit of the south rooted in the garb of the north. The Madura temple furnishes one of the best illustrations of this animistic type of Hinduisn.

MÉNADS.—The character of the Ménads was long a subject upon which the most mistaken ideas prevailed. The accounts of them given by poets, mythographers, and historians were all jumbled together, and were, moreover, mixed up indiscriminately with the representations of the cult of Dionysus in art, while, again, these artistic products were not submitted to any process of critical analysis. Thus arose the conception of a wildly fantastic religious service celebrated by delirious women in nearly all parts of Greece and Asia Minor. The first to reduce the literary and artistic representations to order, and to clear the obscurations of the development and character of the Dionysus-cult, was A. Rupp, in his Die Ménade in griechischen Kultus, in der Kunst und Poesie (Rhin. Mus. xxi. 1872) i–ii, 562–611; cf. Roseher, ii. 2243–2253. Then at length the powerful movement introduced into Greece by the new deity, and the influence of that movement upon the suppositioral Ménads. The latter, indeed, are delineated by E. Rohde (Psyche, Tübingen, 1907, ii. 5ff.). The researches of the folklorists among other peoples have also brought to light interesting parallels to the ancient Dionysian cult and customs; but great caution must be exercised with regard to the ideas of 'vegetation deities,' 'spirits of fertility,' etc., to which the modern tendency to trace analogies everywhere has given rise (cf., e.g., O. Gruppe, Griechische Mythologie und Religionsgeschichte, Munich, 1899, 1899). Dionysus, the lord of the Ménads, of the 'Bacche,' so named after him, was, as is now universally recognized, and as was already known to Aristarchus, not originally a Greek deity, but was derived from Thrace (cf. Herod. v. 7, and the notes of W. W. How and J. Wells, London, 1912), where he was worshipped under the name of Sabos or Sabazios (schol. Aristoph. Vesp. 911 ff.). It is true that Sabazios is also spoken of as a Phrygian deity (red. Ionian, Vaigasite Sabazios, and Dravidianized), but the Thracians and the Phrygians were, in the judgment of the ancients, closely related peoples, and we are not surprised that the worship of the Phrygian national goddess Cybele should show so many points of contact with the Thracian cult of Dionysus. The latter was a non-Greek cult which was celebrated upon the mountain heights of Thrace in the winter of every alternate year (and in Greece, therefore, subsequently called the 'Great and Minor' Dionysus) by the women dancing in wild frenzy amid the glare of torches, whirlimg dizzyly to the clangour of rude music—the clashing of bronze vessels, the hollow roll of large drums (cf. Cybele), the shrill whistling of flutes—and with loud shouts of 'eii' (which afterwards became 'eccho, evoe, and finally 'evoe'). These raving creatures (παραβαταί; used generally as early as Hom. Il. xxii. 460), with their dishevelled hair streaming in the wind, were clothed in long flowing ἔσχατα (whence they were also called ἐσχατάτες), over which they wore the Ἱβήρια (cf. Ἀρκ. frg. 64, and the pictorial representations), and in their hands they carried serpents, (animals sacred to Sabazios (Theophr. Char. xxx. 4); cf. the παραβάτικα of Polyanx i. in the Aryan festival. The Madura temple furnishes one of the best illustrations of this animistic type of Hinduisn. In their religious frenzy they threw themselves upon the sacrificial animals, tearing them in pieces with their teeth (Eur. Bacch. 786 ff., etc.); but cf. the singular explanation of the practice in Gruppe, p. 731 ff.). In these riots were the banquets of wine played no part; the women used no strong drink to stimulate their frenzy, but, on the contrary, were able to work themselves into such a condition of over-excitement as would bring about the ecstatic state. Their delirium was regarded as a means of compelling their god to appear (Eur. Bacch. 141 ff., 301 ff.; Paus. vi. xxxvi. 1: οἱ τὴν θεὸν σφόν ἔπιθυμον τῷ ὅπλῳ τὴν ἐκπύθην Λέγεσιν). A notable analogy to these practices is found in the leaping of the Perioi in the Tyrol; here, on Shrove Tuesday (cf. art. CARNIVAL, vol. iii. p. 225 ff., esp. p. 228), the Perioi (so named, like the Bacchus, after the deity whom they thus honour) work themselves into a frenzy. Their raving is carried to such a pitch that at length they think that they actually see Perioi herself in their midst, and it is even said that she has sometimes manipulated her worshippers (F. A. Voigt, in Roscher, i. 1941). This mimic mock cult, whose votaries were also called Κλάδοφοροι and Μεολάδοι, maintained itself till later times; even Queen Olympias, the mother of Alexander the Great, was devoted to the wild
practices of the Thracian religion, and her tame snakes, which would suddenly wriggle out from amongst the ivy or from the sacred winnowing-fans, not seldom startled the court of Philip (Plut. Alex. 61). In the festival of the raving women (Mήσα), which had been brought from Beroia (or A. Frickenhaus, Lenaeuuseum [Programm zum Winckelmannfeste der archäolog. Gesellschaft, Ixxii.], Berlin, 1912). With these designs are mingled others showing a distinct background of mythology, and here we also find names of the Menads, such as Μαγδα, Κορώ, etc. (cf. C. Franke, Satyrz- und Bacchennamen auf Vasebildern, Halle, 1912).

Then later art brought the depiction of that longed-for, actual, ecstasy of the Bacchic procession, with its troops of men and women rolling wantonly along, and the transformation of the primitive festival, attended by females only, into a turbulent orgy was the work of the superfluous art of the Hellenistic period.

LITERATURE.—This has been sufficiently indicated in the article.

J. GEFFCKEN.

MAGADHA.—Magadha, an ancient kingdom in India, was the scene of the greater part of Buddha's preaching and the last stronghold of his faith in India. It was equivalent to the modern districts of Patna, Gaya, and Shāhābād in S. Bihar. The name Bihār itself, which is now that of a vast district, is evidence of the predominance of Buddhism in these lands, for it was originally the name of a town with a celebrated Buddhist monastery (Skṛ. viṅgāra). Buddha was not born in Magadha, but in the country to the north of it, at the grove of Lumbini (q.v.), near Kapilavatū (q.v.), the Śākya capital in the Nepalese Tarai.

Magadha was the home and the nucleus of two of the greatest Indian empires, the Maurya and the Gupta. It is certainly not longer in the past that Bihār is one of the richest, most fertile, and best irrigated districts in India. As the home of Buddhism and Jainism, it is full of archeological remains of the greatest religious interest.

Its earliest capital activities in very ancient times were in the following order:
- The ancient hill fortresses of the Maurya and Gupta periods
- The ancient city of Gaya, now a great pilgrimage center for Hindus
- The ancient city of Shāhābād, now the capital of the modern district

The modern town of Gaya, although now a place of pilgrimage for Hindus, has no ancient religious associations; 7 miles to the south, however, are the remains of Bodh Gaya, the site of the town in which the Buddha is said to have attained enlightenment (dhi). To the south of Gaya is the hill of Dhoura, the Pragodhi (Po-lo-ki-po-tii) of Hiuen Tsang, with a cave in which the Buddha once rested. Punāwān, 14 miles east of Gaya, is rich in Buddhist sculptures; to the south of it is the sacred hill of Shrāvastī, which has been identified with the Kukkutapagādī of the Chinese pilgrims.
MAQH—MAGI

A. Cunningham, however, recognizes the latter in Karkhisa, which lies some miles to the north. Cunningham and others, however, believe all rich in Buddhist remains, the last-named with a colossal stone image of Buddha. Jetian, or Jakhtitan, is the Ya-yivana (‘bamboo-forest’) of Buddha’s wandering near it at Tapolchan are the hot springs, which the H. Yule of the latter. The latter is the Sattaparni canal which is fed by the Maha-bhera and what had been useful by Indra and Brama for sandalwood to ancient Buddha’s body. In the hill of this region, the present place is called ‘Magha’—Magadha—Magh—Magi. In this north-eastern part of the Japanese, a tiger was the place of the Buddha’s visit of 543 B.C.; according to Cunningham, this is the modern Son Bhadrar on the cave of the southern side of the hill. The ancient hill of Buddha is the pipal-tree cave of Pa-Han in which Buddha used to meditate after his meals. On the top of this hill there still is a small Jain temple; Ratnargr is the perad of the Pali chronicles and the Ruirati of the Mahabbhara. The extensive ruins at the modern Baragendra are the ancient Nalika. In the ancient Central India, the greatest center of Buddhist learning in ancient India. Near Girak on the Panchana river a bathing festival is held annually to commemorate Kpna’s crossing of the river in his war to Java males, or Sasanar, Monghly, and Shergarh are rich in relics of Mughulian architecture. At Sitamarhi is a cave with which a legend of Setha is associated. The annual bathing festival of Sonpur, held in November at the junction of the Gandak and the Ganges, is one of the oldest and most popular in India; it was here that the elephant rescued the elephant from the crocodile, and here Rama built a temple. At Aksar there is a fine sculpture of the varaha (bear) and Visha

MAGAS.—See Sauras and Magas.

MAGH.—Magh, or, popularly, Mugh, Mugi, is the designation of a group of Indo-Chinese tribes, numbering 1,924,5 at the Census of 1911, practically all confined to Bengal. The derivation of the name is uncertain. A. P. Phayre (Hist. of Burma, London, 1884, p. 47); cf. H. Yule and A. C. Burnell, *Holom-Johnson*, Vol. 18, 1903, p. 594) connected it with Maguha, or Mugna, modern Bihar, while L. Vivien de St. Martin (J. W. McCrimmle, *Ancient India as described by Megasthenes and Arrian*, Calcutta, 1877, p. 183, note) identified the Magh with the Maccoalinga of Piny (HAL VI. xxii. 6).

1 All Maghas are Buddhists of the Southern school, and regard the Northern Buddhists of Tibet as wholly unorthodox. The wiser sections of the Thonghas, however, retain some vestiges of an earlier animistic faith, which bids them sacrifice cattle, goats, and swine, and make offerings of rice, fruits, and flowers to the spirits of hill and river. On the other hand, the tendency is to follow after modern Hindustani, particularly in its Tartar developments, and to add the gross worship of Siva and Jaura to the simple observances prescribed by their own communion. It comes to pass that while the ancient Phayra or Holom is the recognized priest of the tribes, considerable respect is shown to Brahmin, who are frequently employed to determine auspicious days for particular actions, and to assist in the worship of the Hindu gods. Among the Thonghas old women often devote themselves to the service with great devotion, and with special ceremonial functions, are regarded as some sort of priestresses, and are called by the distinctive name tenta. (H. H. Reid, TC. 8. 24. 7. 4, 1896.)

2 The people thus described are the Khymongtha of the hill tracts of Chattogong, who, as R. L. Luce states (Hill Travels of Chattogong, Calcutta, 1869, p. 37; *Wild Races of S.-E. India*, London, 1874, p. 36), are known to the Bengalis of the plains as ‘Hill Mugh,’ and are to be carefully distinguished from the true Magh of the Chattogong District, otherwise called Bhag, the Maghas of the offshoot of Bengal women by Burmans, when the latter possessed Chattogong. They supply the famous Magh cooks, well known in Calcutta and other parts of Bengal. The Magha are Buddhists and believe in the doctrine of transmigration of souls; but their Buddhist worship is of a simple character—the presence of a priest is not indispensable; prayers are made and offerings of flowers, food, etc., are placed before the shrine of Gantama by the people themselves. Many villages have no priest, except wandering friars, who are not so much ministers of religion as recipients of alms. Each village has its temple (bhag), a bamboo structure built under the shade of some trees, inside which, on a small raised platform of bamboo, stands an image of Gantama, made either of gilded wood or of alabaster, the figure being in a sitting posture, with a regal-shaped headress indicative of superior power. Before it the village girls lay offerings of flowers and rice every morning, and, at the same time, bring the daily food of any priest or wayfarer who may be resting there. By the side of the image hangs a cylindrical bamboo vessel, containing the village, after removing his turban and bowing to the semblance of the Teacher, rings to announce his presence. Each one prays for himself, except that now and again a father may be seen leading his young son by the hand, and teaching him how to pray. Each year, before the commencement of the burning of the jungle for the purpose of sowing their crops, the boys are clothed in yellow robes of the priesthood, have their heads shaved, and go through a rite before the image, which is to be an assumption on their part of religious responsibilities. Women do not participate in this rite; but it is common for a man to perform it two or three times during his life. If a relative is sick, or he himself has escaped any danger, he performs the ceremony as a supplication or as an acknowledgment of the mercy which he has received.

LITERATURE.—The authorities are quoted in the article.

MAGI.—1. The name (Gr. Mages) is, in Old Pers. *Mages* is familiar to us from the classical writers, and from two appearances in the NT. It meets us first on the Behistun Inscription of Darius, where the kind describes (D. Pers. text i. 35 ff.) as gentes or races, *Ma-r-ga* (Garmata; in Magi) and his own successful plot against him, by which he restored the Achaeonian dynasty to its ancient throne. There is nothing in the NT to show what *Mago* meant, and we must fall back on our Greek sources, Herodotus first, and the rest *longo intervolo*. In Herod. i. 101 we are told that *Magas*, *Mago*, and four others were *Mages* (see text). The six names were explained as Aryan caste-titles by J. Oppert long ago (Le Peuple des langue des Medes, Paris, 1832, p. 7; and again, on different lines, by A. J. Carnoy (Musul. new ser. ix. (1898) 121 ff); the tolerable certainty that live are Aryan makes a strong presumption that *Mago* must be interpreted from the same language group.

The etymology, however, must be left undecided. Putting aside some attempts of Semitists to claim it, we have at least two plausible analyses which do not clash with special ceremonial functions, are regarded as some sort of priestesses, and are called by the distinctive name tenta. (H. H. Reid, TC. 8. 24. 7. 4, 1896.)

1 Ancient Geography of India, p. 462.
2. While the Magi were thus a distinct caste of Medians, and apparently the recognized leaders of the subject population in the time of Aryan (Persian) domination, there is no reason for doubting that their ascendancy was essentially religious, like that of the Brahmins in India. Darius writes of his repairing temples which the Magus had destroyed (Es. [Pers. text] 1:65-66), and so far the inscription favours the view that the departure of the Magi was occasioned by the nature-worship, as described most accurately by Herodotus (i. 131 ff.); they had only to emphasize certain clear points of resemblance between their own religion and that of the Aryan, veneration of the sun and of the chief stars, and others of the sun-race. It is significant of course, that the scanty reference does not definitely prove anything one way or another. But the testimony of Herodotus and all later classical writers is so unanimous and precise that we need not doubt their bold bid for political supremacy, as leaders of the people against Aryan invaders, they began to build up power upon their popular vogue as shamans. It was easy to insinuate themselves into the old storehouses of religious tradition and authority, to replace the old sun-worship by the new, the ancient sun-gods by the Aryan Mithras, the shafts of tamarisk by the tower of Babel. Babylon spread, babylon, it was babylon, in the east.

3. This notice enables us to trace the Magi in a separate activity as far back as 591 B.C., when they were occupied primarily in building the temple of Bel in Babylon. This is quite in keeping with what we know of them. Their contemporary appearance in Babylon is probably attested by Jer 20:1-13, where "the Rab-Mag" appears among Nebuchadnezzar's officers (for alternative views of Rab-Mag see the Oxford Lexicon and EBi, s.v.). H. Zimmermann and H. Winckler (KAT 3, 416) explain the Rab-Mag's name, Nergal-shurezer, as "Nergal, protect the king"; and in their account of Nergal they express the opinion that the Magi who in the Later Avesta has features which could be very easily connected with Babylon. The head of a caste of exorcists, who by their charms can keep the Satan from harming the king, is wholly in place at court. We compare at once the apotropaic functions of the Magi in Phutarch, de Is. et Osir. 46. We may add to this small but important peculiarities several other traits by which the Magi may be distinguished from the Persians in religion, whether in the earlier or the later stages of what we now call Parsism. First come two conspicuous features recognized from the first by Greek writers as Magian and not Persian: (1) their exposure of the bodies of the dead to birds and carrion dogs was distinguished by Herodotus (i. 140) from the Persian custom of burial after encaustic in wax. It has pronounced aboriginal affinities, and was neither Semitic nor (almost certainly) Aryan. Coupled with this was their insistence on next-of-kin marriage, which they believed extravagantly for its accumulations of merit. It was never accepted by the Persians, and never found its way into the Avesta (see on this Moultou, p. 203 f.), first appearing in the Pahlavi writings of the Sassanian age as an important of developed Parsism. But modern Parsism repudiates it with the utmost emphasis, and its scholars attempt the heroic, and impossible task of denying that their ancestors meant anything of the kind (see art. MAJUS (Ir.); § 2). The very name of magic attests the strength of their association, in the mind of antiquity, with an accomplishment altogether ignored in the Avesta, and never countenanced in Parsism. Equally ignored is (4) astrology, with which the Magi were traditionally credited. But the Avesta, while it has plenty of starlore, and some mythology, has never a hint of ideas belonging to astrological conceptions. A curious point under this is the inconsistent views of the planets held in the later Parsi Scriptures (the Avesta has nothing one way or the other). On one side there is the official view that planets were malign; on the other we find them named by the names of the planets, belonging, including Ormazd himself. These names are simply equivalents for the Babylonian terms, like which the names we have taken over through the later Greek and the Romans, so that the date is later-Avestan. Thus, the Magi put the planets into the creation of Ahriman because of their irregular motion, while the Parsis generally believed in their beneficence. There is the same kind of discrepancy in (6) the views of mountains, which in Aryan and Semitic mythology alike were venerated as divine, but by the Magi were treated as lots on the symmetry of creation, to be smoothed out when the regeneration came. It will be seen that most of these peculiar traits, by which we may distinguish the Magi, were habits of people whose religion they adopted and adapted, are incompatible with either Aryan or Semitic affiliation, or at least do not suggest the one or the other. It seems a fair inference that they were aboriginal Medes, or somehow linked with the Medes. This led to neither of the two great races which divided Near East between them. To what stock they belonged we may not be able to say. L. H. Gray (ExpT xxv. [1914] 257) points out that these were Magi in India, about whom we hear in the Bhāṣyag Parāṣa and the Pitṛatāvaitakā; he thinks that these were probably Magians, accepting the general view of them which has been outlined above, and he believes them to be immigrants to India from Persia. 1

It must be premised that the foregoing view of the ethnography of the Magi and their religious origins is to some extent new, and has not yet had the benefit of full discussion. The extent of approval expressed by L. O. D. C. Casatielli (Manchester Guardian, Dec. 31, 1913) and L. H. Gray is the writer to epitomize here the thesis set forth in his Early Zoroastrianism, chs. vi. and vii. (cited also by Geldner, in Tabi 1914 [1914] 257).

4. Pursuing this thesis further we are led to credit the Magi with all that is fairly called "dualistic" in Parsism. There is nothing really new in this, it may be noted that Zoroaster is identified with Iranian Magus; but Magus may be borrowed as a foreign word with altered declension (the form Magus also occurs in the Indian Pur). This word is of Ionic origin, which suits our theory. See, on the Magus, art. ZARAN and MAGUS.
dualistic in Zarathushtra’s Gathas. The very name of Ahriman (angra mainyu, ‘enemy spirit’; see art. AHRIMAN) occurs only once there (Vz. xlv. 2b), as a casual epithet and not a fixed title. The good and evil spirits named as such in these two books of the Gathas, at the very beginning, but there is never any real question as to the source of the strife between them; one whose perpetual counsel is ‘Resist the devil and he will flee’ can never be called a dualist. But the Magi, on Plutarch’s express testimony, offered sacrifices to Ahriman. The practice is entirely absent from the Avesta—a fact that does not discredit Plutarch, but only shows the survival of distinct usages among the Magi, whose genius is well suited by the resurrection among the world the divinities of Ormuzd and creations of Ahriman. This is practically absent from the Gathas, and even from the Yoshts, where a pure Iranian nature-worship shows small sign of influence from Zarathushtra on the one hand or the Magi on the other. The prose Avesta (excluding the early Gatha hayyantanghiti)—which by the loss of metre and the presence of much dubious grammar proclaims itself composed in a virtually dead language—is full of this dualism, and has to be balanced between the two camps; different terms are used for the head, hand, voice, etc., of an Ormuzd-worshipper and those of an Ahrimanian. Every yazata has a demonic opponent; but we note that the latter has been replaced by a political ascendant, and that the friends are often of manifestly late origin and vague functions, so that we should suppose the work of correlation to have been rather half-heartedly undertaken as a concession to theory. The type of dualism implied such a personification of the world that it must have been argued for, and with that apparently called forth the declaration of Is 45. The presence of such a system in Babylonia during the Exile suits our view of the Magi as shamans exercising influence far beyond their own land of Media, and the presumption adds something to the case for recognizing the Rab-Mag as an apxgiasis. We may observe that, if Judaism emphatically denied this dualistic assigning of darkness to an evil demiurge, Zarathushtra himself was so clear in his claim that Mazda made the night as well as the day (Vz. xlv. 5).

5. We are reduced mainly to conjecture when we ask what was the Magian eschatology. That death must be abolished if Ormuzd is at last to conquer his opponent, according to his standing Avestan epithet—seems a natural inference from their first principles. We know, further, that they pictured a regenerate world in which such visionary features as mountains would disappear, and the earth would become a ‘hopeless plain.’ But how far they pressed their form of the doctrine of immortality we have no means of knowing. Our early Greek witness, Theopompus, according to an important statement of Theophrastus, declared that the Magi taught the future resurrection of men to a deathless existence. This excellent 4th cent. authority may, of course, be describing only the doctrine of Persian religion in his own time, when the Magi were their long-established priests. But the extract apparently connects this immortality with a doctrine that looks rather characteristic of the Magi themselves. The locuciones in Plutarch, already quoted, is ordinarily taken as silent to any doctrine of a resurrection amongst the Magi. But E. Botkin, (Die Verwandschaft der persisch-rabimischen mit der para. Eschatologie, Göttingen, 1862, p. 1022), argues that in Plutarch’s quotation from Theopompus we should translate ‘Hades is to be deserted,’ which agrees with the other accounts of the testimony of Theopompus. The absence of any doctrine of immortality in Tobit (cf. the Jewish choice in the beginning) does not exclude the possibility (as in Moulton, p. 416) as a contributory argument. For, whether the book is rightly or wrongly held (as by Moulton, ch. vili. and p. 332ff., and D. C. Simpson in the Oxford Apocrypha) as containing a Median folk story rewritten by a Jew, we must admit that the adapter was not likely to include that element unless he agreed with it, which, if the date was early, he would not do. It is clear that, if Zarathushtra’s eschatology came before the rise of the Magi, the latter were then, in part, at least, described by Magian ideas, it was very little likely to attract the thinkers of Israel. The common belief that the rise of the doctrine of immortality in post-Exilic Judaism owed some real stimulus to Persian influence becomes less and less probable as the history of early Zoroastrianism is investigated more thoroughly.

6. Such, then, in outline were the Magi as a sacred tribe, so far as our information allows us to isolate them from the Jewish views during the Exilic period. Their beliefs were held, apparently organized and a systematized by the Magians, and the early literature which we have, is characterized by the long established presence of Magian ideas. They were not, however, systematically taught, as we may gather from the writings, in which the YHVH is so important as the God of the Jews, to which the evidence of the Magians is less important than the evidence of the Persians. The Jewish testimony shows us how far we should not find the beliefs of the Jewish and Gentile Magi, as we may learn from the later development of Zoroastrianism in Persia, and it is clear that they made a considerable contribution towards the development of the Jewish religion.

7. Later developments of Magianism belong to the history of Zoroastrianism as established under the Sassanian dynasty. It only remains here to add a few words about the Magi as they figure in the Nativity story of our First Gospel. To discuss the historic credibility of that story, or the various theories that ‘many-syllabled’ about the Magi, must be left to the dictionaries of the Bible. Here it suffices to connect the foremost traits of the Magi, as described above, with points in the story of Mt 2. That these Μαγοι ἀπὸ ἅπαντος appear to the picture as experts in dream-interpretation and in star-legends, is clear. It is noteworthy, therefore, that Mt 2, so far as its testimony goes, isolates the Magi from Persian religion, which, as we saw, has practically no room for them. Our early Greek witness, Θεοπόμπος, according to an important statement of Theophrastus, declared that the Magi taught the future resurrection of men to a deathless existence. This excellent 4th cent. authority may, of course, be describing only the doctrine of Persian religion in his own time, when the Magi were their long-established priests. But the second extract apparently connects this immortality with a doctrine that looks rather characteristic of the Magi themselves. The locuciones in Plutarch, already quoted, is ordinarily taken as silent to any doctrine of a resurrection amongst the Magi. But E. Botkin, (Die Verwandschaft der persisch-rabimischen mit der para. Eschatologie, Göttingen, 1862, p. 1022), argues that in Plutarch’s quotation from Theopompus we should translate ‘Hades is to be deserted,’ which agrees with the other accounts of the testimony of Theopompus. The absence of any doctrine of immortality in Tobit (cf. the Jewish choice in the beginning) does not exclude the possibility (as in Moulton, p. 416) as a contributory argument. For, whether the book is rightly or wrongly held (as by Moulton, ch. vili. and p. 332ff., and D. C. Simpson in the Oxford Apocrypha) as containing a Median folk story rewritten by a Jew, we must admit that the adapter was not likely to include that element unless he agreed with it, which, if the date was early, he would not do. It is clear that, if Zarathushtra’s eschatology came before the rise of the Magi, the latter were then, in part, at least, described by Magian ideas, it was very little likely to attract the thinkers of Israel. The common belief that the rise of the doctrine of immortality in post-Exilic Judaism owed some real stimulus to Persian influence becomes less and less probable as the history of early Zoroastrianism is investigated more thoroughly.

LITERATURE.—Greek and Latin lost classics are collected in A. Rapp’s two papers, ZDMG xx. (1869) 189 and xx. (1889) 184-191. Those whose Zoroastrian contents are conveniently studied together in A. V. W. Jackson, Zoroaster, the Prophet of Ancient Iran, New York, 1919. The account of the gospels is given largely on the writer’s own discussion in the writer’s subject Early Zoroastrianism (IL), London, 1917.

JAMES HOPPE MOUTH.
MAGIC (Introductory).—I. History of the term and problem of its definition.—In any general treatment of the subject of magic the problem of its definition must occupy the chief place, seeing that it constitutes a veritable storm-centre in the anthropological literature of the present day. As so often happens when a word belonging to the common language, and used in vague and conflicting ways, is taken over by science that it may correspond to some precise concept, theorists interested in different and more or less incompatible concepts claim exclusive rights over the same technical term; so that, if they are at all equally matched, the term becomes for the time being ambiguous, i.e., it answers to more concepts than one. Something of this kind has occurred in regard to the word 'magic.' It may be instructive, then, to begin with a glance at some of the meanings it has been given to by philologists. It is, of course, the lineal descendant of the Gr. μαγεία and the Lat. magia, which in their strictest sense refer simply to the religion, learning, and occult practices of the Persian Magi, or priests of the sect of Zoroaster, in the form in which they became known to the West (see art. MAGI). Such matters, however, being both foreign and ill-understood, would naturally be more or less suspect. Hence the word tends from the first to carry with it the unfavourable associations summed up in the notion of witchcraft (see, for instance, Hesychius, s. v. ψαργ, which he identifies with μαγεία, and Pliny, HN xxx. 11; and for further references cf. H. Hubert, in Durenberg-Saglio, s. v. 'Magia'). These associations the equivalent words in the various languages of modern Europe have never lost. Bacon's attempt to rehabilitate magia as natural science in its operative aspect (de Augmentis scientiarum, iii. ad fin.) proved quite abortive. Thus it comes about that the nature, as anthropologist in attributing to a given people can hardly do without at the same time implying that it is something inferior and bad—something that, however prevalent it may be, belongs to the lower levels or even to the pathology of mind and society. A survey of representative views on the subject will bring out the fact that, in this respect at least, most, if not all, theories tend to be at one.

2. Representative views.—As far back as 1870 E. B. Tylor laid it down that the 'confusion of objective with subjective conception, ... so uniform in principle, though so various in details, ... may be applied to explain one branch after another of the arts of the sorcerer and diviner, till it almost seems as though we were coming near the end of his list, and might set down practices not based on this mental process, as exceptions to a general rule' (Researches into the Early Hist. of Mankind, p. 129). He adds that the same state of mind will account for its taking, many of the food-preparations of the savage, for instance, depending on the belief that the qualities of the eaten pass into the eater (ib. p. 133). Such an attitude of mind he characterizes as one of 'gross superstition and delusion' (ib. p. 119), even while allowing that at a stage of development when human life was more like a long dream such a system of error was perfectly 'intelligible' (ib. 159 f.). He pursues the same line of explanation in his later work, Primitive Culture, where magic is described as 'occult science,' i.e., a 'pseudoscience' (3rd ed., i. 112, 119). 'The principal key to the understanding of occult science is to consider it as based on the association of ideas, a faculty which lies at the very foundation of human reason, but in no small degree of human unreason also' (i. 115 f.). He adds a dissertation on the utility of magic arts, in which he maintains that 'in the whole monstrosities farrago there is practically no truth or value whatever' (i. 135). Meanwhile, he holds that the laws of mind are as unchanging as the laws of chemical combination, so that 'the thing that has been will be' (i. 150). The 'symbolic magic' of the savage and modern spirituists, in his view, is nothing but a misapplication of fallacies to which the human mind is naturally prone (see ch. iv., passim, esp. ad fin.).

J. G. Frazer (The Golden Bough) maintains a position which in most respects is identical with that of Tylor. In the second edition (1900) he credits primitive man with two views of the world that exist side by side, the one view being that it is worked by personal beings acting on impulses and motives like his own, the other view amounting in germ to the conception of nature as a series of events occurring in an invariable order without the intervention of personal agency. The latter is the view involved in sympathetic magic (GB i. 9), though the savage acts on it, not only in magic art, but in much of the business of daily life (ib. 31). In the second edition (1900) Frazer lays far more stress on the 'fundamental distinction and even opposition of principle between magic and religion,' being influenced especially by the theories of H. Oldenberg (Die Religion in ihren Ursprüngen, Berlin, 1894), F. B. Jevons (Introduction to the History of Religion, London, 1896), and A. C. Lyall ('Asiatic Studies,' 1st ser., London, 1899). More than that, he is now disposed to affirm that, in the evolution of thought, magic, as representing a lower intellectual stratum, has probably everywhere preceded religion' (GB ii. p. xvi). He still represents magic as 'next of kin to science,' since the two have in common the 'general assumption of a succession of events determined by law.' Magic is nevertheless 'the bastard sister of science.'

'All magic is necessarily false and barren; for were it ever to become true and fruitful, it would no longer be magic but science.'

All cases of sympathetic magic resolve themselves en analysis into mistaken applications of the laws of the association of ideas by similarity and contiguity, 'Legitimately applied' these same principles 'yield science; illegitimately applied they yield magic' (ib. p. 62).

Religion, on the other hand, 'is opposed in principle to both to magic and to science, since its fundamental assumption is that the course of nature and of human life is controlled by personal beings superior to man. Towards such beings conciliation must be employed, whereas to exert mechanical control is the object of magic and science, through the former often extend to control spirits, treating them, however, exactly as

Vedic (A. A. MacDowell), p. 311.
if they were inanimate agents (ib. p. 63 f.). Finally, the human race are assumed to have passed through an 'intellectual phase,' in which they 'attempted to force the great powers of nature to do their pleasure,' and had not yet thought of courting their favour by offerings and prayer. Such an 'age of magic' finally gave place to an 'age of religion,' because mankind at length were led by experience to a 'tardy recognition of the inherent falsehood and barrenness of magic,' whereupon the more thoughtful part of them abstained from a truer theory of nature (ib. pp. 73, 75). In the third edition (1911) these main theories are retained, but the following scheme of the principal branches of magic (taken over from Lectures on the Early History of the Kingship, ch. ii.) is added, in accordance with the view that magic is simply misapplied association of ideas:

- **Sympathetic Magic** (Law of Sympathy)
- **Homoeopathic Magic** (Law of Similarity)
- **Contagion Magic** (Law of Contact)

While the whole erroneous system, both theoretical and practical, which answers to the name of magic is the practice of any aspects according to the following tabular form:

![Diagram of Magic Types]

(See GEI, pt. i., The Magic Art, i. 64 and 713.)

The view that tabu is a negative magic did not appear in earlier editions of The Golden Bough. Frazer holds that, if not the whole doctrine of tabu, at all events a large part of it, would seem to be but a special application of sympathetic magic, with its two great laws of similarity and contact (ib. i., p. 26 f.).

E. S. Hartland (Ritual and Belief, London, 1914) enters on a full discussion of 'The Relations of Religion and Magic' (p. 26 f.). He insists at the outset that they spring from a common root. It is venture to suggest that man's emotional response to his environment, in his interpretation of the terms of personality of the objects which encountered his attention, and in their inversions by him with potentiality, atmosphere, orenda, nature —call it by what name you will—we have the common root of magic and religion' (p. 60).

Correspondingly, magician and priest are differentiated from a common type, namely, the medicine-man.

' Roughly and provisionally it may be said that the professional magician is he who in the course of the evolution of society, by birth, purchase, or by study and practice in the conventional methods, has acquired the most powerful orenda. Similarly, the professional priest is he who in these ways, or by prayer and fasting, has obtained the favour of the imaginary personages believed to influence or control the affairs of men—who had, in a word, possessed himself of their orenda. The union of these two professions in one person is not adventitious; it is probably fundamental' (p. 50 f.).

Hartland, while thus differing from Frazer on the question of origin, is disposed in other respects to follow the latter's method of delimiting magic and religion.

N.B. "Conveys the notion of power, by whatsoever means acquired, wielded by the magician as his own, and not as that of a higher being whose cooperation is only obtained by supplication and self-abasement" (p. 86).

On his view prayers and sacrifices are magical processes just in so far as a constraining power is attributed to them; and he asks, 'Have analogous beliefs in the magical powers of a rite even yet disagreed from Christianity?' (p. 87).

Religion, on the other hand, is an organized system, whose objects, so far as they are personal, are endowed with functions which are to be apprehended with the imagination, or may not grant the prayers of their suppliants. ... Where the object is impersonal, or is but vaguely personal, it is none the less treated with reverence and submission by the remote and un-assuming man; it is the object of an emotional attitude, actively directed towards it. The object thus, even when it is not personal, tends to become so' (p. 88).

A. Lehmann of Copenhangen (Aberglaube und Zauberer von den alledemten Zeiten an bis in die Gegenwart, Stuttgart, 1898) defines superstition (Aberglaube) as the following: 'The whole system of religious and sorcery which fails, in order to obtain authorization from a given religion or stands in contradiction with the scientific conception of nature prevailing at a given time. Correspondingly, magic or sorcery (Magie oder Zauber) is any practice which is engendered by superstition, or is explained in terms of superstitious notions (p. 6 f.). By insisting on the essential relativity of these two ideas he claims to have avoided many difficulties that puzzled former inquirers. For instance, if it be asked how magic is to be distinguished from miracle, the reply is that it is all a question of standpoint, Aaron performing miracles while his Egyptian rivals are mere magicians (p. 9). For the rest, he finds two more or less independent theories to be equally at the back of magic, whether it be the belief of the spurious magician, the spiritist, which relies on the intermediation of personal agents, and the occultist, which calls into play mysterious powers of nature (p. 314).

H. Hubert and M. Mauss ('Esquisse d'une théorie générale de la magie,' in ASoci., 1909, p. 87) start from the conception of rites. Rites are traditional acts that are efficacious in a non-mechanical way, thus involving the notion of mana (q.v.), or wonder-working power (p. 14; cf. p. 138). Such a notion underlies the idea of the sacred as something divine, the spiritist, which relies on the intermediation of personal agents, and the occultist, which calls into play mysterious powers of nature (p. 21 f.). The differentia of magical rites consists in the fact that they do not form part of an organized cult, and therefore tend to be regarded by the society concerned as illicit (p. 19). Thus religion and magic tend to stand to one another as two poles representing severally the social and the anti-social ways of trafficking with the miraculous. Finally, magic, as being always the outcast of society, becomes charged with all the effects of decomposition and rejection, and so is gradually differentiated from religion more and more. This very ingenious and weighty study of magic, to which a short sketch cannot pretend to do justice, but which must be remembered, from a strictly sociological standpoint, and throughout regards magic and religion not as phases of mind, but as social institutions, having as such a reality of their own determinable in terms of form and function.

Arnold van Gennep (Les Rites de passage, Paris, 1909) treats the magico-religious as an indivisible whole, distinguishing only between the theoretical and the practical activities which it comprises, and assigns the terms 'religion' to the former and 'magic' to the latter. It is essential, in his view, to insist on the indissolubility of the relation between the theoretical and the practical sides, since the theory divorced from the practice passes into metaphysic, while the practice founded on another theory becomes science. For the rest, the mysterious forces which are the objects of magico-religious theory may be conceived equally well under an impersonal or a personal form; and, correspondingly, in magic, whether it issue in positive acts or in abstractions—viz., in the observance of tabus—may seek to deal with things either directly or indirectly through personal agents having power over the things, while the mechanism of association by
similarity and contact is involved in both cases alike. The theory is stated (p. 18) in tabular form as follows:

1. Theory (Religion)

Wilhelm Wundt (Völkerpsychologie, vol. ii, pts. ii. and iii., Leipzig, 1907-09) makes myth or belief the ultimate source of cult or ritual, since the latter is but the former put into practice. There is but one mythical idea at the back of all rites, namely, the idea of soul, and from it are generated in succession three forms of cult, magic, fetishism, and totemism, which by reaction cause the idea of soul to develop correspondingly. To deal only with the first of these, magic in its primeval form consists in associating or transferring the actual soul on soul, as when the evil eye is feared, while the secondary form consists in supposed action from a distance, when the soul-influence makes itself felt indirectly by means of a symbol (il. 46f.). Thus Wundt is entirely opposed to the Frazerian theory that magic implies a theory of natural causation on the part of the savage. On his view, while ordinary events are accepted as a matter of course, extraordinary events, demanding as they do a theory that will account for them, are at first ascribed to the soul-power or will of a man, and later (when the stage of magic is transcended) to that of a magnified man, or god, similar soul-power or will being ascribed to inanimate objects and to animals at the intermediate stages of fetishism and totemism.

Here perforsche must end the survey of representative views, those selected for examination at least exemplifying the wide diversity of the notions which it is sought for purposes of science to impose on a highly plastic, since popular, term. Now the purely verbal side of the question need not be a source of trouble. If the things are envisaged distinctly, the words may be trusted to look after themselves. Thus in the present case there are evidently different concepts answering to separate aspects of human life; and it will be sufficient for the present purpose if these aspects are discriminated, so that terminology may be given the chance of adjusting itself to the facts.

3. Magic as a general name for rudimentary cult.—On any theory of the evolution of religion which represents it as a single movement falling into distinct stages, there is the primary first stage of minimum development immediately preceded by a stage of what Bacon would call abscia in proximo,—a pre-religious stage, as it might be termed. Now, since the word "magic" tends to bear an unchangeable sense, nothing is more natural than to dub magical whatever fails to come up to the evolutionary standard which religion is more or less arbitrarily taken to embody. It hardly matters whether, after the manner of Frazer, an age of magic is held to have preceded the age of religion, or whether, in the style of Wundt, magic is identified with the lowest form of religion. In either case magic answers to something to which is assigned an unfavourable, because inferior, place in the evolutionary scheme compared with religion at its most characteristic. Anthropological science, however, is becoming increasingly chary of constructing any such scale on lines so simple and so drastic. Human evolution is a mass of many interlacing strands; and, again, the savage of to-day is no older or earlier than the civilized man, so that typological and historical primitiveness cannot be identified off-hand. At most, then, it is with the help of psychological and sociological considerations of a general type that a primordial stage of mind and society can be theoretically posited, out of which determinate religion may be shown to have emerged by some sort of subsequent process. Such general considerations suggest that, just as Jourdain talked prose before he realized the fact, so the primitival savage acted before he thought about his action. Correspondingly, therefore, in the sphere of nascent religion there must have been a stage of cult or ritual (if so it may be termed), the product of sheer unreflective habit, which preceded the growth of ideas concerning the how and why of what was being done. Certain recurrent situations in the social life of a tribe, as for example, the killing of a human being, is wholly subordinate to the social so long as mere gregariousness prevails—induce states of emotional intensity. The emotions must find a vent somewhere. They do either through activities directed to not accidental acts of soul on soul, or through the ritualization of superstitions with the concomitant activities of social life. In either case habit entwines with the activities in question all sorts of more or less functionless accidents; and the presence of these unaccountable details helps to make the whole performance seem mysterious to the performers and still more to the civilized onlooker. When the activity is of the directly practical kind, say, hunting, whereas the tracking, the killing of the game, and so on, explain themselves, the accompaniments of custom which do not explain themselves so readily—for, instance, wearing such a garb, uttering certain words, and the like—may well seem to call for justification even to the unthinking savage, who will at least then suspect a sense of the value of custom into the vague doctrine that there is 'power' in these things, that they 'work.' When, on the other hand, the activities belong to those of the secondary type which are not immediately practical, constituting 'protreptic' rites, as they might be termed, which, while affording emotional relief, act likewise on the whole as preparations for the business of life—very much as play does, in the case of the young—then accretions in the way of accidental features due to custom are likely to be more pronounced, inasmuch as there is no discipline of hard fact to impose bounds on the action. Meanwhile, in proportion as these secondary activities conform to the same stimuli as the primary, in the way in which they are the by-product, as, for instance, when the hunting interest overflows into a pantomimic rehearsal of the chase, they will wear an initiates appearance, though in reality being 'repercussions' rather than imitations. When, however, an ex post facto justification of them becomes necessary, it is quite natural that the doctrine that they have 'power' should implicate the belief that their seemingly imitative character has something to do with their efficacy. It is putting the
MAGIC and genuine magic tend to make them better treated as a part of ritual, namely, as observances of negative prescriptions, which will invariably be found to form one context with sundry other positive prescriptions. Magic is, not even natural according to the ordinary usage of speech. It may even be said to be now a recognized working principle that the first-hand observer should class all magico-religious phenomena under one general heading, and leave the theorists to determine how far, and along what lines, the differentiation of the magical and religious elements involved in the complex needs to be pushed (see Notes and Queries on Anthropology, issued by the Royal Anthrop. Institute, London, 1912, section on "The Study of Magico-Religious Facts, p. 251 f.).

4. Magic as a name for the black art and allied developments.—The view which has just been discussed and deprecated, that identifies magic with rudimentary cult as a whole, may be said to draw a horizontal line between magic and the later and more evolved products of the same tendencies which rudimentary cult embodies. The other view, which will notice neither the civilised onlooker ranks them. For the rest, in so far as these relatively unidented discharges of the social energy need any supporting doctrine, they would seem to find it, not in any philosophy about like producing like, but in some ideas that appear quite late in the history of thought—but in vague notions of the mana type (see MANA). In other words, the savage comforts himself with the theory that these magical practices work, but is content to feel and know of the work without being able to explain it. On the whole, it would seem a pity for the evolutionist to apply a term redolent of disparagement to what on his view is a genuine phase of the serious life as lived under certain conditions of culture. It is far less question begging to predicate religion throughout (unless, indeed, one is prepared to follow van Gennep, and predicate magic throughout as well as a general name for the practical side of religion—which is surely an abuse of language). The science of comparative religion, if it is to do its work properly must in particular embrace the cults of all mankind in its survey.

An observation may be added for the benefit of the field-worker, who, as a rule, has to take over his classificatory apparatus ready-made from the hands of the theorist. If such an one has learnt to identify magic with the sympathetic principle or with these early forms of cult in which this principle appears to predominate, he will be inclined to label his collections of specific ceremonies 'hunting magic,' 'productive magic,' and thus describe rites of the intichiuma type, which bear on the increase of food-animals and plants), 'agricultural magic,' and so on. But it is just as easy to speak of hunting and agricultural 'rites' or 'ritual'; and it is much more likely to lead to an unprejudiced description of all the relevant facts, whether they be like, or unlike, or not.

So, again, tabus are better treated as a part of ritual, namely, as observances of negative prescriptions, which will invariably be found to form one context with sundry other positive prescriptions.
MAGIQ (Introductory)

namely, the suggestibility leading sooner or later to death on the part of one who satisfies himself the easy life. But this is far personal experience as a medical man of five or six such cases among the Queensland natives. Thus it comes about that, by an extension of the same line of thought, "evil magic" becomes the stock explanation offered for every accident or incident of a insanious disease.

An individual becomes incapacitated through some chronic and painful illness which does not answer to the various abdominal methods of treatment or materia medica: the illness weighs upon his mind, and after a time he becomes more and more confirmed in his conviction that someone has been "pointing" the patient (日夜scholastic phraseology, that a "worm, pimple, flower, etc., has been put inside him and his blood removed" (W. E. Roth, Ethnological Studies among the North-West Central Queensland Aboriginals, Brisbane, 1897, p. 154).

Indeed, it has often been observed that the savage scarcely recognizes the fact of "natural" death, so ready is he to attribute the evil to some sinister pass of some particular individual or at least to the machinations of persons unknown (cf. art. Life and Death [Primitive], § 7). From these vaguer attributions of ill-will to one’s neighbours it is but a step to the concept of magical influence, independent of the will and intention of any person at all. Varions more or less impertinent forms of evil—such as the arunguynta of the Arunta (Spencer-Gillen, 1898, p. 626 n.), the adpow of the Hunter’s N. E. H. Bowen, in Anthropological Researches, iv. 1902, p. 37), or the beli of the Malays (W. W. Skeat, Malay Magic, London, 1899, p. 94)—are regarded as malignant and destructive agencies in their own right, much as one thinks of the plague or the influenza. In short, there is always more or less of black magic in the "air" for the panic-ridden savage. For this reason, and seeing also how much the healer of diseases, and, again, the witch-doctor do to foster the evil reputation of the physician by their highly flamboyant accounts of the dreadful arts which it is their professional privilege to be able to counteract, one might almost be tempted to declare that the science of medicine is to be reduced to a combination of fear wedded to ignorance and credulity. But this would be to go too far. There seems good evidence that in Australia men and even women, despite the fact that black-magic practised within the gates is not seldom to be punished by death, wreak their vengeance in this way on their private enemies. Roth’s own black servant, a mere layman, actually dared to point the bone at a native doctor, the latter dying about a fortnight later (A.Gillen, Bull. Ethnol. Soc. Paris, 1912, 1914, p. 354). At most, then, it may be surmised that for every case of genuine guilt there are far more false accusations; and, in short, generally, in every witch-haunted society, whether it be native Australia or 19th cent. England, that the proofs of witchcraft mainly rest on an argument from effect to cause.

As for love-magic, it may not seem at first sight to have the anti-social character of the magic of hate; but, if closely observed, it will be found on the whole to minister to hardly less respectable purposes. Thus among the Arunta of Central Australia such magic is chiefly resorted to in order to bring about a runaway match. It is true that, according to native ideas, it is merely a case of one tribal husband trying to entice the woman away from another tribal husband, so that, as Spencer and Gillen say, “It is a breach of manners but not of custom” (c, p. 544). Even so, however, it would seem to be the case that it is a novelty to large kin formation and social structure, to a general conflict within the group, or between one local group and another, so that its anti-social tendency is bound in the long run to become tolerably manifest.

So much for what are perhaps the clearest instances of types of ritual acts generated by passions and desires which society is bound to try to suppress in the interest of its own self-preservation. Such ritual acts may be placed in the same determinate class by themselves, whereas over against this class can be set in contrast another class of rites, entirely similar as regards the general nature of their mechanism, but embodying entirely different motives of a basis disease.

Broadly speaking, all public rites have this common quality of being illicit and repellant, since the fact that they are the recognized custom of the community is taken as a sufficient guarantee that they exist for the betterment of the common weal. Thus the totemic ceremonies of the Central Australians, the object of which is the increase of the food-animals and plants, occupy exactly the same place in the life of the people as is filled by the rites of other religions. Hence E. Durkheim (Les Formes élémentaires de la vie religieuse, Paris, 1912) takes the totem system of Australia as the typical instance of a elementary religion, whereas Frazer, adopting what has been termed the horizontal line of division between the magic and religion, would assign these totemic rites wholesale to the age of magic. Indeed, no better instance could be cited to illustrate the incompatibility of the religious and the horizontal line of divinity, of magic and religion, than the case of the Malays, in the way in which they are regarded as illicit. A man had no right to enter into private relations with supernatural powers that might help him at the expense of the community to which he belonged. In his relations to the house he was bound always to think and act with and for the community, and not for himself alone.

Granting, however, that in the small undifferentiated society private enterprise is suspect, we must recognize that, as the division of labour develops and the individual asserts himself more and more, the law is increasingly ready to sanction, or at least condone, the use of magic for securing personal ends, such as the protection of property by talismanic marks having the force of conditional curses (see P. Huvelin, Magic et droit individuel, in J. Soc. x. [1907] 1 f.; and cf. M. Mauss and M. H. Beuchot, iv. iv. [1906] 117, on the magico-religious significance of the Eskimo property-marks). For the rest, there will always be in every society a number of ceremonial practices to which a certain amount of magico-religious value attaches that fall most naturally under the category of folk-lore, having no place in the official cult, yet being too insignificant to call for much notice favourable or unfavourable, and, on the whole, tending to be despised rather than condemned. In a case like this, for instance, the practice of the use of magic, it is best to treat all magico-religious rites as generically akin, even while making due allowance for their tendency to group themselves round the opposite pole of benevolence and ineffectiveness, of social service by the priest. More especially is this the case when the interest passes from intent to content, from motive to mechanism. Social and anti-social rites are hardly distinguishable in respect of their external forms at the stage of the most rudimentary culture, the one bearing the closest resemblance to each other, the
MAGIC (Introductory)

sorcerer and priest often meeting in the person of the medicine-man. The rites are of the same general pattern, whether they be annual or oral. Lastly, the idea that are bound up with the rites conform to a common type, now to that of mana and now to that of spirit (cf. Huvelin, op. cit., p. 2). A great deal of ritual material which should hardly have been, seeing that, so long as society is represented by an aggregate of small groups living in a state of perpetual discord, what would be evil if practised on a friend becomes good the moment it is directed against the people just across the way. Or, again, society may halt as it were between two ethical opinions, with the result that ritual practices of contradictory intent may obtain something like equal toleration; the moral status of love-magic was especially ambiguous, so that, for instance, among the Kurmai tribe of Victoria, where marriage by elopement verges on the position of a recognized institution, while there were medicine-men who assisted those who wished to elope, there were other medicine-men who aided the pursuing kindred to discover them (A. W. Howitt, The Native Tribes of S.E. Australia, London, 1904, p. 277). Once more the medicine-man in his capacity of tribal head-man may use his power against the enemies, and will even bring to bear on them the power of Daramula, the great anthropomorphic god of the mysteries, the very embodiment of all that is most religious in the eyes of the tribe (Howitt, pp. 543, 382). Clearly, then, it is not to the simple and more of the differentiated societies that we must look for an accurate evaluation of the purposes embodied in rites, leading sooner or later to their organization in ritual systems that henceforth to some extent develop independently. Organization and system, however, are terms that perhaps are hardly applicable even to the later developments of black magic. It is religion that has all the organization to itself, because public approval affords it every chance of freedom; Magic, on the contrary, shows as the enemy of organized cult and, indeed, of the social organization as a whole, must lurk in dark places, and grows not by internal systematization, but merely as does a rubbish-heap, by the casual act of someone, and the vulgar idea, as is common to all kinds. At most it may affect a certain definiteness of form by imitating religious ritual in a spirit of blasphemous parody, as in the case of the black mass. On the whole, however, it is utterly deficient on the side of theory, and consists simply in a congeries of practices which by version and distortion have lost most of the meaning that they once had. Only in this sense, then, do they rest on the principle of compulsion as opposition. The same is true, of course, of much lacking the support of any consistent scheme of thought, they have to depend for their validity on the bare fact that they appear to work. Religion, on the other hand, though never wholly escaping the tendency to impute value and efficacy to its ritual as such, is free to develop an ethical conception of the godhead in which the action of mere power is gradually converted into that of a power that makes for righteousness, and is therefore to be meted out and accounted for by rites but by righteous conduct.

(b) Magic as the rival of science. — The view advanced by Frazer to the effect that the fundamental conception of magic is identical with that of modern science (Cfr., p. 1, The Magic Art, 1-220) will hardly bear close inspection. The magician surely does not postulate that the same causes will always produce the same effects. On the contrary, his art is based on the supposed possibility of miracle — on what might be termed super-causation as contrasted with normal causation. In other words, he seeks to help out ordinary action by means of certain influences which he hopes to produce from a supra-sensible source. This is what Taylor means by characterizing magic as occult science. It makes a fatal difference if, after the manner of Frazer, this qualification be omitted. Magic thus stands in far closer affinity with religion than with science, inasmuch as religion and magic equally consist in dealings with the supra-sensible and differ not as regards the means employed but simply as regards the ends pursued, since the one tries to bring blessings to pass by means of miracle, and the other to bring curses. On the other hand, at no known stage of his evolution does the existence of man consist in one continuous round of mystic practices. It is mainly at the crisis, periodic or occasional, in the social and individual life that the need to draw on unseen sources of support is felt. In the intervals the workaday world of actions, guided by the routine of sense-perception, stands in the foreground of attention; and this is the world of natural science has always been at home. Chipping a flint so as to produce a cutting edge is nascent science, whereas bringing up a quartz-crystal mysteriously from one’s inside is a magico-religious process and will even call for a special order of experience. A considerable part at any rate of modern science has originated in technical processes of a directly utilitarian and ‘lay’ character. Thus European geometry would seem to be the outcome of the attempt by the Egyptians, who measured out the land in Egypt after each inundation of the Nile (cf. J. Burnet, Early Greek Philosophy, London, 1908, p. 24). It cannot be denied, however, that, so long as their occult character be recognized, certain developments of the magico-religious way of thinking may be held to correspond to sciences or pseudo-sciences, inasmuch as they severally represent a body of organized lore intended on the whole for the furtherance of a system of ritual or magical practices, and the most characteristic types are faith-healing and divination (qq.v.). Faith-healing is in its most typical form a direct counterblast to sorcery, which is in essence a faith-hurting. White magic and black magic are built upon a larger and more of the other’s form, since the natural procedure of the healer is first to establish by his diagnosis what exactly the wicked magician has done, and then by dramatic reversal of the agency to undo it. Indeed, as has already been suggested, witchcraft is in no small part a pure invention on the part of leechcraft. To bring about a faith-cure it is essential to show that what is wrong is something that will answer to the proposed method of putting it right and which merely is evidence that the man may checkmate medicine-man, diamond cut diamond? Meanwhile, the occult science of the faith-healer is not the only form of medical science known to the savage. On the contrary, it may be more or less sharply distinguished from the ordinary folk-medicine, towards which it stands in a certain attitude of rivalry.

Thus Roth, who, as a medical man, went very carefully into the various methods of dealing with disease that prevailed among the aborigines of North Queensland, observes that the “doctors” attend specially on the sick, the charge of all such being left to individual caprice, e.g., a woman looks after her husband, a mother after her child. Nor do the people describe, the knowledge — where known to all — of the therapeutical value of any plant, of massage, etc., being common to the tribe (N. Queensland Ethn., Bull. 6, p. 29). It is only when the ordinary treatment fails that the aid of the medicine-man is called in (6).
Among the specifics in common use among the natives observed by him, Roth enumerates more than forty different plants, for some of which at least genuine remedial properties can be claimed. Among such uses for healing, massage, emollients, dressings for cuts, the use of splints for fractures, and so on, are "lay" methods of treatment which rest on a basis of what we too would be ready to recognize as 'science,' i.e. a more or less organized common sense. At the same time, the lay mind is likewise addicted to what the modern doctors would regard as pure superstition, such as reliance on charms, amulets, the sucking-string, etc. But at any rate the author, as he himself says, "in his short visit" (J. A. J. Smith), the professional faith-healer surrounds the exercise of his craft is absent from these applications of communal lore to the ills of life. Further, the professional enters into competition with the layman in order to demonstrate how superior his wonder-working is to the humdrum procedure of the ordinary folk-medicine.

Thus Roth specially notes that among the Boulla blocks, there are indications of a desire on the part of the medicine-men to claim a share in the care, with a corresponding reward. The medicine-man, as he records it, was asked if he was of a running bath, which apparently answers very well, the medicine-man undertakes to help it out by operating on the snake. 'The doctor himself grasps the porcupine. The snake lies quiet, being as harmless as a by the snake lies hid, dig it out, and lets it glide away a few feet before commencing to pick it with stones. During this process the snake gradually diminishes in size and becomes harmless, when it is carried back to camp, where the medicine-man can make use of it. The process was repeated several times, and so on, in such a way that indications and directions can be obtained for all possible cases' (The Life of a South African Tribe, N. Hatton, 1913, i. 481).

It remains to show how science in the modern sense has managed to shake itself free of its rivals, the pseudo-sciences. As far as relates to what has been called "the scientific epoch of the human mind," the mother of sciences is undoubtedly Greece. There the human spirit shook itself free of the domination of the magico-religious, thanks to its interest in the things of this world.

Between Homer and Herodotus, Greek medicine has come into the world. Man has become the measure of all things; and the things are worth observing and recording, because they do not, or do so, amply human knowledge and ability, are unquenched, or prompt or guide human attempts to classify and interpret them. In this high meaning of the word all Greek records are utilitarian, relative to an end in view: and this end is ever anthropocentric, it is nothing less, but it is also nothing more, than the Greek Life, the Way of Life, the Way of Living' (A. Myres, in Anthropology and the Classics, ed. Maret, Oxford, 1906, p. 129).

There is no violent breaking with the old-world rituals and the associated beliefs; but colonization, trade, and the progress of the industrial arts beget a secular frame of mind which dispenses theological prejudices in so far as they conflict with science.

"All ailments are from God," writes Hippocrates, "no one of them being more divine than another, or more human either, but all alike from God. But each of them proceeds from growth, and nothing comes into being without a process of growth." Therefore he turns without more ado to the study of these physical causes, which originally came into being for the public service are being exploited for private ends (Huelin, p. 40). Whether it be the professional doctor or the professional smith, his right to be a specialist has been purchased at the cost of seeming, and being, something of a humbug.

Passing to the subject of divination, we have an even clearer case of a pseudo-science, since, whereas faith-healing has been to a certain extent purged of its supernaturalism and incorporated into modern medicine, divination has no part or lot in the science of to-day, unless we detect its aftermath in the accepted postulate that the goal of science is prediction. On the other hand, divination is a certain of its developments all the appearance of science so far as concerns the organization of its principles and the directly practical character of its aims. Thus Babylonian divination, the literature of which is particularly rich, reveals an amazing wealth of lore involving the most elaborate classifications of omens resting on a wide basis of genuine observation. It is also to be noticed that here the practice of the art depending on this body of would-be knowledge was thoroughly respectable, being, in fact, a branch or department of the official religion (see Divination [Assyro-Babylonian]). It is not, in fact, until it migrate into Europe that Babylonian astrology is differentiated from astro-nomy, and the organization of the sciences becomes apparent. Again, at a lower stage of social evolution divination can fill the place of science so far as it calls out the reasoning powers of the mind and supplies some sort of intellectual gymnastics.

Thus H. A. J. Smith, a missionary, who gives an admirable account of the use of the divinatory bones among the Thonga of S. Africa, spent many hours with his native teachers trying to acquire the principles of this system of theirs which they call "The Word," a profession which vaunts to be superior to the missionary's Bible.

"So I had an opportunity of reaching the depths of the Thonga mind, that mind which has perhaps invented nothing more elaborate and more magical than the divinatory system. Of course no sensible person would for a moment believe in the value of these practices. Astrologacy has no more real worth than Chiroceromy, Necromancy, and all the other "mysteries." But I am obliged to confess that the Thonga system is far more clever than any other which I have met with, and that it admirably answers to the wants of the Natives, as it comprehends all the facts of their lives, and shows an ability so to speak, in such a way that indications and directions can be obtained for all possible cases" (The Life of a South African Tribe, N. Hatton, 1913, i. 481).
MAGIC (Arabian and Muslim).

The word used in Arabic for this notion is *sihr*, connected with the verb meaning 'to produce illusion' on the eyes (Qur'ān, vii. 113); it seems, therefore, to be in origin the causative of the verb *hārēs*, 'to be bewildered', and is explained by the verb 'to frighten', whence the whole phrase resembles *māyēwō nālīqatārum* in Δ ν. It is probable that the Hebrew *shāhār*, used twice by Isaiah for 'conjure away', is identical, and the Armenian *shkronn*, 'marvel', may be borrowed from this word. The passage in the Qur'ān which contains most information on the subject is ii. 66, where it is stated that the *sihr* was revealed to the two angels in Babel, Harūt and Mārūt, who taught it to mankind, without concealing the fact that they were tempting them; the *sihr* showed how to separate a man from his wife, i.e. was the contrary of a love-philtre. Isaiah (47:1) connects the *shāhār* with Babylon, which, according to classical writers also, was the headquarters of magic.

"The doors of Persia, Babylon, and Memphis:

*Omne veintiornum solvat penetrata Magem*.

(Lucan, Pharsalia, vi. 641.)

Harūt and Mārūt seem from their names to be Arabian personifications of the chief and refusal, with which their recorded operation corresponds.

In the Qur'ān, as might be expected, it is not clear whether the results of *sihr* are always subjective only or may be objective; and some commentators think both possible. When, therefore, a miracle is branded as *sihr*, it may be regarded either as optical illusion due to the employment of demons; it is true that Solomon employed them (according to the Qur'ān), but this may have been a prophetic privilege. And a theological difficulty arises from the statement that *sihr* was revealed to two angels, as what is revealed ought not to be evil. The orthodox view is that magic can be objective; but some Mu'tazilite doctors and some members of the Shāfi'i and Hanifi schools took the other view; and even those who believed in its objective thought that it could affect accidents only, and could not transmute substances.

The practice was forbidden; and, indeed, under penalty of death; Malik hold that one convicted of sorcery should not even be given the option of repentance, whereas Shāfi'i confined the death-sentence to the case where examination of the accused proved him to be guilty of unbelief (Qastāfīnī, *Commentary on the Nawwāb Ladhunagād*, Cairo, 1278, vi. 128). It is possible, however, permissible, and, according to some, a duty incumbent on certain members of the community, as protection against those who practised the art.

The recognition by Islam of the existence of *jinn* furnished a basis for the belief in magic, to which, however, the attitude of the educated and of serious writers is about the same in most countries; it is not ordinarly recognized as an agent in the course of events or actions of man, but is rather a subject of talk and delight, whereas the superstitious may resort to it for a variety of needs.

It figures on one occasion in the biography of the Prophet, when an illness was brought upon him by a Jew named Labāl ben al-ʿĀsām; according to one account, the latter obtained possession of some hair left on the Prophet's comb, which he hid with some other objects in a well; according to others, the object hidden was a string with a number of knots upon it. The latter version is doubtless suggested by the penultimate sīra of the Qur'ān, which is a spell against eclipses and women who breathe or spit on knots. The practices against which those spells were similar to, if not identical with, those which are enumerated by classical writers (e.g., Lucan, vi. 406 ff.). Others, of which the Arabian Nights offers ample illustration, also have analogies in the literature of classical antiquity; the transformation of men into animals by a witch's potion is found as early as the Odyssey. In Arabic there is a special word for this process, *majli*.

*Naqib ibn Khaṭīb (Lexicon bibliograph. et encyclop., ed. G. Flügel, London, 1853-58, iii. 584)* classifies the various magical methods as follows:

The Indian consists in purification of the soul; the Nāhaš in the employment of spells at suitable times; the Greek the compelling of the spirit of the demons and the stars; that of the Hebrews, Copts, and Arabs in mentioning names of unknown meaning—this method being a variety of that by inscription, those who employ it professing thereby to press into their service the angels who have power over the jinn. This last expression gives the spell yet more weight, as it may well be divided into tales of wonder and delight, whereas the superstitious may resort to it for a variety of needs.

The classification cannot be maintained, though it is possible that the tendency in the case of the different nations corresponded roughly with the methods assigned; thus doubtless the theory that ascetic practice won command over the jinn was carried to greater lengths by the Indians than elsewhere, whereas the theory of mysterious words may be particularly Jewish, and the Hermetic
MAGIC (Babylonian).—For the purpose of this article we may regard the term 'magic' as denoting practices which have their origin in the belief that man is able by his exercise to control the unseen powers and force them to act in accordance with his own will. Without attempting to discuss the vexed question of the relationship of magic to religion (see 'Introductory' section above), we may say that this generally accepted use of the term has great advantages for the classification of material. And it corresponds, moreover, to a distinct contrast in attitude towards the supernatural. Magic may be said to be present wherever power over the unseen is believed to be inherent in the ritual, whereas, according to the religious concept, the seat of power is regarded as resting outside the sphere of man's deliberate control. When the term is used in this sense, it must be admitted that a great body of the religious beliefs and practices of the Babylonians and Assyrians should be more accurately described as falling under the category of sorcery.

It is true that, when reading some of the Babylonian religious compositions, one is struck by the resemblance which many of the phrases bear to ethical passages in the Hebrew Psalms and prophetic writings. Quoted as they are in this text, such passages suggest an extraordinarily high standard of morality and great depth of feeling. But it is dangerous to judge any literature merely by extracts or analogies; and, when studied in their own surroundings, they are at once seen to have a background that is largely magical rather than moral. To take a single example, the Babylonian penitential psalms and many of the prayers to the gods show that the Babylonians had a very keen sense of sin. The contrition and misery of the penitent are expressed with great beauty of metaphor; but it is essential to examine the precise meaning of the words employed, and not to read extraneous associations into them. In this connection it is important to realize that the moral character of sin which we find emphasized in the Hebrew prophets is quite foreign to the Babylonian conception. In almost the whole of their religious literature the expressions 'sin,' 'sickness,' and 'possession by demons' are employed as synonyms: they denote merely an evil state of the body. In fact, all sickness and disease were believed to be due to the attacks of evil spirits, under
whose power or influence the sufferer had fallen, whether by his own act or through the machinations of demons or sorcerers. Such spirits and powers of evil were legion, and were even on the look-out to inflict bodily harm on men. They might be ghosts of the dead, or gruesome spirits half-human and half-deamon, or, lastly, fiends and devils, the names of which correspond to, but lower than, that of the gods.

The sole object of the magical texts was to enable the priests to control and exorcize these demons, or to break in some way the malign influence which they exerted upon the victim. And, in order to be successful, it was of the utmost importance that the spirit or evil influence which affected the sick man should be mentioned by name. To this end the magician repeated long lists of ghosts and devils, any one of which might be the cause of the sickness. Thanks to this practice, we know a great deal about the Babylonian demons and their characteristics. In order to illustrate the manner of their attack, and how dissociated this was from any moral offence on their victim's part, it will suffice to refer briefly to one class of spirits, the ghosts of the dead. These spirits were the ghosts of dead people which, for some reason or other, could not find rest, but were found haunting the deities with which they were associated. After death, the spirits of men and women who died in the ordinary course of nature and were buried were believed to enter the under-world, where they checked out a miserable existence with the help of offerings paid to them by their descendants and relatives upon earth. But, if the offerings were not made, or if the corpse was left unburied, the spirit might wander unsatisfied. Other ghosts were the spirits of those who died violent or unnatural deaths, or who departed this life before completing certain natural functions—such as the ghosts of women who died in childbirth. As a rule, such spirits haunted ruins or desolate places, and, if a man wandered there, they might seize on him and plague him. A spirit of this sort could also fasten himself on any one who had been in any way connected with him in this life, by the sharing of food with him or by the mere act of eating, drinking, or dressing in his company. From then on, it would be his ruin, through no fault of his own, to supernatural attack, and precisely similar results were believed to follow both ceremonial and moral offences. To touch the hair or bed of a person already affected by evil influences was, according to these texts, quite as dangerous as committing a moral offence, such as theft, adultery, or murder, and the resulting condition of sickness or misfortune was the same.

In order to escape the ban and cure his sickness or misfortune, the sufferer had recourse to the magician, who, by his knowledge of magical words, prayers, and ritual, could invoke the help of the great gods, and so gain control over the demon itself. In cases where the influence of the hostile sorcerer or sorceress who had cast the spell. In a large class of texts prepared for the use of the magician his purely magical character is sufficiently apparent from their contents. In others, where the contents refer more to the condition of the sufferer than to the possible causes of his misfortune or the means to relieve it, the essentially magical character of the compositions may sometimes be detected in notes or remarks which have been added later by the same scribe or reciter and for the performance of accompanying rites and ceremonies. For the rites prescribed often have an intimate connexion with the subject-matter of the prayer or incantation. Sometimes the offerings and the accompanying rites have, to our eyes, only a vague relationship to the character of the god or goddess addressed. But in other cases the compositions specifically named in the recitative, or liturgical, portion of the text. In fact, a study of the rubries makes it clear that many present a certain general resemblance in giving directions for the recital of the main text over something in the accompanying formula. The relationship between text and ritual may be illustrated by the following group of rubries from the Eighth Tablet of the MUL.APIN series, col. iii. lines 8-22, which give directions for the recital of incantations on the Sixth Tablet of the series and the performance of accompanying rites.

'c) The incantation (beginning):' "Come thou sorcerer, who, in a pure place art born!" over a good offering shalt thou recite, and upon the libation-bowl, which is at the head of the bed, shalt thou place it.

The incantation (beginning):' "Come my sorcerer or my enchantress!" or a nisubhibbi-plant shalt thou recite, and upon the libation-bowl, which is at the head of the bed, shalt thou place it; and with an upper garment shalt thou envelop the bed.

The incantation (beginning):' "Come my sorcerer, my enchantress!" over twelve pieces of libations paid to them by their descendants and relatives upon earth. But, if the offerings were not made, or if the corpse was left unburied, the spirit might wander unsatisfied. Other ghosts were the spirits of those who died violent or unnatural deaths, or who departed this life before completing certain natural functions—such as the ghosts of women who died in childbirth. As a rule, such spirits haunted ruins or desolate places, and, if a man wandered there, they might seize on him and plague him. A spirit of this sort could also fasten himself on any one who had been in any way connected with him in this life, by the sharing of food with him or by the mere act of eating, drinking, or dressing in his company. From then on, it would be his ruin, through no fault of his own, to supernatural attack, and precisely similar results were believed to follow both ceremonial and moral offences. To touch the hair or bed of a person already affected by evil influences was, according to these texts, quite as dangerous as committing a moral offence, such as theft, adultery, or murder, and the resulting condition of sickness or misfortune was the same.

In order to escape the ban and cure his sickness or misfortune, the sufferer had recourse to the magician, who, by his knowledge of magical words, prayers, and ritual, could invoke the help of the great gods, and so gain control over the demon itself. In cases where the influence of the hostile sorcerer or sorceress who had cast the spell. In a large class of texts prepared for the use of the magician his purely magical character is sufficiently apparent from their contents. In others, where the contents refer more to the condition of the sufferer than to the possible causes of his misfortune or the means to relieve it, the essentially magical character of the compositions may sometimes be detected in notes or remarks which have been added later by the same scribe or reciter and for the performance of accompanying rites and ceremonies. MAGIC (Buddhist)

the recital of the correct formula, was obviously believed to synchronize with the destruction of the hostile person whose life had been initiated. These images could be made of wax, honey, bitumen, sesame-seed, and the like—all permissible and common substances. When metal was employed, we may assume that the mere passing through the fire was sufficient for the purpose, and that the great part played by fire in Babylonian magic may be seen in the titles of the two chief magical works, Skirpy and Mokiftu, both of which signify ‘burning,’ and in the great number of prayers and incantations addressed to the fire.

In one particularly interesting class of magical rites the relationship which was constituted by the magician between the hostile influence and the object destroyed may be clearly traced here. Here the image is engaged in exorcizing a demon from his patient, and, having gained control by the necessary formula, he transfers him to some object which may be destroyed or rendered harmless. In such case the medium is a parcel of water, which is then broken and the water spilt; in another a clay image is fastened to the patient’s body and afterwards removed; or the body of a pig might be spread upon the sick man, and afterwards thrown out. In both cases we have a physical transference of the hostile power from the sick man to the object employed. In other rites, such as the knotting of cords, the weaving and unwinding of coloured threads, and the like, it is not clear how far the physical action is to be interpreted as a direct influence. It is possible that we should explain such rites on the principle of imitation, which is the basis of sympathetic magic.

But it must be confessed that with regard to a considerable section of the ritual and its objects, we are still not in a position to follow the underlying trains of thought. The large class of so-called medical prescriptions were, no doubt, essentially magical, and, although in some instances the substances prescribed may have actually had curative effects, the associations which led to their employment by the Babylonians are still obscure.

Most of our knowledge of Babylonian magic is derived from purely textual sources, for we have recently been amply in which we may be said to deal with magic in a concrete form. It is true that we possess a few plaque-tablets, inscribed with a text relating to the plague-god, and intended to be hung up in houses to ward off the plague; we have also recorded the figures and heads of demons, sometimes inscribed with incantations; and these, too, were doubtless employed in propitiation or defence. But the only magical apparatus, in the strict sense of the term, that has come down to us may be seen in certain rectangular plaques of cast metal, moulded on the face with the figure of a sick man lying on a couch, attended by the magicians or exorcizers, and surrounded by various hostile demons and protecting spirits or their emblems, which are arranged in horizontal registers. On the back is the large figure of a demon in relief, with his head usually protruding above the top of the plaque. From the subject of the reliefs it is clear that these figures are to be classified under the general heading of sympathetic magic, but the precise manner in which they were employed by the magician in cases of sickness is not certain. Another class of objects, consisting of little clay figures of deities or birds, which were buried beneath the pavement in the main doorways of a temple or a palace, may be treated as magical in their supposed effects, but they fall rather under the special heading of foundation-deposits. It may be added that the magical beliefs and practices of the Babylonians survived their racial disappearance, and, largely through Jewish, Syriac, and Manichaean channels, contributed in no small degree to the great and composite body of medieval magic.

I. W. King.

MAGIC (Buddhist).—If we rightly understand the real character of Buddhism, what Buddhism ought to be according to its cardinal tenets, there is no possible connexion between the two. The only aim of the Buddhist monk is nirvāṇa to be attained in this life, i.e. absolute freedom from passion in order to reach freedom from rebirth, i.e. eternal, blissful nirvāṇa. All the machinery of illusion was believed to be organized with a view to this. Buddhism does not deny that there are good (kañ.cas) acts that ripen into happiness in a future life (sacara, ‘paradise’), but monks consider them not only as of no avail for, but even as of the worst kind. Such obstacles to nirvāṇa are not in the training for nirvāṇa, and it is a very grave and delusive heresy to lay stress upon them. A fortiori, in contrast with Vedism and Brahmanism, Buddhism ignores all the magical theories connected with sacrifice, worship, or asceticism as a means of salvation. As far as every-day or trivial magic is concerned, its efficiency is acknowledged, but Buddhists are strictly forbidden to practice it: all kinds of magical arts and performances—even of a benevolent nature—are regarded as perversions.

But ‘historic Buddhist’ is not, in every respect, what Buddhism ought to be. Buddhists are Hindu; regular Hindus and Buddhists have never been found that was always scrupulously faithful to the true spirit of its creed, the more so as the Buddhist creed implies a superhuman disinterestedness and a non-Oriental disregard for any kind of superstition.

1. Ādha.—There is a large category of ‘superhuman’ activities, which to some extent would be understood by Europeans as magical, and which are ‘very good Buddhism.’ The term adha (ādha) in the words of Rhys Davids, ‘mystical wonder,’ ‘wondrous gift,’ ‘magical power,’ a mastery (prabhadra), which is only the exercise of a power acquired by pious works, by penance, and also by formula, and especially by contemplation.

There is nothing ‘preternatural’ in the adha, and the natural character of the ‘miracles’ performed by ādha are shown in the following passage of the Mahabodhi-priyā: ‘There are persons who can go with this four-element-made body to

1 These are ‘mundane’ (dakikas) good acts, in contrast with ‘supramundane’ (lokottara), those which lead to nirvāṇa, i.e. the volitional actions (sacara) with ‘traces’ (dhyvanas) and other contaminations (asamadhikas).

2 On the position of the Buddha with regard to magic see T. W. Rhys Davids, Buddhism, p. 388, and, London, (1900) 278.
MAGIO (Buddhist)

Uttarakura [see art. Brest, Amor or the (Buddhist)], or to the Brahman world... "But how can they?" "Do you admitting ever jumped three or six feet of ground?" "Yes; do you believe in this sort of fantastic feat?" "But how can they?"

The man whose thought is concentrated has indeed a great power over his body; but this power is not different, in nature, from the power of an ordinary man.

Birds are, by nature, endowed with magic power, as is proved by the fact that they go through the air. Their bird is born from the ripening of acts, i.e., that the very act of one of the magical acts of their acts; the former bird endows them with this special 'superhuman' faculty. Gods are, of course, magicians; they go through the air, they create at their will palaces and pleasures (bhoga). Sovereign kings or world-emperors (chatukarsa) are, too, magicians by nature. Ordinary men obtain momentary magical power by many devices, and are 'superhuman' at some time and for some object.

As a matter of fact, Buddha was looked upon by his disciples and other was by the unbelievers—a great magician; and it is recognized by all Buddhists that magical power is one of the natural possessions of the saints, since they are holy men, just like the yogi of old and the modern fakirs. We may rank them therefore with the divine and the divine, the knowledge or the thought of others, the knowledge of former births, the knowledge of the disappearing of passions, i.e., with the most desirable gifts of sainthood. And it is no wonder that Mundalayayana, who is style, as the 'best of the Buddha's disciples with regard to magic,'

It is evident that the admission of the reality of rddhi is beset with many dangers. Buddhists were sternly forbidden to boast of possessing superhuman faculties; that was one of the gravest sins.

There is nothing specially Buddhist in the manifestations of rddhi. Buddha's disciples win success in the plantanagorical shows which have long been familiar to Hindu romancers and dreamers: "Being one, he becomes many, or having become many, becomes one again; he becomes invisible or visible; he escapes from the obstruction, to the other side of a wall or rampart or hill, as it goeth through air: he penetrates and down and through solid ground, as if through air; he walketh on water; he travel cross-legged in the sky; even the sun and the moon, so mightily though they be, does he touch and feel with his hand; he converses in the belly even up to the heavens of Brahma..."

Stories of miraculous exhibitions intended to convert the incredulous are frequent. Buddha and his disciples willingly condescend to give 'signs.'

When the Tibetan writer Tanaratna narrates the medieval miraculous tournaments between the Buddhist and Brahmasthalskarah, which often conclude with the Buddhist victory and the conversion of kings, he only testifies the continuance of an old tradition. But—and this restriction is of paramount importance— even when narrating miracles, the old texts add that miracles, by themselves, prove nothing; the unbelievers, conquered by the more powerful magic of Buddha, used to say: "Gautama— the 'maudum' name of the Buddha, and the one used by the believers— Gautama is the magician (maugirea); every thousand years there appears in the world a great magician who can cause or enjoy the world (abhradharmakosa); or, in the world of the Brahmavat缕s: 'Well, Sir! there is a certain charm called the gandhabar charisma. It is by the efficacy thereof that he performs all this.'

There is in the Buddhismatasthala, a text-book of the Vijayanavis (by Asanga, 4th-6th cent. A.D. 3).

1. A. F. R. Lydgate, Buddhist Psychology, London, 1914, pp. 157, 146, 155, 160, 169, 117 (1906) 72. Magic power (rddhi) sometimes only a momentary possession; or even a power of a disciple who, when crossing a river, concentrates his mind, and, according to a legend, walks on water; but, being distracted, he sinks (Satha 120).

2. See Saha Chakravorti, 'Bhuta, the Brahmidharmas' (Mongol, 1907), ii. 295. The rddhi 'born from spells or born of spells (napamakhas) is the same.'

4. Dialogues of the Buddha, i, 274.

a complete survey of the magical power of the bodhisattvas. It is said to be twofold: paivimakim rddhi, power of transformation, when a bodhisattva modifies the nature of an existing thing; and vindhrmakim, power of creation, when he creates some thing or some person. The 'created persons' (nirmiti, nirmitiya) are frequently found in the Mahayana works; but they are not unknown in the Hinayana, both Pali and Sanskrit. Elaborate theories on the nirmitakosas are to be found in the Abhidharmakosa of the Sarvastivadin (Lokaprajipati, 1st cent. A.D.), which, however, is very much at variance with the views of the Sanskrit Hinayana; and in the Abhidharmakosottama (ed. vi), where the creative power of Buddha and of the gods (nirrnitavrtti, etc.) is discussed.

2. Paritta.—Another very orthodox form of magic is puritth, or rokkha, 'guard,' 'safeguard.' It plays an important part in Sinhalese Buddhism under the name of purit (Spenche Hardy, Eastern Monarchs, London, 1850, p. 246, Manual of Buddhism, 2°, do. 1859, p. 47; D. I). Good examples are found in Pali literature.

Taking refuge in the three 'jewels' (ratana, ratana, Buddha, the Dharma, and the Saivaga, forms a charm called 'sutta of the jewels,' which is very efficacious against illness:

Whatsoever spirits have come together here, either belonging to the earth or living in the air, let all fly away and then listen attentively to what is said. Therefore, O spirits, ye all pay attention, show kindness to human beings. Let both day and night bring their offerings; therefore protect them strenuously. Whatever wealth be here or in the other world, or whatsoever celestial jewel, in the heavens, is certainly not equal to Tathagata... By this truth may there be salvation.' In the same way: 'Nothing is equal to the dharma, to the Saivaga!'... So also, in the Peaceock Jataka, sun-worship ('the only king, the one who beholds, the light of the world') is connected with that of the Buddha:

'I worship thee, golden and luminous being! May I spend this day under thy care! Homage to the omniscient seer! May they protect me! Homage to the Buddha and to the illumination, to the delivered and to the deliverance...'

When Sakyamuni was a large golden peaceock, he recited this half-solar, half-Buddhist prayer morning and evening, and consequently avoided all dangers. And, as the peaceock is the born enemy of serpents, the 'sutta or 'charm' of the peaceock' is used as a preventive and as a cure for serpent-bites.

In these examples the magical character is not very prominent: there is nothing pagan in the formula, which are, above all, acts of Buddhist faith; there is nothing mechanical, nothing really magical, in the efficacy ascribed to the purit. The non-Buddhist gods are clearly subordinated to the Buddha: it is almost a dogma that the Buddha converted gods and demons; and it is quite reasonable to believe that they will grant their favour to the disciples of Buddha. It is believed also that benevolent gods (nattis), beings in itself (maaitibhot), which is capable of protecting the benevolent person against all the attacks of the wicked; in order to avoid serpent-bites, it is not a bad plan to sleep on a raised bed, but the right method is to declare to the god of serpents that they are being enveloped in a universal sentiment of benevolence. This magic of benevo-

violence is the most noteworthy invention of Buddhism in connexion with the subject which we are discussing.

3. Hindu influences. — All practices tainted with name-supersition, from the most trivial to the most serious, are strictly forbidden: astrology, divination, charms, enchantments — in a word, all that any one may accomplish with the help of certain secret recipes and a technical method. Hindu sorcerers, enchanters and sorceresses, had only too much opportunity for making huge profits by giving horoscopes and practising white or black magic. The Buddha—the first Order — was anxious that the monks should not be tainted with this temptation, and drew up a long list of 'wrong means of livelihood,' of low arts, that were strictly prohibited. The Brahmans also made an effort to distinguish themselves from sorcerers.

Among these 'low arts' we may mention specially:

'Arranging a lucky day for marriages; using charms to make people lucky or unlucky, to procure abortion, to bring on drunkenness, to keep a man's jaw fixed; obtaining oracular answers by means of the magic mirror, or through a girl's nail, by bringing forth flames from one's mouth; causing virility; making a man impotent; invoking Sīri (Sri), the goddess of luck; worship of sun, etc.'

Whatever the precautions the Order took to avoid all paganism and superstition, there is, nevertheless, a Buddhist magic. It was impossible to guard against Hindu infiltrations. At no time could people have been completely ignorant of the sun or the inferior deities; a day came when the infiltrations became 'streams,' when paganism — gods, rites, theories — under a thin Buddhist veneer, took its place in sacred literature. Of course, we find popular magic always condemned in principle (love-rates, omens of life, etc.), but there are serious official worship and mysticism are permeated with Hindu elements, heavily laden with magic; this is, properly speaking, what is called Tantrism (g.v.).

Among the earliest of these infiltrations we may mention: (1) in some very orthodox books of the Mahāyāna, the great value attached to the sacred texts, to the sāstras, the mere reading of which effaces sin; (2) the great value attached to sacred names (e.g., the name of Amitābha); devotion to images of devotion to mystic emblems, or to the Deity, was replaced or strengthened by mystic formulas (see Avalokiteśvara), represented, when carried to an extreme, by the Tibetan 'prayer-wheel'; it has been noticed that, in the Lotus of the True Law, it is which the express devotion to a feminine Deity, the formulas are made from feminine vocatives; these invocations or litanies are undoubtedly borrowed from rituals; (4) the coming of a day when the rituals received the consecration of literature, and were put at the service of the great work of identifying the faithful with the Buddhhas.

MAGIC (Celtic). — 1. Wielders of magic. — Magical rites resembling those used by other races abound in Celtic paganism. They were performed by the gods, the Tuatha Dé Danann being later incorporated among them, by kings (a reminiscence, perhaps, of the origin of the kingship in the magic-wielding class), and by all members of society, but above all, by the druids as the official magical class. There is evidence that they had acquired as early as the earlier magic-wielding persons.

The rites of agriculture and the possession of much primitive lore having been first of all in the hands of women, and these rites being largely magical, they were par excellence magicians. With the gradual encroachment of man on women's domain, with the growing supremacy of gods over goddesses, men became also greater magicians. But women still professed magic, and their claims were never forgotten. The so-called 'druidesses' of the later empire, the priestesses of the Sæna, and the virgin goddesses of Brigit's fire were magic-wielders. The spells of women were feared even by St. Patrick, as they had been in earlier times by Conall's father, and in the Irish texts women as magicians, performing all magical acts and to dreams, are much in evidence. But their magic was, so to speak, non-official; hence, when the druids were overthrown, they still retained their powers, and much medieval witchcraft is directly connected to the druidic roots of druids. The latter is the origin of the druids, it is certain that the Celts believed firmly in magic, and did not require to learn the superstitious in any of its branches from the races which they conquered.

For the druids as magicians in Gaul and see buccaneer, § 7. Their prominence is seen in the fact that in later Celtic literature 'druid' is the equivalent of 'magician,' 'magistrates of the lives of Celtic saints,' 'druid,' while in sages and folk-tale 'drudism' — magic.

2. Elemental magic. — The druids, who claimed to have created the elements, claimed also to rule them. They could cover the dry land with the sea to destroy their victims; they produced enchanted mists in which to hide people or places; they changed men into animals or into trees; they could produce storms and snowstorms. These feats are ascribed to them even in the lives of early Celtic saints. They caused showers of fire to fall upon enemies during battle. In other cases they dried up all the rivers and wells in an enemy's country by means of spells, though the druids of the latter caused water to flow again by shooting an arrow into the ground. They even claimed to remove mountains and dash them against an opposing host. Druids accompanied the war parties. In fact (5) the appearance of the druids was usually associated with a sacred well, whether the people went in procession, probably with an image of a divinity, which was sprinkled with water; in some instances it was sufficient to beat the water with branches, sprinkle it on stones, or throw it in the air. In certain cases the Church took over this rite by making it a part of an elaborate ritual, including a procession with an image of a saint, the priest officiating and saying prayers. But in pagan times the presence of a druid was probably essential. The control of the elements by tempestarii, which was denounced by the Church, was directly borrowed from druidic magic. Until comparatively recent times the

3 See E. Davids, Dialogues of the Buddha, I, 254, a collection of interesting documents on the ancient life of India.
priest in rural French parishes was believed capable of causing rain in time of drought, or of averting "Madonna" in the modern Celt believes is little more than hallucination. The druid could also turn a man into a lunatic by throwing a wisp of straw at his face after saying a spell over it. Even more primitive was the method of killing a person by throwing a spear into his shadow, or of making an image of him and sticking pins into it or placing it in running water, so that he might suffer or waste away. This image is the corp crech, still known and used in remote Celt regions.

4. The Airbre Druid, or 'Druid's hedge,' was an invisible magic barrier made by the magician round an army, probably by circumambulating it sunwise and singing spells. Its effect was that the ranks could not be broken, but if any one was bold enough to break through, its power was gone, though the act usually cost the trespasser his life.

5. Magical rites connected with stones—trees. The cult of stones and the belief that sepulchral stones were the abode of the gods, that the dead probably gave rise to magical rites, the origin of which must be sought in remote times. Many of these are still practised, and the method used throws light upon the earlier pagan customs. These are of a magico-erotic nature, and, like similar customs, were founded on the belief that the ghost can cause fruitfulness, or perhaps may incarnate himself in the barren woman who performs the rite. The woman sits on the stone, or slides down it, or thrusts her head or body through it. In one of the stones of a dolmen, pregnant women do the same to ensure an easy delivery, or unmarried girls to procure a husband. Similar practices are used in connexion with boulders or stones which are not sepulchral, and probably these were anterior to the use of megalithic monuments. In these cases the rocks were believed to be the abode of spirits, or perhaps manifestations of the power of the Earth divinity, who gave vitality or fruitfulness to those performing the rites. A small offering was usually left on the stone. Such practices may already have been used by the Celts, though they necessarily adapted them to existing stones and monuments in the lands conquered by them. Other practices were the paining of the stones with magical dances and orgiastic rites, in which the motion and the music produce delirium, then exhaustion. But it may also suggest the soothing power of music. Similar magical sleep was caused by the music of divine presence (see BLEST, ABOVE OF THE (Celtic), §§ 2, 6). In other cases sleep was produced by a 'drink of oblivion,' probably some narcotic made from herbs; but sometimes the effect was curious, as when Cuchulainn, by the drink given him by the druids, was made to forget his fairy mistresses, and his wife to forget her jealousy. Another 'druidic sleep,' in which the victim is made to forget or is rendered motionless, and occasionally in that state is caused to tell secrets, is of frequent occurrence, and suggestive of hypnotism, the powers of which are well known to savage medicine-men, and may quite well have been employed by the druids.

The power of 'glamour' produced by magicians, by which stones or trees seemed to be invested with animation, and were attacked by the victim, is also strongly suggestive of hypnotic influence. It may, however, be merely the record of actual hallucinatory cases, since the 'glamour' in which the modern Celt believes is little more than hallucination.

Patrick, the step-mother, Doirche also with black, emotion the death. Sleep, results ably delirium, gest other (see when his herbs his don, swindisch, 'broken, believed by

It may, however, be merely the record of actual hallucinatory cases, since the 'glamour' in which the modern Celt believes is little more than hallucination.
6. Celtic saints and magic.—Much of the magic of the druids was popularly ascribed to the saints who combated them with this difference, that their power was held to come from God. In the Lives of Celtic saints we find them opposing druids with their own weapons—neutralizing their magic, controlling the elements, producing rain, rendering themselves invisible, producing marvellous supplies of food, and causing certain forms of incarnation or communion through their curses. The popular belief in magic could not be eradicated, and they who now filled the place of the ancient priesthood were freely doubted by the people and by their biographers with the ancient powers.

MAGIC (Chinese).—Magic in all its forms is a subject which has always fascinated the Chinese mind. The literature which deals with the theory and practice of magic is enormous; and, if much of this literature is wearisome to the modern reader on account of the child-like credulity of its authors and the extravagance of their speculations, it is nevertheless worthy of more patient scrutiny and analysis. The materials have been gathered from anthropologists and students of folklore, or even from serious students of Chinese life and character. In this article we do not more than touch the fringe of a subject which derives much of its interest from the fact that a belief in magic is still a living force in the China of to-day.

There are many early references to a class of sorcerers or witches known as wen. This name is often applied to male as well as female witches, though the more correct designation of the former is chi. The term chi is rarely found outside the old books, while the term wen (usually in some such combination as wen-po, which means "witch-wife") has persisted throughout the ages, and is still in common use. In pre-Confucian days the wen held a recognized position in the social organization of the country. They were entrusted even in the courts of kings with certain quasi-sacerdotal functions, and in public ceremonials they had stated duties. They were believed to have the power of giving life and divination in cases of remorse.

Judging from the somewhat meagre accounts which we possess, we may suspect that the rites observed by the wen were in many respects identical with those practised to this day by the Chinese shamen (see BUTU AND SHAMANISM). Their methods included mimetic dancing, drum-beating, chanting of mystic formulæ, and trance-mediumship, and their efforts were directed towards the foretelling of the future, the conjuration of spirits, and (in general) the invocation of good influences and the expulsion of misfortune.

In the course of ages their position gradually deteriorated. This was largely the result of the rise of Confucian culture, which always aimed at reducing human nature to a harmonious relationship with society and with the heavens. The wen were held to be a position of inferiority; but it was also due to the fact that many of the magical notions and methods of the wen fraternity were taken up and systematized by the Taoists. This is one of the reasons why the popular Taoism of modern times concerns itself with magic and sorcery to an extent which seems quite unwarranted by early Taoist philosophy, and why the illiterate villagers and fortune-tellers of the present day usually profess to act in co-operation with the native shamen and to practice a form of magic very different from that of the immemorial Taoist deities, in spite of the fact that they are the sole surviving representatives of the ancient wen, whose name they still bear.

There is reason to believe, however, that besides the officially-recognized wen there were always numerous "free-lance" witches who carried on a lucrative business among the superstitions multitudes, and whose connexion with the State cult or predominant religion of the time was little more than nominal. It was probably the sorcerers of this type who were admitted at certain anti-witchcraft regulations (reminding us of Plato's Laws, xi. 933) which we find in the Li Ki—the canonical 'Book of Rites.'

Those who gave false reports about spirits, about seasons and days, about consultations of the tortoise-shell and in the "Ke,' so as to perplex the multitudes: these were put to death (SEB xxvii. 201). It may be added that the same sort of inventors of "wonderful contrivances and extraordinary implements," because such things raised "doubts among the multitude" (ib.).

But it seems that even the official wen were not always free from peril, for the very fact that they were supposed to have a mysterious controlling power over the forces of nature rendered them liable to terrible punishment if these forces seemed to be showing hostility to mankind.

In the year 683 B.C., e.g., there was a disastrous drought, and a certain reigning duke expressed his intention of dealing with the situation by instituting a render of the rich man and a witch. Evidently this was a familiar practice in such emergencies, and the reason why specific mention was made of it in this particular case was that, owing to the enmity of the duke's minister—who seems to have been far in advance of his time in his attitude towards witchcraft, and who was called a "barbarous custom was not carried out. From a similar story which refers to the reign of Duke Hsi (490-487 B.C.) it appears that the practice had been modified to the extent that the rich and deformed man were no longer burned alive, but were merely exposed to the scorching heat of the sun.

One explanation of these customs is that by burning a deformed or emaciated man, or by exposing him to the sun, the pity of the heavenly powers would be aroused and rain would be sent to alleviate the wretched man's sufferings; and that the same happy result followed from the exposure of a witch, because a witch was a person who was able to compel spirits to descend to earth. A sounder explanation is based on the belief in the supposed interaction of the principles of yang and yin—the male and female, or active and passive, forces, which by their alternating pulsations or activities give rise to all natural phenomena. In time of drought the yang principle shows excessive activity and disturbs the harmony of nature's processes: steps must therefore be taken to realign the balance of forces. The intricacies of the yang-yin theory are necessarily bewildering to a Western reader until he has acquired some knowledge of the principles of feng-shui (p. 12); but it is this pseudo-philosophy which was raised to a form of art decaying in China, but is still far from extinct—denial of the witches formed part of the ordinary ritual observed on the occasion of the official rain-sacrifices; and, if we may judge from similar practices in other parts of the world, the dancing partook of the nature of magic-natic magic. It was

2 See SBE xxvii. 201. It has been suspected by commentators that the two stories refer to the same historical incident.

3 China Li (Both's tr., ii. 102).

4 The ceremonial dancing of ancient China was not always magical. There were six dances officially recognized under the Chou dynasty, of which only one (the sam) had anything to do with rain-making. Ceremonial dancing is now yet extinct in China, for it still forms part of the ritual proceedings at the Confucian sacrifices. For an interesting account of the ancient Chinese dances see H. A. Giles, Intercommunication, Shanghai, 1896, p. 119.
accompanied by music; and, if there is any truth in such ancient legends as that of King Wu (who reigned until 947 B.C.), we may suspect that music preceded dancing as a means of producing rain. We are told that the method adopted by that monarch for putting an end to an excessive drought was to play music, which was thought to have such a power that it would produce rain. Many of the observances still carried out at the popular festivals in China are undoubtedly of a magical character, and are intended to regulate the rainfall, to expel disease and misfortune, to ensure good harvests, and to attract good luck. Communal magic of this kind is sometimes official in character, as in the case of the spring-welcoming ceremonies presided over by the local district-magistrates; but for the most part the rites are conducted by the villagers themselves, under the guidance of their own clan-committees (hsia-shou), or headmen. Ceremonies which at one time were doubtless carried out with punctilious care and with something like religious awe have in many cases become mere village games and pastimes of which the original significance has been partially or wholly lost. Such are the lantern-dances and still-walking of the children of N. China at the full moon of the first month of the year. Few of these games take part in, and to understand that by the skilful manipulation of their paper lanterns they are supposed to be helping and encouraging the moon to go successfully through her phases; that in getting up before dawn on a certain day and cooking a dumpling which 'rises' they are assisting nature to stimulate the dormant activities of animals and vegetation; and that in walking on stilts over ground destined to produce a crop of grain they are helping the wheat and other crops to grow to their full height. It is perhaps a significant fact (when we remember the important part played by women in fertility-magic in other parts of the world) that many of the men and boys who take part in these festival-ceremonies are clothed for the occasion in women's garments.

Magical notions are also traceable in numerous simple acts which practically every family performs with a view to the well-being of its own members. Such are the hanging of certain plants above the doorway on certain days, and cooking a dumpling of red threads in the queues ofchildren to protect them from the demons of disease, and the affixing of pieces of scarlet cloth to the scrub-oak bushes to attract the protection of the gods and the silkworms against hurtful insects and noxious influences. At the New Year it is customary to cover the outsides of doors and windows with paper scrolls containing sage mottoes, quotations from classical and other literature, and words expressive of virtuous aims or suggestive of material prosperity. These scrolls may fairly be regarded as magic charms which will not only prevent evil from entering the house, but will attract the influences which make for good fortune and happiness. Many of the usages connected with death and burial, the ceremonial summoning of ancestral spirits, and the talking of personal names are also essentially magical, though their intimate connexion with religious beliefs and observances makes it difficult to decide where magic ends and religion begins.

In China, as elsewhere, magic arts are practised for private and personal as well as for public and formal ends, and the methods and mythical reasons by which they are supposed to work are not uncommonly brought forward as reasons why they should be respected. One of them was the Tang emperor Hsuan T'ung, who ordered certain Taoist necromancers to summon before him the pho of his dead consort, the beautiful Yang Kuei-fei. Very similar stories are told of the magic employed by the emperor Hsiao-Wen of the earlier Sung dynasty. As for the self-styled 'First Emperor,' who reigned in the 3rd cent. B.C., the assistance of witches and necromancers to play no small part in his success. For—as like the king Solomon of Muhammadan legend—was himself a king of magicians. Returning to more recent times, we find that the great empress-dowager, who died in 1908, put implicit faith for a time in the magical attainments of the 'Boxers'; and, though the 'Sacred Edict' of the emperor K'ang-hsi bids men aljore all kinds of heterodox teachings and practices, among which the arts of magic are included, and though in quite recent years proclamations have been issued warning the people not to allow themselves to be deluded by witches and soothsayers, it is beyond question that a belief in the reality of magic is by no means confined to the ignorant peasant.

The official attitude towards 'black magic' (to use the convenient Western term) is clearly demonstrated in the anti-witchcraft clauses of the Penal Code of the late Manchu dynasty. The punishments inflicted on persons convicted of this crime were very severe (in some cases, it is said, 40 lashes were imposed only to add in the words of a scholarly student of the subject) that the pages of Chinese history have never been stained by such a mad epidemic of witch-killing as disgraced Europe and America in the seventeenth and eighteenth centuries. As recently as the summer of 1914 an alleged case of 'black magic' occurred in the territory of Wei-hai-wei, at present administered by Great Britain.

The inhabitants of a certain village approached one of the British Courts with a petition in which they complained that a fellow-villager had been practising magic with disastrous results to their little community. It was stated that he had quarrelled with the village headman, and had foretold the headman's death. 'And sure enough,' they said, 'the headman died, though there was nothing whatever the matter with him.' Two or three other enemies of the accused subsequently died in the same mysterious way; and, to crown all, a villager, going to the shrine of the guardian-spirit of the village, discovered there a slip of paper on which were written, in the accused's handwriting, the names of various people with whom he was known to be on bad terms. This discovery created a panic among the villagers, who took it for granted that the list of names was a reading of the dead man's spirit, with a foretelling of his death. There is no doubt that the man was a criminal, who, in his magisterial capacity had to perform the somewhat delicate task of differentiating between real and imaginary wrongs and ills.

From the point of view of the student of magic, the special interest of this particular case centres in the unexpected part played by the tutelary deity of the village. Here, it would appear, we have an instructive example of the intermingling of religion and magic, and the junction seems to have been brought about in this way. One of the principal functions of the T'ai-ti, or village deity, is to receive the spirits of the newly dead and to act as their spiritual friend and guardian. Each village has its own little shrine dedicated to the local deity, and this shrine usually stands by the roadside a short distance outside the village. When a villager dies, the members of his family go in procession to the T'ai-ti shrine and make a formal announcement of the death, in order that the deity may make arrangements for the proper reception of the dead man's spirit. Now, at first sight, there seems to be no obvious reason why an announcement of death should be made to a deity.

For some time the exact nature of the ceremony was not quite clear, but one of the villagers who had been forwarded to London to observe the proceedings was told that the taking off of the sun hat at the time that the sun was set might be secured for the building of the Great Wall, see R. F. Johnston, Lion and Dragon (North China Branch) xxxviii. [1907] 95.

For a full discussion of the T'ai-ti and his functions see Johnston, p. 374.
expert in black magic who wishes to bring about the death of his enemies should expect the t'ut-ti—who is regarded as friendly to men and interested in their welfare—to give him help and countenance in carrying out his nefarious designs against their lives. What, then, is the magician's object in placing a list of the names of his intended victims into the little shrine of the village t'ut-ti? The theory seems to be that, when the t'ut-ti perceives the list of names, he will assume that the persons bearing those names are already dead, and will make preparations in the under world for the reception of their spirits. All these preparations will act with a powerful attractive force upon the souls concerned, and will create in them an irresistible inclination to sever their connexion with their respective bodies. The non-arrival in the under world of the spirits of persons whose death had already been announced in a formal manner would cause bewilderment to the well-meaning t'ut-ti, and might perhaps arouse his wrath; and, as it is strongly advisable, in the interests of the community in general, to 'save the face' of the t'ut-ti and maintain friendly relations with him, the only reasonable course for the spirits in question is to adopt is to bow to the inevitable and acquiesce in the premature loss of their physical bodies.

Magical and semi-religious theories of this kind are hardly likely to find Western parallels: but many of the ordinary magical practices of the Chinese are strikingly similar to some of the particular forms of sympathetic and mimetic magic with which we are familiar in Europe.

The great artist Ku K'uai-chih (14th cent. of our era), one of whose paintings is among the most treasured artistic possessions of the British Museum, was himself a graduate in magic. When admired by the girl whom he loved, he drew her portrait, and to the picture he gave the breath of his own soul. Thereupon the girl, who knew nothing of the portrait and the thor, began to suffer pain in the region of the heart, and next time he saw her she was dead. The artist then withdrew the thor from the portrait, and, throwing it into the deceased girl's heart promptly disappeared, her love for him remained.

That many of the poets and artists of China have been credited with a knowledge of magic is no matter for surprise when we know how frequently their passionate love of wild nature brought them into contact with the Buddhist and Taoist saints and hermits, whose favourite dwelling-places have always been the caves and forests and ravines of the mysterious mountains. These mountain-dwellers are commonly regarded as the discoverers and guardians of occult secrets of various kinds, and, though their disciples and biographers endowed them with faculties which they never possessed and which the best of them never pretended to possess, it is highly probable that there were some who, in the course of their own heart-searchings and their solitary communings with nature, not only made valuable discoveries as to the properties of plants and herbs, but were also successful pioneers in various untrodden fields of psychology and mysticism. To some extent, at least, the popular belief in their supernormal capacities and attainments was justified.

When Buddhism first came to China, and for some centuries afterwards, the relations between Buddhists and Taoists were often strained to breaking point. The victories of the Buddhists—if we may credit the Buddhist historians and believe the frequent and by no means spurious occurrences which non-Buddhists would perhaps describe as magic if not as mere conjuring tricks. It is difficult, perhaps, in some cases, to draw a distinction between miracles and magic. A miracle, as E. S. Hartland remarks, is 'legitimate magic,' while magic is 'a forbidden miracle.'

However this may be, many of the marvelous doings attributed to Buddhist monks and hermits bear a close resemblance to those recorded of Christian saints. But we know from the earliest Buddhist scriptures that the brethren were not encouraged to perform miracles, and it was certainly not by the help of miracles or of magic that the little sect of the village t'ut-ti attained great success. The Taoists, however, did not scruple to ally themselves with various forms of magic and sorcery, and it is their fatal readiness to meet the popular demand for signs and wonders that makes them invaluable for our present degeneration (see Taoism).

If we had space to deal with matters of detail, it would be necessary to describe the various magical uses made of plants and animals and also of manufactured articles such as metal mirrors and weapons. An authority has stated (see E.Br. xvi. p. 572) that magic mirrors are mentioned in Chinese literature of the 9th cent. but they are mentioned and their uses fully described much earlier than that. The curious book known as Poo Po-ti, which was written by the famous wizard Ko Hung in the 4th cent. of our era, contains full accounts of how to detect the presence of evil spirits and other malign influences by the use of magic mirrors. The belief once prevalent in the British Isles that a witch could turn herself into a hare is paralleled by the Far Eastern belief (still extremely common in China) that demons-wan into some of the forms of sympathetic and mimetic magic, as we have already seen.

There is in China a destructive little insect known to Europeans as the silver-fish (Leptisma saccharinarum), which is a most unwelcome visitor to libraries. It is believed that, if one of these insects gets into a Taoist classic and eats the two characters shen-huan ('spiritual-immortal'), its silvery body will become five-coloured. If the coloured insect be subsequently caught and eaten, the man who eats it will have the happiness of attaining the god of Taoist ambition—he will overcome death and develop into a spiritual being.

As to trees, plants, and herbs, large numbers are believed to possess some magical property or to be adaptable to magical uses. The cypress, pine, and similar trees have been credited with the power of bestowing immortality, and, when we learn that a noted hermit was in the habit of sleeping on a bed of pine-needles, we may be sure that this was not done merely as a means of mortifying the flesh. The willow is much used as a rain-charm. In times of drought in Shansi and neighbouring provinces adults and children may be seen going about with willow-wreaths on their heads. The peach-tree is famous for its magical properties, and for this reason peach-trees and peach-blossoms are frequently mentioned in Chinese fairy-love. The use of peachwood for the exorcism of evil spirits is very ancient, for the branding of peach-woods was part of the recognized procedure of the professional wu at royal courts under the Chou kings and probably at a much earlier date.

That large and important subdivision of Chinese magic which concerns itself with charms and amulets and divination is dealt with elsewhere (see Literature). Here it must suffice to mention that the principal purveyor of charms is...
MAGIC (Egyptian)—I. The Egyptian view of magic.—If the Egyptians had been more self-analytic than they actually were, they might, from the content of their writings, have described all their actions as either ordinary or magical. But since no such universal system of magic was known, all ordinariness would have been understood as all those simple ways of coping with mundane things and living beings, which were suggested by habit, mother wit, and experience.

R. F. JOHNSTON.

MAGIC (Egyptian).—I. The Egyptian view of magic.—If the Egyptians had been more self-analytic than they actually were, they might, from the content of their writings, have described all their actions as either ordinary or magical. But since no such universal system of magic was known, all ordinariness would have been understood as all those simple ways of coping with mundane things and living beings, which were suggested by habit, mother wit, and experience.
Zunciengelch, Leipzig, 1901, pl. 16. 11-13.) Conversely, the Book of Overthrowing Apophis (Budge, Egyptian Hieratic Papyri, London, 1923), a liturgy intended for daily recitation in the temple of Amen- more at Thebes, Apophis being the mythical snake that was supposed to be the eternal foe of the sun-god Re. It was within the reach of all Egyptians to read and prove the greatness of the privilege to the private individual who recited the Book of the Dead, and the god. It may be added that the term 'hiek' is quite common in all parts of the Book of the Dead, as well as in such temple rituals as the Book of Overthrowing Apophis just mentioned.

It may therefore be taken as proved that 'hiek' was as intimately associated with the presumed existence of the gods and the dead as it was with the real existence of the living. But, further than this, a greater or less element of 'hiek' may have been associated with different dealings between men on the one side, and the gods and the dead on the other. The two last classes of being were, after all, creatures of a world apart, elusive in their nature and abiding, matter-of-fact means. The very idea of their existence puts a spell upon the imagination, and for this reason set forms of words, indicative of an effort to break down mystical barriers, had to accompany even such simple deeds of homage as the presentation of food offerings. In other terms, the gods and the dead could hardly be approached save by the medium of what is known as 'ritual,' and the attributes which distinguish ritual from ordinary performances may have been just that attribute which the Egyptians called 'hiek.' The point is not susceptible of absolute proof, for it was morally only in the more extreme cases, where the sense of mystery and miracle-working had to be emphasized, that the term 'hiek' was actually applied; but the view that 'hiek' underlies all ritual is favored by the close resemblance between the divine and funerary rites, on the one hand, and the rites performed by the incantation (well-protective and similar rites), on the other. The formulas of the Book of the Dead differ neither in form nor in substance from the incantations of the Egyptians used to heal their own ailments; and the same general similarity also runs through the daily liturgies of the temples and the tombs (see A. Moret, Les Livres funéraires et la religion (Paris, 1892)).

From the Egyptian point of view we may say that there was no such thing as 'religion'; there was only 'hiek,' the nearest English equivalent of which is 'magical power.' The universe being the battle-ground between the cosmic procession of beings—the gods, the dead, and living human persons—their actions, whether within a single group or as between one group and another, were either ordinary or uncanny ('hiek'). But the gods and the dead were, so to say, under their own tenets, that all dealings with them or performed by them were more or less 'hiek.' It was only when men created them ordinarily, and as man to man, that this quality of 'hiek' was reduced to a minimum, as in the case of spindle-turners, or other letters to the dead—in fact, just in those rare instances where the solemn phrasing of ritual was avoided.

3. Magic defined for Egyptianological purposes as private religion. We shall be able to avoid repeating 'hiek' in English by the words 'magic' or 'magical power'; but, if the Egyptian conception of 'hiek' be taken as the criterion of what is magical and what is not, we shall have little or no use for the word 'religion,' and a multitude of cases in which the conventional phraseology would more naturally describe 'religion' will fall under the head of 'magic.' It is advisable, therefore, in defining 'magic' for Egyptianological purposes, to strike a compromise between the Egyptian conception of 'hiek' and the English connotation of 'magic.' Taking our cue from the former, we shall restrict the sense of 'magic' to those actions which clearly have the implications of mystery and the miraculous; at the same time we shall attempt to maintain the distinction between magical and religion, or, rather, between magic and other kinds of religious acts. It is fully in accordance with the practice of Egyptologists, instinctively adopting, or reluctantly carried out, the contrary definition of the cult of the dead as a cult of the dead in the divinity, and the cults of the gods, as referring exclusively to those rites which deliberately and in the first instance aimed at the advantage of living human beings, the cults of the gods, as referring exclusively to those rites which deliberately and in the first instance aimed at the advantage of living human beings, even if the two forms of divine worship have, on the one hand, implicitly classified together as 'religion.' Magical actions may therefore, for our purposes, be defined as those actions which men performed for their own benefit or for the benefit of other living men, and which demanded certain miraculous powers for their performance. Warning must be given against two misconceptions: in the first place, it must be clearly stated that it is not necessarily certain that the gods and the dead may, as indeed they usually do, enter into the same magical power as defined, except in the second place, magic as thus defined did not differ essentially in its magical power from the beliefs of the dead and of the gods, nor was it necessarily regarded with feelings of moral reprobation.

For a similar definition see A. H. Gardiner, 'Notes on Egyptian Magic,' in Travaux, Troisiéme Interventions des Congrès internationaux de l'Antiquité (Berlin, 1893, 1895, 1897, 1905), i. 289-290. Erman (Egyptische Religionsgeschichte, Berlin, 1909), though forming a very different estimate of magic from that here adopted, accepts the same tripartite division of the active aspect of religion into Götterkult, Totenkult, and Zauberkult. Magic as defined here has a wide native literature of its own: various hieratic papyri in Leyden, Turin, London, Berlin, Cairo, Rome, Vienna, and elsewhere, mostly dating from the New Kingdom; several similar papyri of the Middle Kingdom, in the Ramessean find of 1903, still unpublished.

We may describe, therefore, the priest of Hiek (A. Moret, Les Livres funéraires et la religion, Paris, 1889, p. 96; R. Lepsius, Denkmaler, Berlin, 1849-58, ii. 91a). The defined concept of 'hiek' is figured in the form of a man in some sculptures of the Via Sacra at the sanctuary of Khonsu in the Temple of Eleusis, Leipzig, 1913, pp. 20, and of occasional occurrence also in the texts (ib. p. 44; 120, no. 1226, wherein it was sung to counter upon the deceased the powers of 'hiek' himself has recently come to life (P. Lecan, Textes des dieux extérieurs, Paris, 1910, no. 281), has been reduced to a creation of the sun-god in the New Kingdom, where it seems to have a number of different and not infrequent meanings. The Egyptians believed, or imagined, to believe that their wizards could work all kinds of wonders; in a late tale a charmer is made to bring the victory of the Egyptians to Pyrgi, Egypt, at the siege of Canopus, and Pharaos dwells, where he is to be beaten with some hundred blows of the stick, and returned to the land of Egypt again, 'all in six hours thither' (Griffith, Stories of the High Priests, p. 59). It is said to have been related at the court of Charis, how one magician fashioned a crocodile of wax that devoured an adulterer, how another parted the waters of a lake into which a jewel had accidentally fallen, and how a third cut off a goose's head and replaced it in a twinkling (Erman, Die Mysterien der Pacommunications Western, Berlin, 1894, i. 8f.). The magical contest of Moses with James and Jambres (Ex 7:22, 2 Ti 3:8) is thus quite Egyptian in spirit. Tassoing from such fabulous reports to practical magic, we may see that the art of magic under a comparatively small number of heads.

1. Definive. How important this class was may be judged from the fact that in a general panegyric of God as creator He is said to have made magic (see the things that happened' (Pap. Petrie, Bibel 116 A (ed. Golenischch, Petrie, 1884, line 145).)

(1) Prophecy.—To avert death, See Petrie and F. Rossi, Papyrus of Turin, Leyden, 1865-76, pl. 120; W. F. Petri, Stier und Riek, Leyden, 1865, pl. 101; Papyrus of Turin, 134. Pap. Leyden 509 against lions, byamen, and "all long-tailed animals that eat flesh and drink blood," Le Papyrus magique d'Amenophis IV., from Egypt (London, 1881; also Budge, Egyptian Hieratic Papyri, verso V. against crocodiles and other dangers of the river, p. 82; for snakes, Stern, Papyrus Ebers, Leipzig, 1875, pl. 97. 17.)
The pigment which was rejoicing, the hearts of multitudes grieves for it; Horus has slain it by his magic. He who is summoned in the sound of the flute, thou who wast prostrate, Horus has restored thee to life. He who came as one carried in gone forth of himself; Horus has brought from the body (prescription of drugs). Ebers, 34, 7, 10, against a complaint named the artifice of spells, Ebers, 58, 13. A book of trumpet and tablets to banish magic from the body.

(2) Counter-charms. —To buy a spell (cf. s) on him whom one fears, Ebers, 473. To cast out baneful magic from the body. Ebers, 5, 50. See also Papyr. Assyr. iii. 5. It was preserved in the Library of Edinburg.

(3) Psychological. —A book for repealing fear which comes to be a man by night or day, from front or behind; Papyr. Leyden 35, recto 2, 1.

(4) Propitiatory. —(1) Oaths of witnesses to facilitate birth, Enuma, Zauberspruche für Mutter und Kind, Berlin, 1901, pl. 8, 6, 5. Papyr. Leyden 52, verso 2, 6; 'to bring milk to a woman who is nursing a child' (prescription only), Ebers, 97, 19, 'to keep a child warm.' Zauberspruche, verso 2, 2.

(5) Weather-charms. —Thou shalt perform these ceremonies when rain clouds are in the east of heaven, or when Rê sets in the West, to prevent storm-clouds in the east of heaven. . . . Thou shalt perform these ceremonies many times against bad weather, that the sun may shine and Apophis be overthrown in truth' (Book of Withdrawing Apophis, 23, 141).

(6) Love-charms. —A spell to secure sexual enjoyment, secondarily used for funerary purposes, has been alluded to in § 2. Erotic charms must have been frequent, but those that are known to us are few; in demotic, see P. L. Griffith 9, 45, H. Thompson, Demotic Magical Papyri, London, 1904, p. 11, and C. W. Budge, Griechische Zauberspruche, Vienna, 1885, pl. 96 I, and 1771.

(7) General. —He who recites this book is blessed every day; he who moves not, lacks not, and is not malnourished. He does not enter into the law-court, nor does judgment go forth against him. But if he enters the law-court, he shall be judged against himself. Nor does his popularity depart from him (Papyr. Leyden 347, 12, 10—12).

Marg. —(1) Obstetric. —To know whether a child will live, Ebers, 97, 12. Or whether a man will live, W. Wreszinsky, Medizinische Handschriften der Berliner Museum, Leipzig, 1900, verso 1, 3, 7, 9, etc.

(2) A number of magical modes of divination are detailed in the Demotic Magical Papyri, ed. Griffith. Thompson (see p. 14), but these instances do not seem to belong to ancient origin. Oracle-seeking does not occur under the head of magic, as here defined.

(3) Bodily-Illness. —In the tale of Unanim (RTAP xxi. 1690) there is a related case of a young man being 'seduced by the god and giving a solemn warning while in this condition. The god may perhaps be brought within the sphere of magic, as it postulates supernatural power in its human mouthpiece, and usually involves the welfare of human beings. There is a book of protective prophecies, in the Petrie papyrus (see A. H. Gardiner, Journal of Egyptian Archaeology, vol. vii. p. 54), which is not preserved under the usual magical heading. There seems to be no Pharaonic evidence for horoscopes, charms, and other forms of prophetic magic. The reason may be that they come out in the form of winds (Papyr. Leyden 556 verso 6, 61; cf. especially the word sâr in Ebers, 9, 14, 34, 10, etc.). Or else, again, the hostile power might attack with arrows (Papyr. Leyden 556, verso 6, 61), or might secrete itself in the mummy, for this is the easiest way of extracting the excretions of the body, such as the sweat or urine (Zauberspruche, recto 2, 7—8); or it might manifest itself as a disease (Papyr. Leyden 556, verso 6, 61). All the members of the body were subject to attacks of the kind, whence their frequent enumeration in the texts (see below), here they are not seldom called upon to open their mouths and vomit forth what is in them (Papyr. Leyden 556, recto 2, 8. 8—13).

The malignrant force was sometimes merely informed of its defeat:

'l'ost thou to kiss this child? I suffer thee not to kiss it' (Zauberspruche, recto 2. 1)

Elsewhere, as in the example quoted in § 6, the poison is hidden to slow forth upon the earth. Warnings frequently supplemented and reinforced such commands, as:

'Fall not upon his tongue; it is a serpent at the mouth of its hole' (Zauberspruche, recto 3. 3, in the midst of a long series of similar phrases).

Commands and warnings failing in their effect, a more persuasive means is tried:

'Come, lay thee down, departing to the place where thy
beauties of women are, on whose hair is myrrh, and fresh incense on their shoulders ('Zaubersprüche,' recto 3.-4.).

Or else the demon is made to understand that in delaying the magician he holds the whole order of nature in suspense:

'Re' waits for thee in order to shine, and Atum to set, that thou mayest quell the arm of N of M. The chief of the Westerners waits for thee in order to enter in triumph, that thou mayest quell the arm of N of M' ('Pap. Leyden 255, verso 4.-2.-4).

In the last resort curses are employed:

(1) The greatest Egyptian curse the. . . the little Egyptian curse thee' ('Pap. Leyden 358, verso 1.-3.

(2) 'Thou art in Horus, thou art in the town of Houdn, thou sharp-horned one, who shootest at the mark. . . thou art in thy beauty: destroy the evil that is in my limbs' ('Pap. Leyden 357, 3. 10-13.)

A trait characteristic of Egyptian magic, noted already by Iamblichus (ed. G. Parthey, Berlin, 1857, p. 215), is the threatening tone often adopted towards the gods; examples are very common:

'On the night that the wife of Horus (Selkis, the scorpion goddess) shall bite thee, I suffer not the Nile to heat upon its bank, I suffer not to shine upon the earth, I suffer not the seed to grow, I suffer not cakes to be made, I suffer not jujubes to grow (or be bred for) the 365 gods, who are hungry by day and night, on that night of the burial of Osiris' ('Pap. Turin, 137, 1-4.)

The most daring menace of all is the following:

'I will fire into Buais and burn up Osiris' ('Pap. Turin, 152, 10.; cf. Clerks, 28, 8.)

On such occasions the magician is apt to dislike his responsibility:

'On the night which is it, it is not I who repeat it; it is Isis who says it, it is Isis who repeats it' ('Pap. Leyden 326, recto 11.-7.; Pap. Turin, 156, 8-9.; Pap. mag. Harris, 9, 11.)

Elsewhere the gods are referred to in the third person, and the more numerous they are, the more efficacious the rite is likely to be. Thus, when the limbs of the body are enumerated, it often happens that each separate limb is identified with, or reduced to, some special deity; and the list ends with the words:

'There is no limb of his without a god' ('Pap. Leyden 358, verso 6, 2.)

Orig., [c. Celsus, viii. 58] asserts that the Egyptians divided the human body into thirty-six parts, and placed each one of them under the charge of a god: 'and so,' he says, 'in invoking these, they heal the diseases of the limbs.' The divine names mentioned by Origens are those of the gods of the decans, or ten-day periods.

The magician often speaks of himself in the first person, but sometimes identifies himself with a particular god whose assistance he desires—e.g.,

'I am Re' in this his mysterious name 'He-who-was-In-the-Nun,' shooting his arrows against his foes' ('Pap. Leyden 357, 4. 117.)

or else with some god who, like the person for whom the rite is performed, had once been menaced by some imminent danger:

'Aramt thou, for I am Horus; retire thou, for I am the son of Osiris. The magic of my mother (is) the protection of my limbs' ('Heartad medical Papyros, 11. 41.)

At other times he merely claims to be 'the servant of Horus' ('Pap. Leyden 345, verso F 1; Pap. Turin, 134, 1.)

Often a mythical precedent was alluded to or narrated at length, and the mere mention of a parallel case seems to have been considered a useful expedient for ensuring the success of the rite. Thus the magician declares:

'2. I will banish all evil and evil things which come to fall upon N the son of M, even as Re' saved himself from his enemies, even as Khnum saved himself from Sekh, even as Horus saved himself from Seth, and even as Thoth saved himself from Re'!' ('Pap. Turin, 116, 9-10.)

More often the point of the narrative is merely implied; in the following short incantation against burns even the names of the interlocutors, namely a messenger and Isis, are omitted:

'Thy son Horus has been burnt in the desert. 'Is there water there?' 'There is no water there.' 'There is water in my mouth, and a niche between us: I can come to quench the fire' ('Ebers, 69, 3-4; see H. Schäfer, in ZA xxxvi. [1858]129-133.)

Many valuable fragments of myths have been preserved to us by these means.

Especially frequent are tales that turn upon the revelation of the true name of a god; a well-known instance is the story of how Isis devised a stratagem by which the sun-god Re' should be compelled to divulge his name; this she accomplished by causing him to receive a snake-bite which none could cure save herself ('Pap. Turin, 131-133.)

Less well known is the narrative of the attempts made by Seth to provoke Horus into betraying his real name, which would have given the mischievous god power over his nephew: Horus, however, invents various absurd names, and so manages to elude his wicked uncle ('Pap. Turin, 134, 1.)

The importance of names in Egyptian magic was very considerable; the knowledge of names gave control, whether for good or for evil. It was not a rare proverb that 'a man lives who is conjured by his name' ('Pap. Turin, 133, 6, 11, 134, 7, 9, etc.). Thus to be familiar with the names of the epagomenal days ('Pap. Leyden 367, verso 9.) was a safe method of protecting oneself against their perils. This is a topic which might be greatly elaborated (see art. NAMES [Egyptian]).

Closely akin to the question of the importance of names is that of the importance of things. Certain formulae were supposed to possess particular efficacy, such as the words 'Protection behind, a protection that comes, a protection!' ('Zaubersprüche,' recto 9, 2.)

The magical potency of anything depends in a large degree on its singularity, and it is therefore but little wonder that ebalalistic gibberish ('Pap. mag. Harris, verso C') and foreign spells were held in high esteem (Der Londoner medizinische Papyrus, ed. W. Wresinski, Leipzig, 1912, nos. 27, 28, 32, the last being in the Kelti language).

The significance attached to names and language is an aspect of the doctrine of sympathy, by far the most fertile conception of all those underlying the magical rite. This doctrine attributes to things that have once been associated in any way remains henceforth connected and almost interchangeable for practical purposes; its chief varieties are (1) the principle of contagion, which affirms that things that belong together in one context continue to influence one another even when separated; and (2) the principle of homoeopathy, according to which like has special power to affect like. These and other forms of sympathetic magic are not so easily classified are of constant recurrence in the Egyptian magical books, both in the oral and in the manual rites; the recital of mythical precedents also clearly comes under this head.

The very idea of the oral rite is an instance of homoeopathic magic, for language may be said to imitate and image the things which it expresses, and in so far verbal references to a desired effect may have been considered instrumental in producing it.

Sympathetic magic takes curious forms at times; one or two instances may be singled out. In connexion with the importance of language reference may be made to the significance of penu. A magician says:

'1. I make a charm for him against thee of 'afai-plant, which does injury, of onions, which destroys by its touch, which is sweet to men and sour to the dead' ('Zaubersprüche,' recto 4.)

The virtues here ascribed to the 'afai-plant and to honey are of obscure origin, but the destructive
MAGIC (Egyptian)

property of onions is clearly due to the fact that the Egyptian word for onions was ḫeday (the vowel is merely guessed), while 'to destroy' was ḫaḏu. In order to tell whether a new-born infant would live or not, its first articulation would have to be noted:

(1) 'Thy head has no power over his head, thy arms have no power over his arms, thy legs have no power over his legs. (A. Gardiner, J. G. Milne, and H. Thompson, Thoth Sanku, London, 1915, p. 145.)

A conditional curse that runs upon similar lines may also be quoted:

(2) 'He who is dead to this decree, may Osiris pursue him, may Horus pursue his wife, and Hores pursue his children.' (H. Sottr, Reference has been made to this, p. 125.)

The mystical potency attaching to certain numbers doubtless originated in associations of thought that to us are obscure. The number seven, in Egyptian magic, was regarded as particularly efficacious. From this there derive many of the seven items in the lists of the barks of Uraia, ‘M. Horeb, Ein Mittelschriltur,’ Leipzig, 1910, p. 71):

(3) 'The seven daughters of M., who stand with and make strong this seven times seven, in the lower world (Pop. Turin, 135. 124); and, similarly, we read of

(4) 'the seven hawks who are in front of the barque of M.' (ib. 136. 31.)

Oral rites have occasionally to be recited seven times (ib. 138. 9, 10), but the more usual number is four (Pop. Leiden 354, versus 3, 3, 4, 10, etc.; Pop. mss. Harris, 4, 4), a number doubtless associated with the four pillars of heaven (cf. degera, M. Macea [Disterich, p. 71]), or, as we should say, the four cardinal points.

A characteristic feature of the oral rite is its complexity. This is shown in various ways, and not least in the love manifested for enumerations. Sometimes it is the long lists of parts of the body, and the formula naming all the possible enemies from whom attacks are to be feared. Similarly, lists are found of the various ways in which a man might meet his death (Pop. Turin, 132), and of the various evocations through which the demon might transmit his baleful influence (Pop. Leiden 354, versus 6, 64). This quasilegal taunology is to be explained partly by the desire to cover all eventualities, and partly by the necessity of compelling respect for the learning and skill of the magician.

(2) The manual rite.—(a) Active elements.—The employment of images played an important part in the amulets magic. Sometimes it is the hostile power to be destroyed that is thus counterfeited and done to death; so, in the Book of Overthrowing Apophis, the words of the oral rites are 'to be recited over an apophis, made of wax or drawn on a sheet of papyrus and thrown into the fire' (29, 29; cf. 22, 6).

More often the object imitated represented a means of effecting the purpose of the rite.

Thus in a spell to assist child-birth there was made 'a dwarf of clay to be placed on the forehead of the woman who is giving birth' (Pop. Leiden 326, recto 12, verso 13).

Miniature hands, seals, and crocodiles were powerful to ward off evil, doubtless by saying it, sealing it up, or devouring it (Zauberspruche, verso 2, 4; cf. ZA xxxix, [1901] 87). A great number of the amulets found in such abundance in Egyptian tombs were of a magical nature, all, indeed, except those whose purpose was exclusively funerary. Like the images mentioned above, amulets can, if explicable at all, always be interpreted by the principle of sympathetic magic in one or other of its various forms (see Petrie, Amulets, London, 1914).

The material of which such images and amulets should be made are nearly always specified, and it is evident that this was considered a matter of vital importance. Here we meet with a new aspect of sympathetic magic, namely the doctrine of properties: every plant, stone, metal, and colour possessed its own peculiar virtue, which prompted its use in the diverse cases. Wax and clay were very commonly employed, and perhaps not only because they were easy of manipulation; their plasticity made them the thought symbolic of a wide adaptability. Aetiological myths assign a divine origin to various substances; thus the bees that supply the wax are said to have sprung from tears shed by Isis (Pop. Salt 353, 2, 5-6, unpublished) and the cedar-tree emanated from the sweat of Osiris (ZA xlvii, [1910] 71).

Images were not immediately potent of themselves, but had to be charged with magical power in one way or another. The oral rite is usually recited over them (ib. mako kr, passim), and this transitory and intangible kind of contact seems to have ensured their continuous efficacy.

In a fabulous story the magician Her, the son of Pahsheh, made a litter with four bears and four bulls; writing upon them, gave them breath of respiration, and made them live' (Stich. Book of the High Priests, 16: 13).

Elsewhere the ceremony of 'opening the mouth,' familiar from the funerary ritual, was performed over the magical figure (Pop. Turin, 131. 7), and offerings and incense were presented to it in token of its now animate condition (ib.; Pop. Leiden 354, 2, 3). Drawings upon papyrus or rag were treated in exactly the same way, and seem to have been equally effective (ib.; Pop. Turin, 31, 77. 3); or the figures of the gods whose help was invoked could be sketched on the patient's hand, and licked off by one some (Pop. Turin, ib.). At times the mediating image could be dispensed with: the magician pronounced his spell, and then spat on the diseased limb (Ebers, 20, 17).

Magically charged amulets, images, or beads were often attached to the person whom they were designed to protect or heal; some kind of contact was a prime necessity of Egyptian magic; e.g., we read of 'papyrus, incised and inked, pi.' (ib.) as a left foot (Pop. Leiden 354, versus 4, 3); but the neck was usually the spot where most charms were worn (Zauberspruche, recto 1, 3, 8, 3, and passim). The string or strip of rag employed for this purpose was usually a crocodile, but, as we see, the linen being the favourite number.

Such knotted strings have often been found and are to be seen in many collections (Erman, Zauberspruche, p. 30). In other lands than Egypt the idea of the magical knot is frequently to bind the hostile force; but, though references to binding demons can be found in Egyptian magical texts (Pop. mss. Harris, verso A, 6), it is not in connexion with knots. One view that seems to have been taken of knots is that they were obstacles, as, e.g., in the following words put into the mouth of a magician:

'If the poison pass these seven knots, which Horus has made on his body, I will not allow the sun to shine,' etc. (Pop. Turin, 131, 5).

Particularly interesting is a spell where twelve gods were invoked.

These were drawn 'on a ray of fine linen to be tied into twelve knots. Offer to them bread, beer, and burnt incense. To be placed on the neck of a man' (Pop. Leiden 255, 2, 3).

Here evidence of the knotted cord under the guardianship of a special deity, and thus formed a divinely protected barrier between the malign influence and its possible victim.
MAGIC (Egyptian)

Initiative or significant actions were frequently performed with the apparatus of the magical rite; we have seen how a waxen image of Apophis was thrown into the fire and destroyed, and similar cases could be multiplied.

At this point may be mentioned the composite stele known as Caryi of Horus; these are of comparatively late date (Satte period and after), and are covered with magical texts of the kind described above, and with sculptured figures, chief among which is the figure of Horus with his feet on two crocodiles. Such stele seem to have been placed in buildings for their protection, and especially in rid them of snakes and scorpions (see Goloniensch, Metternichstelle; G. Darowy, Texte des demiers magiques, Cairo, 1903).

(b) Negative or precautionary elements.—Magical rites could not be performed at any time and under all conditions; strict rules and restrictions had to be observed. Of these some, like the injunction to the magician to stand "with his face to the East" (Pap. Legylon 337, 12, 10), are of so many different types that they elude classification. Times and seasons, like everything else in ancient Egypt, had their own specific properties; some days were lucky and others unlucky, in part at least through mythological association (for papylar see CALENDAR [Egyptian], § 2). Such considerations had to be taken into special account where magical rites were concerned, and perhaps more attention was paid to the question of time than is indicated in the brief instructions usually given for the formulation of the manual rites.

Of one spell we learn that it had to be recited "at eventide, when the sun is setting" (Zauberbepiche, verso 3, 7); in another case seven knots have to be tied, "one in the morning, and another in the evening, until seven knots are complete" (Zauberbepiche, verso 3, 5).

Magical rites were also in demand for safeguarding men against dangerous periods of the year. As in ancient Mexico (Olmec, etc.), just as ch. Iv. of the Book of the Dead (pakhret), it was ordained that 'one part of the man and woman, not having eaten venison or fish, and not having been near women,' in another place the user of a spell is charged to purify himself for nine days, and his servants are to do the same (E. Naville, Destruction des hommes, line 79, in TSBA iv. [1876] 16).

Sorcery was essential in dealing with magic. In reference to a spell written on a strip of fine linen the warning is given that "it is not to be looked at (Pap. Legylon 343, recto 2, 25);" of another it is said that it must not be used for any one except him for whom it was prescribed (ib. verso 8, 6). For similar instructions in the Book of the Dead see J. Baillot, Idees necrolitiques dans l'Egypte antique, Blais, 1912, pp. 72-75.

8. Magic and medicine.—Magical spells are often recommended on account of their proven efficacy; "a true remedy on many occasions" is a formula extremely frequent in the magical papyri (e.g., Pap. Legylon 337, recto 2, 25). The appeal to experience indicates a desire to justify magic as a science, and hints at the possibility of a real science arising out of it. There cannot be the slightest doubt that Egyptian medicine is the direct offspring of Egyptian magic, and that it never became really emancipated from it parent. The medical books are seldom free from incantations, and the magical parts of the medical prescriptions (see, e.g., Zauberbepiche, verso 7, 2). In the selection of drugs the doctrine of properties undoubtedly played a great part, though the definitiveness of our evidence and the slowness of progress of empirical science tend to conceal this from our observation. It is no argument against the thesis here supported that many of the herbs and drugs prescribed were actually, and were known to be, wholesome. In the first place, magic itself is not necessarily irrational in its methods, and, in the second place, even the utility of many wholesome things like onions was based upon essentially magical conceptions (see above, § 7 (1)). The exotic and abhorrent nature of many drugs cannot conceivably be explained except as due to superstitious reasons; how else could one account for the use of "the bones of an oxyrhynchus-fish" (Ebers, 6, 3), or "the urine of a male ass that has begotten another" (Griffith, Petrie Papys, London, 1898, pl. 5, 1, 18)? It is significant that the latter medicament occurs in a treatise on midwifery and kindred topics. One can often make a shrewd guess at the meaning of a prehistoric prescription. To enumerations of magical "herbs, scents, and healing of charms" (hunts) the following is prescribed: "A large beetle (hydr), whose head and wings have been cut off. To be burnt and put into fat, and then applied" (Ebers, 83, 13).

The point of this must surely be that, the word for beetle being derived from the verb 'to be a beetle' (hydr), 'to become,' a mutilated beetle would symbolize the frustrated achievement of a purpose; the purpose here to be frustrated was 'the working of charms.'

It must not be imagined that there was no distinction between a medical prescription and a magical rite. The former consisted mainly, not wholly, of what may be considered as a specialized development of the manual rite, namely, the enumeration of drugs and directions for their use. The diagnosis, which is ushered in by the words 'so shalt thou say' (ad-hypr), and which sometimes precedes the list of drugs, may owe its origin to the oral rite of magic—just as the magician sometimes declares that he knows the name of the remedy. A difference is made in the Book of the Dead between an 'incantation' (shuwtet) and a 'remedy' (pakhret); the latter is, in the main, an enumeration of drugs. In the same way the physician (samet) was not quite the same thing as the magician; the physician might be a magus, while the magician was a priest (below, § 9).

That even in the 'remedy' (pakhret) magical ideas were latent may be proved by some additional evidence. The following is explicit enough:

"Formula for digging a remedy: Welcome, remedy, welcome, which destroyest the trouble in this my heart and in these my limbs. The magic (bide) of Horus is victorious in the remedy" (pakhret) (Ebers, 2, 1-9).

We also find formulæ to be recited in applying remedies generally (Ebers, 1, 1-11), in using the medical measures (Pap. med. Hennt, 13, 14), in using animal fat (ib. 14, 4), and so forth. These formulæ seem intended to supply the place of the incantations of which many medical prescriptions have purged themselves; their reintroduction was a reactionary step.

Where, then, does medicine begin and magic end? There is no definite boundary-line. Medicine may be said to begin when incantations are no longer used. At that point medicine becomes a technique, though using means which we cannot understand, and which, if it proves to give ex-
magnelection, it explains by superstitions reasons.

2. Medicine was practised without a sense of mystery and without making appeals to faith, it was a technique of ordinary life like any other; but, wherever there was consciousness of its exceptional, occult nature, it might be said to lapse into the domain of Egyptian mag- 3. new is its sort and The It was at its best in diagnosis and in its physiologically speculative; the materia medica, on the other hand, remained permanently under the influence of magical conceptions.

6. The magician, as before, a philosophical treatise quoted by Maspero (Papyrus XIII. [1891] 520) exactly defines the difference between the physician (eryne) and the practitioner of magic. The former exercises his craft ἀρχαῖα ἱέρατα ... μεγαλώρ, 'mechanically and by book,' while the latter is a 'priest' (τερτεία), 'acting through his own religious feeling' (διὰ τής ἱερατευμονᾶς ποιώς). There appears to be no common word for 'magician' (ἀρχαίος, 'charmer,' e.g., in Ebers, 99, 3, is very rare), and magicians certainly formed no caste of their own. It is in accordance with the homogeneity of religion and magical knowledge, and particularly those priests whose function (§ 2) to be versed within.

The subjects of many of the books kept in the library of the temple of Edfu cannot be described otherwise than as magical (see H. Brugsch, Aegyptologie, Leipzig, 1889-90, p. 156; cf. C. A. Erman, Aegyptologie, Leipzig, 1899, p. 25). The 'doctor-priest' (χρωμάτης) is especially named as empowered to perform cures (Pap. med. Berolin., 8, 10), as having discovered incantations (Pap. med. London., 8, 12), and as being endowed with the gift of prophecy (Pap. med. London., 6, 41). It is clear that the scribes at the court of Cheops in the tale were all 'chief lectors' (see Erman, Märchen des Papyrus Westcar, i. 21). A passage in the Ebers Papyrus (99, 2) singles out the 'priests of Sakhmet' (σακχομέτ) for special mention as skilled members of the magico-medical profession; this is because Sakhmet was a fearful goddess who manifested her wrath in inflicting disease; her priests were likely to know best how to cope with her. Priests, doctors, and magicians alike had to turn to education at colleges called 'the house of life' (περιοναί); of these we know but little.

A 'chief physician' of the time of Darius describes how he was commissioned by Pharaoh to restore the perioinai (in Sais), 'because His Majesty knew the value of this (i.e. the medical) and because he could not provide this knowledge at Abydos,' apparently attached to the temple (Lower A B 62: 231. [1914] 119). The word perioinai in the bilingual decrees is rendered in the Greek as 'scribes of the house of life' (see Griffith, Episcopal Papyri, Manchester, 1900, p. 81, n. 13, Stories of the High Priests, p. 19). Magic could be learnt at the perioinai (de: Pap. mag. Ostra., 6, 10).

On the whole, we receive the impression that less importance was attached in Egypt than in other lands to the personality of the magician; his power might in some cases be due to special gifts, but, broadly speaking, it was ascribed to knowledge, and not to the supernatural powers of certain men. The instructions appended to magical incantations usually presuppose that private individuals could use them for their own profit if only they observed the right precautions. Thus the magician's presence was not essential, and his authority lay solely in the fact that he was the possessor of magical knowledge; the epithet 'knows of things' (with ἰδεῖ) was commonly added to him (see Griffith, Stories of the High Priests, p. 11; Ebers, i. 19).

This point is well brought out in a passage describing the all-wisdom of the Pharaoh Amenemhat: 1

1. A unique king, whom Seshat taught, praised of the goddess isub, the reverence of Thoth is beside him, and he gives to him knowledge of things, so that he guides serpents according to the true rule: He is one great of life' (Scod, Ueberdie, in, Leipzig, 1896, 191).

10. Celebrities in magic.—Egyptian-wise, we will begin with the gods. Thoth was the most powerful of all magicians; in the end this qualification of his gave rise to the fame of Hermes Trismegistos (q.v.; see Griffith, Stories of the High Priests, p. 58). The skill of Thoth as a magician is associated with the dominion of the hieroglyphs and the sciences of astronomy and mathematics; in the myth of Osiris he played the part of 'physician of the eye of Horus' (Pap. med. Horrât, 14, 6). Isis enjoyed great fame as a sorceress, mainly on account of the charms which she devised to protect her infant son Horus (Pap. Turin, 31 + 177, 6; Ebers, i. 12 and passion.). Horus himself was not devoid of magical ability, though it was mainly in his skill in wounding of attacks that this was displayed; the Horus of Letopolis is described as the 'chief physician in the house of Ré' (Pap. Turin, 124, 5). The eye of the sun-god, which was subsequently called the eye of Horus and identified with the Urecs-snake on the forehead of Ré and of the Pharaohs, the earthly representatives of Ré, finally becoming synonymous with the crown of Lower Egypt, was a mighty goddess, Uto or Buto by name; she is often referred to as Woret-hiké, 'the she who is great of magic' (Sethe, Altcitumskunde Egyptians, v, [Leipzig, 1912] 128).

According to Manetho, King Athothis of the Ist dyn. practised medicine and composed anatomical books. Under King Zoser of the IIIrd dyn. lived the wise Iouter, the eldest son of the chief magicians (De exquisite divini, see Sethe, Altcitumskunde Egyptians, v, [Leipzig, 1912] 128). Iouter was in late times worshipped as a god (see art. Heroes A); his son Iouter, a discoverer of various books of hiké incorporated in the Book of the Dead (see Erman, Märchen des Papyrus Westcar, i. 13). Another royal prince, who was high priest of Ptah, became the hero of many tales in which he appears as a great magician; this was Khnumnés, one of the innumerable progeny of Ramesses II. (see Griffith, Stories of the High Priests, p. 11).

In the later Greek and patriarchic literature reference is made to various Egyptian magicians of note, Sochos, Psamosiris, andi, above all, Nectanebo, the last native Pharaoh, who plays an important part in the legend of the Pharaoh, Thutmose III. (see Griffith, Stories of the High Priests, p. 11).

11. The nature of Egyptian magic.—The magical rite, as described in § 7, was by no means wholly irrational in its methods; indeed, granting its premises, namely the existence of gods and demons, the theory of possession, the principles of sympathy, and the doctrine of properties, its manner of setting to work was perfectly logical and businesslike. Here, at first sight, we are face to face with a paradox: the essence of hiké we stated to rest in magic was the principle of order (§ 11), yet the methods of magic are declared to be simple and straightforward. The fact is that no explanation of the magical rite is afforded by the consideration of its parts either severally or collectively; its explanation can be sought only in the concept of hiké, which is a thing apart from, and, as it were, superimposed upon, the methods and premises of the magical rite, a sort of pervading vital principle making this what it is, etc. The rite of the magical rite would doubtless have seemed to the Egyptians no more than what to us it appears to be, a puerile, though not wholly meaningless,
MAGIC (Greek and Roman) 269

combination of words and pantomime. There was
practically no prohibited, thousand
was utterly ignorant of the limitations of their
own power and that of the world outside; they saw
forces which they treated personally in all kinds
of external phenomena, and the law of sympathy
seemed to be very real. In later
hypothesised period magic and science were undifferen-
tiated. Later on, a distinction became gradually
discernible between the simple techniques of ordi-
nary life and the less successful or, at least, less
trustworthy means by which men sought to achieve
their ends. The domain of hikos or magical power, was precipitated. Hikos gathered
round itself just those less matter-of-fact precon-
ceptions which were found unserviceable in ordi-
nary life, and these became its methods. Now,
the simple techniques are always able to detect,
amid the complex environment in which acts
necessarily performed, the actual determining fac-
tor in their results; not so hikos, which is therefore
apt to regard the whole cornor of magic as
essential to the achievement of its purposes. This
is the reason for the meticulous attention that
hikos pays to detail, the set form of words to be
recited, the restrictions as to time and place, the
practical objective by means of which the
power, the domain of hikos became and the less successful
it was, the greater the necessity which it felt of
insisting on its own inherent efficaciousness, and
of diverting attention from its methods; hence its
laws and rules, and its comprehensible jargon to
impress the wisdom lying behind it. In this context
mention must be made of two more ways in
which it sought to obtain credit for hikos,
namely the appeal to antiquity and the appeal to
authority.

Such and such a rite was found at nightfall in the
forecourt of the temple as a test of the godless (hikos) by a
beater of that fate; the earth was in darkness, but the moon
shone upon this book, illuminating it on every side. It was
brought as a Wunder to King Cheops' (Prop. nec. London,
8. 11-13).

The papyri from which this quotation came was
written in the time of Ammosiris, more than a
thousand years after the reign of Cheops. A
mythical origin is assigned to other spells.

One was said to have been invented by Gebe on his own
behalf (Prop. nec. Decret. 5, 13) while others were devised by
Nis or Isis on behalf of Ask (ib. 5, 15, 16).

A more reputable way of appraising the value
of a magical rite was by appealing to the test of
effectiveness. If, for example, a certain
spelling that it has been successful on many occasions
(see above, § 8). Where the claim has proved
justifiable, or where it has seemed sufficiently so
for the rite to pass into general use, the more
mysterious elements rapidly disappear, and the
rite becomes an ordinary technique; so in the case
of medicine and, it may be here added, of legal
oaths. 1 Nothing can better illuminate the nature
of hikos than the alterations which it undergoes in
the course of its transformation into some ordinary
technique.

LITERATURE.—This has been indicated in the body of
the article. Of general interest are E. A. W. Budge,
Egyptian Magic, London, 1911; A. Erman, Ägyptische Reli-
Kioni, Berlin, 1909, ch. viii; A. Moret, La Magie dans l'Égyp-
tique Ancien (Bibliothèque de vulgarisation du Musée Guimet, xx),
Paris, 1907; A. Wiedemann, Magic and Zauber in altem Ägypten
(Der alte Orient, vol. VI, pt. IV), Leipzig, 1905.

ALAN H. GARDINER.

1. MAGIC (Greek and Roman).—I. INTRODUC-
TORY.—It is practically impossible to extract
anything from the great mass of magic theory
and practice as certainly the particular contribu-
tion of any given people. There is no system or
human thought which, in its unchanging essential
principles, is more primitive and, for that very
reason, more cosmopolitan, more literally devoid of
distinguishable national traits, than magic.
Anything which might be considered indigenous
is usually secondary as well as comparatively
unimportant, and, in any case, can rarely be
identified with certainty. This is especially true of
the two great nations of classical antiquity.
Here, as elsewhere, magic was believed and prac-
tised by the common man, and even the literary
record of magic theory and practice begins with
Homer and continues with increasing variety and
particularity until the latest times. But, rich as
they are, the records of classical magic are too
incomplete and the possibility of filling the lacuna
is too remote to warrant us in hoping that a search
for the indigenous would meet with any success.
We shall therefore omit all reference to this aspect
of our subject. For this reason, too, as well as on
account of the intimate cultural relations between
Greece and Rome, it seems best to deal with the
two nations as one.

1. Magic and religion.—From more than one
point of view the civilization of classical antiquity
is still quite justified in challenging comparison
with that of any other period in history. No
other civilization has more closely approached,
observing, reflecting, and creating in so many
great departments of human thought and action.
And yet among all the higher civilizations of the
world there is none in which magic—of all things
the most remote and mysterious—was so
warranted, so highly enshrined, as in Greece, as
had such an abiding influence, none in which
men had such a peculiar interest in the subject,
none in which the progress of magic from the lore
of the farmer to the incantations of the philo-
sopher is more clearly marked and more prototypically
illustrated.

The paradox, however, is only apparent. Owing
to its exaggerated conservatism, the religion of
both nations always remained amazingly primi-
tive, so primitive that it was always impossible
to distinguish it from magic on the basis of any
essential details of ceremonial or of the generaliza-
tions from which they were derived. Even the
discipline of inculcation, with all the conclusions
for which it is ultimately responsible, was never
particular of the one as opposed to the other.
It is obvious, therefore, that the Greeks and Romans
were always in the position of their primitive
ancestors—they were utterly unable to differenti-
ate clearly between a particular act and a spell
on the basis of this or of any other criterion which,
when seriously applied, would have left their
religion unimpaired, and at the same time would
have transformed their once redoubtable magic
into an interesting but harmless fossil. Their
only course was to cling to the ancient distinction
of official recognition.

According to this distinction, "religion is prescribed, official,
an organized cult. Magic is prohibited, secret; at most it is
permitted, without being prescribed" (N. W. Thomas, EB
vol. 305, summarizing R. Huber). Magic cannot be distinguished from religion by
the doctrine of sympathy, or by any supposed
necessary consequence of cause and effect, or even by its
malevolent character. Religion, then, is the
orthodox, magic is heterodox. It is being understood,
of course, that for the Greeks and Romans the
character of orthodoxy was the official recognition
of their own State. The god must be officially
recognized by the State, and his ceremonial must
be the one prescribed by the State. Other gods, and therefore their
ceremonial, are heterodox. Even orthodox gods must be
approached only by prescribed ceremonies.

This Graeco-Roman retention of the primitive
distinction between magic and religion is our only
guide in establishing meaning and coherence in

---

1 Legal oaths are, of course, a fairly effectual way of
guaranteeing truthfulness; but less because the implied cure
is feared than because perjury is a criminal offence.
MAGIC (Greek and Roman)

the bewildering array of phenomena with which we have to deal. For instance, it will be seen at once that the only effect of this criterion, so far as magic itself is concerned, is, so to speak, to define its sphere of action. It does not necessarily destroy or even impair the belief in the reality and power of magic as such; on the contrary, from the very nature of the distinction, it takes them both for granted. Hence the persistence of magic in a civilization otherwise so advanced as was that of classical antiquity.

We must assume this test of orthodoxy, e.g., in the case of Cato's curse for a sprained hip (de Agr. 160). By any other test it is patently magic; but Cato did not consider it magic, or he would not have recommended it. It was orthodox, i.e., it was Roman, it had an immemorial tradition in the Roman countryside; at the most, it had become secularized. By the same test the old Roman ritual for calling out and appropriating the gods of a conquered city (Macrob. II. 13. 17) is religion, and the operation known as 'calling down the moon' is magic. Again, the same criterion is responsible for the well-known method of raising the heterodox to the orthodox by official recognition, this device of promoting foreign cults, and thereby embracing within the sphere of their influence heaven and hell as well as humanity, is several times illustrated in the religious history of the Romans. 1

And these religions, therefore, were classified as magic. The foreign cult, as such, was occasionally despised, but quite as often it was thought to be full of terrible possibilities in the way of mysterious knowledge. This was especially the case if itsประเทศไทย were either in formation or a nation far away in space or time. Despite their native good sense, the Greeks were much impressed by the pretentious wisdom of the East, as after them they were the Romans by the complicated mummeries of the Etruscans. Nations living far away, particularly those who live at or near the place where the sun rises from the under world in the morning or goes down into it at night, are notable for their knowledge of magic. Under such circumstances as these whole nations may be endowed by nature with magic power, especially for some given thing. Remoteness in time is, if anything, a more powerful factor than remoteness in space. When a faith has been superseded, it thereby becomes magic. In other words, the term magic is known today only to be used as a synonym for 'magic.' So the elder and alien race is apt to be looked upon, especially by those who superseded it in the same country, as a race of formidable magicians—so formidable, in fact, and, by reason of their antiquity, so much nearer the days of the gods, that they themselves are sometimes believed to have been of supernatural origin. But they are still heterodox, they belong to the old order of things, they are more or less allied to the Lords of Mischief.

One of the most characteristic features of magic is a direct result of this persistent association of the heterodox and the foreign. From the very first, there is no magician like the one from foreign parts (Theoc. ii. 162 and often), no magic like the imported brand. Helen's nemesis (Hom. Od. iv. 219), as the poet is careful to tell us, was 'Egyptian'; the very word 'magic' suggests the influence of Persia; and to the end of the Empire the nature of the law lingered with representations as that of its rival who was, or pretended to be, from Egypt, Chaldaea, Cilicia, India, or any other place but Rome. It is true, of course, that 'magic is prohibited, secretly practised,' but, so far as classical antiquity is concerned, these distinctions seem to be secondary and derivative. Magic was prohibited because it was heterodox. The Romans, in particular, disliked secret rites of any sort, above all, foreign rites with mysticus, like those Greek cults so much affected by the Greeks themselves. If the principle of holding any operation of magic, it could only have because magic itself was heterodox. So far, then, as secrecy was felt to characterize magic as opposed to religion, the ultimate source of the distinction in Greece as well as in Rome was the criterion of orthodoxy. To the same criterion is due the fact that, as a rule, men turned to magic for the things which they could not or would not ask of religion. Nor, of course, was magic necessarily malicious; on the contrary, it might be distinctly otherwise. So long as orthodoxy was the test, magic was magic; whether it happened to be white or black—and this, of course, explains why the Roman law never made any attempt to distinguish between the two.

2. Magic and legislation.—The general reputation of magic at all times was due to the same criterion; it was always illicit, it was always distrusted, it always had a bad name. And when the law stepped in—as it did at an early date in both Greece and Rome—it was both against the sacred law and for the legal, the heterodox and the illegal, became synonymous terms. Magic was then criminal, and punished accordingly. The history of magic before the law began at an early period, but, so far, at least as Greece is concerned, the laws are too incomplete to give a very satisfactory idea of the question. In Greece, however, as in Rome, it concerned itself most seriously with the matter of strange religions—a burning question as soon as communication with the outside world became more intimate and extensive; still more in Rome when, owing to rapid expansion after the Second Punic War, alien beliefs and rituals came pouring in from every side. From the Decemviri to Theodosius and beyond, the Roman laws against magic were affirmed and reaffirmed, the domain of magic was at once particularized and extended, new laws were frequently passed, and the jurisprudence of the subject grew steadily in volume and importance. And, as far as the legal aspect of magic is concerned, it may be emphasized anew that, whether in Greece or in Rome, the ultimate formation and guide of procedure was always the old criterion of orthodoxy. It is clear, for instance, that the magic law to extend its scope was both suggested and guided by this criterion. It was particularly useful whenever the law felt obliged to take cognizance of some system of activity more or less mental that was 'good in parts'—such, e.g., as divination (q.v.), which stands on the border line between magic and religion, or alechemy (q.v.), which hovers in like manner between magic and science, or, again, certain types of mysticism (q.v.), which were more or less an amalgam of magic and logical thinking. In every case what was to be considered legal and what illegal was determined by official recognition. Above all, the inclusion of foreign rites and religions within the legal concept of magic was an obvious and entirely logical deduction from the test of orthodoxy. Not only so, but by the same test it was equally obvious that precisely those foreign rites were the most serious question in magic. How, e.g., shall we define the law®es? as compared with the legal status of the provinces? The final solution was again entirely logical. The Emperor was the civil and religious representative of the State. He was therefore entitled to investigate them and to make such use of them. But, so far as the principle was not called upon, and only by virtue of his office. In the hands of private individuals it was
considered dangerous, and no doubt it was largely for this reason that magic was so rigorously proscribed and its illegality so solemnly kept alive.\(^1\)

The history of legal legislation on the subject of foreign rites begins with the consul Cæsar of its type, the *Soccius consulium de Bucchaulibus* in 186 B.C. (Livy, xxxix, 8-19),\(^2\) in connexion with which it was ordered that all books of magic should be burnt.\(^3\) The practice of the courts naturally went hand in hand with the law and was regulated by it. The charge of magic in one form or another was always a cause of action. It was perhaps most common in cases in which our plea is 'undue influence.' In Greek law, a case which was specified either as ἐν δίκαια ἐπαγωγή or as γαμοῦ προνείβασις (i.e., 'drugs,' in the ancient sense of the word, or 'persuaded by one's wife').

The best known case of this kind is the one brought against Apelles, the famous poet of the 2nd cent. B.C., by the relatives of the impressive old widow, Porcilla, to whom he had just married. The charge was that he had won her affections by magic, and specified practices were alleged.\(^4\) The local task of the action was perhaps ultimately the Lex *Caelia de Scortaniis et Punctulis* passed by Sulla in 82 B.C. The defendant conducted his own case and won it by a speech, the *De Magia*, which still survives and is a valuable contribution to the knowledge of magic at that period. It must be said, however, that for the most part the great rhetor does not touch upon the real point at issue.

Considering the comparative frequency of such litigation in everyday life, we can understand with what interest the Athenian audience listened to the famous scene in the *Andromache* of Euripides in which she is charged by Hermonice, the wife of a Neoptolemus, with winning his affections by the use of philtres. Her dignified and stinging reply:

> Not of my philtres thy lord hateth thee, 
> But that thy nature is no mate for his.

That witch's broodrigers, nay, but nobblers. (565 B.C.) is, doubtless the poet's own protest against the folly of such a charge. But, if one may judge from cases still occasionally reported in the daily press, it is a charge which, old as it is, will never cease to be preferred in one form or another.

### 3. Derivation and definition.

**All the words for "magic" in Greek and Latin record some real or supposed fact in the history of the subject or else indicate that some particular manifestation of it was sufficiently prominent to stand for the whole.**

The ordinary Greek words for "magic" are μάγια, μάγος, and μαγία. The last two are old and popular. The μάγος, according to the derivation offered by the Greeks themselves—καὶ μάγος καὶ ἐπέρρει τὸ μάγος τοῦ μάγου—was specifically a necromancer in the original sense of that word, i.e., like the besom-dcipherer, necromancer, theo-nermancer, theo-rondumancer—thing which in all ages has been one of the most important specialties of the magic art. It is true that the modern definition of it contains the derivatives of professional mourners, and, as Hubert observed, the two occupations are not incompatible. But it has been both. As we shall see below, the old etymologist is not thinking of mourners; he is giving a very good description of a special and particular type of magic which itself was doubtless quite familiar. The μάγος was, no doubt, much feared by the population in general, but he was also more or less a respectable charlatan, and in other respects the associations with a person of his type were such that the three ordinary names of "magic," μάγια appears always to have been the most distinctly pejorative. The prominence of μαγία in this connexion is due to the primitive idea that the action of any drug or magic—using that word in its most extended application—is due to magic power. In its original sense μαγία means the science which deals with the magic properties of plants and simples. Hence the μαγία—in all countries the primitive ancestor of the doctor, the apothecary, and the toxicologist (amateur or professional)—was the magician. The magician whose specialty was this particular branch of the subject, and the μαγία, i.e., the 'drug' which he prepared, was a magic charm. As such, the efficacy of a magic charm was enhanced if it was conditioned, by the incantation which generally is associated with some stage of its history. If not properly discovered, prepared, or given under certain conditions or in a certain way. Of course, its effect may be helpful or harmful according to the intentions of the magician. A secondary use of the word in the sense of either 'poison' or 'charm' isomerism, which is the primary meaning of an adjective (Od. iv. 239). The origin and use of μάγια (Lat. magus), from which, through the substantivized adjective (μάγος, μάγοι) our modern word is derived, are an

excellent illustration of the Greek and Roman attitude towards an alien faith to which alienation has already been made. In its original and restricted sense psyche meant nothing more than the soul of the Persian Magi (e.g. Plato, Alcm. L. 122 A). It is well known that this faith, which was imported to Greece by the Magi about 515 B.C., entered into the great religious systems of the world. But it was imported, and had no official standing; it even though impressive, it was unauthorized. Between the two religious systems the general term for 'magic' as early, at least, as the 4th cent. B.C., as we see from Theophrastus, Hist. Plant. ii. 17, and, perhaps, Aristotle, frag. 263 (though this last is a later interpolation, Dug. Lect. priorum, v. 3), and thereafter retained no apparent traces of its specific and pretentious application. The word psyche was, however, perhaps, used by sophists, and certainly in Greek philosophy the word psyche was, at least, distinguished from the original and distinctive use, as a pejorative term for magic in the general sense. In Latin, as far as we know, the general term for 'magic' is the verb incantare (pejorative) and whatever may be derived from it is religio. The mystics (e.g. Porphyry, De Abstinentia, ii. 49) differentiation theoretically the use of these words; they distinguish between good and bad magic, and this distinction holds good in another very important and extensive branch of divination, one in which one was interested and which all the schools of philosophy, especially the Stoics, investigated and dissected at great length—this was the identification of dreams (αρτορία; see DREAMS AND SLEEP, vol. v. p. 301, and cf. Artemidorus, Oniricon, a curious treatise of the 2nd cent. A.D. which still survives). The method officially sanctioned for divining dreams was that of the magus, and the word incantation was invented, but the magic ārtpo (esp. the Pat. Lingl. Batem., Leyden, 1813-85, v. vii) are full of artorico, formula and charms for obtaining such dreams. Hubert was also interested in this field, and his theories were revived and found their way into the sphere of magic instead of paganism happening to be the official and standard of comparison. For the Romans themselves—at least, after the 1st cent. A.D.—the difference between the magi and the magus, the enepten, the magus, and the magia was only difference of degree.  

Pliny's opinion (HN xxx. 2) is that magic began with medicine, and that the chief causes of further growth were the admixture of religion and astrology (ars mathematica)—all with intent to deceive. In the same way (or series of such speculations regarding the hierarchy of demons) through whose aid the good or the bad magic, no one may be, is able to accomplish its purpose. The Alexandrian school of philosophers undertook to draw a distinction between psyche and the particularly pretended their own. But the magia (De Civ. Rel. x. 9) is too much a practical, clear-headed Roman not to see the essential weakness of the entire theory. It is the worship of God, he says, is the only simple xed a connecting link, not logisms, and the articius aliens adiunctus also analogous, e.g. quae and presence in any purpose. They are, of course, nothing more or less than our familiar old criterion of orthodoxy, the fact that Christianity as orthodoxy must be the official and local standard of comparison. For the Romans themselves—at least, after the 1st cent. A.D.—the difference between the Pagani and the Christian, the one, the other, and the magia was only difference of degree.  

MAGIC (Greek and Roman)
MAGIC (Greek and Roman)

Cretes, of Acarnania.⁴ As such, they were all regarded as servants of the gods and, indeed, as themselves more or less divine; and, in some cases, they were all classed as ἀγάμοι (Noun, xiv. 301 f.; Strabo, p. 601).⁵ Indeed, the Telchines are inimical to the gods and spiteful towards men. They use the water of the Styx in their charms (Nonnus, Dionys. xiv. 36); they are malignant sorcerers, who with the plants ruin the crops, and make barren the domestic animals.

Most notable is the position of these clans in the history of the arts. As the Cyclopes were the servants of Hephaestus, so these semi-divine corporations of men were the first workers in iron from harm (see KOURETES AND KORYBANTES).

The great individual magicians of Greek mythology are Prometheus (Apoll. Rhod. iii. 845; Val. Flac. vii. 335), Agamedes,⁶ Melampus (Apollod. ii. 12, 20; ibid. iii. xv. 14), Agamedes or Perimeide (Roscher, s. c.; Theocr. ii. 16 and schol.), Circe (Roscher, ii. 1193), and Medea (ib. s. c.). The special, though not the exclusive, interest of all is φαρακτεία. Promethes, the father of the deadly word, and the wise Melampus of Thessaly, the distant land of magicians. All the rest (except Enone, and even she a water-nymph) are in some way connected with the sun or—which amounts to the same thing—with the sea or the moon. Agamedes is the grandson of Poseidon. The rest are descendants of Helios. Agamedes is also the beloved of Poseidon. The greatest of all are Circe and Medea—both of the seed of Helios and Poseidon, both from Corinth, the distant land where the sun god himself rises at dawn from the ocean stream.

Circe. — In the Homeric account—the most marvellously correct and sympathetic portrayal in all literature of her curious, abnormal, not quite human, but free dwellers far away in the mystic and trackless seas. Cruel, but no more consciously cruel than the child who separates some luckless fly from its wings, this φαρακτεία, whose special power is metamorphosis, amuses herself with enticing such wandering mariners as come within her reach to drink magic potions which straight-
and commentators—few fail to mention her. Ovid never escaped from her spell. From Homer to the last foible echoes of rhetoric, and again in the renaissance of the modern world, here is a dominant personality, and the story of her love and her lover, her betrayal and her terrible revenge, has never grown less arresting and charming.

As we might guess, Medea is the typical Groeco-Roman enchantress. Her connexion with Hecate, her methods of discovering, securing, preparing, and administering her φάρμακα, and the large preponderance of φαρμακία itself in her theory and practice of magic are all typical of every other enchantress both in literature and in life from Homer to the end of the classical world.

2. Their methods.—φάρμακα are either to be swallowed or to be applied outwardly as salves or plasters. The distinction is medical, but it is also Homeric, and applies equally well to magic at any time. Circe uses a salve to restore her victims to human shape (Od. x. 391 f.); Medea uses another to render Jason invulnerable (Αἴπολις βιβλ. ii. 1041 ἐκ.), and still another—in the form of the essence—to put the dragon to sleep (Ἰβ. iv. 150); in the old Lesbian folk-tale Aphrodite gave Phaon a box of salve which, when applied as directed, gave her youth and beauty (Ἔρως ἔρωτος τινα βοηθάων τινα βοηθάων τινα τον Φαώνα). The shirt of Nessus and the robe of Crenxa belong to the same type. Pampylia (Αἴπολις Μερ. iii. 48) went so far as to have a box filled with little caskets, each containing a special salve for a given metamorphosis.

Quite as ancient and characteristic is the φάρμακα taken as a drink. So Helen, herself a sorceress, administered her cup to Nestor (Od. i. 229—232); so Circe effected all her transformations (Ἰβ. v. 237); so Medea performed some of her feats. And here, again, the method is typical of later times. One branch of it—the use of φάρμακα in νομολογία (κ. a. drinks to inspire love—is perhaps the commonest and most characteristic feature of all ancient magic. It is to be noted here that in Circe's case the process is not completed until she touches the victim with her ἱδρέα, or wand (Od. ii. 140). In art Medea is frequently represented with a wand; with a wand Athena makes Odysseus look young again (Od. xvi. 172); so Hermes overpower our senses (Ἱ. xxiv. 343; Od. v. 47); and, as every one knows, to this day no national gathering of a public nature is complete without the use of the wand; such a wand seems to be an application of the doctrine of sympathy. It facilitates the transfer of the magician's power to the object upon which he wishes to exert it. But in all cases the wand is a help rather than an actual necessity. Except, perhaps, in the case of the gods just mentioned, who, as such, are too powerful to need it, the really essential thing is the φάρμακα, and, as we have seen, the Groeco-Roman theory of magic presupposes that Circe had already prepared her φάρμακα to the accompaniment of the proper charm, and that Helen and Medea had been similarly treated either by herself or by the specialists from whom she had procured it.

The same rules hold good for φάρμακα in the art of healing. The sons of Antolyos bind up the wound of Odysseus, and stop the flow of blood with an ἱεροῦ (Od. xii. 457); the divine physician, Ἀρεάπης, follows the same methods (Πεν. Πυθ. iii. 52; cf. iv. 217; schol. Ἰσμ. vi. 53; cf. Soph. Ἄνδρ. Col. 1194 (ἐκ.), and at all times the use of inunction with a remedy was no characteristic of any of our richest sources for the study of φάρμακα as magic is the works of the physicians from Hippocrates to Marcellus. Not that men like Hippocrates and Galen were much impressed by the magic of medicine; but their patients were, and any good doctor learns that his most powerful allies are the patient's own determination to recover and his belief that he is getting well. In popular medicine, of course, the survival of magic is much more marked. Here, too, the practice of pre-Periclean times is typical. The case of Iphicles (Ἀπολλ. τ. ι. 12; Ῥοσχέρ., ii. 306) is an excellent example.

For ten years Iphicles could have no children. At last he consulted Melampus the seer. Melampus, whose specialty, like that of Mopsus the Argyarch (Ἀπολλ. Βιβλ. iii. 156), was the language of birds, consulted the vulture. The vulture said that ten years before, while castrating rams, Iphicles had threatened his father Phyesus with the knife. It was then discovered that the knife had at that time, and presumably by Phyesus himself, been struck into the tree with which the life and well-being of Iphicles were bound up, and men seek the tree ever since. The knife was removed, the rust scraped off and prepared as a φάρμακα, and, when Iphicles had taken it as prescribed, he immediately recovered his powers. Similarly, the wound of Telephus could be cured only by the rust on the spear of Achilles by which the wound had originally been inflicted. The principle is, of course, frequently illustrated in the later history of Groeco-Roman magic. It appears in our own homely saying that 'the hair of the dog cures his bite.'

3. Other branches of magic referred to in this period are engraving and incantation. According to Homer (Od. v. 516 ff.), Odysseus learned from Circe how to call up the dead, and the ceremonial of necromancy, as the poet pictures it, always remained practically the same. Indeed the antics of Εἰμίκλαθα, as described by Diog. Laert. (viii. 53, 62 ff.), show clearly that the type of the ψευδής became finally fixed at a very early period. Again, the bag of winds given by Αἰώλιος to Odysseus (Od. v. 16 ff.) repeats the symbolism of wind and weather magic in all times and countries. The same is true of the primitive rustic magic attributed to the Telchines. Finally, the love-charm known as 'drawing down the moon' was certainly familiar long before the time of Sophron, who, according to Plutarch, was a contemporary of Cicero. Presumably this charm was from the first looked upon as the special property of the Thessalian witches. At all events, the idea was firmly fixed in the time of Aristophanes (Νυφ., 749) and was never afterwards forgotten.

III. FOREIGN INFLUENCES.—We have seen that, in conformity with the law of distance in time or space or both, the early Greeks attributed special magic powers to their alien predecessors, the Egyptians, Babylonians, Synes, and Cyprus; and that the Pelasgi—and that unusual activity and ability in magic were attributed to what at the time were felt to be so many distant countries as Colchis, Egypt, Thessaly, and even the Islands. As time went on and the horizon of the known world became correspondingly wider, such local centres became pari passu more and more distant, and the strange tribes of the African deserts, the mysterious nations of the Far East, and the still more mysterious peoples of the Far North took their turn as redoubtable magicians.

But the primacy always remained with Thessaly. In the time of Aristophanes as in the time of Apuleius, Thessaly was the centre, if not the birthplace, of magic and magicians. The literature is full of it, and evidently the literature was in this respect a faithful reflection of average opinion in the world at large. Numberless passages might be cited to show that in the Athens of Periclean days in the Rome of Augustus and the average professional enchantress found it 'good business' to advertise herself as a 'genuine Thessalian.'

Orphism.—Thrace too, though Pliny (H.N. xxx. 167) gives us no hint that the Thracian Persians were of the right age to have given a Thracian Orphism, tells us that the Thracian Persians were of the right age to have given a Thracian Orphism.

2 W. Mannhardt, Antike Welt- und Feldkulturen, Berlin, 1877, p. 32 ff.
MAGIC (Greek and Roman) 275

1.) denotes it, was another famous locality for magic. But Thracian magic, as Hubert warns us,1 was really another name for Orphic magic. Now Orphism itself was not essentially magic; on the contrary, it was not only a religious movement, but a religious movement of the most momentous importance in the spiritual development of classical antiquity and ultimately of the entire Western world (see ORPHEISM). But it was heterodox and, therefore, "magic." Indeed, it was to be the first great and definite example within historical times of the imposition of a strange religion on Greek orthodoxy. Aristophanes and his fellow poets make all manner of fun of the Orphics and Orphic poetry. Cicero (Natural History, Book 3, 72) mentions the pseudonymous poet Musaeus, who claimed to be the author of the Orphic Hymn to Apollo, which Cicero attributes to Homer. But Orphism itself suffered from the fact that, being a strange religion, it was at once classed as mere magic. As such, it had no standard and inevitably began to deteriorate. It justified more and more its new name of ordinary magic, and its adherents assumed more and more the habits and point of view of ordinary magicians. On the other hand, ordinary magic was enriched and enlarged, its usual, by contact with new principles and methods of procedure. Here, of course, we have one important reason for the incomparable wealth and variety of Greek-Roman magic.

But out of all these foreign influences on native magic the religion of the Persians, i.e., of the Magi, was perhaps the most important. At any rate, in the ordinary opinion of later times it was the type of all such influence in general. And in fact the Magi were the most prominent of all the native rivals of the new combination of magic. As we have seen, this was not later than the middle of the 4th cent. B.C.; we are therefore safe in assuming that by that time the Orphic name had, as it were, become a synonym for magic. Afterwards generally accepted, that the original fountain-head of the new combination was Zoroaster, the Persian. The intrusion of Zoroastrian magic is characterized by a refl ected light on the later history of the subject. It was not absent, as it was popularly believed in the ancient world that great scholars and sages—especially if, like Pythagoras, Ephemerides, Democritus, and even Plato, they had also traveled in foreign parts and had been vociferous in the indefatigable mysteries of the Oriental religions—were thereby mighty magicians, if not actually the first to reveal their wonders; they are the world at large [Val. Max. VIII, vii, 7, ext. 2; Solinus, 3; HN xxx. ff., xxiv. 156 ff., xxv. 13 ff.]:

1) B. R. 1349.
2) For formula attributed to Orphus see E. Abel, Orpheus, Leipzig, 1885; R. Wünsch, Rhein. Mus. 14 (1860) 78.
5) Lobecck, p. 625.

Plut. Sympos. viii. 8; Aub. Gell. x. 12; Apul. de Mag. 27, 31; Diog. Laert. ix. 7; Lucian, Neugenteu. 6; Apoll. Tyan. Ep. xvi., we now hear that Pythagoras was a pupil of Zoroaster; indeed, we are told that he was also a pupil of Zara- 

tis the Chaldean (Lobeck, Agygophares, p. 471). Democritus broke into the tomb of Dar- 
amus in order to secure the wonderful MSS buried with the dead; and others say that, after being initiated by the Persian Orphics, he became one of the fountain-heads of the tradition of alethno-

Of these Persian sages associated with the tradition of Greek-Roman magic the most famous was Oesines (HN xxvii. 8, etc.). His special prominence was partly due to the belief that he had committed to writing all the voluminous and unutterably precious but, until his time, entirely oral tradition of ancient magic (ib.). The first book that we know of was that of Oesines (ib. xxviii. 6), and also certain apocryphal books on alethnos.1 Of all the authors on magic he is the most frequently referred to, and his name may be found cited as an important authority in "dream-books" still found in many places.

As we shall see, all this foreign influence on magic was much discussed by the philosophers (Diog. Laert. prooem. 1). One of the most notable contributions was made by the poet, especially the poet of the alleged Orpheus, usually attributed to Aristotle (Frgg. Arist., ed. Rose, frag. 32 fl.). Suidas (s. r. Antithesenes) does well to doubt Aristotelian authorship, for the symphonically childish statements referred to are eminently uncharact eristic of that residuary legatee of Hellenic thought, the hard-headed and highly intellectual Stagryte.

IV. ITALIC MAGIC.—The traditional history of Italian magic is not so well attested, but the assumption that it has been more highly developed than the rest is not without foundation. It is illustrated by Pliny's typical anecdote of one Furins Chreemius (HN xviii. 41), and as late as the 6th cent. A.D. we are told by Agobardus of Lyons, de Grandine et Fontanae, 2 (PL civ. 148), that in his time Satan was so powerful that he himself had formed a sort of trust and were transporting all the crops in air-ships to a land with the significant name of Magoniam.2

A certain amount of magic of this primitive type is preserved by the Varro de Agr. 701, 73, 96, 102, 127, 156-169) and Varro (de Ec. Rust. 1. ii. 27) and is more or less discernible in later authors (e.g., HN xi. 3, xviii. 4; Sen. Quest. Nat. iv. 7; Serv. on Óv. viii. 99; Aug. de Civ. Dei, viii. 10; Pallad. i. 35). It will be observed that the only difference here between magic and religion is that religion is officially sanctioned, while magic is not. The effect of the law of the Twelve Tables is simply to establish this distinction from the legal point of view.

Divination, as usual, occupies a more or less indefinite position between religion and magic. Hence neugenteu. was practised to a certain extent by private individuals, and Creco's accusation of Vaticiniae (in Vatici. vi. 14) is not so extraordinary as it sounds.

MISTRES ROC., Paris, 1888, ii.

2) Brunck, p. 590.
The usual term for a magician is magus, but the word does not appear until Cicero's time. T. Pline (1,1) states that the
name is derived from the verb magere, meaning "to be weak",
and that it was given to a man who had no real power,
which seems to be the origin of our word "magician." The
word magus is doubtless associated with the Persian word
"magus," which means "wise man," and with the Greek word
"magos," which means "wise man." The Persian word is
likely to have been borrowed from the Greek word, and the
Persian word is likely to have been borrowed from the Greek
word. The Persian word is likely to have been borrowed
from the Greek word, and the Persian word is likely to have
been borrowed from the Greek word.

The word "magus" is found in the Bible, and the word "magi"
are mentioned in the New Testament. The word "magus"
is also found in the Book of Isaiah, and the word "magicians"
are mentioned in the Book of Zechariah.

The word "magus" is also found in the Book of Job, and the
word "magicians" are mentioned in the Book of Judges.

The word "magus" is also found in the Book of Psalms, and

and the word "magicians" are mentioned in the Book of
Revelation.

The word "magus" is also found in the Book of Revelation,
and the word "magicians" are mentioned in the Book of
Revelation.

The word "magus" is also found in the Book of Revelation,
and the word "magicians" are mentioned in the Book of
Revelation.
MAGIC (Greek and Roman) 277

Theoretical philosophy was violently attacked by the Sceptics, Epicureans, and Cynics (Philos. Apoll. Lyric, vii. 39). Among the most important works were the Kæro Megro of the Epicurean Celsus (probably the adversary of Origen, and the one to whom Lucian dedicated his Pseudomantis), and the Παιρων Φύσιν of the Cynic Enomax. The Porphyr Magonides of Sextus Empiricus still survives, and it is usually dreamy reading. Lucian feels that the wandering priests of the Syrian sect were better than any other magicians. All magic is a mere pretence, all magicians are hypocrites, rascals, and charlatans, whose object is to play on the credulity of the average man.

The Christians.—The attitude of the Christians, as we have seen, was different. According to Origen, Celsus had no right to deny the reality of magic; Augustine was quite certain that the rites used for summoning demons were efficacious (de Civ. Dei, xxvi. 6); and in general are far from denying the existence and power of magic (Epiph. Hær. xxxiv. 1; Tert. Apol. 35, de Antim. 37; Ens. Prop. Evang. v. 14), especially in those early days when it seemed necessary to make the sharpest distinction between the Christians and the Gnostics. All heretics in general and Gnostics in particular were magicians and their faith was magic (Iren. Hær. i. 13 ff.; Justin Martyr, Apol. i. 26). Paganism in any form was magic, and ancient philosophy was often nothing but magic. The difference between gods and demons was merely a difference in degree; for the Christians there was an absolute opposition between the two: God was good, all the demons were evil; the pagan gods were all demons, therefore all the pagan gods were evil. Any and all marvels which did not happen to be orthodox were the work of the demons.

It will be seen that this is really the familiar old distinction between the orthodox and the heterodox, with a much greater emphasis on the secondary conclusion, also ancient, that the one was good and the other evil, per se. And the same old distinction carried with it the same old assumption that the one was just as true and real as the other. The Christians never seem to have realized any more than did their pagan forefathers that the difference between their gods and other people's gods might conceivably be the difference between some gods and gods who were, under the old name, demons. The only way to deal with the pagan gods was to classify them as evil demons (Tatian, Orat. viii.). They were just as real as ever; the marvels and prodigies attributed to them were just as real and just as really believed as ever; it was merely insisted that the same had been wrought with intent to deceive. The 'idols' still nodded and gave signs from time to time, just as they had always done; but that was a mere operarius wrought by the demons of the old religion (Iren. Hær. c. 28. 2; Ens. HE ix. 3). The persistence of this old prodigy of nodding, etc., is an interesting proof that the Christians still clung to the old pagan idea, more or less generally entertained by the less educated class, that the gods actually inhabited their statues. Many a priceless example of ancient art has been destroyed for this reason, and the idea still survives in the famous medieval story of the 'Ring of Venus.'

Of particular interest to the student of magic of this strange period are such surviving treatises as the Polimondres of Hermes Trismegistus, Asclepius adversus Dialectus Hermeticus Triunnegati, the Hero-glyphica of Heropollon, and the astrological works.
MAGIC (Greek and Roman)

of Nechepso and Petosiris.\(^1\) The literature of the magic oracles belongs to astrology as well as to magic proper. Another important work is the Tetrabiblos, a work of slightly later date. It is the magic encyclopedia, so many of which have come to light in recent years.\(^2\)

The magical papyri.—But most important of all are the magical papyri which continue to turn up from time to time in Egypt. Ehrilber\(^3\) gives the list of those published down to 1904; for later finds and their discussion, the reader is referred to Von Christ (op. cit.), L. Mitteis and U. Wilcken, Papyrologische Mittheilungen (Leipzig, 1912), the Archiv für Papyrologie and the occasional reports in Bietzian’s Jahrbuch der Griechischen Alterthümer.

The magic papyri belong for the most part to the period between A. D. 300 and 500. Their discovery is peculiarly fortunate in view of the fact that they belong to a type which came under the ban of the law, and which some of the later emperors, notably Diocletian, made sedulous efforts to destroy. They are not original and independent works, but merely handbooks of magic, and, as might be expected, the editorial tradition is very poor. There are often different versions of the same thing; sometimes the hymn or formula in one version will be considerably abbreviated as compared with the same hymn or formula in another version; again, certain magical words and magical formulas are often merely indicated. It is therefore extremely difficult to reconstruct any complete and trustworthy text of this type.

The authorities habitually quoted and the sources, so far as can be traced, seem to us naturally to bear out Pliny’s statements in his account of the growth and development of magic. Pliny distinguishes three principal sources of ancient magic: (1) the Persian school, founded by Zoroaster and containing 20,000,000 words of magic, and, (2) the second is the Jewish school, descended from Moses, and (3) the third is a Cypriote school.

It will be observed that Pliny makes no reference to the Egyptian school, which was particularly important. However, so much of it has come down to us in the papyri themselves. One of the most important authorities in magic alchemy is Maria, the Jewess, but the papyri also refer to real philosophers like Thales, Anaxagoras, Heraclitus, and Diogenes. The genuine magicians, i.e., the contemporaries or recent authorities, are generally referred to under such names as Zosimus, Synesius, Olympiodorus, Pelagius, and Iamblichus. Now and then we find such curious and characteristic documents as a letter of a magician to Nephotes to ask his advice, a charm of Solomon, or a letter of Pitys, the Theessalian, to Osthene. This gives some idea of the attitude of the Alexandrian magicians towards the tradition which they followed.

It is no longer possible to trace the Persian, druidical, and Brahmanical elements in this strange compound. Assyro-Chaldean influence must have been strong, but it appears to have been indirect. Jewish influence, on the contrary, was both strong and direct; the magic papyri being strongly affected by Judaism. Jewish magicians were in evidence, and they doubtless encouraged the impression that they were the only depositories of the genuine tradition of magic. That, after all, is the Tetrabiblos, so many of which have come to light in recent years.\(^2\)

1 See W. von Christ, Gesch. der griech. Litteratur, Munich, 1869, p. 289, for a discussion, etc.

2 See esp. W. S. Fox, ‘The Johns Hopkins Tabellae Defunctae,’ AJPh. Suppl. to vol. xxviii. (1912) and references.

The fundamental purpose of magic is to compel by supernatural means; the primary object and supposed result of every charm is some form of constraint. Possession or obsession (e.g., possession by an evil genius) is a constraint, any form of metamorphosis (such, e.g., as lycanthropy) is a constraint, *fronsinatio* in all its numerous forms is a constraint. The ancients habitually associate the processes of magic with the ideas of binding, tying up, or constraining. A magic act is a *katademos*, a *katakeiosis*, a *defecio*, a *devincio*; the removal of its effect is an *aeloia*, a *soluto*, and the corresponding verbs are, e.g., *katakeiosis*, *defeo*, *aeloia*, *soluo*. The language of charm is full of the details of ritual, and is largely suggested and guided by some form of this fundamental idea. One sees it most clearly in such symbolic acts as the tying of knots, the driving of nails, and the binding of images.

are all founded, are simple, universal, and eternal.

The virtue of lead for certain purposes is due to the fact that it is heavy or cold or indigestible, etc. One of the most important applications of the doctrine of sympathy is the use of symbolism. As we have already seen, symbolism is even more characteristic of magic than it is of religion. Hubert defines two methods. In the one, which is particularly dramatic, the person or thing upon which we wish our magic to act is represented by any notion the magician may choose, and the objects which are supposed to affect the symbol are supposed to form a sort of magic key to the effect. In this class is the use of clay and waxen puppets. The second consists in prefurnishing the desired action and result (Tib. i. vi. 53 ff.; Soph. Aes. 1175—

e.g., apply a stone to a wart (contact and sympathy), throw the stone away (sympathy), and the wart goes away. If, however, you have a pain in the stomach, apply the stomach of a frog to the part affected, and your pain becomes his pain, etc. (I. xii. 149; Marcellus, xxxv. 125).

The same idea of contact and sympathy creates the familiar rule of magic homeopathy, that the cause of a given thing is also its remedy. But, so far as magic is concerned, perhaps the most momentous deduction from the doctrine of sympathy is the rule that the part may stand for the whole, that the two are inseparably connected; the part is able to draw the whole to itself, if aided by magic. What Vergil called the *cercus* of Aeneas had a special function and a special significance in the pretended *soluto amoris* of the unhappy Dido (En. iv. 494 f.). Without assuming the active co-operation of this principle, we cannot appreciate the true inwards and performances of magic in classical antiquity. If, for instance, a magician can secure bones of the dead, he has a special and powerful means of calling up the dead to whom those bones originally belonged (Tib. ii. 46)—which is the important reason why witches were so often accused of haunting the graves (Hor. Nat. ii. 8; Lucan, vi. 590), and in primitive times the principal reason why the corpse was so carefully watched until it was safe in the grave (Petron. 65; Apul. Met. ii. 21). So, too, if we wish to reach the living, it is very important to possess a lock of their hair, the parings of their nails, a garment, or anything nearly or remotely associated with them. Nothing is more intimately and entirely part and parcel of a thing than its real name. 'Rome,' it is said (Tib. i. ii. 57 f., with the present writer's note; Macrob. iii. 9; H. N. xiii. 18, ii. 65; Plut. Quast. Rom. 61 [p. 270]), Sert. and Solinus, 1; Lydiv. de Mens. iv. 78), is only the alias of the great city with world dominion. The true name, i.e., the name which would have enabled her enemies to conjure against her, was a religious secret. So the clay or wax image may be comparatively harmless until it has been

1 Hubert, op. cit. p. 1506.

2 See esp. GDB, pt. i., The Magic Art, i. ch. 3.

ceremonially named with the true name of the person whom it is meant to represent. The results of the incantation are not only words which are an integral part of the things which they represent. A similar relation exists between the verb, or the sentence, and the action described by it. Hence, of course, the theory of incantation as opposed to that of prayer in the modern sense. From this point of view the lines of Euripides (Hippol. 475 f.), 

εἰς τὴν ἐγκατάλειψιν καὶ μὴν δολοδομησθεν

ναοῦς τε τὰ ἑτερορροιον νεκρῶν,

echoed by Horace (Epist. i. 134 f.) in

'sunt vera et voce quisque hunc lenire deore

discursus; et quum quosque sonum voces

are not true only of magical theory in general, but of the Greco-Roman conception of magic in particular. Incantation is rarely, if ever, absent from some stage of the act. The influence of the indirect method is seen even more clearly in the fact that sympathy is often created by the incantation which accompanies the act (e.g., HN xxvi. 93). In the exorcism of disease the incantation is often sufficient in itself. Again, a mere verbal comparison is sufficient, especially if accompanied by a gesture.

'Salutem sit quod tange!' ejaculates Triunachio piously (Petron. 63), to avoid possible consequences when he touches his friend's arm to illustrate where and how the unfortunate character in his story was touched by the witch.

Given, therefore, the right words in the right order and pronounced in the right way, the desired results ensue. But which words? Ancient formulae connected with or naming the appropriate gods are, of course, valuable, but in many cases nothing can compare with ancient words in anutterly incommunicable tongue. The most famous example in antiquity was the so-called Ephasis Gramatov attributed to the Daetylis.

But it is by no means necessary that an incantation should consist of what, even in the most general sense, could be termed articulate speech of any sort. Music, e.g., as much is distinctly magical. The great musicians of mythol-

Apollon, Orpheus, Vainamoinen, etc., are always magicians. We no longer attribute the power of music to magic in the literal sense, but primitive man can hardly be blamed for doing so. The ancient doctors made a considerable use of music in their practice, and we ourselves have learned that it is sometimes distinctly beneficial in certain obstinate nervous disorders of long standing.

Here, however, one particular concern is with a class of sounds which are anything but musical, but which are mentioned again in the literature of the Empire as being especially powerful and efficacious in magic incantations. Lucan, vi. 686 ff., tells us that all the sounds of nature were imitated by such an expert as Erichtho, and does not fail to add his usual and characteristic catalogue. But Lucan is too anxious to tell us all he has read in his uncle's library to be of any great value in a matter like this. Whatever they afterwards may have become, we can be sure that these phenomena were simpler and more specific, that they were probably inspired by some aspect of the doctrine of the senses, and not used for any general purpose. The Romans habitually describe them by stridor and stridere. The sounds to which these words are applied are many, and vary from the flogging of a saw to the cracking of a door and the shrilling of a locust. They are elicited, in being articulated, high-pitched, and disagreeable. The obvious and instructive parallel is the primitive Greek ἀγγέλος. The γοητεῖς were specifically necromancers and, as we saw above (p. 271), they were supposed to have received their name from the most notable peculiarity of their magic, viz., 'from their wailing and crying among the tombs.' So, long afterwards, in Greco-Roman times the charms described by stridor and stridere are very characteristic of necromantia. If so, and we can hardly doubt it, the inarticulate magic charms commoted by these two words should be just those described as 'wailing and crying.' If this be true, then they par excellence should be called up the dead. Such being the case, the two most common and characteristic uses of stridor and stridere outside the sphere of magic itself are illuminating. (1) One of these is that of squawking and shrieking—usually in gathering of the dead to which the ancients so often refer:

'Ecce inter tumultuos atque osse caretvis hastis Umbrarum facies direo stridere minax' (Petron. casii. 182); 'auribus incertum ferialis stridere umbra' (Lucan, vi. 626; cf. Stat. Theb. vu. 770; Sil. Ital. xii. 600; Claudian, in Iul. l. 126; Ovid, Fasti, v. 458; Verg. Aen. vi. 4911; Hom. Od. xxix. 2; and Hor. Sat. i. 8. 405).

By the doctrine, therefore, of sympathy the stridores of the necromancers were an imitation of the wailing and crying of the dead, and owed their efficacy to that reason. (2) Stridor is regularly used to describe the hoot of the strix, or screech-owl—that long-drawn, shuddering scream that suggests nothing so much as the laugh of a banshee, the meaning of souls that can find no rest, the ominous cry of the βασιλίσσα, questing ghosts of those who died before their time (see HECLAH'S SUPPERS). No wonder the strix is the most remarkable of the private witches in most folk lore. Owls, disembodied spirits, or necromancers calling up those spirits—so far as the cry alone was concerned, how was one to be sure which was which? As a matter of fact, all three were more or less inextricably confused with each other, and there can be no doubt that the cry had much to do with the situation. The strix is associated with all sorts of witchcraft in antiquity, but especially and above all with vampirism in its various forms (see the present writer's note on Tib. i. v. 42). The classics are rich in examples of the type which happens to be more familiar to us, especially in the erotic sphere. The return of Proteusia is a case in point (Roscher, s. v.), also the story of the Lamia (Philostr. Apoll. Tyg. iv. 25) immortalized by Keats, and the simple and touching tale told by Phlegon of Tralles (Mireb, i) which is the prototype of Schiller's 'Braut von Korinth' and Gautier's 'Morte Amoureuse.'

But witches are, of course, recognized whenever they like, and they do so regularly, when their object is some form of necromancy.

Ovid, Amor. i. viii. 15-18, speaking of Dipsas, the reh autobalg sage with eyes of different colours ('papula duplex'), says:

'Hanc ego nocturnas versam volitare per umbra

Supplicer et pluma corpus ante tegi;

Supplicio, et hanciter; soleaque papula duplex

Fulminat et genium hunc ab ore miscat;

Erecat antiquis praevos statorne sequemur.'

Et soli auge curante carmine hamann.'

But the ever present and most gruesome side of this idea, as of magic in general, is the sexual side. Most frequently the witch is like Amphitrite in Apuleius (Metam.). She uses her love to persuade a strix to fly to her lover; she neverceome to him as a human and normal woman. The fires of hell are in her eyes, the fires of hell are in her veins, the taste of blood and death is on her lips. She is the erotic vamp of the Middle Ages—who haunts her victim in his dreams and little by little draws to herself the very narrow in his bones. Hence it is that the Greco-

Roman screech-owl, who, even her name describes as phlegon substantially says (HN x. 34), seems to make no effort to look or act like a well-meaning and self-respecting fowl of the air, behaves quite as

2 E. Rohde, Psyche, Tübingen, 1897, p. 64; often in the paper.

3 See E. Kuhnert, in Paulay-Wissowa, v. 2773-2778, and refer-
much to the kingdom of dreams as to the kingdom of birds. How can one be sure in any given instance whether the steir is a real steir or a witch in the form of one (Ovid, Fasti, v. 111). Indeed, as clearly as Plutarch (Pseudep. 105), Procris (ib. 17), striges always meant ‘witches’ as well as ‘screach-owls,’ and this designation of what is evidently the Roman parallel of the old Greek phober records a popular belief which showed no tendency to diminish in later times.

2. Sources of magic power. — Our surviving testimony is insufficient to give us a very clear idea how the powers of the classical magician were derived or from what sources they were supposed to be derived. For example, as Hubert remarks, the magician was like the priest in being closely associated, if not actually identified, with the god whose power he was utilizing, and perhaps in the ultimate issue this even is so. Particularly notable was the development of this principle among the Alexandrian theurgi. Here, of course, the characteristic Greek-Roman preference for the indirect method afforded a favourable soil, but, without doubt, the chief factor was the direct influence of the Egyptian theory just mentioned.

But, granted that he does identify himself with the god, how does he compass it? Is it a gift, or does he acquire it, and if so, how? The theory emphasized by theurgy that it was acquired, and the methods recommended indicate in themselves the effort to raise magic to the level of a religio-philosophical system permeated with the ideas and ceremonial characteristics of mystic, ascribing even to the initiate the power of the great sage. In this sense, the magician must be an adept. Such persons may have a revelation coming to them more or less directly by way of the fallen angels or the archangels (Tert. de Idol. 91, A.D. 33). Indeed, Plutarch, as Hubert remarks, was instructed by God Himself. Gods, kings, great philosophers, and sages of old loom large in this aspect of later magic. The 'Book of Moses' gives us a good idea of the complicated ceremonial through which the candidate was supposed to pass in order to arrive at the perfection desired. There were recoveries, sacrificial rites, invocations, and, to crown all, a revelation of the kosmoperas (how the universe was made and the secrets thereof). This put the initiate in relation to certain specific gods, as appears to have been the idea of the Egyptian prototype, but with the stars and planets, i.e., the universal powers. The magician, especially the magician-philosopher, derives his power from the world with which he has in some way established rapport with the universe; and, as there is also rapport between all the parts of the universe, he has extended his power over the entire universe as a whole. This, of course, is the old doctrine of sympathy on a particularly grand and impressive scale. The result of the ceremony is that the magician, the theurgus, is himself no longer a man, but a god.

This is a conception calculated to appeal to any man whose imagination is still in working order, but it does not emerge clearly in ordinary magic. It belongs rather to mystic magic, which was the special development of serious souls, some of them really great, who believed that this world would lead them to the undiscovered secrets of life, death, and immortality. To speak in terms of the average man and of the history of the art as a whole, the ideas which determined the powers of the magician were much the same as those which dictated the choice of a magic object or the construction of a charm, and which, in fact, are fundamental in the art of magic as a whole. Generally speaking, magic is a gift and, as such, it is often due to some accident of birth or to some external privilege. In some instances, the power is transmissible; again, it can be outgrown or easily lost. Children, e.g., merely as such, sometimes possess it. Virginity has always been considered an important condition of the power to prophecy (Geopon. xi. 4. BiA Accurs. 21). We have already seen how important they are in the mythology of Greek and Roman. This is true of all magic. They are less prominent in the mystic and their brethren, but this is itself symptomatic of the ideals and pretensions of the movement. In the genuine, traditional, inerrational life, the day-by-day life in Greece and Rome they never lost their importance. As a phantasia, Medea was typical of her sex. The knowledge and practice of phantasia as a branch of magic were always more or less confined to women.

The distant, the sacred, the uncertain — the unusual, even the horrible, are all important factors. Magic is a primitive name for anything abnormal. Those who come from distant countries, especially it, like the Brahmins (Philostor. Apoll. Tyron. ii.), they are also the seers of strange and remote religions, are magicians. Hence, on the principle of 'omne ignotum pro magnifico,' there are distant countries in which all the inhabitants are magicians or possess the evil eye or some such uncanon gift. Any person who has the evil eye is a magician; so, too, the ventriloquist (schoi. Aristoph. Thesm. 1014; Plato, Soph. 232 C; Plut. de Deucta Orac. 9). Anything abnormal about one's birth or pedigree is likely to give one magic power. The child of incest, especially of deliberate incest, is bound to be a magician. This was harped on continually in the witch trials of the Middle Ages, but it is also prominent in ancient tradition. It is certainly in connexion with certain specific gods, e.g., the god of nature. He has established rapport with the universe; and, as there is also rapport between all the parts of the universe, he has extended his power over the entire universe as a whole. This, of course, is the old doctrine of sympathy on a particularly grand and impressive scale. The result of the ceremony is that the magician, the theurgus, is himself no longer a man, but a god.

3. The powers invoked. — But the most characteristic feature of Greek and Roman magic is the universal prevalence of the indirect method and its influence on the development of the art. So far as Greece and Rome were concerned, the theory of demons — those spirits to whose action practically every phenomenon is due — was as characteristic of the world as large as it was of Plato and his

2 Dieterich, p. 150.

5 Dieterich, p. 535, n. 1.
followers (Plut. de Def. Orac. 10). Diseases were caused by specific demons, panic was caused by Pan; such figures as the Eryx, Nemesis, Pallas, Iphigenia, the Major, Arachne, and others are not only popular but very old. There are even demons whose only function is to execute the commands of the magic tablets deposited in the baths, and there are others who are merely divinatios, or divinations. The efficacy, c.g., of the Iex demons, as Hubert observes, the creation of a demon or of a special god—a curious but characteristic retention of the primitive view that nothing in this world can happen or be except by the individual exertion of some supernatural power. The magician may find it necessary or advisable to consider other spirits besides the specific agents of the phenomenon in question. He cannot be sure of success beforehand. He may make mistakes, and fail utterly in a god. ... of the power of a magician as contrasted with its successor was the inability to make a sharp distinction between gods and demons. The obvious criterion would be power or disposition. Neither were trustworthy. Some demons were greater than some gods, some gods were the uncannily malignant as some demons were beneficent. The demons, therefore, were not the only powers to whom the magician addressed himself. The dea Trinomia, for instance (Greek law, III. vi. 8); indeed, Pindar says (Pyth. iv. 213 ff.) that it was Aprodite whom she taught Jason how to "draw down the moon"; and so the magician would naturally turn to them (Apol. de Mag. 31). The preference is, of course, for the dea Inter—Hades, Demeter, Persephone, Bank, the Praxidikai, the Eryxines, Gaiya, Cybele, especially those who, like Hecate, Selene, and Hermes, habitually pass back and forth between the two worlds. The greatest of all, the dead souls or resurrection of magic and magicians throughout antiquity, is Hecate—Selene, the Dea Trinomia of the cross-ways, and the queen of the ghosts, who sweeps through the night followed by her dreadful train of quaking spirits. Her power is universal, but she is specially connected with the magic of love, metamorphosis, and φάρσαλαι. The most famous and dramatic incarnations of antiquity are associated with her. The ἱματις, the ὑπάτα, the σελενία, the rerobolnay, the messengers—a regular hierarchy of demonic officials, whose rank and functions are established and fixed with meticulous exactness. The only private citizens in this government are the ordinary human man and woman, sometimes attributed to the success of some magic rite. The magic charms of the later period are full of invocations to demons—demons of all kinds and descriptions and exercising every imaginable function, but all of varying degrees of infernal character. Some of them occur only in the tradition of magic itself, but the large majority are common to both magic and religion. Most important here are the demons, Plato himself (Sudios, s. v. sychia), as well as the aversion of his may be nearly human and therefore so much in sympathy with the magician himself as to take a really personal and lively interest in furthering the matter in hand. All this question of rank and functions was carefully discussed by Proclus and Porphyry (de Mysteriis, Kegygi), and, in fact, the prominence of it is perhaps characteristic of their school and period. This school, it may be observed, made a distinction between good demons and bad demons, attributing the errors of others to the latter. The magic arts have much in common with the Jewish angels in their function of divine messengers, and even the old pagan gods, reduced to

7. Huenen, p. 21 n.

the rank of demons, became messengers of the universal deity (Aug. de Civ. Dei, ix. 19), while the archangels, Michael, Gabriel, etc., take rank with the gods. The archontes, the Cereri, as the planetary gods of the planets (W. Anz., TU xv. [Leipzig, 1857] passim). With Christianity the old gods became demons, and all were considered evil. But magic, the conservative of conservatives, never gave them up, though as the nouveaux riches without distinction were in the service of the devil.

One of the most important classes of demons connected with magic are the spirits of the dead, the νεκροδιανευστη, especially those who, like the ἄνουργα, died violent deaths or survived their time, or never received proper burial, and therefore cannot rest in their graves. The heroes, so to speak, have a somewhat higher social position, but they too are important in magic.
MAGIC (Greek and Roman) 283

this was more or less concealed or defaced in the magician's characteristic effort to get at the true name, the name of power for the now somewhat vague supernatural force which he wished to utilize. Having the name and also the image of the god, he could use the force for anything desired, it being understood, of course, that such accompany ceremonies had been performed as were appropriate for realizing the mystic presence of the god.

4. Rites and ceremonies.—Thanks to this habit of pluralizing for power, of summoning from the living all kinds of strange and, therefore, particularly irresponsible forces, a magic ceremony was even more complex than a religious ceremony. Especially notable in all ages is the number of conditions and precautions which have to be observed. This is characteristic of any cult in which the theory of incantation still survives. Under such circumstances the immediate conclusion always is that religion is a perilous pursuit. Any man who approaches gods with an invocation so worded and presented that it is a command which must be obeyed knows that he is handling an edged tool able to cut both ways. The gods resent the imperative, especially from an inferior, and will destroy him if they can. The human account of the death of old king Tullus shows how dangerous it was in their opinion—even in religion, much more in magic—for an amateur to start the complicated machinery of invocation. There was an old belief that the charm against the draws down the moon finally draws it down on herself.1 The saying reflects the general idea, afterwards so strongly emphasized in the Middle Ages, that the magician, of all people, is foredoomed to something like a Tullus Herminius in the end. The Greek is also apt as a specific illustration. It was generally held that of all charms one of the most difficult and dangerous was 'drawing down the moon' — so dangerous, in fact, that the magician deemed it wise to arm himself in advance with a protective counter-charm against the very power whom he was about to invoke. The Δημοκλῆς τοῦ Σελήνου preserved in the Papyri E. P. x, line 3622 f., is an interesting example of what was considered efficacious against the wrath and vengeance of Περσεφόνη Σελήνου, 'Our Lady Moon,' a suggestive forerunner of the 'magic circle' of which we hear so much in the more pretentious magic of the Middle Ages. The magician must also observe certain rules, likewise characteristic of religion, which, to a large extent, are suggested by the nature of the powers with whom he has to deal.2 He, or the person in whose interest the charm is being performed, or both, must be in such a condition that contact with the spirits evoked shall be without danger. Regulations vary, but among the most common are ἀγγεία, 'purity,' abductions at stated intervals, anointings with oil, avoidance of certain foods (esp. fish), fasting, temporary chastity.3 (cf. Tib. II. 1. 1 f.; the regular secunditas so often referred to by the elegiac poets, etc.) More rigorous and more numerous are the conditions attending the penthexis of the rite itself, and most important is the observance of nudity or its ceremonial equivalent.4 The costume must be flowing, i.e., without knots or fastenings of any kind, or it must be coarse, or of linen, and in the last case, either white or wool. There are also some distrusts of cerimonial significance of colours has already been referred to.5 Having gone through the preliminary purifications and donned the appropriate raiment, the operator must then consider the attitude to assume. This is vital. In most cases there are gestures which cannot be omitted.6 Equally important is the magician's own state of mind. He must have faith, he must put all his soul into the accomplishment of the rite (Virgil's Martialis, 19).

The time at which the rite should be performed is also very important. This is largely determined by the habits and associations of the god to be addressed, and is an immediate deduction from the law of sympathy. For magic in general, but in particular for all magical connexion with Selene, sunset and the few minutes just before sunrise are very favourable; so, too, any phase of the moon, but, above all, the new and full moon. The stars and planets for the most part became important only after astrology gave greater precision to the sort of influence supposed to be exerted by each. As a matter of course, night is a better time than day.7

The place is quite as important as the time, and the choice of it is again a direct deduction from the law of sympathy, as regards either the god to be addressed or the person to be affected. Roads, streets, boundaries, and the threshold are all sacred in both magic and religion. The cross-roads suggest Hecate, the house corners suggest her; mystic stones or favourite spots so far as the magician is concerned.

Finally, as we have just seen, there are ceremonies which the operator does not venture to perform unless he is armed with some sort of protective counter-charm. It is a safeguard for him, or for any one who might interrupt the ceremony, or against the effect of possible counter-charms.

The best and clearest description of the ceremony, properly speaking, is given by Hubert.8 It involves the use of two hands, or of a ring; the purpose of the one is to accomplish the object itself of the ceremony by a logical application of the principles of magic action; the object of the other is to manufacture or, at least, to assure the presence of the actual magic power sufficient to work in the way prepared and thus to accomplish the purpose desired. In other words, to state it in terms of modern electrical science—the theory of which is curiously near to that of magic—he must construct the proper machinery and establish the proper connections; then, before turning on the power, he must see to it that the power is really there.

The first class of rites, the machinery and connexions, calls for the use of a certain number of objects or parts which, in the absence of more to be considered magic in themselves. One of the most common and dramatic is the magic wand, which is really a conductor of the magician's mana. The divine rod, though used in a different way and for a different purpose, derived its efficacy from a similar conception. The Etruscans used it in searching for hidden springs (Daremberg-Saglio, s. e. 'Aquilex'), and, as the writer of this article can testify from personal observation, as late as twenty years ago a similar method for discovering the best place in which to dig a well was still used occasionally in the American countryside. In addition to the magic wand and the divine rod, we have the apparatus of doudikyamia (A. B. M. X X X X . i. 29 f.), the lamps of Ichnomantia, the basins of water in lecanomantia, keys in their symbolic use, cymbals, the various substances referred to above, threads of different colours, portions of the dead, the four winds, the famous rhombus, turbo, or vertigo, i.e., the 'witches' wheel,' the rotation of which, by imitation and sympathy, was sovereign to influence the will of the person whom one wished to gain, etc.

8 The examples of its use in classical literature are collected by F. Norden, Jabu. f. Phil. Phil. Suppl. Bd. xvii. [1854] 217 f., 319 n.
All these end by being considered magic in themselves, but, in view of what has been said, it will be seen that this idea is secondary. Their real function and purpose was to facilitate or render possible the accomplishment of some magic purpose. The ceremonial point is the ceremonial of incubation. The purpose of incubation is to surround a person with the appropriate conditions to secure for him the true and prophetic dream which he desires. Conditions are, as often, dictated by the wishes of the patient. And, excepting that the nature of dreams was never quite clear to the ancients—and perhaps will never be quite clear to any one—the nameless theorists and thinkers by whom these conditions were first discovered and formulated appear to have been quite familiar with the results of J. Bömer’s famous dissertation afterwards incorporated and extended in W. H. Roscher’s Ethnologie: eine pathologisch-phantastische Abhandlung über die Alpträume und Alphnatur als Vorgänge der Geisteshaltung. Bömer showed that, among other things, in a healthy person nightmare is usually due to partial suffocation caused by burying one’s head in the pillow, coverlet, etc., that the rapidity with which the dream appears, the matter it is made of, the manner in which it is done to the person who is being the case, though L. Lessing 9 goes too far in his theory that the Umbels in the primitive nightmare, the father of all mythology, we may at least suspect with Roscher that Pan’s legs were the inevitable result of the style of bed quilts used by the primitive worshippers (cf. Latins’s method of securing an interview with Fannus in Verg. En. vii. 81 ff.), and, for that matter, that the incubi, succubi, stripes, and all their monstrous brood must have entered this world in the first place by the Ivory Gate. If so, it is certain that some of our most cherished legends, our best and most thrilling stories, and our finest poetry are literally the stuff that dreams are made of.

In primitive magic operations none is more common and characteristic, more dramatic and impressive, or a better illustration of the doctrine of sympathy than the casting of spells (cf. Heliodorus, xi. 14, and the examples noted below). The special feature of this operation is due to the theory that, if the person whom we wish to reach with our magic is absent or far away, his place be filled by a puppet, or some symbolic substitute for him. If, then, the ceremonial is appropriate, whenever we do to the puppet will be exactly repeated, literally or symbolically, as desired, on the person whom the puppet represents. Consecration of the one is immediately followed by consecration of the other (Verg. Eld. viii. 74 ff.), binding of the one by the desired condition symbolized by it in the other, running needles into the heart of the one by some effect on the other symbolized by such a process—e.g., wasting away to death with no apparent cause (Ovid, Amor. iv. 29 ff., Heroides, ii. 65, and others). Sometimes one figure may stand for an indefinite number, as in the spells of Nectanebo (pseudo-Calisthenes, i. 1). One may cast a spell on spirits as well as mortals by this means (Ens. Prop. Evng. v. 12 ff.).

Hence we have cases in which two puppets are used, one representing the person to be acted upon, the other the spirit by whom the action is to be performed (Hor. Nat. iv. 25 ff.). Occasionally, even three—i.e., one designated to the spirits, another to men, the third to thieves—(Eurip. in Verg. Eld. viii. 75). Often they were hollow, and their power was enhanced by putting written incantations inside. As a rule, these puppets must be made of clay or wax, but occasionally other substances were just as rigorously prescribed. Eusenius (loc. cit.) speaks of such an image of Hecate made of pulverized lizards and the roots of rue. A sheet of metal or even of paper upon which the figure has been traced is often considered sufficient. 2 The value to happen of cem the eurit ce have already been mentioned. But one may use such arbitrary substitutes as the body of a bird, a sprig of myrtle or of rue, etc. 3 Indeed, as we have already seen, the name is sufficient in itself. On the same principle, a written incantation placed in a tomb has the same effect as would a puppet 4 (Apul. Met. i. 10, dc. Mag. 53). The verbal portions of a magic rite are of the highest importance. In many cases they are the operator’s magic formulae, 5 in order that he may make no mistake as to the meaning and object of the symbolic rite. The puppet is inscribed with the name of the person whom it represents, and sometimes this is accompanied by a prayer 6 or incantation 7 addressed to him. So, when one gathers a medicinal plant, one should be careful to utter the name of the patient who is to be benefited by it. Again, in constructing a decret or, one should specify in order each and every word, as it is desired that the proposed victim shall suffer. 8

The indirect method is also directly responsible for the conclusion that incantations are a special help to the operator in the accomplishment of his special task—the creation of magic power. Hence the use of the magic hymns and litanies, the object of which is to ensure the presence and active participation of the appropriate spirit, to indicate his duty, and, if necessary, to frighten him into doing it. 9

We have seen how various objects, plants, simples, etc., originally selected as facilitating in some way magic rapport, finally came to be considered magic in themselves. Names and incantations underwent precisely the same development. From being a means to an end they became magic per se. The further conclusion was then drawn that their power might be indefinitely increased by frequent repetition, by lengthening certain syllables to an extraordinary length, by abstracting certain syllables and decorating them with adlives and suffixes, by rearranging them in different combinations, and especially by disposing them so as to form certain figures. Examples still surviving are 'alacanabri,' and 'sator arepo tenet opera rotas' 10 (see Theaurus Ling. Lat., s. v. 'Arepo'). The Ephesia Grammatici belong to the same type (Orphyr. de Myster. vii. 4). Mystery and power were further enhanced by the use of magic alphabets, by certain sacred inks, and so on. Numbers pass through the same experience and acquire the same magic power per se—

e.g., there are seven planets. If, therefore, we wish to invoke them, there is nothing so compelling as the pronunciation of the seven vowels or a sevenfold repetition of a ceremony,

MAGIC (Greek and Roman) 285
gesture, or word (Eos, Pheo, Eovv., v. 14). Odd numbers have always been significant (Verg. Ec. viii. 75, and often), three and multiples of these are sacred to Hecate, and certain specific numbers—like four, ninety-nine, etc., have a special importance.

In magic as in religion the object of sacrificial rites is to ensure the actual presence of the gods invoked. And here again the indirect method suggests that the rites are material rather than spiritual. As a rule, the gods addressed are common to both and of equal importance in both; in fact, it is perhaps safe to say that, so far as sacrifice is concerned, the usage of magic and religion is a fact, if the magic, is quite natural. The preference of magic for black victims is not distinctive of magic. It simply means that, in accordance with the naive analogy set forth, for instance, in the old hexameter quoted by Eusebius (Porph. frang. 9).

The gods to whom magic habitually addresses itself are the gods of the under world. So wine, honey, milk, perfumes, meal (Theoc. ii. 18, 33), certain cakes dear to these same gods, a cock to Hermes, a white dove to Aphrodite, etc.—all common to human religion and magic—are frequently employed. The use of blood is defined by Hubert as a sacrificial rite; it is at any rate—as in Sallust's account of the oath administered by Catiline to his fellow-conspirators—a striking illustration of the law of sympathetic magic (Loeban, vi. 544) and, for that matter, for magic and its secret rites. The Christians in their time were charged with such abnormalities as infant-sacrifice and promiscuous incest at their meetings—precisely the same charges which, a millennium later, they themselves preferred to wear their regularity during their long persecution of witchcraft, especially in connexion with the 'witches' Sabauda.

In most cases the charge of human sacrifice is as conventional as it is untrue; but it would be unsafe to say that even in such an outlaw, such a striver for extraordinary effects, as magic to abstain altogether from what was quite regular in the religion of more than one savage race, and which—in accordance with the fact that the catastrophe is exceptional and certain special extraordinary sacrifices—has been known to occur more than once at some grave crisis in the religious life of nations which, comparatively speaking, occupied a much higher plane of civilization. Finally, it may be noted that the incantations, names of the gods, etc., mentioned above, the things sacrificed, whatever they were, soon passed into the secondary stage of being the object of magic pot.,

One important aspect of our ceremony—quite as important in relation to as it was in magic—remains to be considered. As we have seen, the operator must be careful to follow certain prescribed rules in order to get into the necessary and intimate spiritual relation with the gods whom he is addressing, and, therefore, with the sacrifice which he is conducting. The relation is abnormal and distinctly perilous. To get out of it safely is, therefore, quite as important to as to get into it safely; prescribed rules are as necessary for the one as for the other. The object of these rules is to end the ceremony, to limit the effects of it so far as the operator is concerned, to make it safe and possible for him to return to the routine of everyday life. Above all, the remains of the sacrifice, unless he wishes to preserve them to produce some lasting effect (as, e.g., in a decrédé), must be disposed of ceremonially. One may deposit them at some prescribed spot sacred to the god to whom the sacrifice itself was offered. The καθάρισμα, for instance, the ceremonial remains of the sacrifice to Hecate (see HECHTE'S SUPPESIUS), were deposited at the cross-ways. The more usual method was to eliminate them ceremonially by burning them, burying them, or throwing them into running water or the sea (Verg. Ec. viii. 102, with the notes of Conington and Forbiger). The Mauéra Koons (Purp. Paris. 3005) shows that, at least in some cases, the ceremony closed with a prayer to the god in which he was invited kindly but firmly to go back to where he belonged:

'Ανέβας, ἄρα, τοιν πατριῶτα, καὶ γέρων αὐτοῦ τίνος ἱδών τὸν θάνατον, εἰς τὸ συμμετέχειν τί πάντα. 'Ανθρώπινο το φροντίζω.

It will be seen, therefore, as Hubert observes,1 that among the Greeks and Romans the standard ceremony of magic and the standard ceremony of religion, so far as their essential elements were concerned, were practically the same, even to the point of using the same formulae and terms. Furthermore, with some comparatively slight exceptions, the gods of magic are equally important in religion, and, on the whole, they are treated with the same reverence. As we have seen, some of the abnormalities of magic are just as characteristic of religion, and they are generally due to the fact that, at the time when these abnormalities occur, both are specially concerned with the inegal gods. The worship of these gods, whether in religion or in magic, is visibly influenced by the universal idea that the under world is the reverse of ours. It is dark, silent, barren, loveless, childless, eventless, stationary—a complete contrast to the world above, a contrast regularly symbolized in rituals to the dead and their gods by such things as the use of the left hand instead of the right. It is, no doubt, this ancient idea of reversed conditions in Hades that suggested the most striking feature of the famous 'Black Mass' as practised by the Jesuit order. (Iren. Harr. i. xii. 2). The normal 'White Mass' is addressed to heaven; if we reverse it, i.e. if we read it backwards, we address it to hell. But the Christian magician, in so far as he was a Christian, was bound to assume that his Black Mass was a wicked and impious rite. Hence the inevitable deduction was soon established that, the more wicked and impious magic could be, the greater and more terrible its power. For the magician of Graeco-Roman paganism there seemed to have been no such parodying of religious rites—above all, no such deliberate and malignant desecration of things considered divine as that of which we hear so much in medieval magic and which appeared again in the modern cult of Satanism (q.v.), as described some years since by Jules Bois2 and as utilized for purposes of fiction by J. K. Huysmans.3

Sprouvey.—In so far as there was any real and essential difference between magic and religion in Graeco-Roman paganism, the ultimate cause of it was largely, if not entirely, the steady maintenance of the ancient distinction of official recognition as defined and explained at the beginning of

this article. It is the business of magic, as long as it remains magic, to speak only in the imperative. It must, therefore, retain and emphasize the doctrine that sympathy in all its forms—which are supposed to enable it to use the imperative successfully in addressing the gods. It is also the business of magic, partly because it is an outlaw and bound to assert its importance in order to live, to promise extraordinary, if not impossible, things—among them, things which the social and legal restraints of religion would not allow it to promise. In the course of its long and exceptionally brilliant history, classical magic provided practically everything from a cure for warts to a receipt for personal immortality—all tried and true. Magic, therefore, was obliged not only to retain but to develop in every possible way those primitive aids to its imperative. It pluralized for power. And religion had done the same. But magic was an outlaw, it had no position in society, it was free at range to will, to gather into one portentous plural strange and terrible gods from the four corners of the earth, to combine them with the native gods to re-arrange, re-interpreted, disguise, mutilate, etc., in the ways described. In the long run, as we have seen, the pantheon of Graeco-Roman magic was a pandemonium, and confusion worse confounded, and the historian of magic reports to us that the fact that the doctrine of sympathy in all its forms has been pushed to its uttermost limits.

To the very end magic was obsessed by the old imperative and, therefore, by the time-honoured manner of expressing it. Whether it was expressed in the social scale, it merely learned to be pretentious. Even when it had been adopted, so to speak, by some distinguished family like the mystics, had changed its name, and had been careufully educated and rationalized, it had not been able to lose its legs, or to free itself. It is conceivable that, even with the heavy handicap of the imperative and its attendant vices, magic might have risen to comparative respectability. But its weaknesses were encouraged rather than checked. By the 2nd cent., the number of strange religious forms available, not to mention the semi-detached religious theories, had increased to an indefinite extent. The result was that from being a thing which, at least, could appeal to the imagination and the aesthetic sense, it steadily degenerated into utter absurdity as pretentions and complications as it was dreary and commonplace.

But, fortunately for us, Graeco-Roman magic in its best days was the familiar possession of all classes in a highly intellectual and highly imaginative people. Men of Ovid’s calibre and training may not have believed in it to any extent, but there never was a time when magic as such became unfamiliar to any one. Even the major operations of the practical magic of the day were always keeping before us, and, as we have seen, the charge of magic was always kept alive in the courts. Hemionus was far from being the only jealous woman to soothe her wounded pride by accusing her successful rival of resorting to philtres. The charge was quite as characteristic of the Augustan age as it could ever have been of Homer’s time (Tib. i. v. 41; Propert. iv. 10. 33). Pseudo animari were a regular specialty of the lena, or go-between, and they actually were so frequently administered that the average man generally assumed that they were responsible for certain lingering diseases, especially certain mental or nervous abnormalities, for which he could see no apparent cause. Examples in point are the traditional account of the death of Lucretius and the contemporary explanation of the vagaries of the melancholic Cato’s tormented brain (Jerome, Chron. Euseb, 1924; Sueton, Cato, 50).

VI. MAGIC IN LITERATURE.—The more or less familiar presence of magic not only in folklore and legend, but also in ordinary everyday life, is reflected to an extraordinary extent in the written word. It is continually turning up in the arts, in science, in philosophy, in the writings of the mystics, in the literature of the Roman poets, in the tragedies of the Hellenic age, the time of Augustus and his immediate successors, and the Sophistic revival of the 2nd century. This use of magic was essentially characteristic of poetry and of such types of prose as that of the classical and some of the early Christian writers. But the characteristic and interesting aspect of Graeco-Roman magic is the deliberate exploitation of it in the interests of conscious literary art. It is inclined to assume, and perhaps justly, that this was particularly the case in the classical and perhaps in the Hellenistic age, the time of Augustus and his immediate successors, and the Sophistic revival of the 2nd century. This use of magic was especially characteristic of poetry and of such types of prose as that of the classical and some of the early Christian writers. But the characteristic and interesting aspect of Graeco-Roman magic is the deliberate exploitation of it in the interests of conscious literary art. It is inclined to assume, and perhaps justly, that this was particularly the case in the classical and perhaps in the Hellenistic age, the time of Augustus and his immediate successors, and the Sophistic revival of the 2nd century. This use of magic was especially characteristic of poetry and of such types of prose as that of the classical and some of the early Christian writers. But the characteristic and interesting aspect of Graeco-Roman magic is the deliberate exploitation of it in the interests of conscious literary art.
merely a consequence of the quake. He splits the ground so that the ghosts can hear his incantation (i.e. be reached and affected by it) and then can come straight up to him from Hades (Sen. Epip. 571; Lucan, vi. 728). As we have seen, the literary use of nekyomantia begins with the famous passage of the Odyssey (xi. 24 ff.). The essential details of Homer's descriptions of the ghost of Thetis (VII. 728 ff.) was the masterpiece of its kind. And so it is. It would be hard to find a more glaring illustration of what can happen to literature in an age when a furious lust for effect is not restrained by any principles of common sense. Nekyomantia had a long and brilliant tradition in the drama. Examples still surviving are Aeschylus, Persae (the ghost of Darius), and Seneca, Oedipus, 560 ff. Indeed, ghosts were as common, it would appear, in the ancient as in the Elizabethan drama. The name, in Greek, 'Charon's step-ladder,' was the popular name for the regular staircase by which the ghosts appeared on the stage as if from the underworld (Nekyomantia). The term was also quite as characteristic of comedy. In the later days of the Roman Republic Decimus Laberius wrote a mimic entitled Nekyomantia, and we know that this and similar themes were characteristic of the mimic as developed by Philistion and his successors during and after the Augustan age. Brilliant examples in the satirical sphere are Horace, Sat. i. viii., and Lucian's Nekyomantia.

If we choose to emphasize the literary influence as such of the Homeric Nekyomanteia, we may say that this is responsible for one of the most notable developments in classical literature. This is the theme of the Descent into Hades. The Homeric passage is directly responsible for the 9th book of the Aenid and its numerous imitations, both epic and narrative poetry both ancient and modern. Nor was epic the only department to be affected. The theme was a favourite in the Old Comedy of Athens, although, as it happens, the Frogs of Aristophanes is the only example now surviving. The same is true of the satirists and popular philosophers of the Alexandrian and Hellenistic ages. It was characteristic of their didactic methods to appropriate for their own purposes the traditional forms and the current modes of literature; one of the most notable was the Kardiai eis Aiax, which practically became conventionalized as a mime-scene for the presentation of doctrines and opinions. Allied to it are such examples as Horace, Sat. i. vi., Seneca, Apocolocyntosis, such works of Lucian as the Dialogues of the Dead, and Claudian's attacks on Entropius. The Epicharmus of Ennius and probably certain of the lost satires of Lucretius and Varro were illustrations. The poet Sotades used it to a not inconsiderable extent.

But, while nekyomantia is the most prominent and pervasive aspect of literary magic, the most famous and picturesque was the love-charm known as 'drawing down the moon.' It is first mentioned in surviving literature by Aristophanes, Nubia, 750, again and again by later writers, and still survives, it is said, in modern Greece. It was the theme of no fewer than four masterpieces: a lost name of Sophron in the 4th century BC; the lost Thetis of Apollodorus (HN xi. 7, the second Ibyl of Theocritus (found on Sophron), and the eighth Elegy of Vergil (found on Theocritus). Certainly, too, Lucian, Philostratus, I.4, is a masterpiece of its kind. The atmosphere reflects to the life that aspect of the 2nd cent. which the theme of the moon, e.g. theosophy, spiritualism, and kindred ideas are wont to grow luxuriantly.

In this passage of Lucian we have the 'Professor's' story of how his disciple, Glaucus, was saved by the great 'Hyperborean' magician. 'It seems that Glaucus, a rich young orphan whose father had left him a fortune, but Clio, the muse of history, fell in love for the disdainful Christian—a genuine prototype of Jenny Grove and crue Barbara Allen. His condition became so desperate that the 'Professor', as he says, 'felt it his duty' to secure the services of the great Hyperborean. Four minor hadro-sacri were paid in advance—stuns Philistion and was listened more if the operation was successful. By way of preliminary—which showed that the specialist was not only a great man but also a just and scrupulously conscientious moralist on having an elaborate rite of nekyomantia, to call up the boy's late lamented father and ask his consent. The old gentleman was furious at first, but finally told them to proceed. A dramatic description of the ensuing ceremony follows—how the masterpieces of Homer, of the Odyssey and of the Iliad, of the Theogony and the Hymn to the Iphigeneia were read. Some charming passages follow, how the ghosts found around, how, at the psychological moment, the distinguished operator 'told the sort of little figure of Cupid which he had fashioned out of clay to go and fetch Chrysa.' Away flew the tiny thing at once. A few minutes later there comes a knock on Glaucus' door, in rushes Chrysa, throws the arms around him, as he transitoria amores ('like a girl utterly crazy with love'), and there she stays till cockcrow! Then up rose the moon, from the heavens, down sank Heraclea, and the ghosts disappeared.

But the 'Professor's' listener is not duly impressed. Besides, he knows the trick. He has been told, he says, of calling on one Hyperborean magician, one goddess, and one clay ambassador to unite in overcomely designing the things of the world; but who, as every one knows, is ready to follow a man to the North Pole, and beyond for twenty drachmas.

Such books as the Metamorphoses of Ovid and the lost poem of the 1st cent. by his predecessor, Nicerand, show that change of form was quite as characteristic of classical mythology and folklore as of the Thousand and One Nights. Transformation was Cire's speciality, and the Homeric account of her methods (Od. ii. 21 ff.) and Lucian's account of hers (in Elegy i. 10) was the most famous literary account of the performance. Apart from the Homeric passage, the most vivid and circumstantial accounts of transformation by magie are those in which Apuleius (Met. iii. 21 ff.) and Lucian (in Elegy i. 10) describe how the son of the last of the Roman, who was not a son of the last of the Roman, was a son of the last of the Roman, was a son of the last of the Roman of both the last of the Roman of Patras] tell how the witch, Pamphile, made an owl of herself, and how, immediately afterwards, Potis, her maid, made an ass of Lucius. But, as a rule, magic as such is not prominent in metamorphosis as a literary theme. This is, of course, quite natural; for in this particular feat the dramatic point is the transformation scene, and all else is likely to be subordinated, even in those cases where it is due to magic. Vergil's sorceress, c.e., says that she has seen the wervolbek transformation with her own eyes and that it was done by magic:

1 Has herbae acque hoc Fonto nihili lecta venas
2 Sue dedit Morias (auscultans plurima Pontos);
3 Hic ego saepe Iupum ferit et se condere silvis
4 Morias (Cid, vii. 49 ff.)
5 Vorbek am, in the Cid, vii. 49 ff.,
6 But in all the famous wervolbek stories of antiquity, as in most of the stories told by Ovid, the magic element is either absent, ignored, or referred to so slightly that it calls for special notice here. Magic command of the wind and weather is often mentioned, and nothing in the way of magic was more common in everyday life, but the one famous passage is that in which Alcestes gives the bag of winds to Odysseus (Od. x. 190 ff.). Also, a full and dramatic description of her charm for re-creating the youth of Jason's father. This was the famous was her pretence of doing the same favour for the aged Pelias at the instance of his daughters (Apollod. i. ix. 27; Hygin. Fab. 21; Maerob. v. xix. 91 ff.). Also, it was the theme of the lost Palaemon.

of Sophocles. Indeed, the best plays of the Greek tragic poets would have been a wonderful field for the study of the use of magic for literary purposes.1 Creusa's robe was a famous theme. Euripides (Medea, 1156 ff.) merely described the evil effect of it upon the woman; Seneca (Medea, 740 ff.), the punishment itself. It is true, more striking and effective may easily be seen by comparison.

On the other hand, there are types of magic in which it is precisely the preliminaries, the things which witchcraft do because they have something terrible in prospect, that are full of dramatic possibilities. This is especially true of necromancy.

As we have seen, the necromancers are always eager to get mortal remains in order to be better able to call up their late owners. Striking examples are Triumphant's story in Petron. 63, and the dramatic experience of Thelyphron as told by him after dinner in Apuleius, Met. ii. 21 ff. So, speaking in terms of magic theory, the dreadful scene of Horace, Epod. v., was only a means to an end; the object of the witches was to secure the strongest possible love-charm. The liver is the seat of desire (Hor, Odes, iv. i. 12) therefore the liver is sovereign in a charm to arouse desire. Now, when a savage wants snake-poison for the purpose of the snakes was to be killed, it is killed, so that it may secres more poison and that the poison may be more virulent. So, here, the idea is that the more the liver feels so much the more it actually accumulates desire, as desire, and stores it up within, if therefore, we can secure a liver still containing a maximum of desire so accumulated, we have a charm of maximum power for arousing desire in others. Hence, in this scene, the poor child who has been kidnapped what the witches for this purpose, is buried to the neck and left to die of a prolonged agonizing intense desire for food and drink, which is deliberately aggravated as much as possible by always keeping food and drink before his eyes. After the child was dead, his liver was removed, and, upon being prepared with the appropriate ceremonial, became a love-charm of superhuman power, a φιληρος secured in a special way for a special purpose.

The gathering of herbs is another preliminary of φαρμακεία, which was fully appreciated for its dramatic possibilities. In literature the process is regularly associated with Medea (Apoll. Rhod. iii. 849 ff.; Valer. Flaccus, vii. 323 ff.; Ovid, Met. vii. 222 ff., and all was as before—all the probabilities laid on the theory by Sophocles in his Περίοδος). She went out at night and by the light of the full moon cut her plants with a brazed sickle held in her left hand and behind her back, i.e. συμετριπτεί (see HECATE'S SUPPERS).

So far as philtres are concerned, the most influential contribution to literature is what might be called the case of Beauty v. Magic in the court of Love.2 Its first appearance is in the scene between the Sieve and the Power (a female who was the probable name of the Power) in Apoll. Rhod. (vii. 235 ff.), to which attention has already been called. The subsequent tradition of the question at issue is a striking and characteristic illustration of the methods and development of ancient literary art. The topic was announced from the stage, discussed in the boudoir, argued in the schools of philosophy, enlarged upon in the schools of rhetoric (Menander, frg. 616 K.; Aelian, 376 L.; Lycret. iv. 127 ff.; Tib. i. 45, viii. 25; Ov. Fast. viii. 262 ff.; Pliny, Nat. Hist. xxviii. 102). And some time in the unrecorded past it was given a new turn and made the basis of a properly illustrative and sprightly anecdote in which the appropri-

1 Myth. op. cit. p. 173 ff.
all seemed like a nightmare to the prisoner at the bar, and his impressions are fully shared by the reader. What surprised him most was the sight of the manial girl, and the hair was led in th

## MAGIC (Indian) — I. HINDU.

---

### MAGIC (Indian).

The magic of the ancient world is essentially the profession of certain castes, though magical rites may be practised by laymen and magical properties are attributed to countless objects.

The caste which is peculiarly devoted to magic as a vocation is that of the Brahmins, primarily Hindu but has Muhammadan elements-allotted to it. The Yogi claims to hold the material world in fee by the magical powers which he has acquired through the performance of religious austerities, but the common diagnosis of superstition of the worst type, and the Yogi in reality is little better than a common swindler, posing as a fakir. Thus, in the tale of the magic boat, the gift of the Brahmin to the Occasions.

The Brahmins are said to have secret books on the subject which contain over 50 jatius, or figures, consisting partly of numbers and partly of mystic symbols, cabalistic words, and geometrical figures not unknown to freemasonry; these are used for all kinds of purposes, including the causing of abortion, success in gambling, etc., as well as to ensure easy parturition.

The Yogi in particular claim power to transmute base metals into silver and gold—a claim which enables them (and those who believe them) to reap a great harvest from the credulous.

This power is said to have been discovered by the Yogi Dina Nath, who, passing one day by a money-changer's shop, saw a boy with a heap of copper coins before him and asked for some in alms. The boy replied that they belonged to his father, but offered him some of his own. Bountifully and honestly, the Yogi proving to Vijnati lake the boy's back, bade him collect all the copper coin he could find in his father's house, and then, melting it down, recited mantras, sprang it, and sprinkled a magic powder over it, whereby it was changed into pure gold. This occurred in the time of Sinth Mahannath (A.D. 1250-30), who witnessed the process. The Yogi's presence was marked by a similar effect, and in commemoration of it had gold marbaks struck with Dina Nath's name on them as well as his own. These Dina Nath mubaraks are said to be still found. The secret of the mantras and the powder has been handed down, but is known only to the initiates. Secret books on the subject contain over 50 jatius, or figures, consisting partly of numbers and partly of mystic symbols, cabalistic words, and geometrical figures not unknown to freemasonry; these are used for all kinds of purposes, including the causing of abortion, success in gambling, etc., as well as to ensure easy parturition.

### 1. Occasions.

MAGICAL Rites are practised at weddings, during pregnancy, at birth to procure offspring and ensure its safety and to determine and predict its sex, and to resuscitate the dead.

#### (1) Marriage.

The magic practised at a wedding is often symbolic. For example, just as naked women plough the soil in times of scarcity to ensure a crop, so at weddings a Telugu bridegroom of the Dalija caste performs a mimic ploughing ceremony, thus simulating the magic employment of the swindler, or magician, to get his crowd, and to test the presence of a similar real, and in commemoration of it had gold marbaks struck with Dina Nath's name on them as well as his own.

seed on some white-silt earth near five pots filled with water. By the time the wedding is concluded, these seeds have sprouted and are called by the pair, taken to the village well, and cast into it—
down the well to ensure their fertility. An Indian couple sow nine kinds of grain in seven trays, 3 and the Malá groom digs with his knife a few
furrows, which his bride fills with grain and waters after he has covered it up. 4 Apparently the widespread custom of sowing grain at weddings has a similar origin. This is done by five women, e.g.,
in Bombay. 5

The grinding-stone is also used among the Bhondári in Madras; the bridegroom stands on it, while women take off the millstones from the wedding and use the pans containing nine kinds of seedculls are set. Seven pots are arranged in a row between the stone and a
branched lamp, and married women bring water from seven streams and pour it into a pot in front of the woman. 6 The grinding-stone is also used in Bombay. 5

The future offspring of the union is symbolized among the Konati by a doll which is rocked in a
cradle, but both the prospective parents profess
to bear a cradle to look at it. 7 The Pariváryans use a stone rolling-pin to represent the child, which the husband hands over to the wife, who accepts it as 'the milk is ready.’ 10 The Konga Vellála bride-
groom takes some fruit and a pestle to a stone, where he worships it. It is supposed to be the Konga king whose sanction to every marriage used to be necessary, and the pestle represents the villagers; but the fruit is not explained, and the
myth is probably etiological. 14 A newly-married
Bédar or Bóya couple sit on a pestle, and are anointed after rice has been showered over them. 12
In Bombay the rice-powder is used to perspire
the baby. 13

Fertility can also be communicated to a bride by placing her bed or lap on a grinding-stone, as an effective substitute for one. 14 On the same principle women whose husbands are alive are admitted to take part in marriage rites, 15 more especially if they have sons living; whereas widows and those whose children have died should be excluded, at least from the more significant rites. 16 Similarly, widowers are excluded from certain functions. 17 Unmarried
women may, however, take the place of married
women: e.g., among the Badaga, married women of
virgins, preferably the bridegroom's sisters, go to a stream in procession to bring water for cooking
purposes in decorated new pots. 18

Water as a source of fertility also plays a great
part in wedding rites. Thus bathing is an essential
part of the ritual for both parties at weddings, and visits to a well or stream are very common. The
use of pots full of water is to be explained in the same
way. Thus among the Aitkár of Bombay a couple already married bring pots from a potter's house to the place of each party to the marriage, and after an elaborate rite the boy pours water from a

jear. A jar also plays a prominent part in other
rites, including a widow's re-marriage. 1

Fish being an emblem of fertility, they are often caught by the bridal pair—e.g., among the Guigára
of Madras. 2 An immortal couple sow nine kinds of
grain in seven trays, 3 and the Malá groom digs with his knife a few
furrows, which his bride fills with grain and waters after he has covered it up. 4 Apparently the widespread custom of sowing grain at weddings has a similar origin. This is done by five women, e.g.,
in Bombay. 5

Quite distinct from this Brahmanical rite is one observed in the seventh month in Travancore.

The woman goes to the foot of a tamarind tree, where she records threats seven yards long. This she entwines round a tree, and, if it breaks, either she or her child will soon die. Next day the thread is unwound, and her husband gives her a handful of tamarind leaves. On putting the leaves into a pot, she also gives her tamarind juice to drink, pouring it through his head, and then employing in this rite a few plucks of his hair on her head, and from the summer of its fall divines the child's sex. As she drinks the juice, the woman leans against a range, which is then planted; and, if it fails to strike root, the child is doomed to adversity.

Among the polyandrous Kamalpan the woman's brother gives her rice gruel mixed with juices of the tamarind, mango, and Hibiscus.2

In protracted labour the washings of a brick from the fort of Chakulub or Chakrabhun Anum near Velika are potent, or it suffices to draw a plan of the fort and drink the water into which this picture has been washed off.2 The origin of this rite is obscure. The 'fort of Chakulub' is a game played by children; they make a maze on paper, and one child runs through it with a pencil. A dot within represents the treasure which it is supposed to contain. Vaisnavas of the Vallabha sect, or school, often make the child do this shape.

Difficult labor is dealt with in parts of Madras by calling in a woman who has had an 'easy time'; she presents the patient with betel, etc., and, if that fails, a line of persons drawn up pass with an incantation from hand to hand until it reaches the woman, which is the 'easy time.' This she gives some of it to the sufferer. Here the luck or quality of the one woman is transmitted to the other.

In one caste, the Malas of the Telugu country, who are Pariahs, the placenta is put in a pot in which are nim leaves and the whole is buried, lest a dog or other animal should carry it off, which would make the child a wanderer.

A magical rite of resuscitation is practised by the Dasisars, a class of priests who minister to Sídaras, in Madras. If a Dasisar is offended, he will revenge himself by self-mutilation or even by cutting off his own head. News of this is miraculously carried to all his caste-fellows, and, when collected, their display their magical powers by frying fish which come to life again on being placed in water, by joining together limes cut in two, and, finally, by bringing the suicide to life again. The rite can fail only if the victim's wife is in pollution or when the rite is not carried out reverently.6

2. Agents.—First-born children have power to stop rain. Muslims say that they can do so by stripping naked and standing on their heads, heels in the air. In Calcutta they need only make a candle of cloth and burn it.7 A first-born son leaning against anything will, it is believed in S. India, attract a thunder-bolt to it.8 Girls born in the asterism of Mula are believed in S. India to place their mother-in-law in a corner, i.e., make her a widow, and so such a girl, if her mother is not already a widow, finds difficulty in securing a husband.

Just as charms are made out of various natural substances, so such substances often possess magical powers. The acaana is inhabited by a jinn, but its wood is unlucky only if used to make or mend a bed; no one will be able to sleep on it. Here is a charm that is not unlawful.8

The spirit in the tree appears to endue it with magical properties; a man who conveys himself in servitude to the spirit of this tree will get all that he wants, but only at the risk of his life. For twenty-one days he must take a pot full of water daily to the tree, and on his way back cast half of it upon a particular tree; on the twenty-first night he will be irresistibly drawn towards it; the devil will appear to him, and, if he escapes death, he will get all that he wants as the price of his bondage. The tree cured, bakhkar (Celtis cambogia) has magical properties; any one cutting it down or tampering with it loses all his hair and becomes very ill. It yields a milk which raises blisters, and even to sit in its shade, while it is exuding it, has that effect. Indeed it is dangerous to sit in its shade at any time. This belief is current in the Murree Hills, in the Punjab, and in that very part the Gajara use amulets of bakkar (its usual Indian name) to ward off the evil eye (nazar) from both men and cattle, and its fruit is also much relished.

To cure scorpion bite the insect should at once be caught and burnt, and the smoke allowed to touch the bite. To cure sanya, or consumption, in a child (said to be due to consumption caused by ashes taken from a burning plane and absorbed over or near the child) the parents should give away salt equal to the child's weight.4 Toothache is cured by a magical rite which consists in spreading sand over a clean piece of board and writing on it the first six letters of the Arabic alphabet. The patient then holds his aching tooth between his thumb and index finger, and touches each letter in turn with a pointed instrument. When he reaches the sixth letter, if not before, he will be cured. At each he should be asked if he is cured, and, when he says that he is, he should be asked how long he wishes for relief. He should reply 'two years,' as that is the limit of the charm's efficacy.

After a bad dream, a Gáro, in Assam, collects a reed-like grass and is beaten with it by a priest, who repeats certain exorcisms. Then they carry a cock to the nearest stream, kill it, and let its blood fall into a toy boat; the boat is launched, and as it starts the dreamer bathes in the water. The prayers, the chanting, and the sacrifice appease the spirits, and the boat is allowed to carry off the ill-luck.6

On the first day of sowing sugar-cane, sweetened rice is brought to the field, and women smear the outside of the vessel with it, after which it is given to the labourers. Next morning a woman puts a necklace on a necklace and walks round the field, winding thread on a spindle. This custom is falling into disuse.

Magic squares are in vogue among Hindus. Thus one which totals 90 lengthways cures quartaneague; one totalling 100 every way causes excess of milk in cows and women and of gbi in a charm; one totalling 130 every way will, if worn round one's neck or in one's pagri (turban), bring any person under one's power;5 and one totalling 15 each way brings luck and is commonly found on shops. Squares totalling 55 and 20 each way should be placed under one's seat to ensure success at play.5

1 NIVQ vi. [1894] 727. 5 NIVQ ii. [1894] 274, and Selection Calcutta Review, viii. [1899] 124 (Calcutta Review, Ixiv. 1892).—In the latter, C. T. Temple identifies the bakhkar with the bir, vata, or banyan-tree, but describes the bakkar as a large shrub of the caynna, or junghe, family, the fruit of which is the 'true paradise' in Arabic poetry—on which account the tree is much prized in Tripoli and Tunis.

5 NIVQ i. [1891] 114, 465. 9 T.J.D. i. [1894] 579.

6 NIVQ vi. [1894] 373. 10 T.J.D. i. [1894] 579.
The power of magic is so great that by mere assertion of its potency a îhr, or demon, may be brought into subjection.

Fact the whole of a ninth lunar day falling on a Friday, and in its midst is set the ring of red clay, which is burned and made a circle of red clay on the ground. Sit in its centre with four cardinal points, with eyes fixed on eight points. Give a jump fed with clarified butter and say: 'Incantation can break down the stairs' 5000 times—and a demon will be at your service.

II. ISLAM. — Muhammadans classify magic as high (âli), divine (raûbânî), low (sîfl), and satanic (shaîtañî). In divine magic perfection consists in knowledge of the greatest of God’s names—the Ism-ûl-Al-îmân, which is imparted only to the elect, and which the dead cannot raise. But God’s other names, and those of Muhammad and of the good jîmûn are also efficacious, and written charms are composed of them or of passages from the Qur’ân, as well as of mysterious combinations of numbers, diagrams, and figures. Satanic magic is condemned by all good Muslims. It depends on Satan’s aid and that of the evil jîmûn, who ascend to the lowest heaven and hear the angels so that they can assist magicians. Enchantment (al-âhla) is the essence of this art, and may be studied with good intent and with the aid of good jîmûn, there is a science of enchantment which may be regarded as lawful. Enchantment results in death, paralysis, afflicting with irresistible passion, poisoning, and the like. Metamorphosis, or transfiguration, is effected by spells or invocations to the jîmûn accompanied by the sprinkling of dust or water on the object to be transformed. Against enchantment and other evils a talisman (tîlûn), i.e. mystical characters, astrological or otherwise magical, or a seal or image on which they are engraved, is effective. When rubbed, it calls up its servants.

Divination (al-khâhana), which is also practised by the aid of Shaîtañ, is obtained by magic, by invoked names, and by burning perfumes. Its forms are: dârth al-mandal, inscribing the enchanter’s circle; darth al-rayn, the moving of sand, ‘aln al-najjâm, astrology;2 and al-zîjar, or augury from beast and wind.3

The Imam Zainûn rupee is said to be dedicated to that imâm, and is worn by Muhammadans on the right arm when starting on a journey.4

The names of ‘Ali and the imâmûn are used in magical squares according to the âujîr, or letter-valuable, order of composition. Notices of the custom are not uncommon in Indo-Persian histories as having been practised on the Moghal court-ladies.5

Islamic medicine is acquainted with the olive of Ben-Israil, a stone found on the banks of the Indus. It is black with a little red and yellow, or olive-colored with small white lines, and is used only for sprinkling over wounds and stings by Muslims. Hindus are said to worship it as a god, and to the Persians it is known as the general of the spirits, ‘Yâhû, or ‘stone of Jahweh’, or the haçar al-Hûnish, or ‘stone of the Hindus’, in Arabic. Jasper (in Pers. yashâh, Arab. haçar al-bashof, or ‘hard stone’), when olive, green-yellow, or opaque green, is used in charms; and, when white, in medicine. The hair of a child will never turn white if a piece of it be tied on his neck at birth. If a piece is tied on the right eye of a baby, it will have good eyesight, and the evil eye. Tied to a woman’s thigh, it ensures painless labour; and, if by the light of Îslad al-qâjîr (the night when Muhammad spoke with God) a man be sketched over it and the picture born over the head, the wearer will be safe from wounds in battle.6

III. MAGIC AND RELIGION.—It has been held by many scholars that in ancient India the confusion of magic and religion was rife, just as it has survived among other peoples that have risen to higher levels of culture. II. Oldenberg7 regards the sacrificial ritual of the earliest known period as pervaded with primitive magic, and he tells us that the rites celebrated at marriage, initiation, and the anointing of a king are complete models of magic of every kind, and that the forms employed are of the highest antiquity. Sylvain Levi8 observes of the sacrifices prescribed in the Bràhmanas that they have all the characteristics of a magical one, and it has been demonstrated that they are independent of the divinities, and capable of producing evil as well as good; it is only distinguishable from magic in that it is regular and obligatory, so that both matters are treated in the same works. It is further shown that the Sûtrâs of the Vedas, or incantations and sorcery, as is the Adhûthâ Bràhminya portion of the Sûdayâna Bràhmanya, M. Bloomberg9 also holds that witchcraft became intimately blended with the holiest Vedic rites, the broad curse, or otherwise magical, or a seal or image on which they are engraved, is effective. When rubbed, it calls up its servants.

Divination (al-khâhana), which is also practised by the aid of Shaîtañ, is obtained by magic, by invoked names, and by burning perfumes. Its forms are: dârth al-mandal, inscribing the enchanter’s circle; darth al-rayn, the moving of sand, ‘aln al-najjâm, astrology;2 and al-zîjar, or augury from beast and wind.3

The Imam Zainûn rupee is said to be dedicated to that imâm, and is worn by Muhammadans on the right arm when starting on a journey.4

The hair of a child will never turn white if a piece of it be tied on his neck at birth. If a piece is tied on the right eye of a baby, it will have good eyesight, and the evil eye. Tied to a woman’s thigh, it ensures painless labour; and, if by the light of Îslad al-qâjîr (the night when Muhammad spoke with God) a man be sketched over it and the picture born over the head, the wearer will be safe from wounds in battle.1

On the other hand, J. G. Frazer7 also points out how in India, from the earliest times down to the present day, the real religion of the common folk is a mixture of magic and religious belief, with a multitude of spirits of whom many, if not most, are mischievous and harmful. This belief persists under the great religions, like Brahmanism, Buddhism, and Islam, which may come and go; and in support of this thesis he cites Oldenberg for the Vedic and Monier Williams for the modern periods. It is to this deep-seated and universal belief in the existence of spirits, which fill all created matter—the sky, the earth, trees, beasts, the earthy waters and clouds—that many, if not all, magical practices are to be ascribed, at least in their inception. At every stage of a ritual sacrifice, e.g., spirits have to be appeased, and the very stake to which a willing victim is tethered for the sacrifice must be cut, shaped, and erected

6 Pâg. i. 686.
with the most minute precautions against their sinister influences. Every point in sacrificial ritual is symbolical, but the guiding principle in it is not magical, but religious. By the part of the stake which is burned in the sacrificer gains the lower world of the fathers, by its middle part that of men, and by its top the world of the gods. But this winning of the three worlds is conditional on his success in averting the onslaughts of evil spirits. In the whole ritual of animal-sacrifice at the stake (*yipa*), as prescribed by the *Sutrapatha Brāhmaṇya*, there is no trace of magic or of magical practices.1

A question of minor interest is whether Indian magic was derived from or has influenced that of Arabia and the Near East. The Skr. word *śilpā* (lit. 'black magic'), may be the original form of *ṣiṯī* or, conversely, the Arab word *ṣiṯī* may have been transcribed in this form. *Śilpā* illustrates the spiritual basis of belief in magic. When performed with the object of destroying an enemy, it is known as *ekel*, or *ghālīf*, in the United Provinces. A vessel is filled with iron nails, knives, etc., and the wizard, through certain incantations, drives these through the air until it descends on the victim's head and kills him. But, if a river intervenes, a sacrifice to the spirit called *ghatūri* (lit. 'ferryman'), which is supposed to guard the river, must be made in order to induce the vessel to cross the river.2 Thus black magic has to reckon with the spirits, however it works and whatever its origin.

**LITERATURE**—1. The Hindu literature is vast, but mostly unclassified. It comprises many treatises on special topics—e.g., the *Kathakā* (*Sādhanā*), a Gargjūgīya which contains only magical squares for all kinds of ailments.3 It commences with the *Aṣṭāvakra*, upon which and which is based Alfred Hillebrand, *Ritual litteratur* : *Vedische Opfer und Zauber* (GLAP iii. 2, Strassburg, 1897).

2. The Brahmans, who are prone to asceticism, have six books on magic: the *Jaṭākā Jāna*, *Jaṭākā Gautājī*, *Ṭhāthāl Ādivacak*, *Mahāt Ādavās*, *Mahtār Adhakhaśi*, and *Aṣṭādīl-Naśakha*. The Sunnis also have books on magic: such are the *Avajjér Middle Brands* and the *Naśik-Saśir*.

**MAGIC (Iranian).—1. Religion and magic.**—Although religion and magic are two essentially different things, the interpretation of the two is fairly common; but nowhere are they so intricately conuningled as in Mazdaism. The first clear line of differentiation has to be traced between the real doctrine of Zoroaster, as it is expanded in the *Gathās*, and the later Avesta.

In the Gāthic hymns we find a religion of a highly moral character. It admits of no deity besides Ahura Mazda except personified moral entities, and it expressly undertakes a struggle against the lower beliefs and the magical practices of the people of the time. The cult of the *dōrēs* in general and the nocturnal orgiastic sacrifices in which *huço* (q.v.) was drunk by the worshippers were specially condemned.5

The Later Avesta also anthropomorphizes the sorcerers (*gīțā*), and witches (*pātrikā*), but many of the beliefs and practices which Zoroaster had associated with them have found their way back into religion. The whole subject isrendered more the more intricate that the fact that a coherent system has been formed in a combination of the doctrines of the *Varāṇ* and the *Zoroastrian creed* (sophisticated to a great extent by adaptation to a lower standard of religious thought) and the popular and inferior beliefs of the Iranian people, including much that is in origin magical. As well known, this is the system called dualism, by which the number of dualism (q.v.) is based on the assumption that there are two cosmic elements, the one created by Ahura Mazda, the real god, and the other by his adversary, Angra Mainyu. Every creature of the wise lord is good, but all that has been created by his foe is evil; each is communicated to his creatures its own specific nature and power. His creatures both share in their lord's natural and supernatural power and must assist him in the incessant struggle which is going on between the good and the evil spirit—a contest which will not be settled before the end of this world.

It follows that good creatures have a power over evil ones and evil over good. Of course, we may imagine that a good being, when he realizes the evil deeds of his opponent, acts, after all, as a depository of his creator's power; but in practice it is as though he had a real and effective power of his own against demons.

A good work is an act of war, capable of helping effectively towards the triumph of good over evil and having, therefore, an efficacy of its own to conjure and oppose the noxious activity of evil creatures such as evil spirits; and this is very much like the efficacy ascribed to magical rites.

The only difference between such an activity and magic is that, with the latter, material interests are generally at stake, whereas, in the majority of Mazdaean religious acts, the concern is mostly spiritual and supra-terrestrial, let the vessel cross. Thus black magic has to reckon with the spirits, however it works and whatever its origin.

**2. Purification.**—For the Zoroastrian the normal means of getting rid of an impurity acquired by sin is to outweigh it by merit—a process which, of course, is far from being magical. Sin, however, being in Iranian eyes not only a breach of order which has to be repaired by repentance and good works, but a positive product of the evil spirits, of the evil creation, produces a substantial, though invisible, pollution—a moral disease like a bodily illness—and death likewise results from some mysterious contrivance of the originators of all evil. A material means of removing that pollution is therefore requisitioned, just as a remedy by its beneficial properties, as a piece of good creation, earns an ordinary disease. The power of purifying man from impurities belongs to the highest degree to water—an eminently good element of Mazda's creation. Besides water, other substances—e.g., *gromatza* (urine of cattle)—are supposed to have great power to purify. The rites of purification by means of substances are strictly fixed, as in a magical proceeding: the priest has to sprinkle every part of the body in a daily order, beginning with the head, till the *dōrē* is expelled from the left toes, which are the last refuge of the evil spirit. Dogs have a specially powerful wholesome influence. More intricate ceremonies tending to the same result existed besides this relatively simple one—e.g., the great purification of the nine nights (*Pahl. Zoroast-* *šīl dī ḵī*), in which the head, the ground is prepared, holes are dug, and furrows are drawn, according to a strict ritual: *gromatza* is put into the holes, the patient rubs the ground, and is sprinkled with water and religious purity of the last degree, a spoon and a stick of a fixed size, etc. The proceeding cannot, however, be completely identified with magic, because, however material the concept of purity may have been in the thought of the Iranian people at that time, it was, after all, a duty not confined to human interests in this world, because the activity of the purifying substances and acts derives from an essentially beneficent power, whereas the counter-spells, although tending to

neutralize noxious influences, are regarded as possessing a power of the same kind as the one which they oppose, and, lastly, because the rites, in spite of their magical tendencies, are devoid of all mystery. They are a public and accepted procedure, assumed—wrongly, of course—to date back to the Prophet's teaching and forming part of the sacred struggle of good against evil. Man is supposed to make use of the weapons which Mazda has put into his hands for a contest in which he is serving the lord's interests. Nevertheless, it is clear that a real degeneration of magic has taken place in these ceremonies, and also that many an ancient magical prescription for averting evils may have been introduced. This process is analogous to that which we observe in Mazdaism from Zoroaster to the Later Avestan period.

Moral beings, like the asuissca spents (g.v.) justice, good spirit, piety, etc., have been turned into—or, rather, identified with—the genii of fire, earth, etc., and brahma, 'obedience,' has become a good spirit protecting men during the night against demons and sorcerers, having the cock and the dog as his assistants in this task (Bund. xix. 33).5 Of sacrifice we may say much the same as of purifications. Neither to the Indians nor to the Iranians was the sacrifice properly a magical act. Oldenberg6 is quite right when he says that sacrifice is in Vedic times a gift to the god, but in the way of compulsion, not by way of influence to secure his powerful goodwill. This conception, however, was likely to degenerate, and did. Indra and Agni are sometimes stated as being the hemavat by the sacrificers. Agni, the fire, is regarded as a miniature of the sun, the great fire, and, by kindling fire, one gets the sun to rise. Indeed, the Sutapatha Brahmanga7 says that the sun would not rise if the fire-sacrifice did not take place. A similar process can be traced in Iran, where the sacrifice is given its place in the general cosmic conflict, so that it 'is more than an act of worship; it is an act of assistance to the gods. Gods, like men, need food and drink to be strong; like men, they need praise and encouragement to be of good cheer. When not supplied by the sacrificers, they fly helpless before their foes.'4

Sacrifice has thus a value of its own independent of the will of the sacrificer. It is an act of war, helping God in His struggle against the evil creation, so much so that gods also have to practise cult:

5Asha aitahzd performed the spiritual Yasnav ceremony with the instruments (anahagpani) in the Bap in Gah, and in the Yasnav he supplied every means for overcoming the adversary.

The value of sacrifice in itself is also to be discerned in the fact that it produces merits independently of the piety and attention of the sacrificer. If he does not obtain them for himself, they are not lost, but are collected in a store (gana) of merits.8 The sacrifice of the haoma ( = Ind. soma), although not itself really magical in principle, was specially prone to develop in that direction. The haoma = soma, in the thought of the Prophet, was a plant wherein resided an extraordinary strength of life capable of giving immortality to the gods, who were supposed to live on it like the Homeric gods on ambrosia, and of giving a superexaltation of life to man, in whom it caused intoxication. As was said above, the haoma orgiastic sacrifice had been banished from Gathic religion in company with the magical procedure of the daeva-worshippers. In the post-Gathic period we see it reappear, but it has been deprived of its savage character and turned into a mystical drink.9 Not only was it found fulfilling partly the sacred function of purifying man of evil but also of elevating and intensifying all the vital powers of life, for it was regarded as a highly beneficial spirit, imparting to man the gift of spiritual life and a title to the supranatural reward.10 It led to a division into two haomans. The first, the haoma magha, is the haoma, the other, supranatural, called the white hauma, was identified with the tree gaokerena (Pahl. gokhard) 'that stands in the middle of the sea, Vaeura-Krahe... that is called the "All-healer"—an asuissca spents—that has been made the principle of all life and of all goodness, and is supposed to receive its healing power from Vohu Manah, and to be the son of Ahura Mazda. This mysterious power of the drink of life is an approach to magic, although it is extended to domains that are rather those of sanctity.2

Thus we have here to do with a real amulet.

4. Spells.—If the sacrifice is apt to degenerate into a magical rite, prayer may become a spell. The message of Zoroaster to man is a mundah, a noble word which properly means 'utterance,' 'word,' 'orders,' the will of the highest, and it has the meaning of 'spell' and, indeed, the sermons of the Prophet, instead of being a subject for meditation, are chanted in a dithematic order for ages, and have degenerated into mere spells, the exact pronunciation of which is all that the author sought by pure life and diligence in a noble calling. The finest Mazdaean prayers, such as the Ahuna Vairya (g.v.) Parsi, hurwag)—a kind of profession of faith—have still remained in a mechanical repetition of formulae, and have acquired an infinite power of their own, so much so that they become a weapon for the Creator Himself. The Bundahish (l. 21) narrates how Ahuramazd, having recited the Ahunavart and uttered its twenty-five words, crowned the evil spirit and secured the victory over him, in the first days of creation. The power of the same prayer and of some others is also expended in Vend. xii. (cf. also Yt. xvii. 20). Recited as many times as is prescribed on every occasion, they help as a spell the purification of man, which is

primarily attained by the marvellous power of the sorcerers and magicians mentioned above.

No wonder, therefore, if the manthra is mentioned as a regular means of curing diseases. It is distinguished by healing plants, by the knife, and by the manthra, the last being the most powerful. A manthra, however, is to Dahaka, as is the prayer, to both diseases and evil beings. The prayer contained in Vend. xx. 11 is supposed to be peculiarly powerful. It is directed to Ahiraman, the healing god par excellence. Vend. xxii. 18-25 is also a spell against all kinds of diseases, consisting of some fragments of other parts of the Vendidad and of some very well known prayers. These are the means that Ahiraman has at his disposal for curing the 99,999 diseases created by Angra Mainyu for the baneful purpose. It is said, however, that the manthra is an old Indo-Iranian god: in the Vedas he is an aditya (Aryaman) who is generally found in company with Varuna and Mitra. He is a beneficent and helpful god, but in Persia he has been narrowed down to the same footing as the manthra for healing diseases must, of course, be put the numerous incantations and magical formulae for removing the pollution inflicted upon anything which has come into contact with a corpse. Vend. viii. 14 ff., e.g., places that a road where the dead bodies of dogs or men have been carried cannot be traversed again by men or flocks, till the yellow dog with four eyes or the white dog with yellow ears has gone three times round it, saying aloud the hallowed words of the hovener. Vend. vii. 28 ff. contains the method of purifying wood which has been in contact with a corpse, and a formula for all kinds of good elements infected with the pollution of the dead. In such cases the Gathas had become a mere spell (cf. Vend. x. 1 ff.). The reason of this custom with regard to corpses is originally a magical one, which has been fitted into the general Mazdean system, and conviction of mankind that death, like illness, cannot occur without the maleficent intervention of some spirit, which has therefore to be averted. For a Mazdean to die was to pass into the power of the dreg Naun. Hence, it was necessary to minimize the evil produced by this demon by protecting all good beings and substances from its power and freeing, as soon as possible, the beings or substances that had fallen into its hands. The intervention of maleficent beings and the utility of spells were felt in many other circumstances—e.g., in the case of a woman on the eve of child-birth (Vend. xxi. 8, 12, 16), or when some accident occurred to cattle. 

5. Fire.—Among the elements which have to be kept safely from any pollution, fire occupies a prominent position. It is well known that among the Parsees it enjoys a veneration which is not far from being superstitious. Here, the process is not a degenerative one, but rather the elevation of an elementary and, to a great extent, magical belief which is common to many nations, but which is especially Indo-Iranian (cf. art. FIRE, FIRE-GODS, § 6 f.). Fire is the great purifier, which illuminates the night, keeps off bitter cold and wild beasts, and, as such, is the great enemy of demons and the friend and ally of man. It repels diseases, and it plays an important part in the proceeding of Indian magic, as is expounded in the Atharva-veda—a name which is taken from the atharvan, who were originally priests of fire. The Iranian myth of Artas victory over the serpent Az Dusha (Vr. xix. 45 ff.) is for repelling both diseases and evil beings. The prayer contained in Vend. xx. 11 is supposed to be peculiarly powerful. It is directed to Ahiraman, the healing god par excellence. Vend. xii. 18-25 is also a spell against all kinds of diseases, consisting of some fragments of other parts of the Vendidad and of some very well known prayers. These are the means that Ahiraman has at his disposal for curing the 99,999 diseases created by Angra Mainyu for the baneful purpose. It is said, however, that the manthra is an old Indo-Iranian god: in the Vedas he is an aditya (Aryaman) who is generally found in company with Varuna and Mitra. He is a beneficent and helpful god, but in Persia he has been narrowed down to the same footing as the manthra for healing diseases must, of course, be put the numerous incantations and magical formulae for removing the pollution inflicted upon anything which has come into contact with a corpse. Vend. viii. 14 ff., e.g., places that a road where the dead bodies of dogs or men have been carried cannot be traversed again by men or flocks, till the yellow dog with four eyes or the white dog with yellow ears has gone three times round it, saying aloud the hallowed words of the hovener. Vend. vii. 28 ff. contains the method of purifying wood which has been in contact with a corpse, and a formula for all kinds of good elements infected with the pollution of the dead. In such cases the Gathas had become a mere spell (cf. Vend. x. 1 ff.). The reason of this custom with regard to corpses is originally a magical one, which has been fitted into the general Mazdean system, and conviction of mankind that death, like illness, cannot occur without the maleficent intervention of some spirit, which has therefore to be averted. For a Mazdean to die was to pass into the power of the dreg Naun. Hence, it was necessary to minimize the evil produced by this demon by Protecting all good beings and substances from its power and freeing, as soon as possible, the beings or substances that had fallen into its hands. The intervention of maleficent beings and the utility of spells were felt in many other circumstances—e.g., in the case of a woman on the eve of child-birth (Vend. xxi. 8, 12, 16), or when some accident occurred to cattle.

6. Influence of stars.—Astrology, as is well known, was the chief concern of the Magi, as the Zendavesta describes; but it is evident that there is abundant evidence that this element of activity was not of Iranian origin. The proto-Aryan element of astrology was extremely small, in contrast with Babylonian religion. We have, however, the cult of Tistrya, which is referred to as a good genius that brought rain after having slain the drought demon Apsaun (Vr. viii. 20 ff.). It is a very good genius which, at the dawn of creation and before man was created, destroyed the noxious creatures by an effusion of beneficent waters. It would be an exaggeration to treat as real magic such beliefs concerning the part of Tistrya as we find in the Avesta. There is reason to believe, however, that in some parts of Persia rain spells were in use. The Great Bundahishin says:

'The plague created against Sasanian is abundance of witchcraft; and that character appears from this, that all people deem that place practises astrology: those who play upon the stars, are said to be those who play, as the Zoroastrians say, on the stars, snow, hail, spiders, and locusts.'

On the other hand, it was a current belief among Iranians that planets had a malign influence; but this does not obligate us to admit that they had any belief in the influences of stars upon men's fate (cf. art. FATE [Iranian]).

7. Recent superstitions.—Among the superstitions prevalent among the Parsees and the Muhammadan Persians many customs, no doubt, go back to old Mazdean practices or, more probably, to popular beliefs which persisted beside the official creed. The great power assigned, among the old Mazdeans, to planets in general, and in particular to some specially marvellous ones, as well as the extensive practice, among the Babylonian Magi, of natural or magical treatment of diseases by herbs, probably explains the important part played by plants in the superstitions customs attached to the ancient Persian festivals as described by Persian writers—e.g., rubbing with olive oil on the day of Naturz as a riddance from sorrows during the new year, planting a pomegranate on the feast of Mihir (Mithra) to avert dangers, hitting
an eating animal with an orange on the day of Ablat in November as a way of securing happiness, giving garlic to one's friends on the Gôs râz (14th Dec.), and boiling herbs on the same day, in order to get rid of demons, purification with licorice on the fourteenth day of the month to avoid stagnation or misery, eating apples and Dollakios on the same day in order to secure success in one's enterprises, placing betel, walnuts, etc., on a pregnant woman's bosom, to make her fertile, etc.

Over the most ancient of these rites, we have a story in which a certain pretended priest of Darmesteter consequence, Modi, was brought to trial for magical element—were certainly composed at a much earlier date, even before the most ancient mythico-historical works, the Kojiki and the Nihonoki, which were written in the 8th century. By glancing over these stories, we find that the priest of the Kojiki and the Nihonoki or in other equally ancient sources, rather than by abstract classifications, we shall gain a vivid idea of what Japanese magic was in its most ancient and most original form.

The old rituals seem to have been not so much prayers as magical formulae, solemn incantations, and we shall see that at the same time they were enclosed in the language by which the magician priests of primitive Japan conquered their gods.

This magical spirit appears at the very beginning of the collection, in the 1st ritual, Toshigô no Matsuri, which was said every year at sea-time in order to obtain a good harvest. The chief priest (matsutomi), who recited it in the name of the emperor, addressed the gods in these words:

'If I believe in the presence of the sovereign gods of the Harvest, H the sovereign gods will bestow in many-hundred ears and in innumerable ears the late-ripening harvest which you have bestowed, the late-ripening harvest which will be produced by the dripping of foam from the arms and by drawing the sword together between the opposing thongs, then I will fulfill their praises by setting up the firstfruits in a thousand ears and many hundred ears, raising high the sake-jars, filling and range

Other offerings are then enumerated, among which we notice a white horse, a white pig, and a white cock. Now, a 9th cent. document, the Kogoshibi, gives the legendary origin of this detail: Mitoshi no Kami, 'the god of the august harvest,' had cast his curse on the rice fields; but the diviners obtained from him, by the gift of these same white animals, the secret of a magical process which enabled them to save the important rice. The ritual is, therefore, based on a history of magic. The main point to remember from this first text, however, is the conditional character of the offerings which are to obtain the desired result. The same precaution is taken by the Japanese towards the end of this document, where the officiant invokes the gods who preside over the departure of the waters on which irrigation depends. This ritual, therefore, is not so much a prayer as a contract, a matter-of-fact agreement by which the gods receive in advance the remuneration promised in exchange for the services expected from them, and thus find themselves morally compelled to render them. We accordingly see at the very beginning the familiar nature of the relations between these very human gods and the priestly magicians who exploit their power.

In the 2nd ritual, Kasuga Matsuri, we again find this idea of the bond which must unite the offerings with the services rendered; for it is 'in consequence of these offerings' that the gods are asked to protect the sovereign and his court. We may also observe that, of the four gods worshipped in the temple of Kasuga, the first two, Take-miku-dzuchi and Futsu-nushi, were represented by magical swords (cf. Kojiki, tr. H. H. Chamberlain, 2nd ed., Tokyo, 1896, p. 50), and that the other two, Koyané and his wife, are connected with the famous eclipse in which that god, by his 'powerful ritual words' helped to bring back the sun-goddess (Kojiki, 64).

There is the same spirit in the 3rd ritual, Hirose Oho-tomi no Matsuri, devoted to the goddess of food.
Her worshippers make a bargain with her; while bringing her various offerings, they promise her others if the harvest is very abundant.

The 4th ritual, Teninun no okese no Kumi no Motoni, is just as characteristic, and, moreover, relates its own legendary origin. For several years unknown gods have bungled all the crops, and the diviners have not been able to discover who these gods are. To one of them, in the hope of conjuring them, and they revealed themselves to him in a dream. They are 'Heaven's Pillar's augustness and Country's Pillar's augustness,' the gods of the winds who maintain the order of the world. They require certain offerings, the announce future gods and, in the first instance, at Tsutsu, and a liturgy, by means of which they 'will bless and ripen the things produced by the great People of the region under heaven, firstly the five seeds of grain, down to the least leaf of the barley. How? It is the gods who state their conditions. The people hasten to fulfil them without omission,' but evidently the recollection of past calamities has left some mistrust, for, when making the present offerings, they announce future gifts: if, be at night and then, the gods have deigned not to send 'bad winds and rough waters,' but to 'ripen and bless' the harvest, they will grant them the firstfruits of it. This is the announcement.

We shall pass over the 5th, 6th, and 7th rituals, which are not so interesting, and come to the 8th. Ototo-Hogahi, i.e. 'Luck-bringer of the Great Palace.' This title itself indicates the magical character of the document, and, in fact, we find the ritual defined in its own text in the words, ama tsu kusuiki itahiki-goto, 'the celestial magical protective words.' It is a formula the recitation of which wards off all calamity from the palace, as an annual custom. This is shown by the importance ascribed to the perfect regularity of the words pronounced; for, in another passage, certain 'correction-gods (nako) are begged to rectify all the omissions that they may have seen or heard in the rites of the ceremony. This ceremony itself throws abundant light on the magical character of the ritual of which it was a part. We have a description of it in the Gi-shiki of the 9th cent. (see E. Satow, in TASS, vol. ix. pt. ii. [1881] p. 348) in the present ceremony, the shichishu chief the nakotom, the itume (abstaining priests), and the vestals, go through the palace in every direction; and in different places, from the great audience-hall to the bath-room, even to the kitchen, the ceremony, the coming of the nako, while the itume hang precious stones on the four corners of the rooms visited by them. We observe here an application of the custom, called sumanai, which consisted in scattering rice to ward off evil spirits. Whatever is the reason of this custom—whether it is simply a bait thrown to the demons or perhaps a symbolic use of grains whose shape represents one of the aspects of the generative power, of the vital force which combats illness and death—in the vast majority of the magical ceremonies practised in Japanese magic. Rice was scattered inside the hut in which a woman was about to be confined; in the divination at cross-roads (takuri-wa; see art. DIVINATION [Japanese]), a boundary was sometimes marked on the road, where rice was also strewn, in order to take afterwards as an oracle the words spoken by the first passer-by who crossed this bewitched line; and an old legend tells how, when the son of the gods descended from heaven to the castle, a temple was set up for the nako, and thrown at random in the air to disperse the darkness from the sky. Just the same is the magical use of jewels to combat evil influences. Through the whole of Japanese mythology there is the sparkle of jewels, some of which are talismans—jewels which, at the time of an eclipse, the gods suspended to the highest branches of the sacred elyers, and whose brilliance recalled the sun (Kojiki, 64); jews which, in another form of the story, enabled their possessor to make the tide flow or ebb at his will (ib. 150); jewels which even aimed at resuscitating the dead, as we shall see below. We can, therefore, easily understand the magical character of the ritual. The nako, paraded in the imperial apartments, caused the dark threats of the invisible everywhere to retire before their brightness. Still another point to be remarked is that, according to the description cited, the itume recite the liturgy and the Polynesian sorcerers also said their prayers in a low singing, perhaps even hissing, tone, similar to the hissing, whispering voice which they attributed to their gods; and even in Japan, in the divination by the larp (koto-uru), one of the practices of the officiant was a complicated whistle. All this magical atmosphere which surrounds the ritual suits its text very well. It points out, first of all, the propitiatory rites which the itume have accomplished in hewing down the trees intended for the construction of the palace. Then it recalls the mythical recollections which assure beforehand the efficiency of the formula recited. Then the protector-gods of the palace ward off certain calamities, several of which—e.g., serpent-bites, or the droppings of birds falling through the smoke-hole in the roof—are ritual 'offences.' Lastly, in the same way as it invokes the protector-gods, every possible omission, the text insists on this fact—that the 'immutable strings of luck-bringing grains' have been made by sacred jewellers 'taking care to avoid all pollution and to observe perfect cleanliness.' The care in all these matters shows the magical importance by attaching to each of the rites of the ceremony, and to the most insignificant words of the incantation.

We shall omit the 9th ritual, Mikado Motoni, 'Festival of the Sublime Gates,' devoted to the gods who guard the entrance of the palace against the evil influences of the 'crooked' gods (waigo), and come to the 10th, which is much more important. This is the 'Ritual of the Great Purification' (Ohe-horakhi). This ritual was recited by the chief of the nako, the priest who in the 11th month, and the 12th months, to blot out all the transgressions, both moral and ritual, that the whole people had committed in the interval. The choice of these dates is in itself significant; the summer ceremony recalls the lustration in the months of St. John in different countries of Europe, and the ceremony at the end of the year corresponds with the need of renewal experienced by the majority of men at this time, and which, in Japan, still takes the popular form of a dramatic enactment called temuna, 'expulsion of the demons.' The Great Purification included various rites; but the ritual is often mentioned as if it itself formed the whole ceremony—which proves the magical power ascribed to it, for the ritual itself contains clearly that it is the emperor who 'deigns to purify and wash away' (horakhi-tamahi kiyone-tamafu) the offences committed—from which we see that the gods who, a little later, are to be invoked to intervene really play a part inferior to that of the emperor, and act only, so to speak, at his command. The right of absolution which he exercises thus arises from the general sovereignty conferred respectively' upon him by the celestial gods at the beginning of the year, and the text immediately recalls. Then follows the enumeration of ritual crimes, voluntary or not, which are to be effaced (see Revon, Anthologie de la litterature japonaise, Paris, 1910, p. 28 l.). We may select from this list at least two offences con-
nected with our subject. The one is the 'planting of wandes' (kashi-shidzue) in rice-fields, probably with instaurated purpose or process; native interpretation explains as the casting of magic boundaries on the field of which one claims to be proprietor, though perhaps it is an example of pointedly stuck into the mud to hurt the bare feet of a neighbour. Amongst the Malayas, a person in flight recounts the pursuit of his adversaries by this means. The other offence (amiy-com-sarasvati) is 'the performing of witchcraft,' either in a general way (cf. Kojiki, 326 ff.) or in particular against a neighbour. It is magic (wii) we connect this passage with the expression semono-tafushi, 'to kill animals,' which precedes it. In any case the Chinese character employed shows that it is a question of black magic; and that is why the norito, although it is itself a magical text, does not hesitate to condemn it. The ritual afterwards shows that, when these faults are committed, the great nakatomi has to prepare some twigs in a certain way, doubletless intact, and form a sort of purificatory broom, then to recite 'the powerful ritual words of the celestial ritual' (tsa fi norito no futo noritogdo). The native commentators tried for a long time to explain what caused these serious incantations, and this passage could possibly allude, without seeing that it simply referred to the norito itself. This is the 'celestial' ritual which the gods revealed on high to the ancestor of the emperors, and whose 'powerful words,' it has already been said, cannot be repeated—an expression intended to recall the intrinsic virtue of this formula. When the high priest recites it thus, according to the text of the ritual itself, the gods of heaven and earth will approach to listen, and all offences will disappear, being washed off, carried away by the ocean by the goddess of the torrents, swallowed by the goddess of the sea-currents, driven to the nether regions by the god whose breath chases before it all impurities, and when they will be seized at last by a subterranean deity who banishes them for ever.

Clearly these deities are only the four wheels of the machine which the emperor sets in motion by the hand of the great nakatomi, the magician who knows the sacred words which even the gods obey. As for the rest, to the meaning, curiosity, they belong, horse whose erect cars will incite these gods to listen attentively, just as the crowing cocks, the lighted fire—all these magical processes of the myth of the eclipse (Kojiki, 62-65)—would recall the sun, or as it were, the holy mouth of the emperor himself (Nihongi, tr. W. G.aston, London, 1896, i. 118), one had only to whistle to raise the wind. Then an order is given to the urabe ('diviners') to throw into the river the expiatory offerings, to which a mysterious sympathy unites the sins themselves, which will disappear along with the objects to which they have been attached. The ritual finishes, therefore, with a last example of the magic which has marked the whole of it.

We may mention the 11th ritual along with this one. It is an invocation which the hereditary scholars of Yamato pronounced immediately before the ceremony of the Great Purification, and in which they presented the emperor with a silver-gilt human effigy, which would play the part of scapegoat by removing calamities from him, and a gilded sword which he breathed before it was taken from him, with the same intention of driving away, by this magical transfer, both the sins committed and the material support.

Another ritual which is plainly magical is the 12th, the title of which, Ho-shidzume, "Appeasing of the Fire," shows that its purpose was not to worship the god of fire, but to banish him from the palace. As for the 13th ritual, the text first recalls the celestial revelation which has confided to the emperor the 'powerful words' by means of which he is superior to the gods. Then it recounts this atrocious crime of this 'child with the wicked heart,' who caused his mother's death by burning her when she gave him birth (cf. Kojiki, 32-33): and tells how Isunmi herself, caching this son who had caused his mother so much distress, offered to give birth to the water-goddess, the gourd, the river-plant, and the princess of the clay mountains, four divine things whose magical use against fire she immediately taught. Then, in order that this might be done, many demons not to be terribly lively in the palace of the august sovereign, he is loaded with offerings, which have the effect of captivating and subduing him. This ritual was accompanied by rites which consisted mainly in the lightening of a fire by the urabe in the four outside corners of the precincts of the palace, with the primitive apparatus (hi-kiri-umi) of which a specimen may be seen in the University Museum, Oxford.

The 13th ritual, Mikichi-abe, also aimed at employing certain gods to combat others. Those who were invoked on this occasion were three gods of roads and cross-roads, whose phallic character was encrusted with a sworded head (sake no baikin) against the epidemics sent by the demons. The ritual begins by reminding these protector-gods, without great reverence, that their duties were inaugurated in heaven itself, where they already served the son of the gods. It then dictates to them what they must do:

'Whenever from the Bottom-country, the Bottom-country, there may come savage and unearthly beings, consort not and parley not with them, but if they go below, keep watch below, if they go above, keep watch above, protecting us against pollution with a night guarding and a day guarding.'

In return they are presented with offerings, which they are to enjoy while defending the great roads 'like a multitudinous assemblage of rocks,' and, finally, the celebrant insists once more on the 'powerful words' of his formula.

The next ritual, the 14th, was devoted to the Ohonihe, 'Great Offering of Poo.' Before eating the new rice of the year, the ancient Japanese performed a ceremony called Niki-name, 'new tasting,' which had a propitiatory purport towards the spirits of the magic season. The Ohonihe was a more solemn Niki-name, celebrated some time after the succession of the emperors, and constituting a sort of religious coronation for them. The ritual relating to this festival contains nothing very curiously magic, excepting that we find it to be the very complicated ceremony with which it was connected included a long series of preparations, in which magic occupied a large place, just as in the essential part of the festival, when the emperor in person, surrounded by ladies of honour who repeated a mysterious formula, shared in the repast which he had just offered to the gods.

The 15th ritual is another document whose magical value appears as soon as it is placed in its psychological surroundings. It is entitled Mitama shidzumu, which shows that its purpose was 'to appease the august spirit,' i.e. the spirit of the emperor, that is to say, that which keeps the imperial soul in his body, of recalling if it seemed to wish to escape—in a word, of renewing magically the vital force of the sovereign for the coming year and thus prolonging his life. This is the meaning of the ceremony which called Mi-tama. The Ohonihe was celebrated at the end of the year in the sanctuary of the priests of the court (see Nihongi, ii. 273). Now, the gloss identifies this festival with an ancient ceremony called Mi-tana farashiti, 'shaking of the angst jewels,' which again plunges us into deep magic. The Kojiki (11. 2) says, in fact,
that, when the sun-goddess gave the investiture to the ancestor of the emperors, she bestowed upon him ten precious treasures:

- one mirror of the earring, one mirror of the shore, one eight-handed brass sword, one jewel of birth, one jewel of return from death, one perfect jewel, one jewel road-returning, evil things to it, the road they came, one scorpion-ear, one bee-ear, and scarp of various things.

She added: 'in case of illness, shall be repeated to the words: Hi, su, mii, po, shen, mi, sena, ga, kohiko, faris, and shake them pursura (cosmatopilia). If thou doest so the dead will certainly return to life.

The objects enumerated by the sun-goddess are talismans, several of which occur in the most ancient Japanese mythology (see Kojiki, 86, 159, 234, etc.). As for the inscription, it represents simply the series of numbers from one to ten, which demonstrates its intrinsic power, independent of the meaning of the words. We know, besides, that the same inscription was recited at this festival by young ladies.

We shall omit rituals 16 to 24, which refer exclusively to the offices of the temples of Ise; it will be sufficient to mention in this group the formula of the 25th ritual, for the installation of a prince or princess:

'The offering of a sacred princess of the blood imperial to serve as the deity's staff, having first, according to custom, observed the rules of religious purity, the young princess, for three years, in the end that thou mayst cause the Sovereign Grandchild to live peacefully and firmly so long as Heaven and Earth, the Sun and the Moon may last. I, the Great Nakatomi, holding the sacred spear by the middle, with deepest awe pronounce this dedication of her by the Mikado to the end that she may serve as an august staff.'

We have here evidently a survival of the 'abstainer' of primitive Japan, whose asceticism necromanced against the health of the village, in the same way as here the sacrifice of the imperial virgin is to guarantee the happiness and long life of the sovereign (cf. art. Ancient Japan).

The 25th ritual, of a more general interest, is entitled: Totari-gami wo usukashi-tatematsuru norito, 'Ritual for the Respectful Removal of the Gods who send Plagues.' In the 13th ritual the usual offerings of fish, game, vegetables, rice, and sake, but also in a novel form, 'as a thing to see plain in, a mirror; as things to play with, leather; as things to shot off with, a bow and arrows; as a thing to strike and cut with, a sword; as a thing which gallops out, a horse.'

Lastly, after having thus loaded them with numerous toys and abundant dainties, which they beg them to accept 'with clear hearts, as peaceful offerings and sufficient offerings,' they earnestly ask these 'sacred gods' to be good enough, 'without desiring to be fierce, and desiring to hurt, to remove out to the wide and deep places of the mountain-streams, and by virtue of their divinity to be tranquill.'

Passing in silence a less interesting ritual (the 26th), we come at length to the last document of the collection, the 27th ritual, which is called

_Itzumo no kuni no miyako no kuni yugoto_, 'The Divine Words of Good Fortune of the Chiefs of the Country of Izumo.' These local chiefs, after having lost their civil sway, had been reduced to religious power. It is they who to this day in the old province hand down the primitive fire-kindlers which their legendary ancestor, the god Ame-no-hohi, had received from the sun-goddess herself, and which each chief of Izumo bequeaths to his successor by the ceremony called Hi-taomari, 'perpetuation of fire.' In this ritual the miyako first announces that he will recite the formula, after many ritual preparations, to bring happiness and prosperity to the reign of the gods; how he then divided his life by counting:

He then relates how Ame-no-hohi and, later, other celestial ambassadors were sent to earth to prepare for the descent of the son of the gods; how Onahmochi, the divine king of Izumo, who achieved the 'making of the country' with the help of a stranger magician, and who was the first to found a government in this important region of the archipelago, was persuaded by the celestial envoys to abandon his temporal rule to the son of the gods; how he then divided his life by counting:

We have here, therefore, a typical case of the action of like upon like, which is one of the essential doctrines of primitive man, as also, in the present case, attaches to the different jewels a power corresponding to their colour. The formula continues by other applications of this principle of imitative magic:

'As this white horse plants firmly his fore-paws and his hind-feet, so will the pillars of the Great Palace be set firmly on the upper rocks and frozen firmly on the lower rocks; the pricking up of his ears is a sign that your Majesty will, with ears more erect, rule the Under-Heaven, etc.'

It is possible that at some time these rites may have become symbols; but it is impossible not to recognize in them, especially at the beginning, practices inspired by that primitive logic which has always and everywhere constructed magic on the same universal principles.

Ancient Shinto, together, as it appears to us in its most authentic liturgies, is a religion in which the magical element still prevails over the religious sentiment. The rituals are essentially formulaic, addressed to magician gods (as is demonstrated by all their mythical exploits) by magician-priests (the nakatomi, the mimiku, and the urahe), and encircled in magical rites. Magic is, therefore, at the base of the national cult of the Japanese, and it appears there with all the characteristics familiar to the student of comparative religion.

To finish with a vivid illustration, which, after the necessarily short descriptions given above, will show this magic in application in a typical and exact case, we shall choose as an example sovery,
as it was practised in the most ancient times. The following is the curious account of the subject given in the Kojiki (326 f.).

*The Deity of Idzushi [the country of the "sacred stones"] had a daughter, whose name was the Deity Maiden of Idzushi. So eighty pairs of young people were chosen to obtain this maiden of Idzushi in marriage, but none of them could do so. Therefore there were two Deities, brothers, of whom the elder was called the Younth-of-the-Haze-on-the-Spring-Mountains, and the younger was named the Younth-of-the-Haze-on-the-Spring-Mountains. So the elder brother said to the younger brother: "Though I beg for the Maiden of Idzushi, I cannot obtain her in marriage. Will you be able to obtain her?" He answered, saying: "I will endeavor to do so." Then the elder brother said: "If thou canst obtain this maiden, I will take off my upper and lower garments, and datil liquer in a jar of my own height, and prepare all the things of the Mountaineers and the rivers, in payment of thine wager." Then the younger brother told his mother everything that the elder brother had said.

Fortwith, the mother, having taken wistaria-dye, wove and sewed in the space of a single night an upper garment and trousers, and also socks and boots, and likewise made a bow and arrows, and clothed him in this upper garment, trousers, etc., made him take the bow and arrows, and sent him to the maiden's house, where both his apparel and the bow and arrows all turned into wistaria-blossoms. Thereupon the Younth-of-the-Haze-on-the-Spring-Mountains hung up the bow and arrows in the maiden's privy. Then, when the Maiden of Idzushi, thinking the blossoms strange, brought them, he followed behind the maiden into the house. She had just set a tub, and asked him: "And will you pay the things he had wagered?" Then when the younger brother insisted on his mother, his august parent replied: saying: "During my august life the Deities indeed are to be well imitated; it must be because he imitates mortal men that he does not imitate the gods!"

Fortwith, in her anger with her elder child, she took a one-pointed bamboo from an island in the River Idzushi, and made a coarse basket with eight holes, and took some wistaria-dye, and mixing them with brine [taking in the sense of 'hard salt'], wrapped them in the leaves of the bamboo, and caused this curse (tsoku) to be spoken [by her younger son]: "Like unto the becoming green of these bamboo-leaves, do thou become green and wither! Again, like unto the flowing and ebbing of this stream, go thou (in the word shika, let it be here with the meaning of 'sea-water'), do thou flow and ebb! Again, like unto the sinking of these stones, do thou sink and be prostrated." Having caused this curse to be spoken, she placed the basket over the smoke [apparently on the hearth of the house]. The elder brother dried up, withered, sickened, and lay prostrate for the space of eight years. So on the elder brother entrusting his august parent with lamentations and tears, she forthwith caused the curse to be reversed. Thereupon his body was pacified. This is the origin of the term "a divine wager-payment."

In this text we have a case of original soecery, founded on sympathetic magic (a notion so well expressed by the Japanese word for 'magic,' manja, which conveys the idea of 'to mix'), but before the time when the progress of the arts and foreign influences could have given the idea of such soeceries to the effigy of an enemy. (For this later development, see, e.g., the popular ballad of Shuntoku Maru, in TASS, vol. xxii. pt. iii. [1894] pp. 291-308.) We are, therefore, in the presence of a thoroughly Japanese rite, whose ancient character is shown by its very obscurity, and which cannot be understood unless it is replaced in the midst of the primitive beliefs from which it came. First of all, the mother provides herself with the mysterious bamboo on which the life of her elder son is to depend. Purposely she does not gather it in any chance place; she takes it from an island—which already connects that object with the aqueous element. With this bamboo she weaves a basket, in which she takes care to have eight holes, which will be the eight openings by which eight years of misfortune are to enter for the victim. In this basket she places river-pebbles, which, even more than the bamboo, come from the water. But it is from fresh water that brine is obtained, and this natural demand that they should assume a maritime character. They are, therefore, put among brine; by this union the assimilation is made, and the soecery is accomplished. The only thing that remains to be done is to pronounce the formula whose powerful words will act on all these things. The victim will wither like the leaves of bamboo, in the same way as, in another legend (Kojiki, 238), the magical imprecation (tsuku) of a chief had made a great oak-tree suddenly decay; or, better still, in the same way as, by the effect of a general maldelegation, man, formerly immortal, was condemned to the cherry-tree fade (Kojiki, 140-142). Then, as the high water falls back, the guilty one will be abused. Lastly, he will be seen foundering as a stone sink when disappearing under the waves. This curse pronounced, the basket of perdition is placed in the smoke of the hearth; the green leaves become black; the threat is executed. Yet in the end the mother's heart bears the remembrance of her son. She reverses the curse, i.e., the terrible magical formula is this time pronounced backwards (cf. Kojiki, 238), and immediately the body of the young man is 'pacified'; he returns to health, to life.

In this soecery the most curious point is that which is connected with the sea element. The fate of the young man is, in fact, connected with the ebbing of the tide. We have here an interesting illustration, among the insular Japanese, of the belief so wide-spread among primitive races, according to which a mysterious harmony exists between the rising and falling of the sea and the course of human life. In this belief, it is when the sea is flowing in that one is born, becomes strong, prosperous; it is when it is ebbing that one loses his energy, falls ill, and dies. The Japanese soecers, the deposition of primitive traditions, as is well aware of this secret agreement. She knows that, even far from the sea-shore, an artificial connexion can be formed between these two manifestations of a single force. Consequently she brings into connexion with the soecery just considered, into which the consecrated words will bring the very existence of her son; and the cursed one is immediately delivered up to the enchantment of the waters; he becomes like a pebble on the beach, the tide carries him away, drags him towards the brightnesses of life, then lets him fall back and roll in darkness and death. This story of witchcraft has, therefore, given us at one and the same time a typical case of Japanese magic and a new proof of the straemcon of the most curious beliefs of humanity in general.

LITERATURE.—This has been cited in the article.

M. RYEO.

MAGIC (Jewish).—The attitude assumed by Judaism towards everything not sanctioned by its own monotheistic teaching has also affected the practice which may be called 'magic,' and it thus becomes necessary, first of all, to obtain as clear a definition as documents of the OT and Jewish tradition allow us to what is to be understood by the term.

It must at once be pointed out that divination and charms (see DIVINATION [Jewish] and CHARMS AND AMULETS [Jewish]) are not part of Jewish magic, which, purposely strict in character. The difference between witchcraft and other forms of magic is that the magician has nothing whatsoever to do with forecasting the future or with preventing any occurrence that is sure to happen in the ordinary course of nature. He has nothing to do primarily with spells or incantations, nor is the writing of any formula an indispensable condition for magic. Magic can only be 'performed'; no magic is effective unless the nature of the rite demands that they should assume a maritime character. They are, therefore, put among brine; by this union the assimilation is made, and the soecery is accomplished. The only thing that remains to be done is to pronounce the formula whose powerful words will act on all these things.
seeks to subvert the regular course of events. He is expected, if possible, to obscure the sun and moon, to bring the dead to life, to change human beings into animal shapes. In the technical literature he is described as producing fruit in winter, and, in fact, to do everything that is contrary to the regular laws of nature.

The magician will kill, he will create strife—his activity will always be an evil one. He is not expected to do good; he will be the agent for vengeance, hatred, and everything that makes for strife, death, and destruction. But he cannot carry out his intention without an 'operation'; he must do something in order to bring about the desired result. Unlike the certain spells, songs, formulae, and written amulets, the magician must perform a whole set of ceremonies quite independent of signs, omens, and spells. It is a new definition that is here offered, which, by circumventing much more narrowly the field of superstition, is an endeavour to give to magic its real meaning. The magician's work, again, is not expected to be of a permanent character; it is temporary, and it can be undone by other means, or by the actions of others who are skilful in such an art. In order, then, to disturb the laws of nature, to transform existing things, to shape and mould new creatures, the magician requires the help of supernatural beings who are skilful in the art of magic; the magician must be able to command the services of spiritual powers—demons, gods, or ghosts—malignant in their disposition and willing to do mischief.

Magical means presupposes the existence of such spirits, and occupies the borderline between orthodoxy and heresy, between Judaism and paganism. It is an art that lives in the twilight between truth and falsehood, and the line of demarcation shifts according to the change of theologial views in the course of development and transition. It depends also upon the nature of those spirits and upon the theological attitude towards them—whether they are considered as forces of super-negative forces that are also creatures of God and yet unwilling, by their own innate wickedness, to do good. The conception of a rebellious angel who has been cast down from the heavenly heights because of his insubordination does not enter into the sphere of Jewish magic, nor, with rare exceptions, have the gods of other nations become evil spirits subservient to the will of the magician and willing to do his behest.

The Hebrew term for 'magic' is 'kushef', which, like all technical expressions connected with superstition, is of obscure origin; though many attempts have been made to elucidate its primitive meaning, no one has yet proved satisfactory. The primitive meaning of 'kushef', in the view of the present writer, is apparently 'hidden', 'obscure', 'a thing done in a secret manner', which is the very essence of magic. The performance is a secret one, and even those who are allowed to witness it are slow to understand its meaning. The spell, inscribed, as it has various derivatives, occurs twelve times in the Bible. It is to be noted that all the references in the Pentateuch are to Egypt, while the references in the Prophetic writings some are to Assyria as well as to Palestine itself. In 2 Ch. 33:20 Manasseh is described as having practised witchcraft as well as other forbidden things (cf. also Mal 3:8); the wizards of Egypt are mentioned in Ex 7:11-22; in Babylon there is only one allusion to them, in Dn 2.

The LXX translates 'kushef' by φάρακος, which does not mean 'poison,' but, as in ancient Greek, a 'spell' cast by a magician. 'Kushef' has remained the technical term. The art of witchcraft is called 'kishef' in the Mishna and Talmud, and there was no magic' is exactly witchcraft. It is clearly stated (Sanh. vii. 4, 11) that only he is to be called a magician who produces a real act, but not the man who produces an optical illusion, a kind of jugglery.

The fact that the term, with its various spells, songs, formulae, and written amulets, the magician must perform a whole set of ceremonies quite independent of signs, omens, and spells. It is a new definition that is here offered, which, by circumventing much more narrowly the field of superstition, is an endeavour to give to magic its real meaning. The magician's work, again, is not expected to be of a permanent character; it is temporary, and it can be undone by other means, or by the actions of others who are skilful in such an art. In order, then, to disturb the laws of nature, to transform existing things, to shape and mould new creatures, the magician requires the help of supernatural beings who are skilful in the art of magic; the magician must be able to command the services of spiritual powers—demons, gods, or ghosts—malignant in their disposition and willing to do mischief.
magic with idolatry, noted above). In addition there was the lighting of candles and the use of a knife with a black handle which is mentioned by Rashi to Sanh. 101a, and which can be understood only as a symbolical sacrificial knife. Philtres must be served to a goat (Ber. Meid. 20a). Fasting and other ceremonies are all intended to propitiate the evil spirit, and this is what made magic and magical operations objectionable to Jews and an ‘abomination’ to Judaism. Yet Rabbis made old phrase for weaknesses of human nature and, except on rare occasions, avoided rigorous measures against witchcraft. But when necessary they did not shrink from them. During the first centuries of the Christian era the whole of what might be termed the civilized world—Egypt, Babylon, Greece, and Rome—stood under the absolute sway of belief in evil spirits. It was partly Babylonian tradition that ascribed every form of evil and harm to the notion of the skethim and maszahim and produced a large literature of invocations and magical formulae for harm and for protection, and partly the Egyptian tradition of magical operations and ceremonies of a mystical and magical character. During Talmudic times it became the belief that these demons were harmless, and, though they were looked upon as evils inclined and malignant, a friendly intercourse with them does not appear to have been considered contrary to Jewish law. Thus a Rabbi once assisted a woman to kill many men for destruction and sorcery. In the book of Tobit another side of this belief is shown in which we may begin to see a differentiation between a white magic, or a magic tolerated by Judaism, and that kind of magic that was ranked as paganism, and which probably would fall under the category of the witchcraft for which the death penalty was prescribed by law. Here we find the angel Raphael himself helping, by means of fumigation, to counteract the work of a demon who, falling in love with Sarah, had become an invocans, and would, therefore, kill any one who intended to approach her. The spirit thus exercised was Asmodeus, who is recognized in the later demonological hierarchy as the king of the evil powers. The position of Belial, or Beelzeboul (the name given also in Samaritan tradition to the evil spirit who deceived Eve), is, in the Ascension of Isaiah and other apocryphal writings, not so clearly defined, but in any case he is an evil spirit, Subject to the character of Satan in the book of Job (cf. Belial, Beliar). To obtain the assistance and help of these powers, certain means had to be devised: gifts or sacrifices were made in order to win them over and gain control over them. Maimonides, in interpreting Dt. 22:18, ‘they sacrificed to shedhim,’ says that the gift most acceptable to the evil spirits was blood, and that their will was obtained by giving them the blood of the sacrifice as food; the magician must partake of the blood, thus sharing the food of the evil spirits, so as to become their associate. To this sacrifice, which was not limited to the shedding and partaking of blood, other ceremonies had to be added, all best understood as sacrifices, just as the fumigation or burning of incense in the temple is an offering to God, so fumigation and the burning of incense must be understood primarily as gifts very acceptable to the spirits, who are not sufficiently materialized to enjoy material food (cf. the Biblical parallelism of

1 For an Egyptian parallel to this legend, see the literature of enchantment of a demon who had fallen in love with a woman see M. Berthelot, Collection des anciens alchimistes grecs, Paris, 1868-69, 1, 51.

2 For the legend of shedhim and other rulers and princes of the dead Asmodeus (cf. Jer. Shch, v. 40, Gen. Rab. 29, Levit. Rab. c. 6, and apocryphic compilations).

3 For this, see M. 56.

4 This is one of the earliest invocations of a lion-headed god, which plays such an important role in fairy-tales.
apocryphal literature it is the 'Book of Adam,' or the 'Book of Raziel,' a title afterwards given to a handbook of practical ḳēbdūti of full magical use. angel names, angels, rulers, evil names, planets, and sublunar worlds. Still less could the Rabbis object to belief in power over these demons when they remembered that even the Temple in Jerusalem was said to have been built by Solomon with the assistance of the  ḳēbdūti—a legend which relies on a peculiar interpretation of the word ḥēlālah, occurring in Ec 2:4. So firm was the later belief in Solomon's power over the  ḳēbdūti—and whatever was allowed to Solomon could not be refused to any other Jew—that Josephus has preserved for us (Ant. viii. 5) the tradition of Eleazar, who came before the Roman emperor Vespasian, and was able to drive away an evil spirit by using the ring of Solomon and certain herbs.

In the Acanthus is mentioned as their king, and Lilith, Mahalath, and Agaron are also described later as leaders of evil spirits, while even a demon Meredimma has been evolved out of Ps 94:16. Once the grouping of spirits was considered somewhat from that given by Ezekiel and was swelled by additions from various quarters to swell the host. Among these we find reference, in the Talmud, to the princes or rulers over oil and eggs, rulers over the skull or, rather, thumb-nail, and over crystal—all shining objects used, no doubt, for their magical properties. They are named syncretically, in everything that helped either to do or to avert evil was eagerly sought by the credulous. The work of the magician was wrapped in obscurity; his books were kept secret, and his operations were accessible only to the adept, whence much of the practical operation is almost lost to us. What has survived is, with few exceptions, the accompanying formula by which these various spirits and invisible powers were invoked and either, for evil, as in most cases, or for good. In the Greek magical papyri some fragments of the formule are extant, but very little of the operations. Much more seems to have been published in the Hebrew Sword of Moses (ed. and tr. Caster, JPS, 1896, pp. 149-198), of extreme antiquity, and in some MSS of practical ḳēbdūti, or practical occultism, mostly in the possession of the present writer (one of the prescriptions in the form of an incantation). A large number of bowls, many of them dating from the first centuries of the Christian era, have been found in Babylonia with Hebrew and Syriac inscriptions, these vessels being used by the ancient magicians for the purpose of making vessels or canopic jars for the use of the deceased. The inscriptions in question contain whole lists of demons and spirits who are in the service of the magician or whose power he is expected to check. A large number of them have been published by J. A. Montgomery (Aramaic Incantation Texts from Nippur, Philadelphia, 1913), and one (no. 32) may here be reproduced as showing the state of mind and the beliefs of the people. The translation is independent and different. The statements which form the text of the bowl are doubtless a product of the time of Dinni, son of Ishpardarmid, and from that time to the present there has been a practice of writing them down and then erecting them into a sort of temple in a room, on a shelf, or in a place where it will be seen by the people. The idea of a witch or a sorcerer, who can control the spirits, is found in the ancient world, and the practice of invoking evil spirits is found in all parts of the world, and particularly in the Orient, where the practice is still common.
